How to go to your page

This eBook contains three volumes. In the printed version of the book, each volume is paginated identically. To avoid duplicate page numbers in the electronic version, we have inserted a volume number before the page number, separated by a colon, matching how the page numbers appear in the Cumulative Index.

For example, to go to page 5 of Volume I, type I:5 in the "page #" box at the top of the screen and click "Go." To go to page 5 of Volume II, type II:5. To go to page 5 of Volume III, type III:5... and so forth.

PREFACE

From the beginning of time, stories have fascinated humans in every society. Because storytellers grasp certain social and psychological phenomena within their societies which others do not, and are able to interpret those phenomena and bring them to life, their status is unique.

Encyclopedia of World Writers, Beginnings through the 13th Century presents a list of the world's visionaries and their masterpieces, covering many centuries from the earliest recorded writings to the year 1300. Entries include discussions of poetry, fiction, religious writings, drama, epics, history, political science, maxims, biography, philosophy, and nonfiction. Each entry is followed by the suggestion of a translation in English

of the original work whenever available. The main considerations that ruled the selection of writers and works were their intrinsic value, their interest for young contemporary scholars, and their geographic and linguistic diversity.

We wish the readers a pleasant and exciting voyage into the realm of the world's masters and their literature. It is our hope that this volume will stimulate readers to further explore the masterpieces for the essence and exquisiteness that in this work can only be suggested.

Thierry Boucquey
General Editor

INTRODUCTION

Encyclopedia of World Writers, Beginnings through the 13th Century offers a comprehensive yet accessible overview of early world literature, covering the period from the first vestiges of human literary activity to the year 1300. The survey spans the globe, covering 12 main geographic domains: Africa, the Americas, Britain-Ireland, Classical Greece and Rome, East Asia, Francophone Europe, Germany-Netherlands-Scandinavia, the Middle East, the Iberian Peninsula, India, Italy, and Russia-eastern Europe.

The nearly 300 entries in this volume naturally include the giants of the classical Greco-Roman canon, such as Plato, Homer, and Ovid, in addition to anonymous great Western literary works such as *Beowulf*, the *Song of Roland*, and the *Nibelungenlied*, as well as well-known medieval figures such as Dante, Marco Polo, and Chrétien de Troyes. However, a particular effort has been made to include a significant number of entries representing language domains that are traditionally less studied in Western institutions. Our aim has been to include not only texts and authors sanctioned by academic tradition—canonized one might say—but also writers and works often excluded from the traditional curriculum for reasons that are not always clear or convincing. Often literary encyclopedias apply a strict definition of

literature and limit themselves to poetry, prose, and theater but omit, for example, religious writers, chroniclers, mystics, artists, or philosophers. In our view, however, these writers and their works are often carriers of literary significance in that they have strongly influenced their era and the more traditional authors of their time.

In this volume, therefore, major figures that have dominated the East Asian canon, such as Confucius or Murasaki Shikibu, appear alongside the Middle Eastern *Gilgamesh* and *The Thousand and One Nights*, the Indian *Bhagavad Gita* and *Ramayana*, and the Native American *tuuwutsi* narratives. The entries also include a significant number of lesser-known but nonetheless notable authors and works—from all domains—which have influenced global literary traditions and generated renewed scholarly research as of late. Because a parallel encyclopedia on British writers is available, entries regarding British writers have been kept to a minimum.

A few words must also be said concerning oral literature. In certain genres, such as the epic, the folk tale, or the love song, literary traditions have been transmitted orally for centuries and still remain in vogue in certain areas of the world. In fact, today in the United States and lately in France as well, a strong revival of the storytelling tradi-

tion is taking place. Alas, some civilizations never embraced writing, therefore dooming their literary production to extinction. The concept of oral literature itself may be a contradiction in terms, for we can only know it as it becomes written, which is also when it fundamentally changes. This dilemma, however, could not dissuade us from recognizing the importance of the oral tradition in world literature and incorporating it into the encyclopedia. Furthermore, the particular performative style of oral literature tends to blur the lines between recitation, song, dance, and even religious liturgy, adding yet another distinctive interdisciplinary layer to our entries.

The volume further incorporates definitions of important literary movements and phenomena, such as mystery plays, mythology, or troubadours, as well as literary terminology, such as epic, Purana, and *deus ex machina*. Some historical terms and events that are closely associated with the literary output of certain epochs, such as the Crusades, are also included in the hope that they will assist the reader in a more complete evaluation and understanding of works from bygone eras.

Aimed at both high school and college-level students, this encyclopedia endeavors to encour-

age and motivate the aspiring scholar to explore the literary wealth of world writers and their masterpieces. Tools at the students' disposal include biographical information, critical analyses of major works, appropriate cross-references, and the inclusion of the titles of translated editions as well as suitable critical texts. Whenever possible, English translations of works written in other languages have been included.

Readers, then, will be able to stroll through space and time from Egypt's and China's ancient literary beginnings to the romances of late medieval Europe. They may continue their journey through Incan and Aztec lands to the sacred Native American world and on to Africa's wealth of oral traditions. It was impossible to include everything here, but it is our sincere hope that, in reviving the old ideal of the Renaissance, this volume will pique its readers' curiosity and stimulate their interest by suggesting intriguing avenues and tools for research that may direct them to many genres in numerous unfamiliar literatures.

TIMELINE OF AUTHORS AND WORKS

Because there is no way to date the entries on Native American and African works (they all originated from the oral tradition, and most were not put into written form until after 1800), we have listed them as having no date (“n.d.”).

Dates	Entry	Dates	Entry
n.d.	African proverbs	ca. 1500–600 B.C.	Rig-Veda
n.d.	Nahuatl poetry, ancient	ca. 1400 B.C.–ca. A.D. 200	Book of the Dead
n.d.	Chinook myths and tales	1125–570 B.C.	<i>Book of Songs</i>
n.d.	Coyote tales	ca. 900s–100s B.C.	Bible, Hebrew
n.d.	creation myths, Native American	700s B.C.	Homer
n.d.	Navajo Nightway Ceremony songs	700s B.C.	Hesiod
n.d.	Ojibway myths and legends	ca. 620–565 B.C.	Aesop
n.d.	Oklahoma Cherokee folktales	fl. ca. 610–ca. 580 B.C.	Sappho of Lesbos
n.d.	<i>O’othham Hoho’ok A’agitha</i>	600s–500s B.C.	Alcaeus
n.d.	<i>telapnaawe</i> narratives	551–479 B.C.	Confucius
n.d.	<i>tuuwutsi</i> narratives	fl. ca. 550 B.C.	Valmiki, Maharishi
n.d.	<i>waikan</i> narratives	ca. 528–483 B.C.	Zen parables

Abélard and Héloïse (12th century)

theologian, philosopher, poet; student, abbess

Pierre Abélard (1079–1142) is remembered as the most important philosopher and logician of 12th-century France, and Héloïse as his most famous student. Abélard was born to a noble Breton family but gave up the life of a knight for the life of a scholar, devoting himself to the study of philosophy, rhetoric, and logic, or dialectic. Education in Abélard's day was administered by the Church, and he most likely studied PLATO and ARISTOTLE through the work of BOETHIUS. He was an enormously popular teacher due to his technique of *disputatio*, or argumentation, and he traveled widely, attracting students from all over the world.

Around 1113, Abélard decided to study theology under Anselm of Laon, then returned to the school at Notre Dame to teach. For Abélard, logic was the only way to reach understanding. Around 1105 he began writing his *Glosses on Logic*, which were separated into Greater and Lesser volumes and completed about 1130. In Paris he began working on two of his most influential treatises, *Sic et Non* (Yes and No) and *Theologica Summi Boni* (On the Divine Unity), written between 1118 and 1120. *Sic et Non*, structured as a list of questions

with both yes and no answers, outlines Abélard's scholastic method and its tools of argumentation, inquiry, and example.

The years following Abélard's entry into St. Denis were his most productive in terms of writing; he published several commentaries, *Treatise on Understandings* (1122–25), *Introduction to Theology* (1125–30), and a disposition on *Dialectic*, which he worked on continuously between 1130 and 1140. During this time, Abélard, always a controversial figure, came under suspicion of heresy for certain points in his *Theologica*. The public condemnation and the burning of his books proved to be the second most calamitous event of Abélard's life.

The three most important works of his later life were his *Theologica Christiana* (Christian Theology, 1134–38); *Dialogue between a Philosopher, a Christian, and a Jew*; and his *Ethics, or Know Thyself*, both written between 1138 and 1142. While the later *Theologica* shows Abélard's intimacy with Christian doctrine, the *Dialogue*, structured as a discussion between three voices on the nature of good and the necessity of virtue to happiness, shows his familiarity with Judaism and Islam. In *Ethics*, he daringly proposes that virtue or sin lie

2 Abū al-'Alā' al-Ma'arrī

in the intention behind an act and not in the act itself. This ethic of intention, which he shared with Héloïse, unsettled traditional theologians but has kindled the imagination of many subsequent scholars.

Abélard's contributions as a teacher and logician are frequently overshadowed by his doomed love affair with Héloïse, whom he began to tutor at Paris sometime before 1119. She had been previously educated at the convent of Argenteuil and had developed a reputation for intelligence and beauty, and the two quickly began a passionate affair. At the insistence of her uncle, they married, but when Héloïse returned to Argenteuil, her uncle, believing she had been abandoned, had Abélard beaten and castrated. The assault prompted Héloïse to take vows as a nun, and in 1128 she became prioress of the Paraclete, the religious institution that Abélard had founded.

The surviving correspondence between Abélard and Héloïse begins in 1132, after she had read his *History of My Calamities*. The first four letters of the collection, called the "personal letters," discuss their love affair from all angles and reveal Héloïse as a passionate and highly intelligent woman as skilled in the art of rhetoric as her teacher. Within these letters, both lovers cite the BIBLE as often as they quote scholars like AUGUSTINE or Latin writers like OVID, and they logically analyze their beliefs on marriage, human and divine love, and spirituality. The "letters of direction," which complete the collection, include deeply philosophical contemplation, outlines for a reformed religious order, and poems and prayers Abélard writes that the nuns may say on his behalf.

Despite Abélard and Héloïse's rhetorical sophistication and philosophical skills, later writers JEAN DE MEUN and Petrarch remembered them as doomed lovers similar to Anthony and Cleopatra of Julius CAESAR's time or Shakespeare's Romeo and Juliet. Yet Héloïse's service as prioress made her widely beloved in her community, and Abélard has been called the first modern thinker, whose philosophy formed the basis of empiricism.

Abū Tammām (Abū Tammām Ḥabīb ibn Aws al-Ta'ī) (ca. 805–845) *poet, anthologist*
Abū Tammām was a prime exponent of the *badi*, or new school of Arab poetry that emerged in the Abbasid period. He was also one of the first to assemble an anthology of pre-Islamic and other early Arabic poetry.

Born in Syria to a Christian family, Abū Tammām converted to Islam in his youth, changed his name to indicate descent from a noble Arab tribe, and moved to Cairo to study Arabic poetry. He specialized in panegyrics, poems extolling leading figures of the day, from the Abbasid caliphs (rulers) al-Ma'mun and al-Mu'tasim to provincial governors who would pay for the service.

The most famous of Abū Tammām's panegyrics is his ode "Amorium," which celebrates al-Mu'tasim's victory over the Byzantines in 838: "O day of the Battle of 'Ammuriya, [our] hopes have returned from you overflowing with honey-sweet milk; / You have left the fortunes of the sons of

Islam in the ascendant, and the polytheists and the abode of polytheism in decline.”

Abū Tammām’s innovative style aroused criticism in his day and from later commentators. His use of archaic words, far-fetched similes, and homonyms was often considered mannered, abstract, and overly sophisticated. His poems were unfavorably compared with the supposed naturalism of earlier poets, and the debate became an important stimulus to the tradition of Arab linguistic and literary criticism.

As an anthologist, Abū Tammām put together several *diwans*, or poetry collections, the most famous of which is *al-Hamasa* (Heroism), consisting of hundreds of poems from pre-Mohammed Arabia down to his own time, mostly by less famous poets. Unlike his own poetry, the works he collected and thus helped preserve have been universally celebrated as among the purist models of classic Arabic form.

Adam de la Halle (ca. 1250–ca. 1306)

musician, playwright

Adam de la Halle was born in Arras, France, and spent most of his life there. He was educated in the church but did not take holy orders. Because of his writing talent and connections in literate and cultural circles, Adam became a spokesman for a group of local men who criticized the corrupt aristocratic government of Arras. In 1283, he traveled

as court musician to Robert II, Count of Artois, in Naples, where he died around 1287.

Adam de la Halle was a gifted composer whose surviving body of work includes motets and chansons for single and multiple voices. He was not only talented enough to contribute to medieval music but also wrote two plays that are some of the most frequently anthologized pieces of medieval drama. Both *The Play of Madness* (Le Jeu de la Feuillée, ca. 1276) and *The Play of Robin and Marion* (Le Jeu de Robin et Marion, ca. 1283) are secular comedies that are fresh, charming (and in *The Play of Madness*’s case, raunchy and absurdist) glimpses into the medieval mind and society.

The Play of Robin and Marion is a pastoral in which the title characters court each other and entertain their fellow shepherds with songs and dances. There is some dramatic tension when a knight becomes infatuated with Marion and tries to abduct her, but Robin and his friends recover her and they celebrate with a picnic and games. The piece charms readers and spectators because of its playfulness and light touches of humor and realism; when Marion asks Robin to dance the farandole, a lively court dance, he excuses himself because his leggings are torn. The picnic consists of water, bread, apples, and cheese, and the partygoers are extravagant in their delight; one wonders if a courtly audience laughed condescendingly at the rustic characters’ simple pleasures or recognized themselves in some of the games and songs the characters play. *The Play of Robin and Marion* has been recorded by several contemporary early-music groups and could still entertain a contemporary audience.

The Play of Madness, however, more closely resembles 20th-century experimental theater than the morality plays and farces of the time period. Adam’s characters are himself and his friends from his Arras circle mingling with fairies, and there are stock comic characters such as an old woman, a doctor, and a village idiot. Nothing is sacred in this piece; Adam mocks his own desire to leave Arras for Paris, as well as his distaste for his aging wife.

4 Aeschylus

The humor in the play is often bawdy and insensitive; male characters complain about their wives' shrewishness, the idiot spouts obscene jokes, and characters mock church politics and the public's gullibility when it comes to worshipping saints' relics. Political and social satire intertwine with physical comedy. There is no plot *per se*; characters shift from center stage to background, from participant to observer of what takes place center stage. The play's in-jokes about the well-to-do townsmen of Arras indicate its original audience may have been the literate burghers of this prosperous northern French city. The specific details of medieval life and the fresh direct language of both plays make Adam de la Halle's surviving plays not only significant artistic contributions to European drama but also intriguing glimpses into his world.

Aeschylus (ca. 525–456 B.C.) tragedian

Aeschylus was born in Eleusis, a Greek coastal city not far from Athens that was the center for the worship of Demeter, goddess of the harvest. His father, Euphorion, was descended from nobility, but little else is known about Aeschylus's family and early years.

In 499 B.C., Aeschylus began competing in Athenian dramatic contests, which were popular at

the time. His initial victory was achieved in 484 B.C., and he went on to win first prize in a dozen more contests during his career. In 490 B.C., Aeschylus fought at Marathon against the Persian Empire in its attempt to conquer Greece, a battle that claimed his brother, Cynegirus. Aeschylus also fought the Persians at Salamis, Plataea, and other battles. Military valor had such a cachet in Aeschylus's day that his self-written epitaph, according to Greek scholar Edith Hamilton, describes his "glorious courage [on the] hallowed field of Marathon" but makes no mention of his stunning achievements as a playwright.

Aeschylus twice visited the court of Hieron of Syracuse, who was also patron of the poet PINDAR, in Sicily. Several of Aeschylus's productions were performed there. In 476 B.C., Aeschylus composed a play commemorating the king's founding of the new city of Aetna; he died during his second visit. An official Greek ruling later honored Aeschylus by providing that the city of Athens would fund the revival of any of his plays.

Some critics would profess that the art of tragedy is Aeschylus's creation. His plays incorporate genuine dramatic power and tension, startling and profoundly poetic imagery, and grand, eloquent language. His subject matter, always lofty, particularly explores the relationship between humans and God. Aeschylus was the first tragedian to supplement the chorus, a group of singers and dancers who performed the drama, with dialogue and interaction between individual actors. He was also the first playwright to enhance the spectacle with elaborate costumes and stage sets.

Aeschylus penned some 90 plays, of which only seven remain. His work was powerfully influenced by the Persian conflict, in which Greece challenged the ruling world power in order to become a cultural and political empire in its own right. Accordingly, *The Persians*, which won first prize at the Great Dionysia festival of 472 B.C., dramatizes the defeat of Athens's bitter enemy. It is a tribute to the humanity of the playwright that he portrays the characters, including Xerxes, king of the Persian

Empire, in a sympathetic light. In *The Persians*, he also gives voice to the universal hopes and fears that characterize life during wartime. The play is one of the few surviving Greek tragedies based on contemporary rather than mythological or historical events.

Seven Against Thebes, part of a trilogy that has not survived, was awarded first prize in the dramatic contests in 467 B.C. In it, Eteocles, king of the ancient Greek city of Thebes, thwarts an attempt by his brother Polyneices and six warriors to seize the throne. Both brothers are killed, and order is restored.

The Suppliant Maidens, written in the 460s B.C., is the first play of a lost trilogy in which the 50 daughters of Danaus have escaped from the 50 sons of Egyptus who want to marry them against their wishes. The maidens have no right to refuse their suitors under Egyptian law, so they flee to Argos. There, King Pelasgus, after a democratic conference with his people, agrees that the State will provide sanctuary. The play ends with a prayer and a depiction of the god Zeus as the ultimate guardian of justice, highlighting the conflict between human, natural, and divine law.

Aeschylus's final triumph at the Great Dionysia took place in 458 B.C. with the *Oresteia*, a tale of a familial curse upon an aristocratic household. Each of the three plays that comprise it—*Agamemnon*, *The Choephoroi* (also called *The Libation Bearers*), and *The Eumenides*—can be seen as one great act of a complete drama.

Prometheus Bound, produced after the playwright's death, was an early part of a trilogy featuring the ancient hero Prometheus. Prometheus was the divine being who stole fire from the gods to give it to man and was therefore condemned by Zeus to be shackled to a cliff. In Richmond Lattimore's translation, Prometheus laments this error he made on behalf of humankind: "You see me a wretched God in chains, the enemy of Zeus, hated of all the Gods that enter Zeus's palace hall, because of my excessive love for Man." But he is ever rebellious and defiant, and the play concludes with

an aggravated Zeus plunging Prometheus into the underworld amid a splendid display of thunder and lightning.

Critical Analysis

The *Oresteia* trilogy is today the most-studied of Aeschylus's works. Several important historical events take place before the first play opens. Aeschylus's audience was familiar with the legend of the ancestral curse upon the noble House of Atreus, which impelled generation after generation to perform unspeakable acts. King Pelops's sons Atreus and Thyestes quarreled over the kingdom and became enemies; Thyestes seduced and betrayed Atreus's wife; and, in retaliation, Atreus fed Thyestes' own children to him in a grisly feast. This was the legacy inherited by Atreus's sons Menelaus and Agamemnon, who became king. When Menelaus's wife, the beautiful Helen, fled to Troy with Paris, Agamemnon coordinated an expedition to retrieve her. Before sailing, Agamemnon was forced to sacrifice his daughter Iphigenia to appease the gods and cause favorable winds to blow. The mission to fetch Helen escalated into the Trojan War. After 10 years of combat, Troy was captured and the Greeks began to make their way home. This is where the *Oresteia* begins.

In *Agamemnon*, the first play of the trilogy, the king's wife Clytaemnestra, aggrieved by the sacrifice of her daughter Iphigenia, takes as her lover Aegisthus, son of Thyestes. Together they plot to assassinate Agamemnon upon his return from Troy, and they succeed. In the second play, *The Libation Bearers*, Orestes and Electra, son and daughter of Agamemnon and Clytaemnestra, slay their mother and Aegisthus to avenge their father's murder. Orestes states that his was an act of justice, but when he spies the spirits of retribution known as the Furies, he knows there is more anguish to come.

In *The Eumenides*, the third and final play, Orestes is besieged by the Furies. They are determined to avenge the crime of matricide whether or not it was justifiable. Orestes seeks refuge with the god Apollo, who purifies him of his misdeed, but

6 Aesop

the Furies are not appeased. Orestes is then tried and absolved by a jury in a court set up by the goddess Athena, but the Furies are enraged that their authority has been usurped. Lattimore translates their lamentation:

Gods of the younger generation, you have ridden down the laws of the elder time, torn them out of my hands. I, disinherited, suffering, heavy with anger shall let loose upon the land the vindictive poison dripping deadly out of my heart upon the ground.

To mollify the Furies, Athena offers them honorable positions as tutelary goddesses. “No household shall be prosperous without your will,” she promises. “So we shall straighten the lives of all who worship us.” Thus, the curse on the House of Atreus is no more.

The *Oresteia* dramatizes both the conflict between barbarian ways, represented by the curse and the Furies, and Hellenism, or the civilization and culture of ancient Greece that developed and flourished over Aeschylus’s lifetime. Only Athena, who represents wisdom and reason as well as the city of Athens, can persuade the bloodthirsty, ruthless, and childish Furies to relinquish their ancient system of punishment in favor of one in which the law is the instrument of justice.

Aeschylus portrays ordinary men as heroic, with indomitable spirit, and life itself as a peculiar combination of suffering and joy, misery, and optimism. He presents conflicts between and within individuals that are universal and enduringly relevant. The Romantic poets Lord Byron, Percy Bysshe Shelley, and Samuel Taylor Coleridge all wrote about Aeschylus’s Prometheus in the 19th century. The 20th-century playwrights Eugene O’Neill and T. S. Eliot recast Orestes’ tragedy in *Mourning Becomes Electra* and *The Family Reunion*, respectively.

“The strange power tragedy has to present suffering and death in such a way as to exalt and not depress is to be felt in Aeschylus’s plays as in those

of no other tragic poet,” writes Edith Hamilton in *The Greek Way*. “He was the first tragedian; tragedy was his creation, and he set upon it the stamp of his own spirit.”

Aesop (ca. 620–565 B.C.) *storyteller, fabulist, orator*

Aesop was born in Phrygia, an ancient country in the center of what is now Turkey. He may have been taken prisoner by one of his homeland’s many conquering invaders; it is known he was enslaved and eventually sold to a man called Iadmon. On Samos, a Greek island in the Aegean Sea where the prosperous landowner took him, Aesop established a reputation as a masterful storyteller and fabulist (maker of fables). Aesop so impressed Iadmon with his gifts that his master freed him so he might tell his humorous animal tales throughout Greece. Aesop was later retained by King Croesus of Lydia as a diplomat and ambassador.

Aesop successfully represented his various employers in legal matters and other negotiations by

telling instructive, lively stories featuring animals with very human traits. The great Greek philosopher ARISTOTLE tells the following story of Aesop in *Rhetoric*, a treatise on the art of persuasion: While defending a popular political leader of Samos who had swindled the public, Aesop recounted “The Vixen and the Hedgehog.” In this story, Aristotle explains, a fox who becomes trapped in a gully and tormented by fleas is offered help by a passing hedgehog. The fox declines the offer, explaining that the fleas clinging to her skin had had their fill of her, but if the fleas were taken away they would be replaced by another set of parasites that would drain the rest of her blood.

“So, men of Samos,” Aesop concluded, according to Aristotle, “my client will do you no further harm; he is wealthy already. But if you put him to death,” he explained, other ambitious politicians will assume the position the man has vacated, “and their speculations will empty your treasury completely.”

Aesop died while on a diplomatic mission to the sacred site of Delphi, where he found the residents to be not holy, but arrogant and greedy. Fearful that Aesop would use his powers of oratory to discredit them, the Delphians enacted a conspiracy to frame him with theft. In his defense, the already legendary fabulist told of “The Rat and the Frog” and “The Eagle and the Beetle,” tales cautioning that oppressors of the innocent will be subjected to divine vengeance. Notwithstanding his warnings, Aesop was found guilty and executed by being flung from the cliffs at Delphi.

There are hundreds of fables attributed to Aesop, but it is uncertain how many he actually composed, if any. He did not write any down, and some of the stories in the body of work known as “Aesop’s Fables” are known to have originated well before his birth or after his death. He may merely have been a brilliant raconteur of oft-told tales that were then recited in the “Aesopic” manner. They were written down for the first time around 300 B.C., probably by storytellers and other fabulists.

Critical Analysis

In Aesop’s *Fables*, talking moles, swallows, monkeys, and a host of other animals demonstrate all-too-human flaws, virtues, and desires. Accordingly, they are taught lessons that humans might do well to mind. Like all fables, those attributed to Aesop are both brief—sometimes as short as two sentences—and fanciful, and are designed to teach a lesson about such themes as modesty, honesty, and industriousness.

Perhaps the best-known tale is “The Hare and the Tortoise,” in which the speedy hare challenges the sluggish tortoise to a race. The confident hare, thinking he has all the time in the world, takes a nap, while the tortoise trudges laboriously to the finish line, teaching that slow and steady wins the race.

In “The Fox and the Grapes,” another popular favorite, a ravenous fox spies a bunch of the fruit hanging from a trellis. Unable to reach them, he tells himself they weren’t ripe, anyway, giving rise to the term *sour grapes*.

Aesop also relates the story of a shepherd boy who falsely “cries wolf” so often that when a real wolf appears and threatens the herd, nobody heeds his pleas for help; and of a mule who boasts of his racehorse mother but is compelled to acknowledge that his father is a jackass (“There are two sides to every story”). Another narrative tells of a fox happening upon a lion for the very first time and nearly dying of fright. The fox becomes bolder upon each encounter until one day he strolls up to the lion with a cheeky greeting, because “familiarity breeds contempt.”

In “The Dairy Maid and Her Milk Can,” a milkmaid is carrying a pail of milk on her head daydreaming about what she will do with the money she will earn from selling it. She imagines increasing her stock of eggs, which will produce a certain number of chicks that she will sell at a certain price. She’ll have enough money for a new gown, and her beauty will attract many suitors, but she will just toss her head at the lot of them. At that, she tosses her head and the pail of milk crashes to

8 African proverbs

the ground—along with her fantasy. The moral: Do not count your chickens before they hatch.

The greedy owner of “The Goose with the Golden Eggs” squanders an even greater windfall than that of the milkmaid. He cuts the goose open, hoping to find a large gold nugget inside. Thus, when referring to people whose impatience for great riches causes them to lose what little they do have, we may say they “killed the goose that laid the golden egg.”

Another familiar expression comes from “The Fishes and the Frying Pan.” Some live fish are placed in a skillet over a flame to cook. As the pan heats up, the fish find the high temperature intolerable, so they leap from the pan, landing in the flames. Today, we use the expression “out of the frying pan and into the fire” to mean a choice that exchanges one unpleasant situation for one that is worse.

Our very language owes a debt to Aesop’s fantastical universe, insofar as everyday speech is populated with animals who have the human traits Aesop ascribed to them. We speak of wily foxes, wolves in sheep’s clothing, vain peacocks, rapacious vultures, and hardworking ants.

The lessons Aesop’s fables teach are very much in evidence in contemporary expressions, too, and in the way civic and ethical matters are framed and judged in modern society. “The Country Mouse and the City Mouse” is an exceptionally popular fable that is no less relevant today than in ancient times, and it aptly illustrates the benefits and drawbacks of rural and urban living. As the Country Mouse sums up: “You can dine in this way and grow fat, if you like; jolly good luck to you if you can enjoy feasting sumptuously in the midst of danger. For my part, I shall not abandon my frugal home under ground, where I can eat coarse food in safety.”

Aesop is generally credited with introducing the fantastical animals who made the tales and their characters so beloved, keeping the tales simple and providing a “moral of the story” tagline that made them so unforgettable. The fables have been translated and augmented many times over, perhaps most famously by the 17th century French poet Jean de La Fontaine, and they have retained their straightforward appeal for more than 2,000 years.

In many ways, it is irrelevant whether Aesop was, in fact, the author of the fables. He was the storyteller who brought them to vivid life and made them, and himself, universal and timeless.

African proverbs

Proverbs distinguish themselves from other forms of ORAL LITERATURE by their brevity, consistency (their word order rarely changes over time), and widespread acceptance within a community. Some African cultures, such as that of the Bushmen, have few proverbs, while others have hundreds. One recent collection contains approximately 3,000 proverbs from 64 Nigerian peoples. Researchers have recorded 4,000 proverbs in the Rundi language alone, and the Chaga people claim they “have four big possessions: land, cattle, water and proverbs.”

In many African cultures, speakers use proverbs as a way to catch their audience’s attention, display intelligence and learning, lend authority to their words, settle legal disputes, provide entertainment, and resolve moral or ethical dilemmas. As one Igbo puts it, “The proverb makes somebody think twice. If you use a proverb people might be more likely to take your advice.”

The writer Ruth Finnegan points out that African maxims use rhythm, striking imagery (many involving comparisons with animals or household objects), and exaggeration to make their points clear.

Proverbs appear in stories, poems, art, and songs. The Ashanti even make brass weights depicting figures from proverbs. In addition, proverbs are usually short (from a few words to a sentence), allowing the speaker to wittily communicate complicated ideas or concepts. This, in turn, makes the ideas easier to learn.

The themes of African proverbs include power, death, marriage, wealth, foolishness, fate, and the importance of community. A particular culture's choice of proverbs tells something about that culture. Americans and Europeans know that the term *sour grapes* refers to one of AEsop's fables; similarly, the Yoruba and other African peoples believe that "Half a word will do for an intelligent boy." And the proverbs of Bantu-speaking peoples reveal that they raise livestock. Their saying, "Don't throw away the milk pails," is their way of saying people should keep hope.

Because some proverbs are often incomprehensible to listeners unfamiliar with African cultures, they are sometimes used as a secretive type of language to keep "outsiders" from understanding. As one Igbo saying goes, "Proverbs are used to confuse stupid people." In addition, because some proverbs are indirect, they can be used in situations when more direct speech might be insulting. For instance, one might speak the Yoruba proverb "Children are a man's clothes" in the presence of a father with misbehaving young children. The children would not understand the reference, but their father would. The phrasing of the proverb would allow him the chance to curb his children's actions without taking offense. This is similar to proverbs that encourage appropriate behavior. "Those who eat together shouldn't eat each other," say the Igbo, reminding friends and family to respect each other. The Longuda emphasize the importance of keeping promises by saying, "A promise is not just a knot which you

can simply untie with your hands." Finally, a Tswanan saying, "To give is to put away for yourself," encourages generosity by implying it will someday be returned.

There are also numerous ambiguous proverbs that can be used in different situations. For example, the Boko saying, "A sheep does not give birth to a goat" (or the Ga's "A crab does not beget a bird") can humiliate a thief's child, but it can also reassure a woman that her child will be as healthy and intelligent as she is.

Such lessons, advice, and compliments were passed down for centuries in African cultures. They are part of the same oral tradition that created and preserved stories like the EPIC OF SON-JARA. It has been only in recent centuries that Europeans and Africans themselves have written down these sayings. The explorer Richard Burton's collection *Wit and Wisdom from West Africa* (1865) was one of the first of its kind. This and other works reveal the proverbs' archaic words and grammatical constructions, but this seems almost irrelevant when compared to the African proverbs' versatility, authority, rhythm, and imagery, for it is these elements that give the proverbs their universal and lasting appeal.

Alcaeus (seventh century–sixth century B.C.)
poet

During the centuries before the Persian Wars, the Greeks produced a number of outstanding literary figures whose works later inspired the more famous Greek poets and playwrights. Among these early figures of Greek literature was the poet Alcaeus.

Alcaeus was a native of the city of Mytilene, which was on the island of Lesbos, off the coast of modern-day Turkey in what was then known as Ionia. During Alcaeus's lifetime, the Greek islands of Ionia were in a state of almost continuous disorder, suffering invasion from outsiders, constant infighting between city-states, and bitter internal quarrels. Alcaeus involved himself in the political disputes in Mytilene and was forced into exile as a result.

Most of Alcaeus's work has been lost, but some survives. His poetry reflects the turmoil of the time in which he lived. Editor Kenneth Atchity says of him: "Extroverted and aggressive, better at hating than loving, Alcaeus lived, drank hard, and wrote primarily of wine, women, and war." Poems such as "To the Baseborn Tyrant" express his bitter hatred toward the idea of tyranny and praise the brave men who fight for honorable causes. He feels only hostility toward those who betray their city-state, since traitors had torn his own city apart. Several surviving poems extol the beauty of women, and many express Alcaeus's favorite theme of being happy in spite of troubled times. In "Winter Evening," after cursing the cold, the poet urges men to nurture friendship and conviviality to keep despair at bay:

*Pile up the burning logs
and water the great flagons of red wine;
place feather pillows by your head, and
drink.
Let us not brood about hard times.*

Alcaeus had a large influence on Greek and Roman poets who came after him. The Roman poet HORACE claimed Alcaeus as one of his great models for metrical style (Alcaeus invented the Alcaic meter) and poetic inspiration, as his *Odes* demonstrate. The rhetorician QUINTILIAN approved of Alcaeus in "his work where he assails tyrants; his ethical value is also great; his style is concise, magnificent, exact, very much like HOMER's; but he stoops to humor and love when better suited for higher themes."

Alfred the Great (849–899) *king, scholar,
translator, educator*

King Alfred of Wessex, present-day southern England, is known in history as a strong military and political strategist and cultural and scholarly leader. He is credited with having developed an Old English prose style through his translations of well-known works from Latin.

Until the time of Alfred's reign (871–899) there was no prose in Old English. With the exception of laws and charters, all prose was in Latin. By the ninth century, England was in a cultural and intellectual decline, and the people understood only Old English. Alfred was the first to realize the need for educating the people, and he set about translating works he deemed suitable. As Alfred himself said, "Without wisdom no faculty can be fully brought out. . . ."

Alfred was tireless in his devotion to preserving Anglo-Saxon literature by copying and translating

important pieces of his times into Old English. He himself did some of the translating and also supervised scribes and monks, influencing them to follow his example. Some of the important works he translated include *Consolation of Philosophy* by BOETHIUS, a philosophical work from the sixth century that had an important influence on much of the literature of the MIDDLE AGES; *Cura Pastoralis (Pastoral Care)*, a handbook by Gregory describing the responsibilities of a bishop; and *Soliloquies* by St. AUGUSTINE, an ecclesiastical manual.

Two of the works that Alfred translated and compiled, BEDE's *Ecclesiastical History of the English People* and the ANGLO-SAXON CHRONICLE, have generated a storm of arguments among scholars through the ages. Most of the debates are based on the style of writing in these works, as it differs from the style in works soundly attributed to Alfred's hand. Thus, whether Alfred directly contributed to the works or not, it is established that the translation of the works was accomplished during and inspired by his reign.

Knowledge of Alfred's early years is based on a biography by John Asser, who was Alfred's companion. Alfred had no schooling in his childhood and could read neither Latin nor Old English until after his 12th year; however, once he started learning, there was no stopping him.

He came to the throne of England in 871, following the death of his brother, King Aethelred I. His early years as a monarch were spent organizing successful campaigns against the Danish Vikings, forcing them north back into the Danelaw, where many became Christians. This saved England from becoming part of the Norse empire. The rest of England accepted Alfred as their national leader.

Alfred acutely felt the pressures of being a monarch and of constantly having to fight to defend his land. His infirm health was also a continual source of aggravation to him. Despite all of this, he continued to ably administer his kingdom; bestow alms and largesse on natives and foreigners; practice hunting; instruct his goldsmiths, falconers, and dog-keepers; design and build majestic houses; attend Mass twice a day; memorize poems

and psalms; translate works of literature into his native tongue; participate in discussions and debates with scholars from all over Britain and Europe; and, above all, pursue the education of the people of his kingdom.

'Alī ibn Abī Tālib (Imam 'Alī) (575–ca. 661) poet, homilist

Born in Mecca, 'Alī ibn Abī Tālib was the son-in-law of MUHAMMAD. He is venerated by Shi'ite Muslims as the prophet's rightful successor. The poems, sermons, lectures, and sayings that are attributed to Ali are esteemed by Shi'ites to this day.

'Alī was a cousin and foster brother of Muhammad, the founder of Islam. He was among Muhammad's supporters, serving as his secretary and marrying his daughter Fātima. After Muhammad's

death, a faction of Muslims supported 'Alī as his rightful heir. 'Alī did become the fourth Caliph, or leader of the faithful, in 656, only to be murdered five years later; his sons Hasan and Huseyn were later murdered as well.

'Alī is considered the first great writer of sermons and an eloquent writer of aphorisms. As caliph, he was patron of moralistic poetry and of the first systematic Arabic grammarians, and he was also known as an expert calligrapher.

'Alī's sermons and other prose works were collected in the 11th century by al-Sayyid al-Sharīf ar-Radi, an Islamic scholar, in *Nahj al Balagha* (Peak of Eloquence). Al-Sharīf divided 'Alī's works into three categories: sermons, letters, and short sayings. In the first section, 'Alī stresses spirituality, justice, ethics, and worship. The second section consists of letters 'Alī wrote to friends and enemies, as well as his instructions as Caliph to government officials, stressing their role as servants and protectors of the people. Finally, the third section is a collection of 'Alī's aphorisms, which serves as a set of instructions on how to live "purely" and prosper. It is the emotional depth and wisdom of these works that have given 'Alī a place in world literature.

Ambrose, Saint (ca. 340–397) *religious writer*

Ambrose was born to an ancient noble family of the Roman Empire. His father was Prefect of Gallia. He had a younger brother, Satyrus, and an older sister, Marcellina, who influenced Ambrose's dedication to the virtue of virginity.

Ambrose received a brilliant liberal and legal education, acquiring a thorough mastery of Greek language and literature. He also studied law, and his eloquent speeches attracted the attention of Emperor Valentinian, who named him consular governor of Liguria and Æmilia. In 374, Ambrose became the bishop of Milan and occupied this position until his death. He became famous as one of the most illustrious of the Four Doctors of the Church, which included St. AUGUSTINE, St. JEROME, and St. Gregory.

From his lifetime to the present day, Ambrose is known for the exceptional clarity and piety with which he expressed the Church's teachings. Most of his writings are homilies, or commentaries, on the Old and New Testaments. His education allowed him to engage in scholarly and spiritual studies of authors, such as VIRGIL, Origen, CICERO, St. Basil, and others, which he did primarily to learn how to teach.

Some scholars divide Ambrose's surviving texts into four groups: scripture-commentaries, moral texts (referred to as ascetico-moral writings), dogmatic texts (concerning the divinity of Jesus, the Holy Ghost, and the sacraments), and occasional texts. His most influential piece, *De Officiis ministrorum*, belongs to the moral texts and, as such, is a treatise of Christian morality. Also belonging to this group are his "On Virgins," which he addressed to his sister.

Of his dogmatic texts, his *De Mysteriis* (a treatise on baptism, confirmation, and the Eucharist) is extant, as are many of his occasional texts (mostly letters, official notes, and reports). From these and other of Ambrose's writings, much social, religious, and cultural information of ancient Milan and Rome has been preserved.

'Amr ibn Kulthum (sixth century) poet

'Amr ibn Kulthum was among the classic Arabic poets who flourished in the century before MUHAMMAD. Though not considered a great innovator, his inclusion in the *Mu'allaqāt* (The Seven Odes), the standard collection of pre-Islamic poetry, has given him a place in literary history.

Like many of the pre-Islamic poets, 'Amr was of high birth and a chief of the Taghlib tribe that lived in the mid-Euphrates River area of Iraq. He was the grandson of al-Muhalhil, himself a celebrated Taghlib chief and poet. Little is known of 'Amr's life, but some of the feats alluded to in his poems were later accepted as facts. For example, one legend has 'Amr beheading the powerful Lakhmid king 'Amr ibn Hind (ca. 568) for allowing the poet's mother to be insulted. Within a century of his death, reputedly by drinking too much un-mixed wine, he had become a legendary hero in Arabic tales.

There are not many surviving examples of 'Amr's poetry, but one of his longer poems (untitled) was included in the *Mu'allaqāt* when it was assembled in the late eighth century. In his *qasidah* (ode), 'Amr fiercely extols the strength, courage, and cruelty of his tribe, and hurls threats against its foes:

*Ours the right of the wells, of the springs
untroubled;
theirs the dregs of the plain, the rain-pools
trampled.*

This type of writing is a classic example of the *fakhr* (boasting) often found in Arabic poetry of the time. 'Amr's poem became so popular among his Taghlib tribesmen that they expanded it in the retelling from 100 to 1,000 lines, and the ode has since influenced subsequent generations of Arabic poets.

Anacreon (sixth century B.C.) poet, composer

Anacreon was one of the most influential and famous Greek literary and musical figures who flourished during the time before the Persian Wars and the Golden Age of Athens. Greek writers continued to imitate him long after his death, and his impact on Greek culture was profound.

Anacreon was born in the Ionian Greek city of Teos, on the eastern coast of the Aegean Sea.

Throughout his life, he was never able to remain in the same place for very long, being continually forced to relocate because of political turmoil. After Teos fell to the Persians, the poet became a guest of Polycrates, the tyrant-ruler of the island of Samos. According to the historian HERODOTUS, Anacreon may have been dining with Polycrates when the latter was assassinated. Following this event, Anacreon moved again, this time to Athens. When another political friend was assassinated, Anacreon again fled, this time to Thessaly, but was later recalled to Athens. He died there, according to legend, by choking on a raisin.

Anacreon was best known for his brilliant and bawdy feasting songs. They glorified the enjoyment of life, the subjects generally being wine, women, and pleasure. The chief theme of his work is that people should strive to enjoy life while they have the chance. People throughout the Greek world enjoyed these songs, and Anacreon was extremely popular. He also wrote satirical pieces that were well received. Greek and Roman writers continued to imitate his style for many centuries, and the tradition of popular “drinking songs” owes much to Anacreon.

In the 16th century, a large collection of Anacreon’s works was published in Paris for the first time. It influenced writers such as Ben Jonson, Richard Lovelace, and Robert Herrick. An English translation by Thomas Moore, titled *Odes of Anacreon*, appeared in 1800.

Angiolieri, Cecco (1260–ca. 1312) poet

Cecco Angiolieri was born in Siena to parents Angioliero degli Angiolieri and Lisa Salimbeni. As a youth he entered military service, where he was reprimanded several times for unauthorized absences and once for making noise after curfew. In 1288 he served in a military campaign where he is thought to have met fellow poet DANTE. Angiolieri’s later history is equally colorful: In 1291 he was accused but not convicted of stabbing a man, and sometime in the next decade he was banished from Siena. In 1302 he sold a vineyard to a neighbor for a tidy profit, but in 1313, after his death, his five children renounced their claims to his estate to avoid the huge debts placed upon it.

Of Angiolieri’s poetry, 150 sonnets survive. He wrote in a realistic and burlesque style, and translator Thomas Caldecot Chubb says that “his is the best and the most vivid writing of this interesting school.” Angiolieri often introduces a comedic touch into the conventional depictions of love and lovers. His sonnets to Becchina, the shoemaker’s daughter, show him using the tropes of love with laudable skill:

*Whatever good is naturally done
Is born of Love as fruit is born of flowers:
By Love all good is brought to its full power.*

In other sonnets, he parodies those who are slaves to love and celebrates his freedom, as in this playful verse in which the poet says,

*Love is no lord of mine, I’m proud to vouch.
So let no woman who is born conceive
That I’ll be her liege slave. . . .*

Angiolieri also wrote three bantering poems to his friend Dante, one of which respectfully points out how Dante appears to contradict himself in the last sonnet of his *New Life*. Angiolieri’s contemporaries spared him no less in their own literary works; Boccaccio portrays him as a gambler and prankster in the *Decameron*, which no doubt con-

tributed to Angiolieri's reputation, in Chubb's terms, as a handsome and well-mannered rogue.

Anglo-Saxon Chronicle (891–1154)

The Anglo-Saxon Chronicle is a collection of manuscripts detailing British history from the beginning of the Christian era to A.D. 1154. Translator M. J. Swanton speculates that "the Chronicle, as we know it, had its origins towards the end of the ninth century: a reflection of both the 'revival of learning' and revival of English national awareness during the reign of King Alfred" (ALFRED THE GREAT, 849–899). For information on events beginning with Julius CAESAR's first Roman invasion, the clerics in charge of the work drew their material from documents already in circulation, such as *Ecclesiastical History of the English People* written by The Venerable BEDE. The Chronicle was maintained and added to by generations of anonymous scribes until the middle of the 12th century. The final entry in 1154 describes the death of Stephen and the coronation of Henry II:

In this year died the King Stephen; and he was buried where his wife and his son were buried, at Faversham . . . Then when he [Henry] came to England, he was received with great honour and was blessed as king in London on the Sunday before midwinter day, and there held a great court.

Four distinct manuscripts exist, named by the religious houses where they were kept: Winchester,

Abingdon, Worcester, and Peterborough. The Winchester manuscript is the oldest, while the Peterborough manuscript was the longest maintained and is considered the most complete. Variations between the individual manuscripts show that they circulated among religious houses, and recorders made note not only of national events but also doings of more local concern.

The Chronicle remains a crucial historical document, not only because it dates from a time when few other records exist, but it is also significant, as Swanton observes, "that so fundamental a cultural document of English history should have been composed in English." In addition to their historical importance, the Chronicle serves as a literary text. Several passages contain vivid prose, and in the 937 entry, the account of the Battle of Brunanburh stands as one of the finer examples of Anglo-Saxon poetry, reminiscent of the heroic motifs in the epic poem *BEOWULF*.

Anna Comnena (1083–ca. 1154) *historian*

Anna Comnena was born in Constantinople, the eldest daughter of an aristocratic general who later, as Alexius I, became one of the greatest emperors of Byzantium (the Eastern Roman Empire). Nevertheless, Comnena spent the latter half of her life in exile, where she wrote a remarkable history book, perhaps the first written by a woman.

Anna was betrothed at age five to Constantine, son of then-emperor Michael VII. Her royal ambitions were thwarted, however, due to her husband's

early death and the birth of a son and heir to her parents, who had since become the imperial couple.

Anna enjoyed major influence in affairs of state via her mother, the empress Irene. They conspired together to obtain the succession to the throne for Anna's husband—in effect for Anna herself. After the death in 1118 of her father, Alexius I, Anna plotted with her second husband to overthrow her brother, the new emperor John II. When the plot was discovered, Anna's properties were confiscated, and she was banished from the capital for life. She retired to the convent of Kecharitomene, built by her mother, where she spent her remaining 35 years as a patron of scholarships and the arts as well as the center of a literary and political faction opposed to Emperor Manuel I. She died in exile, becoming a nun on her deathbed.

Before her death, Anna composed a long history of her father's glorious career, the *Alexiad*, covering the years from 1169 through his death. Later translated into spoken Greek, her book gained wide popularity. It is still celebrated for its forceful, vivid writing; its thoughtful if biased analysis; and its wealth of information on contemporary literature, society, religion, internal politics, and international affairs.

In her writing, Comnena tried to emulate the language and spirit of classical Greece, whose pedigree was as ancient and authentic as the Christian scriptures. The title *Alexiad* was a deliberate tribute to HOMER's *Iliad*. Not that Anna had any tolerance for rationalistic heresies. Her conservative outlook found expression in her distaste for frivolity, astrology, and gambling, and in the heroic language and conventions she used for her protagonists.

The *Alexiad* is in some ways a traditional imperial encomium, in which the emperor emerges as wise, brave, and tirelessly devoted, the very model of *mesotes* (the middle way). But Anna added depth to her portrayals, even of her father, whom she described as frequently depressed by temporary setbacks or guilt. She gives even the villains motives and recognizes their strong qualities.

Anna was a master of emotionally powerful descriptions, both of people and events. Describing

John Italos, a leading philosopher denounced for heresy, she wrote in the *Alexiad*: "His writings wore a frown and in general reeked of bitterness, full of dialectic aggression, and his tongue was loaded with arguments. . . . The man was no more in control of his hands than his tongue."

Anna's career shows that the social status of women improved in Byzantium in her era, at least among the elite. The characters she describes in her writing provide further evidence. For example, according to the *Alexiad*, her father appointed his own mother, Anna Dalassena, as coruler. Anna writes: "One might say that he was indeed the instrument of her power—he was not emperor, for all the decisions and ordinances of his mother satisfied him, not merely as an obedient son, but as an attentive listener to her instruction in the art of ruling."

Anna's importance was twofold: Her book was the first great product of a Greek renaissance that lasted until the last days of the Byzantine Empire, three centuries later, and it is the primary original source of information for the era of the First Crusade.

Apollodorus (first century B.C.) *mythologist*
Apollodorus is largely responsible for the information modern scholars possess concerning the religion and mythology of ancient Greece. Very little is known about his life, and the dates of his birth and death cannot be established with any certainty. It is

known that he studied in the city of Alexandria, which in the first century was the intellectual heart of the classical world, under the tutelage of the astronomer Aristarchus and the philosopher Panaetius. He spent most of his life in his native Athens.

Apollodorus is best known for his work *Bibliothēke* (Library). In essence, this work is a summary and description of the identities and activities of the Greek gods. It discusses famous events in Greek mythology, such as the war between the Titans and Olympians and Prometheus's gift of fire to humanity. It is a straightforward story that Apollodorus tells uncritically and without digressions. From this compilation comes much of the modern knowledge of Greek mythology, although only fragments of the work survive to the present day.

Apollodorus also wrote a work entitled *Chronicle*, a historical reference covering Greek history from the time of the Trojan War to Apollodorus's own time. Again, only fragments of this work remain. Apollodorus wrote other works, some dealing with geography, which is said to have influenced the geographer STRABO, and grammar, but it is his works on mythology that are of greatest importance and that have influenced such writers as John Milton and Ben Jonson.

Apollonius of Rhodes (ca. 295–ca. 247 B.C.) *epic poet*

Apollonius of Rhodes is one of the great literary figures of the Hellenistic Age. He was born in the city of Alexandria, a Greek community founded in Egypt when Alexander the Great conquered that country. During Apollonius's lifetime, Alexandria was the greatest city of the Hellenistic world, not only a hub of economic and political activity but also the center of scholarly life for the Greeks. Apollonius spent many years in Rhodes, another city noted for its civilization and learning, working as both a writer and a teacher. Eventually he returned to Alexandria, called there by the great Library, one of the famed intellectual institutions of the ancient world and the pride and joy of the city. After a period of serving as tutor to the ruling family, the Ptolemies, Apollonius was made head of the Library, where he wrote his only surviving work, *Argonautica*, or "The voyage of the *Argo*."

This piece tells the famous story of Jason and the Argonauts, as they make their way through dangers and adventures in search of the legendary Golden Fleece, which some historians believe is based on real expeditions into the Black Sea dating from the fourth or third millennium. As a well-known legend, the story made an appealing subject for epic poetry; moreover, as far as audiences of the time were concerned, the legend was true. As scholar Green observes, the Greeks felt that tales such as the expedition of the Argonauts and the fall of Troy were datable, if distant, events. To them, "the mythic past was rooted in historical time, its legends treated as fact, its heroic protagonists seen as links between the 'age or origins' and the mortal, everyday world that succeeded it." Both HERODOTUS and PINDAR, writing centuries before Apollonius, make references to the story as though it were actual fact.

The *Argonautica* differs from traditional Greek epic poems in many ways. Like his contemporary and sometime-friend CALLIMACHUS, Apollonius dared to experiment with the traditional epic form as shaped by HOMER. Jason, the hero of the poem, is portrayed as reluctant and not entirely confident

in his abilities, which stands in stark contrast to the valiant and superhuman portrayals of such figures as Achilles and Hercules in other Greek works. Furthermore, despite being an adventurous story, the main theme of the poem is not the quest of heroic achievement, but rather the romantic love between Jason and Medea. Apollonius's achievement in the poem is the psychological depth given to the character of Jason's spurned wife. She is portrayed as having complex feelings, as in the passage from Book III where she waits in worried anticipation for Jason to appear. In a passage rich with poetic tension and epic similes, Apollonius writes, "Medeia could not remove her thoughts to other matters / whatever games she might play," and instead was continually "looking round up the road, peering into the distance":

*The times her heart snapped in her breast,
when she
couldn't be sure
if the sound that scampered by her was
wind or
footfall!
But soon enough he appeared to her in her
longing
like Seirios, spring high into heaven out of
Ocean,
a star most bright and splendid to
observe . . .*

Thus, the writing of Apollonius, with ideas of the reluctant hero and romantic love, stands as a predecessor for much of the Western literature that followed it.

Disagreements over the use and function of the epic genre led Apollonius to argue bitterly and ultimately break with Callimachus. In his lifetime he saw the Alexandrians warm to his work and welcome him as a great poet. Though the Callimachean fashion was to treat poetry with intellectualism and self-conscious irony, Apollonius's explorations of the human heart and the numinous mystery of the Golden Fleece made his poem enduringly popular. Apollonius's lasting impression on the tradition of

Greek epic poetry eventually passed on to the Roman world, where echoes of Apollonius would resound in the Latin epics, particularly in the *Aeneid* of VIRGIL.

Apuleius (Lucius Apuleius, Apuleius of Madaura) (ca. 125–after 170) novelist, philosopher, rhetorician

Apuleius was born in Madaura, a Roman city in North Africa. His father was a *duumvir*, or provincial magistrate. Apuleius attended the University of Carthage and then studied philosophy in Athens, where he followed the teachings of PLATO. In 155 he married Pudentilla, a wealthy widow, but was brought to court and accused of seducing her by magic to acquire her money. Apuleius freed himself from the charge by giving a speech, known today as *Apologia*, in his own defense. He then settled in the African city of Carthage, where he wrote and gave lectures, but nothing is known about his later life.

Though Apuleius wrote a number of philosophical works, he is best known as the author of the *Metamorphoses*, or *Transformations* (also called *The Golden Ass*), the only complete Roman novel to survive from antiquity.

The novel relates the adventures of a young man named Lucius, who engages in a love affair with a slave girl to persuade her to show him the forbidden magical practices by which her mistress transforms herself into an owl. Lucius tries to transform himself but turns into a donkey instead. He then goes through a series of bizarre, dangerous, and humiliating adventures under different masters. Finally he prays to the Egyptian goddess Isis, “the loftiest of deities, queen of departed spirits, foremost of heavenly dwellers, the single embodiment of all gods and goddesses.” Isis appears to him and changes him back to his human form, and he devotes himself to her as a priest.

For a long time, it was thought that the *Metamorphoses* was autobiographical, but it is actually based on an earlier novel by LUCIAN, *Lucius, or the Ass*. Apuleius embedded some other stories within the narrative and changed the ending to reflect the hero’s salvation by Isis. Most of the embedded stories are in the style of the “Milesian tales,” the bawdy stories, written in extravagant language, told by Egyptian street-corner storytellers.

Since Apuleius’s novel is largely comic, many critics have believed it was intended as simple entertainment without any moral message. Others see it as a serious story of religious conversion. Carl Schlamm describes the novel as “a work of narrative entertainment . . . [A]mong the pleasures it offers is the reinforcement of moral, philosophic and religious values shared by the author and his audience.” In this sense, the story is allegorical. It also gives readers an excellent picture of the lives of people in the second century, especially of the popularity of the mystery religion of Isis.

One of the embedded stories in the *Metamorphoses* has become much better known than the novel itself—the myth of Cupid and Psyche, for which Apuleius is the earliest source. The character Lucius listens to the myth when he is in his donkey form. Psyche is so beautiful that people worship her instead of the goddess Venus, and the jealous Venus arranges to have Psyche exposed on a mountain as prey for a monster. But Venus’s son Cupid (Love) falls in love with Psyche. He rescues

her and visits her by night as her husband, but forbids her to see his face. Urged by her jealous sisters, Psyche looks on her husband’s face one night with a lamp, but he awakens, rebukes her for her lack of faith, and deserts her. The grieving Psyche wanders far and wide and must perform many labors assigned her by Venus, but she finally wins back her husband and becomes a goddess.

This story contains the themes of the entire novel. Both Lucius and Psyche are led by curiosity to try to see forbidden secrets of the gods, for which they both pay dearly. Both stories illustrate Plato’s conception of the striving of the soul (*psyche* in Greek) for union with God.

Apuleius’s philosophical works *The God of Socrates, Plato and his Doctrines*, and *On the World*, helped transmit knowledge of the teaching of Plato and his followers to the MIDDLE AGES. The *Florida* is made up of excerpts from Apuleius’s lectures in Carthage.

The *Metamorphoses* has had a great influence on world literature since it was rediscovered in the RENAISSANCE. Boccaccio and a host of successive writers have analyzed, been influenced by, and retold the tale of Cupid and Psyche, as can be seen in William Shakespeare’s *Midsummer Night’s Dream* and John Keats’s “Ode to Psyche.”

Aristophanes (ca. 450–385 B.C.) *playwright*
Born in Attica near Athens, Aristophanes became a playwright as a fairly young man; his first play, *Banqueters* (now lost), was staged in 427 B.C., and he penned approximately 40 comedies throughout his life. He was profoundly influenced by the Peloponnesian War between Athens and Sparta, which erupted in 431 B.C. and lasted more than 25 years.

Precious little is known about Aristophanes' life; what can be gleaned comes mainly from his 11 surviving plays, in which he attempts to cultivate the self-image of a brilliant but underappreciated artist. However, in his dialogue *The Symposium*, the philosopher PLATO portrays Aristophanes as a rascal. In Plato's work, Aristophanes gathers with other erudite and prominent Athenians at the home of tragic poet Agathon and admits to having spent the previous day carousing. After attempting various tactics to cure a violent case of the hiccups, Aristophanes narrates an entertaining and fanciful account of the origins of sexual desire that nevertheless manages to reveal his sophisticated intellect, learnedness, and familiarity with the scholarly theories of the day.

Critics defer to Aristophanes as a satirist of the highest order, and his work represents the only extant examples of Old Comedy, which is characterized, in part, by farcical plots, satire, and social and political commentary. Aristophanes caricatures self-important individuals as being dim-witted and foolish. He indiscriminately mocks theories of education, intellectuals, poets, women's suffrage, religion, and political systems, including democracy. In addition, he criticizes the affectations of civil society by alluding to bodily functions, indelicate acts, and parts of the anatomy usually not discussed in polite company. No fantasy was too outrageous for Aristophanes to imagine, and no subject was immune to his brutal, bawdy, and often vulgar wit. Yet his poetic dialogue at times reveals a tender, sympathetic soul. His protagonists are often underdogs, such as rural farmers and women, who have no real power or influence but who, in the world of the play, realize fantastic dreams.

Part of Aristophanes' breadth can be understood in context: Athenians enjoyed absolute freedom of speech during most of Aristophanes' life. Nevertheless, when *Babylonians* (426 B.C.) was presented at the Great Dionysia, an annual festival held to honor the god Dionysus, the demagogue Cleon denounced Aristophanes for ridiculing the city's elected magistrates before numerous foreign visitors.

Though Cleon's charge was serious, Aristophanes was not prosecuted, and he exacted revenge in his next two productions. In the *Acharnians* (425 B.C.), in which the farmer Dikaiopolos arranges a one-man truce with Sparta to end the Peloponnesian War, one scene shows Aristophanes' version of the indictment. Worse, *Knights* (424 B.C.) depicts Cleon as the grasping and unscrupulous slave of a foolish old man, Demos, who symbolizes the Athenian people. When Demos plans to replace him, Cleon attempts to curry favor in an uproarious display of self-abasement. Both plays were awarded first prize in the theatrical contests at Lenaia.

Clouds, first produced in 423 B.C. and later revised, spoofs intellectuals, modern theories of education, and even the great philosopher SOCRATES, who is suspended in air, suggesting he is less than firmly rooted in reality. Aristophanes returns to political satire in *Wasps* (422 B.C.), wherein the democratic jury system, which the Athenians held in high esteem, becomes the target of his comic savagery. The play features an old man with a consuming passion for jury service because it allows him to wield irresponsible power and deliver harsh punishments. His son argues that the power belongs to the prosecutors who use the jurors to exact revenge on enemies. Father and son set up a mock court in which a dog prosecutes another dog for stealing some cheese, and the old man is tricked into voting for acquittal. The singers and dancers of the chorus dress as wasps to suggest that those who would spend their days on jury duty are peevish and predisposed to find fault.

Peace won second prize at the Great Dionysia in 421 B.C., when the Peace of Nicias was being ne-

gotiated between Athens and Sparta. Like Dikaipolos of *Acharnians*, Trygaios is a war-weary farmer who takes matters into his own hands. He fattens up a dung-beetle to immense proportions and then flies it to Mount Olympus to appeal to the gods for peace. The next surviving play, *Birds*, received the second prize at the Great Dionysia in 414 B.C. Three years later, the renewed conflict between Athens and Sparta provided the subject matter for *Lysistrata* (411 B.C.). In this play, the women of Athens and Sparta go on strike, withholding conjugal relations to force their warrior husbands to reconcile with their enemies. To this day, *Lysistrata* is performed to express antiwar sentiment.

Like his other plays, *Frogs* (405 B.C.) shows Aristophanes using comedy for a serious purpose. On the surface, the action parodies Greece's eminent poets and the gods themselves. The playwrights SOPHOCLES and EURIPIDES have died, leaving Athens with no important living tragedian, so Dionysus travels to the underworld to retrieve Euripides. To the latter's indignation, Dionysus returns instead with AESCHYLUS, whose poetry had been weighed on a scale like so much cheese and found to be more substantial, weighted, Aristophanes suggests, by ponderous language and overelaborate syntax. In reality, Aristophanes took seriously the poet's ability to sway public opinion, and *Frogs* reached its audience at a time when Athenian morale was flagging and the preservation of the city was at stake.

The Peloponnesian War came to an end in 404 B.C. when the people of Athens surrendered to Sparta. The conquerors installed an oligarchy, a form of government in which power is in the hands of a few, to replace democracy. This greatly impeded free speech. As a result, Aristophanes' final comedies lack the bite of his earlier plays and feature few direct references to current events.

Critical Analysis

Birds (414 B.C.) is considered Aristophanes' utopian tour de force, boasting a fantastical plot, splendid costumes, exuberant dialogue, and grace-

ful lyric poetry. Wearing by the constant taxation and litigation that are part of Athenian life, two citizens, Peisetairos and a companion, seek a more suitable place to live. They visit the mythical hoopoe bird in the hopes that he has spied an appealing metropolis from the air but decide instead to build their own utopia in the sky from which they can reign over all humankind. The hoopoe gives the Athenians a potion that causes them to sprout awkward wings, and the new city is dubbed "Cloudcukooland." Immediately, the self-serving opportunists appear: a priest who attempts to ingratiate himself by reciting a list of bird-gods; a fortune-teller who offers his services for a fee; and officials who threaten legal action if the new city doesn't comply with various regulations.

The gods are furthermore enraged by the Athenians' presumption, and a battle ensues. At last, a divine embassy arrives in Cloudcukooland to resolve the conflict, and Peisetairos arranges a luncheon consisting of birds "condemned for revolting against the democratic birds." The gluttonous gods agree to a truce. In the end, the utopian city is no less politically corrupt, imperialistic, or bureaucratic than Athens; and Peisetairos is no less arrogant and ineffectual than any of the demagogues whose government he was fleeing.

Contemporary audiences continue to enjoy *Birds* for many reasons, not the least of which is its spectacle: the magnificently arrayed chorus of birds, each with a distinctive call; the appearance of a messenger goddess via theatrical crane; and the final battle between the Athenians and the birds, in which the men's weapons consist of cooking utensils. The action of the play aptly illustrates the qualities which continue to make Aristophanes' work accessible and appealing: His conflicts are relevant, his characters have complex personalities, and his ideals always suffer tragic defeat when meeting with the real world.

The New Comedy introduced with MENANDER eventually replaced the Old, but Aristophanes continued to fascinate audiences, perhaps because ARISTOTLE included him in his widely influential *Poetics*. Eugene O'Neill, Jr., in *Seven Famous Greek*

Plays, credits the playwright with a timeless appeal, saying, “There has never been anything quite like the comic drama of Aristophanes, and regrettably there will never be anything quite like it again.” His “exceptionally high intellect and inexhaustibly fertile imagination” are expressed in “concentrations of splendid and dazzling conceits which follow one another in breathless abundance,” while the “soft side of his personality expresses itself in his lyrics,” which astound and delight. His plays seek to instruct as well as entertain, and with this blend of motives, Aristophanes set a standard by which all great art is judged.

Aristotle (384–322 B.C.) *philosopher, scholar, teacher, treatise writer*

Aristotle was born in the small Greek town of Stagirus (now Stagira). His father, Nicomachus, spent some time serving as personal physician to Amyntas II, king of Macedonia, at the kingdom’s capital of Pella. Aristotle’s mother and father died when he was a boy, and he was reared by other family members in the town of Atarneus in Asia Minor. In his late teens, Aristotle moved to Athens and enrolled in PLATO’s famed Academy to study philosophy, mathematics, and the sciences. There he remained until Plato’s death 20 years later. Aristotle and

some fellow scholars soon relocated to settle in Atarneus, which was ruled by another Academy alumnus, Hermias, whose niece, Pythias, Aristotle married.

Around 343 B.C., Aristotle was invited by Philip of Macedonia, son of Amyntas II, to come to Pella and tutor his 13-year-old son, the future Alexander the Great. The tutorship lasted only three years, for the young man was obliged to take a more active role in Macedonian affairs; he would become one of the most brilliant military leaders of all time. In 335 B.C., Aristotle returned to Athens to establish his own institution of higher learning, the Lyceum, where he taught and wrote. His surviving works, or treatises, were probably lecture notes or textbooks for his classes. Upon Alexander’s death in 323 B.C., anti-Macedonian sentiment in Athens became violent, and Aristotle, with his ties to the erstwhile royal family, was forced to flee for his own safety. He and his family sought refuge at Chalcis, where he died shortly thereafter.

Aristotle mastered every field of learning known to the Greeks, as demonstrated by the breadth of his treatises, which cover subjects ranging from biology to public speaking to literary criticism. Indeed, he assumed the task of identifying the distinguishing characteristics of each of the scholarly disciplines. Because humans are the only animals that possess the faculty of reason, Aristotle believed that to behave as a human being is to behave rationally. Furthermore, he defined three areas that comprise all possible human knowledge and activity in which the power of reason is expressed: theoretical, productive, and practical.

Theoretical is the purest form of rational knowledge, since it seeks truth only for its own sake. The person who pursues theoretical knowledge has no ulterior motive beyond understanding and insight. Examples of the theoretical branches of learning are natural sciences such as physics (bodies at rest and in motion), abstract mathematics, and metaphysics (the nature of being and reality).

The productive sciences, such as the arts, use reason for a specific purpose: to generate an end product. Practical sciences employ rational abili-

ties to organize life within society, such as in the practices of ethics and politics. Living an honorable and productive life is the goal of the practical sciences.

Aristotle's *Physics* is a logical and methodical inquiry into such questions as how things come into being and how they are changed, and the difference between the fundamental nature of a thing and its incidental characteristics.

Metaphysics begins by stating that all people, by their very nature, desire knowledge. After all, Aristotle argues, that is why we value our senses so highly and our eyesight the most; they help us gather the information we desire. The knowledge Aristotle seeks in this treatise is the very nature of being, the basic and eternal principles of reality itself. Because God is depicted as the quintessential eternal and unchanging being and the primary cause of all that is, *Metaphysics* is also a theological tract.

In *Nicomachean Ethics* (named for Aristotle's son, who edited it after the philosopher's death), he states that "Every art of applied science and every systematic investigation, and similarly every action and choice, seem to aim at some good; the good, therefore, has been well defined as that at which all things aim." Happiness is the "good" toward which human activity aims, and people cannot be happy unless they live and act in a virtuous manner. Moral behavior is learned and becomes habitual as it is practiced, according to Aristotle. However, actions are considered virtuous only if they are intentional and take place within the context of human society. Ultimately, Aristotle conceded that ethics was an imprecise science.

In the category of the practical sciences, Aristotle wrote on such topics as ethics, politics, and rhetoric. In *Rhetoric* he offers, after careful observation of human behavior, a practical psychology for teaching the art of persuasive public speaking. The first book outlines the nature of rhetoric and the second its means and ends and the ways rhetoric can influence decisions, while the third book analyzes techniques of successful rhetorical style. The practical analysis of thought and conduct contained in these three books influenced Latin

rhetoricians like CICERO and QUINTILIAN and thereafter swayed thinkers in the MIDDLE AGES, Renaissance, and beyond.

Politics contains a discussion of the role of the individual in the government of the city-state. Aristotle describes humans as political and social beings; some individuals are meant to lead, and others must be led. He condoned slavery as a natural state of affairs because he believed that those who became slaves were not capable of rational thought; otherwise, they would be rulers instead of servants. This, of course, is a circular argument; the fact that a phenomenon can be observed does not, by necessity, make it appropriate.

Aristotle was one of the great philosophers, but not all of his ideas have borne the tests of time and scrutiny. *Poetics* is the outstanding exception.

Critical Analysis

Poetics is a pioneering work that identifies the criteria and establishes the standards for excellence in literature, particularly tragic drama. Aristotle introduces such enduring concepts as unity of plot and action; catharsis, or a cleansing of the audience's emotions; and HUBRIS, arrogance that leads to a hero's downfall, which is itself an example of *hamartia*, a tragic flaw or catastrophic misjudgment.

Human beings are possessed of a natural ability to imitate, Aristotle says, and enjoy both viewing and producing imitative works of art. The basic ingredients of tragedy are, in order of importance, plot, character, thought, diction, song, and spectacle; and each element plays a part in artistic imitation.

According to Aristotle, drama is superior to EPIC poetry because it is enhanced by song and spectacle, the plot is more unified, and it achieves its artistic goal in a shorter period of time because the episodes are short. In an epic poem, the episodes are longer, even if there is not much to the story. As an example, he says, HOMER's epic poem the *Odyssey*, which is composed of over 12,000 lines, can be summed up as follows:

A certain man has been away from home for many years, kept that way by [sea god] Poseidon, and he ends up being alone. Meanwhile, his affairs at home are in such a state that his wife's suitors are squandering his property and are plotting against his son. Tempest-tossed, he arrives home; he reveals himself to some; he attacks and destroys his enemies and is saved. That is the essence of the *Odyssey*; the rest is made up of episodes.

Poetics instructs its readers that the best tragedies feature a protagonist who possesses virtue and is prosperous. The transformation of his good fortune to misfortune is caused not by his wickedness or indulgence in some vile practice, but by hamartia: "an error from ignorance or bad judgment or some other such cause."

The finest plots present events that follow one another of necessity as a matter of cause and effect. The fear and pity aroused in the audience should not be achieved by spectacle, Aristotle says, but rather by the structure of the events themselves, as was practiced by the better tragedians such as SOPHOCLES.

Aristotle criticizes the use of artificial dramatic devices. For instance, scenes of recognition between long-lost loved ones should occur as a consequence of events, he says, not through contrivances such as signs from the heavens, the detection of physical scars, or the recollection of keepsakes. He particularly disliked the practice of DEUS EX MACHINA ("god from the machine"), a device used frequently in the plays of EURIPIDES.

Only a fragment of *Poetics* remains for contemporary readers to enjoy. Nevertheless, scholar Sheldon P. Zitner rightly calls it "the most influential work of literary criticism in Western culture." Says he, "from the Renaissance on, the *Poetics* has been the foundation of both literary theory and 'practical' criticism, and it has been translated and retranslated, interpreted, applied, and cited in polemics as the final authority."

Arnaut Daniel (Arnaud Daniel)

(fl. 1180–1200) *poet, troubadour*

Arnaut Daniel was born into a noble family at the castle of Riberac in Perigord, France. He was a member of the court of Richard Coeur de Lion and was highly regarded as a Provençal poet and TROUBADOUR. Troubadours flourished from the late-11th to the late-13th century in southern France and in northern Spain and Italy, and they acquired a social influence unprecedented in the history of medieval poetry. They generally employed complex poetic structures to explore the theme of love, as Arnaut does in his poem "Anc ieu non l'aic, mas elha m'a" ("I don't hold it, but it holds me"):

... I tell a little of what's in my heart:
fear makes me silent and scared;
tongue hides but heart wants
what on which, in pain, so broods

*I languish, but I do not complain
because so far
as the sea embraces the earth
there's none so kind,
actually
as the chosen one
for whom I long. . .*

This, like many troubadour songs, would have been set to music and performed in noble dining halls.

The poetic style of Arnaut's poems is called the *trobar clus*, which used intricate rhymes and complex metrics. Words of the *trobar clus* were chosen more for their rhythmic and rhyming functions than for their meaning. In terms of form, Arnaut wrote most of his poems in sestinas, six unrhymed stanzas of six lines each that involved elaborate word repetition. He was, in fact, credited with inventing the sestina.

Arnaut was admired by Petrarch and greatly influenced DANTE, who imitated his sestina form, dubbed him the "best crafter of the mother tongue," and gave him a prominent place in the *Divine Comedy*. In the 20th century, interest in his work was revived by T. S. Eliot and Ezra Pound, who translated several of his sestinas.

Only about 18 of Arnaut's poems survive, and they are among the best examples of troubadour poetry. Arnaut is remembered for his ability to write of love in language that was also flavored by religion, eroticism, and humor, and to set all of his words to music that gave his songs complex metrical schemes.

'Attār, Farīd od-Dīn (Farīd od-Dīn Mohammad ebn Ebrāhīm 'Attār)

(ca. 1142–ca. 1220) *poet, philosopher*

Farīd od-Dīn 'Attār was one of the greatest mystical writers and poets of the Muslim tradition. His works strongly influenced later Persian and other Islamic literature in both subject matter and style. Farīd od-Dīn was born in Nishapur, in northeastern Iran. Not much is known about his life, but the name 'Attār (perfumer or druggist) may indicate his family's line of work. As a young man he traveled extensively throughout most of the Muslim world, from Egypt to Central Asia and India, then returned to his hometown to pursue his writing. Apart from writing his many poems (over 45,000 couplets) and mystical prose works, he was a diligent collector of the sayings and writings of the great Sufi saints and masters who, in the previous two centuries, profoundly influenced the civilization of Persia.

Farīd od-Dīn's most celebrated work is his long allegorical or didactic epic, *The Conference of the Birds*. The poem follows the birds as they search for the Simurgh, or Phoenix, whom they want to make their ruler. Passing through the philosophical trials and tribulations of the seven valleys of inner perfection, most of them die through a fatal attachment to the self: the nightingale cannot give up the rose, nor the parrot its cage; the wagtail decides it is too small, the peacock too large. The remaining 30 birds (*simurgh*) find the king's palace at last, only to see themselves reflected in the phoenix's face.

The searchers, representing aspiring Sufis, are thus identified with the divine beloved they have been seeking all their lives. The beloved tells them:

*Since you came here as thirty birds, you
appeared thirty in the mirror.
But We are altogether far superior: We are
Simurgh, the One Reality.
Known by a hundred glorious Names. Be
annihilated, so that you may find
yourselves in us.*

Farīd od-Dīn's *divan*, or poetry anthology, is suffused with many more such verses of mystical and philosophical exploration. Two examples are *Book of Affliction*, in which Farīd od-Dīn traces the progress of a soul through 40 stages of isolation; and *Elahinama*, in which a king instructs his six sons on how to attain perfection of the self and, through that, all their other desires.

One of Farīd od-Dīn's prose works, *Muslim Saints and Mystics*, is a thorough account of the early Sufi movement that has served as a source book for historians of the era. Among his most popular works is *Book of Secrets*, a collection of edifying short stories.

Some 30 of 'Attār's 100 books have survived. The poet had a great influence on all subsequent Persian mystics, including the great mystic poet RUMI.

Attic orators (fifth century–fourth century B.C.)

During the Golden Age of ancient Greece, many of the Greek city-states began experimenting with representative forms of government. Rather than being ruled by kings or tyrants, the citizens of these city-states attempted to rule themselves in

the name of the common good. It was the birth of democracy.

One of the keys to this new form of government was the assembly, where the citizens of a city would come together to debate and discuss political and social issues. Differences of opinion were freely aired, and each speaker was allowed the opportunity to convince the audience to agree with his argument. This gave birth to oratory (also known as rhetoric), the art of speaking well and persuasively. In addition to political matters, oratory was used by lawyers to persuade the courts to find in favor of their clients.

The city-state of Athens, which controlled the region known as Attica (from which the Attic orators take their name), was indisputably the most powerful democracy in Greece, and the influence of the Athenian Assembly was tremendous. The fact that Athens was deeply involved in all the great political, military, and diplomatic events of the day meant there was a great deal for Athenian politicians to discuss. The two centuries between 500 and 300 B.C. saw two Persian invasions of Greece, the rise and fall of Athenian power, the disastrous Peloponnesian War, the conquest of Greece by Macedonia, and the astonishing career of Alexander the Great. Through all these years, the politicians and orators of Athens constantly debated and discussed these events, attempting to decide what to do. It is no surprise that many eminent orators lived and worked in Athens during this time.

One of the first of the great Athenian orators was Antiphon (ca. 480–411 B.C.), who was a lawyer interested in murder cases. He did not take much of an interest in politics until near the end of his life, when he organized a revolt by oligarchs, wealthy men who distrusted democracy. The revolt failed, and Antiphon was executed for treason against Athens. His most famous works are the *Tetralogies*, four hypothetical paired speeches, and surviving fragments of his speeches on law and justice.

Another orator who favored the oligarchs was Andocides (ca. 440–391 B.C.). He wrote his speeches *On the Mysteries*, *On His Return*, *On the*

Peace with Sparta, and *Against Alcibiades* in defense of charges brought against him for his involvement in the defacing of the statues of *Hermes* (considered religious monuments) and another religious scandal relating to the revelation of the Eleusinian Mysteries during the Sparta peace mission, for which he was exiled once from 415 to 403, and again in 392.

Not all the orators favored the oligarchs, however. One such democrat was *LYSIAS* (459–380 B.C.), who lived and worked mostly in the aftermath of the Athenian defeat in the Peloponnesian War. During this time, a continual struggle was being waged between the oligarchs and the democrats. *Lysias*, who was a foreigner, was granted Athenian citizenship for his assistance in helping democracy return to Athens. He was regarded as an outstanding speaker and was knowledgeable on a wide variety of subjects. His speech *On the Murder of Eratosthenes*, about a peasant who murders *Eratosthenes*, is perhaps his best-known work, but he also wrote a speech in defense of *SOCRATES* that is known for its simplicity and clarity.

During the fourth century B.C., as King Philip of Macedonia began to encroach upon Greek independence, the Athenians constantly debated how to respond. One orator who favored accommodating Philip was *Aeschines* (389–314 B.C.), who, as *DEMOSTHENES*' rival, spoke in favor of peace and against opposing Macedonia. Three of *Aeschines*' speeches survive: *Against Timarchus*, a sanction against *Timarchus* for his homosexuality; *On the Embassy*, a defense against *Demosthenes*' charge that he was accepting bribes; and *Against Ctesiphon*, his opposition to *Ctesiphon*'s claim that *Demosthenes* should be awarded the golden crown. In the matter of King Philip's rule, *Aeschines* accepted the point of view of *ISOCRATES* (436–338 B.C.), who states in his speech *Philip* that he wanted King Philip to unite all of Greece under a strong ruler. *Isocrates* is also known for having trained many of the great Athenian orators of his day, including *Hyperides*, *ISAEUS*, and *Lycurgus*.

Other orators, however, were bitterly opposed to Macedonia and spoke out in favor of continued

resistance. One of these men was *Hyperides* (ca. 390–322 B.C.), who spoke out repeatedly against King Philip, even after Athens had been defeated by Macedonia at the Battle of Chaeroneia. He is believed to have written more than 70 speeches, all of which were lost until the latter half of the 19th century, when six were discovered in Egypt. In the debate over Macedonia's rule of Athens, *Hyperides* was an ally of *Demosthenes* (384–322 B.C.), who was bitterly opposed to peace with Macedonia, as can be seen in his eloquent speeches known as *Philippics*. *Demosthenes* is still regarded by many as the greatest orator Athens has ever produced. He is believed to have been a student of the Attic orator *Isaeus* (fourth century B.C.), whose speeches are valued for the legal, social, and cultural information they provide on ancient Greece.

After Macedonia had ended Greek independence, Athens's political and military power declined. Nevertheless, debates continued in the Athenian assembly. An orator named *Lycurgus* (ca. 390–324 B.C.) sought to persuade the citizens of Athens to become more religious and moral and also attempted to make the city government more efficient. He studied the art of rhetoric under *PLATO* and *Isocrates*, but he is most remembered for his efforts as a financier in increasing Athens's wealth.

The last of the great Athenian orators was *Dinarchus* (ca. 360–after 292 B.C.), who actually came to Athens from the city-state of Corinth, and who wrote speeches seeking to prosecute many distinguished Athenians for corruption, including *Demosthenes*. His works mark the decline of Attic oration in ancient Greece.

The Athenian tradition of oratory has had a tremendous influence on history and the art of debate. Today, in places like the United States Congress, the British Parliament, the Sansad of India, and the Diet of Japan, politicians debate and discuss the great issues facing their nations, and in city councils and town hall meetings across the world, ordinary citizens do the same regarding local issues facing their communities. But it was in the city-states of ancient Greece, and in Athens in par-

ticular, that the art of oratory first came into being through the efforts and skills of the Attic orators.

Aucassin et Nicolette (13th century)

French tale

Aucassin et Nicolette is the only surviving example of the genre of the French *chanteatable*, a medieval tale told in alternating sections of prose and verse. The word *chanteatable* is from Old French and literally means “(it) sings (it) recites.” The term may have been coined by the author of *Aucassin et Nicolette*, for he says in the work’s concluding lines, “No *chanteatable* prent fin” (“Our *chanteatable* draws to a close”). Nothing is known of the author of this work except that he may have been a professional minstrel from northeastern France, as the work is written in this dialect.

Aucassin et Nicolette is a tale of adventure revolving around the romance of Aucassin, the son of the Count of Beaucaire, and Nicolette, a captive Saracen woman recently converted to Christianity. The work shares much in common with an earlier French romance titled *Floire et Blancheflor* (ca. 1170): both works share common Moorish and Greco-Byzantine sources and use similar themes of separation and reunion (the lovers endure many complications, including flight, capture, and shipwreck before they are finally able to marry).

The author of *Aucassin and Nicolette* skillfully depicts the ardor of the characters’ young love, yet he also mocks the EPIC and romance forms by inverting the roles of the two lovers. Nicolette is portrayed as an intelligent, resourceful young woman (in fact, she proves to be the daughter of the King of Carthage) who disguises herself as a minstrel in order to be reunited with her love. Aucassin, however, is depicted as a pathetic lovesick swain:

*He made his way to the palace
Climbed the step
And entered the chamber
Where he began to cry
And give vent to his grief
And mourn his beloved*

He lacks initiative, is ungrateful to his parents, and must ultimately be bribed to uphold his duties as a knight. Only under the threat of death does he rise to the task of defending his honor. Aucassin is also shown to be a poor Christian when he states he would prefer to be in hell with his love rather than in heaven.

The verse and musical portions of the work are considered to be more finely wrought than the prose narrative, in which the author displays comparatively less skill. The only surviving manuscript of *Aucassin et Nicolette* is housed in France's Bibliothèque Nationale. It is valued for its mixture of prose and verse, reversal of gender roles, and subtle mocking of courtly fiction.

Augustine, Saint (Augustine of Hippo, Aurelius Augustinus) (354–430) *memoirist, theologian, philosopher, essayist*

Saint Augustine was born in Thagaste, the site of modern Souk Ahras, Algeria. His father, Patricius, was a pagan who died while Augustine was still in his teens. His mother Monica was a devout Chris-

tian who profoundly influenced Augustine's way of thinking in his later years.

Much of what we know about Augustine's life comes directly from his *Confessions*. He was educated in Thagaste and Madaura and then sent to Carthage to study rhetoric. There, abandoning the Christian Church and its teachings, he took a mistress with whom he had a son, Adeodatus, and began to dabble in Manichaeism, a Persian religious philosophy that held a dualistic view of good and evil.

Augustine taught rhetoric in Carthage, Rome, and finally Milan, where he fell under the influence of Bishop Ambrose, whose sermons inspired him to read the Epistles of Saint Paul. In 386, Augustine converted to Christianity and devoted himself to scholarly and literary pursuits. He was ordained as a priest in 391 and established a new monastery near Hippo in northwest Africa. He was consecrated assistant bishop there by the ailing Valerius in 396 and spent the remainder of his life caring for the diocese. He died while Hippo was under siege from the invading Vandals.

Augustine's literary output was phenomenal. He produced tracts against heretics and enemies of the church, including the Manichaeans; philosophical and literary essays in a dialogue form inspired by the works of PLATO; scriptural exegeses; religious instruction and pastoral works; and a prodigious quantity of personal correspondence. Among his most important earlier works are *Contra academicos* (Against the Skeptics), which counters the academic skepticism of the followers of CICERO; *De beata vita* (On the Happy Life), in which he argues that enduring happiness is to be found only in the love of God; *De ordine* (On Order), an attempt to explain how evil can exist when God is both omnipotent and completely good; *De immortalitate animae* (On the Immortality of the Soul, 386/387); and *De animae quantitate* (On the Greatness of the Soul, 387/388), inquiries into the nature of the soul and its aspects. He also wrote *De musica* (On Music, 387/391), in which he addresses time and number in the abstract and treats music as a matter of rhythm; *De libero arbitrio*

(On Free Will, 388–395), in which he argues that “willing” in the appropriate way will bring about happiness; and *De magistro* (The Teacher, 389), a dialogue between Augustine and Adeodatus on how knowledge is obtained and transferred.

City of God, written between 413 and 426 and composed of 22 books, is Augustine’s most well-known work besides *Confessions*. Following the sack of Rome by the Goths in 410, the Christian Church was widely blamed for the loss of faith in the pagan gods and the subsequent fall of the Roman Empire. Augustine answered these charges with *City of God*, a refutation of the idea that in order to flourish people must appease a diverse and sundry assortment of gods, as well as an interpretation of the development of contemporary society and Western thought in the context of the struggle between good and evil.

Critical Analysis

Confessions, written in 397–398, is both a memoir and a testament of faith. Even as a child, Augustine constantly faced temptation in an environment characterized by powerful pagan influences, as was typical of the time and place of his youth. He disobeys his parents and teachers, participates in sporting events or attends theatrical productions when he is supposed to be studying, and resists Monica’s attempts to expose him to the teachings of the Christian Church. “I was a great sinner for so small a boy,” he writes.

As an adolescent, he finds that he derives genuine pleasure from doing things that are forbidden simply because they are forbidden, and when he goes to Carthage to study rhetoric, he lands “in the midst of a hissing cauldron of lust.” In this hedonistic environment, he soon finds a suitable object of his affection, although his joy is tempered by “the cruel, fiery rods of jealousy and suspicion, fear, anger, and quarrels.” Nevertheless, Augustine joins the other sensualists of Carthage in their endless pursuit of pleasure. “Give me chastity and continence,” he prays, “but not yet.”

At age 19, Augustine’s ambition is “to be a good speaker, for the unhallowed and inane purpose of

gratifying human vanity.” As part of his studies, he is assigned CICERO’s *Hortensius*, which arouses in him a love of philosophy. “It altered my outlook on life. . . . All my empty dreams suddenly lost their charm and my heart began to throb with a bewildering passion for the eternal truth. . . . In Greek the word ‘philosophy’ means ‘love of wisdom,’ and it was with this love that the *Hortensius* inflamed me.” In his quest, he joins the Manichees, whose dualistic and materialistic approach to good and evil appeals to him: Blame for the sin is cast not on the sinner, but elsewhere. For nine years, to his mother’s great distress, Augustine is “led astray . . . and [leads] others astray” by his affiliation with the Manichees.

When Faustus, a bishop of the Manichees, comes to Carthage, Augustine is disappointed that the bishop cannot resolve the discrepancies between the tenets of the Manichees and known scientific facts. “The Manichaean books are full of the most tedious fictions about the sky and the stars, the sun and the moon,” he writes. “I badly wanted Faustus to compare these with the mathematical calculations which I had studied in other books . . . but I now began to realize that he could not give me a detailed explanation.”

Augustine’s final rejection of the Manichaean doctrines would come in Milan when, listening to the sermons of AMBROSE, he recognizes his prior misconceptions about Christian doctrine. Scripture may be understood metaphorically, not literally, he realizes. Evil is not a material substance, as the Manichees would have it, but a distortion of free will. He also acknowledges the factors that are preventing him from embracing Christianity wholeheartedly. They include his worldly ambitions, his reluctance to relinquish his mistress, and his difficulty conceiving of God as a spiritual entity. Nevertheless, he wishes with increasing agitation and desperation to convert to the faith.

One day he is weeping bitter tears in the garden of his house, asking for the grace to “make an end of my ugly sins,” when he hears a child’s voice saying, “‘Take it and read, take it and read.’” Taking this as a divine message, Augustine opens Paul’s

Epistles and reads the first passage his eyes land upon: “Not in revelling and drunkenness, not in lust and wantonness, not in quarrels and rivalries. Rather, arm yourselves with the Lord Jesus Christ; spend no more thought on nature and nature’s appetites.”

“I had no wish to read more and no need to do so,” Augustine recalls. “For in an instant, as I came to the end of the sentence, it was as though the light of confidence flooded into my heart and all the darkness of doubt was dispelled.”

He relates his conversion to Monica, who is overjoyed, and the following year (387), Augustine is baptized on Easter Sunday.

Thus concludes the autobiographical portion of *Confessions*. In the remainder of the book, Augustine variously examines his ability to master temptation and expounds upon the first chapter of Genesis, discussing the nature of time with respect to God (i.e., there was no “time” as we know it before God created the heavens and the Earth).

“The life of Augustine has a special appeal because he was a great sinner who became a great saint and greatness is all the more admirable if it is achieved against odds,” writes the translator of *Confessions*, R. S. Pine-Coffin. “He hinges on the incidents of his life such considerations as tend to elevate the mind and heart of the reader.” Pine-Coffin adds, “The *Confessions* and the *City of God* rightly belong to the great literature of the world.”

Moreover, Augustine’s theories of sin, forgiveness, and free will have provided the foundation for basic Roman Catholic tenets as well as those of Calvinism, Lutheranism, and other religions.

Augustus (Gaius Octavius) (63 B.C.–

14 A.D.) *emperor, patron of writers*

Augustus was the first and perhaps the greatest of the Roman emperors, rising to power in the aftermath of the fall of the Roman Republic. The adopted son and successor of Julius CAESAR, Augustus brought stability and peace to Rome, ushering in an era of tranquillity known as the *Pax Romana*, or “Roman Peace.” Augustus was also a writer of some talent, but his most important contributions to the world of literature came from his support and encouragement of some of the greatest writers the Western world has ever produced.

Born Gaius Octavius, Augustus came from a distinguished family and received an excellent education. He was fascinated by philosophy and literature and initially possessed a rather introverted personality. As a young man, he served with his great-uncle, Caesar, although his political and military roles were limited. When Caesar was assassinated in 44 B.C., Augustus was surprised to discover that he had been made Caesar’s heir, after which he became Gaius Julius Caesar.

Over the next several years, Augustus was engaged in a bitter political and military struggle, first with Caesar’s assassins, then with his rival for power, Marcus Antony. In 31 B.C., at the decisive Battle of Actium, the forces of Antony were defeated and Augustus had emerged as the single most powerful man in the Roman world.

In 27 B.C., the Roman Senate surrendered virtually all its power to Augustus, who thereafter ruled as emperor. This is the traditional date for the end

of the Roman Republic and the beginning of the Roman Empire. For the remaining four decades of his life, Augustus would use his power to reform the government of the Empire and bring order to the entire Mediterranean region. He launched a sweeping program of construction that beautified the city of Rome itself, improved the transportation and communication systems in the Imperial provinces, developed the economy, and reformed the military. By the time of his death, the Roman Empire was peaceful and prosperous.

Augustus was deeply interested in literature and commissioned several writers to produce works that glorified Roman achievement. By far the most famous of these works was the *Aeniad*, written by Rome's greatest poet, VIRGIL. The author had left instructions that the epic poem be destroyed when he died, but Augustus ordered that it be preserved, thus saving one of the great works of classical literature.

Augustus also supported the work of LIVY and HORACE. Most writers found Augustus to be an extremely positive influence and welcomed the gift of peace he had brought to their world. For reasons which remain unclear, the emperor quarreled with the writer OVID, but the general attitude of Augustus toward the great authors of his day was one of encouragement and assistance. This greatly furthered the literary arts of Rome, which has deeply influenced Western literature to the present day.

Augustus was himself a writer, although most of the work he produced has been lost. He penned an autobiography and at least one poem and one play. His only extant work is *Res Gestae Divi Augusti*, or "Acts of the Divine Augustus." This was his last will and testament, in which he described for posterity what he believed his greatest achievements were. It is in this work that he makes the celebrated remark that he found Rome a city of bricks and left it a city of marble.

Averroës (Abū al-Walīd Muhammad ibn Ahmad ibn Muhammad ibn Rushd) (1126–1198) philosopher

Averroës was the last in a great line of medieval Arabic philosophers. The author of many books in all fields of knowledge, he was particularly known as an interpreter of the Greek philosopher ARISTOTLE and a defender of philosophy in a religious, Muslim civilization. His greatest influence was in Europe, where his works inspired Christian scholars for hundreds of years.

Averroës was born into a prominent family of scholars and public servants in Córdoba, the ancient capital of Muslim Spain. His grandfather and father served as *qadis*, or chief judges and administrators; he himself rose to that position, first in Seville (1169) and then in Córdoba (1171). He studied with prominent scholars, and took advantage of Córdoba's famed library of some 500,000 volumes.

Around 1160, Averroës was introduced to the caliph, Abu Yaqub Yusuf, himself an accomplished scholar. The ruler was so impressed with his guest that he asked him to write a commentary on all of Aristotle, a task that Averroës devoted much of his life to completing. Despite moral support from the caliph, the philosopher had to contend with a public mood that was hostile to Greek philosophy and to any learning outside the confines of traditional Muslim theology and law. (Spain and Morocco were then ruled by the North African Almohad Dynasty, which had been founded as an austere Muslim reformist movement.)

Sometime in the 1170s, the caliph brought Averroës to Marrakesh in Morocco to be court physician. There, under the caliph's protection, Averroës wrote his greatest works in defense of philosophy. Yaqub's son, al-Mansūr, confirmed the appointment on his succession to the throne in 1184. However, in 1195, al-Mansūr banished Averroës to a village in Spain and had his philosophical book burned. Historians claim the caliph had acted to gain wider support for a *jihad*, or holy war, against Christian Spain. Three years later, he forgave Averroës and invited him back to Marrakesh, where the philosopher died.

Critical Analysis

When the Arabs conquered the ancient civilizations of the Middle East in the seventh century, they discovered Greek philosophy, which dominated intellectual life at that time. Many of the works of Aristotle and some of PLATO were translated from Syriac translations of the Greek into Arabic.

The new Muslim civilization gave pride of place to theology and law, but Greek philosophy was also developed, though not without the criticism of the leaders of other fields of study. Averroës devoted much of his life and writings to an attempt to reconcile Aristotelian philosophy with Muslim law and theology. Over the course of several decades (1169–95), he wrote commentaries on most of Aristotle's known works and on Plato's *Republic*. Each commentary had three sections: the *Jami*, a brief summary or simple paraphrase of the original; the *Talkhis*, a more elaborate exposition of the text; and the long *Tafsir*, which included extensive elaborations and many of Averroës's own contributions, often relating the material to Islamic thought and society.

Apart from these commentaries, Averroës wrote three great works that established his reputation as a literary scholar and philosopher, especially in Europe. *On the Harmony of Religion and Philosophy* (*Fasl al-Maqal*), *Examination of the Methods of Proof Concerning the Doctrines of Religion* (*Kashf al-Manahij*), and *The Incoherence of The Incoher-*

ence (*Tahafat al-Tahafat*) were all written in Marrakesh between 1179 and 1180.

The first two works describe the exalted role of philosophy. According to Averroës, only philosophers, armed with the logical techniques provided by Aristotle, could understand the true inner meaning of the laws as revealed to the prophet MUHAMMAD. In addition, theologians could only reach a certain level of understanding, while the masses must be content with the stories and metaphors provided in the Koran and other religious works. Averroës conceded, however, that some revealed truths were beyond rational understanding and must be accepted on faith, even by philosophers. In the third book in the trilogy, Averroës refutes al-Ghazali's condemnation of rational philosophy, as presented in al-Ghazali's book *The Incoherence of the Philosophers*.

Nearly all of Averroës's books survive only in Hebrew and Latin translation (with the Latin usually translated from Hebrew) or in Arabic written in Hebrew characters. This may reflect the philosopher's greater reputation in the non-Muslim world.

Averroës, in Latin translation, was probably the most important source of Greek philosophy for Christian religious and secular scholars of the Middle Ages. His works helped spark a revolution in learning throughout Europe, which historians often say laid the groundwork for modern science. Freethinkers were often called "Averroists," but this was not considered to be a good thing. Some Christian religious authorities considered Averroës to be a threat to the church because he advocated a "double truth" in which theology and philosophy held different, opposing views.

Averroës was also known for a major medical treatise (ca. 1162), known in its Latin translation as the *Colliget*. European universities continued to use the book for hundreds of years.

On another issue—the role of women—Averroës's position was very unusual for his time and place. In his view, confining women to the sole function of childbirth and raising children betrayed women's true potential. It also deprived society of a major economic resource.

As a bridge between the ancient Greeks and modern European civilization, Averroës had an enormous impact. His attempts to reconcile Islamic and secular philosophy made him an ideal model for many later Christian thinkers.

Avicenna (nickname of Ibn Sīnā, Abū 'Alī al-Husayn ibn 'Abd Allah ibn Sīnā) (980–1037) *philosopher, scientist, nonfiction writer*

Avicenna was one of the most respected philosophers and scientists in the history of Islam. For hundreds of years, his works influenced philosophy and the teaching and practice of medicine in the Christian and Muslim worlds.

Avicenna was born in the village of Afshana near Bukhara, in present-day Uzbekistan. His father was a local governor under the Samanid rulers, the first independent Iranian dynasty since the Arab conquest 300 years before. Avicenna was

given the best education available in all fields of knowledge. A brilliant student, he had learned the KORAN (Qur'an) and memorized much Arabic poetry by the time he was 10. He also became very adept at medicine, a skill that would eventually make his career. At age 17, he cured Nuh Ibn Mansur, the Samanid ruler at Bukhara (a feat he would later repeat with other rulers when political turmoil forced him to move). He was rewarded with access to the royal library, one of the best of the time, where he began to write some of his major works.

The death of his father and the defeat of the Samanids at the hand of new Turkish rulers forced Avicenna to begin several years of travel, working as physician, local administrator, and jurist. He was known as a hard worker, and he devoted his evenings to continued learning and writing, surrounded by a convivial group of scholars and students.

Wherever Avicenna went, he always found the time to write, eventually producing an astounding body of some books and treatises, some of them encyclopedic in length, on an unusually wide range of subjects. About 200 of these works survive. He wrote most of his works in Arabic, the dominant scholarly language of the Muslim world. He also wrote a few works in Persian, including the first book of Aristotelian philosophy in that language.

After several years of travel, in 1015 Avicenna won an appointment as court doctor to Shams ad-Dawlah, the Buyid prince of Hamadan in northwestern Iran, whom he cured of a severe colic. The prince eventually named him vizier (prime minister), though political troubles forced him to spend a few months in prison and longer spells hiding in exile. At Hamadan Avicenna completed his monumental medical treatise, *The Canon of Medicine (al-Qanun fi al-Thibb)*.

Forced by the death of the ruler in 1022 to flee Hamadan, Avicenna found refuge two years later at Isfahan, at the court of another Buyid ruler, 'Ala' ad-Dawlah, where he lived the last 13 years of his life in peace, accompanying the prince in all his military campaigns and journeys. He died in Hamadan during one of these trips.

Avicenna eventually wrote an autobiographical sketch. It is the main source of information pertaining to his life, together with a biography, *The Life of Avicenna*, written by his lifetime companion Juzjani, which was included in Latin translations of Avicenna's major works.

Critical Analysis

Avicenna's *Canon of Medicine* may be the most influential medical textbook in history; at more than 1 million words, it is certainly one of the longest written by one person. The book relied to a certain degree on the works of the great Greek physicians, including GALEN, but it also incorporated knowledge gained by many Muslim doctors and scientists, as well as through Persian and Indian lore. Avicenna was able to add to this bulk of knowledge a great deal of insight he had personally acquired through his long medical practice. His discoveries included an understanding that tuberculosis and other diseases were contagious, that some diseases could spread via environmental factors like water, and that psychology affected health.

The Muslim world soon recognized the book as a major step forward in medical science. It was translated into Latin in the 12th century, and it soon became the chief medical textbook in all European universities, maintaining that status until after 1600.

The book contains five volumes: treating physiology and hygiene; simple drugs; pathology (two volumes covering fevers, tumors, rashes, and poisons); and drug combinations. In addition, Avicenna's descriptions of the many hundreds of herbs, powders, tablets, leeches, ointments, and other remedies constituted the most complete and accurate listing of remedies ever assembled. During his lifetime he wrote some 40 other medical works, most of them specialized treatises.

Like most Muslim philosophers of his day, Avicenna worked in the Aristotelian tradition handed down from ancient Greece, with a substantial influence of Neoplatonism from the Roman period. Many of his ideas were developed in *The Book of Healing*, which was in effect an encyclopedic sum-

mation of knowledge in almost every scientific and philosophical field.

Avicenna's central philosophic idea is that God exists as the "first cause"; everything else in the universe emanates from that cause. The first things to emanate are pure ideas, perfect and unchanging, which can be understood through intelligence. Souls emanate next; they can move matter in the heavens and on earth. Then come the physical laws of nature, followed by matter, which is by itself incapable of motion.

One of the four sections of *The Book of Healing* was devoted to mathematics, under which Avicenna included music and astronomy. He also wrote works on psychology, geology, and physics, in some cases adding his own original insights, theories, and proofs, such as his designs for equipment for measuring the exact coordinates of stars (their location on the heavenly sphere or sky).

Like many Persian writers, Avicenna was also influenced by mystical thought. He elaborated his mystical ideas in one of the main works of his later years, *Oriental Philosophy*, which was apparently lost during an attack on Isfahan in 1043. However, some of these ideas survive in his personal testimony, *The Book of Directives and Remarks*, in which he describes a spiritual journey from the start of faith to an eventual direct vision of God.

After Avicenna's death, prominent orthodox Sunni Muslim writers criticized him for denying that God can directly influence events in the world. Nevertheless, his philosophy remained influential for centuries in both the Muslim and Christian worlds.

B

Bacchylides (fifth century B.C.) *lyric poet*

During the Golden Age of ancient Greece, all forms of literature reached new heights. The writing style known as lyric poetry, which was designed to be sung by a performer, was of particular importance. One of the most important Greek lyric poets of this era was Bacchylides.

The nephew of the lyric poet Simonides, Bacchylides was born in the town of Ceon but later emigrated to the city-state of Syracuse, on the island of Sicily. Syracuse was then controlled by the powerful ruler Hieron, who was a great patron of the arts. During his time in Syracuse, Bacchylides was a rival of the more famous poet PINDAR.

Bacchylides' works were almost unknown to historians until the late 19th century. Fortunately, a collection of works was discovered in the Egyptian desert in 1897, preserved in writing on papyrus. Nineteen poems were recovered, including dithyrambs (lyric poems written in a lofty style) and epinician odes (poems written to honor Greek athletes who won victories in the Olympic Games). In one of his dithyrambs, Bacchylides memorializes the legendary Greek hero Theseus. The poem takes the form of a dramatic dialogue between King Aegeus and a chorus of Athenians. The dialogue describes a young man (Theseus) and his epic defeat of a host of monsters.

Bacchylides' works are important in the details they provide of ancient Greek culture and traditions, as well as for the insight they give to changes taking place in the formation and purpose of Greek poetry.

Bai Juyi (Po Chü-i) (772–846) *poet*

Bai Juyi, the son of a minor government official, was born in Hsin-cheng, China. Though his family was poor, Bai received a good education that prepared him for his government service examinations in 800 and 803. After passing his examinations, he was assigned to a job in Ch'ang-an, the Tang dynasty

capital. His experiences in the capital influenced his early poems, which were mostly political and social commentaries, known as the “New Ballads.” His poetry is known for its clear, simple style and its reflection of Confucian thought. The autobiographical nature of his poems also reveals that he was influenced by the poet Tu Fu.

Despite Bai’s popularity, in 815 his political commentary caused him to be demoted to a post outside the capital, in Chiang-chou on the Yangtze River. While there, he began to address more spiritual concerns in his poetry. While studying and meditating at the Buddhist temples on Mount Lu, he became interested in the work of TAO YUANMING (365–427), a Buddhist poet whose work extolled nature and the virtues of idleness and serenity.

Bai’s most powerful poetry reflects everyday events and the effect they had on his inner thoughts. Some of these poems include “Watching the Reapers,” in which the poet compares the sparseness of the reapers’ lives to his own well-to-do life; “Golden Bells,” in which he philosophizes on the joy and burden of having a baby daughter; and “Pruning Trees,” in which the act of pruning trees symbolizes clearing one’s vision to find the important things in life.

One of the most famous groups of letters in Chinese literature is Bai’s extensive literary correspondence with his friend, fellow poet and government official Yuan Zhen, who compiled Bai’s poetry and prose into a volume for which he wrote the preface. Through its distribution to Buddhist temples throughout China, the work preserved more than 2,800 of Bai’s poems.

Bai Juyi retired from public service in 833. He spent the remaining 13 years of his life studying Buddhism and adding poetry and essays to his collected works. He is widely regarded as one of the Tang Dynasty’s greatest poets.

bardic poetry (sixth–13th centuries)

Bardic poetry refers to an oral tradition of verse composition and performance largely associated with the Celtic cultures of Anglo-Saxon England, Scotland, Ireland, and Wales. The forms of bardic poetry followed precise metrical and alliterative patterns since the word-music, made from the sounds of the language itself, was considered as important as the music of the accompanying instrument. To meet the demands of a strict meter, bards drew on a repertoire of stock phrases and metaphors, and when necessary they used adjectives or kennings to fill out a line. A kenning is typically a compound descriptor using an innovative image or metaphor to convey the qualities of a person or thing. For instance, a person might be called “strong arm,” “steady glance,” or “bright cheek.” Unfortunately for modern listeners, not only does little of the bards’ music survive, but the word-music itself is often lost in translation.

Documentation on early bards is scarce and obscure. The bulk of the early lyrics remain anonymous, and some authorial attributions are apocryphal. Manuscript fragments attempt to capture works that could have been composed centuries before. Part of the literary style was to use intentional archaisms to make the language sound older and therefore superior. Most bards were rigorously educated, well-respected members of the aristocratic classes who could boast of a long poetic heritage. Some traveled, performing their works, while others had patrons. Celtic culture accorded great esteem to bards, and noble Celtic families, who attached great importance to having honor of “face,” often feared to provoke a poet to slander. Women could be bards as well as men, and several surviving Irish lyric love poems are attributed to female authors.

Since it was composed and sung in the vernacular or native language, much bardic poetry retains

a flavor of the Celtic culture prior to Christianity, which brought literacy in the form of Latin. The forms and subject matter of bardic poetry can often be traced to pre-Christian influences. In addition to nature poems, devotional lyrics, and encomiums of praise or protest directed at rulers, the bards preserved their culture's native history in saga or chronicle poems populated with gods, heroes, and other mythical creatures. Anglo-Saxon bards were as revered as warriors, since their ability to describe a warrior's feats after his death, thus elevating him to hero status, was often the only consolation a warrior had to achieve enduring fame. Such an achievement was based in the concept of the heroic ideal: Kings and their retainers sought perfection in battle, honor, and chivalry. This heroic ideal is aptly portrayed in the Old English EPIC poem *Beowulf*.

Much of Irish bardic poetry features the legendary figures Finn MacCool; Cuchulain; Cano, the Irish version of Tristan (see *TRISTAN AND ISEULT*); and Oisín, remembered in the Ossianic or Fenian cycles. Welsh poets often sang of Arthur and his warriors.

Anglo-Saxon and Irish bardic poetry spans the Old, Middle, and Early Modern English periods; Old Irish turns into Middle Irish around the 12th century, whereupon the tradition changes from a mainly oral legacy to a documented practice of literary composition maintained by clerics and court poets. The early Irish tradition distinguished between a bard who sang and played the poems and a *fili* who composed the poetry and functioned as a historian, genealogist, seer, and social satirist as well as an artisan. *Fili* (the plural of *fili*) trained at bardic schools. In its earliest uses the word suggests someone who is a master poet and also initiated in spiritual practices such as divination. This may reflect the status and service held by the druids, who were, for the pre-Christian Celts, poets, prophets, lawmakers, guardians of traditional knowledge, and practitioners of the occult.

Many *fili* liked to preserve a sense of mystery around their work and perpetuated the romantic myth that the best poets created under very spe-

cial circumstances, specifically in a dark room, lying down, with no outside noise or distractions. Thereafter, the bard would offer a recitation and musical performance. Though at one point bards received about half the pay that a *fili* did, later the terms *bard* and *fili* became interchangeable. Some of the best-remembered Irish bards are Donnchadh Mór, Gofraidh Fionn, Eochaidh Ó hEoghusa, Fear Flatha, Fearghal Óg, and Tadhg Mac Dáire.

Though the Irish and Welsh embraced Christianity well before the Anglo-Saxons did, early Welsh poetry escapes Latin influence. The sixth-century Welsh bards are themselves figures of legend: Taliesin; Llywarch Hen; and Anerin, who is credited with the battle poem "Gododdin," the earliest reference to King Arthur. Manuscripts of their works date to the 12th century. Other Welsh bards from the 12th and 13th centuries are Meilyr; his son Gwalchmai; Owain prince of Powys; Owain's court bard Cynddlew; and the greatest of the medieval Welsh bards, Dafydd ap Gwilym (1340–1400), who lived at the same time as the English poet Geoffrey Chaucer.

Beatrice of Nazareth (1200–1268) mystic, diarist, treatise writer

Beatrice of Nazareth was born to a merchant family of Tienen, near Brussels, Belgium. As a very

young child she showed an aptitude for scholarship, and at age seven, upon the death of her mother, her father sent her to live for a year with a group of beguines. The beguines were laywomen in the Low Countries who chose to lead spiritual lives without taking vows at a religious institution. When Beatrice discovered her vocation for monastic life, her father allowed her to enter the Cistercian convent at Bloemendaal.

In 1216 Beatrice officially became a novice, and in 1217 she traveled to the convent at Rameya to study with Ida of Nivelles. Under her tutelage Beatrice had her first mystical experience in January 1217. In 1221 she returned to Bloemendaal, where the visions continued, and the esteem with which she was treated troubled this very modest woman. In 1236 she joined the Cistercian community at Nazareth, near Antwerp, where she was made prioress and where she remained until her death.

The anonymous *Life of Beatrice* was composed from a private diary Beatrice kept, recording her experiences. She also wrote several treatises on the spiritual life. The only one to survive, called *Seven Modes of Sacred Love*, is considered the first vernacular work exploring the soul's ascent to God. For Beatrice, sacred love, *minne* in Flemish, is the pinnacle of the soul's existence. In *Seven Modes* she writes: "love strives only for the purity, the nobility and the highest excellence which she herself is . . . and it is this same striving which love teaches to those who seek to follow her." Beatrice shares her belief that experience of God is a personal interaction mediated by love with other women mystics, such as Mechthild of Magdeburg, Julian of Norwich, and Hadewijch, as well as the later Belgian theologian Jan van Ruusbroec.

Bede (Baeda, The Venerable Bede)

(673–735) *historian, scholar, commentator, biographer, treatise writer, poet*

Bede was born in a small village in the vicinity of Jarrow in Northumbria, near the present-day city of Newcastle in northern England. In 679, at age seven, as was the culture in those times, Bede was fostered at the monastery in Wearmouth in the care of Abbot Benedict Biscop, and later at the monastery in Jarrow under Abbot Ceolfrith. In addition to his theological studies, he was educated in literature, grammar, rhetoric, history, philosophy, arithmetic, geometry, astronomy, law, and music. He was ordained deacon in 691 and priest in 702 by Bishop John of Hexham.

From his extensive readings, his own observations, and the stories he gathered from travelers visiting the monasteries, Bede wrote scores of books: Biblical exegeses (commentaries, explanations, and critical interpretations of texts); hagiographies (biographies of saints and venerated people); treatises on astronomy, botany, and meteorology; hymns; and poems. The 60 volumes and 950 manuscripts that Bede produced over a period of some 30 years make him one of the most prolific and greatest of English writers.

In recognition of his piety and contribution to theological writing, historians of the ninth century conferred the title of "Venerable" upon him. He was canonized in 1899 by Pope Leo XIII, who conferred the title of "Doctor of the Church" upon him for being "an ecclesiastical writer of great learning and sanctity." His feast day is celebrated on May 25.

Writers throughout history have attempted translations of Bede's works. In 1910, J. A. Giles

published an English version of *Historia abbatum* (Lives of the Abbots), which Bede wrote ca. 725 as a compilation of biographies of the lives of abbots and saints. In addition, C. W. Jones published a translation of Bede's *De natura rerum liber* (On Nature, ca. 691), a scientific text on nature and astronomy, in 1975.

However, no single work written by Bede has been more frequently copied in longhand, from the date of its completion in 731 until the printed book was published in 1475, than his *Historia ecclesiastica gentis Anglorum* (The Ecclesiastical History of the English People). It has never ceased to be read, and more than 150 manuscript copies of it survive to this day. This celebrated work served as the guiding model for historians throughout the Middle Ages, and it is the work for which Bede is remembered as the "Father of English History."

Bede himself modestly described the work as "the history of the Church of our island and race." Composed entirely in medieval Latin, this indispensable source of early Anglo-Saxon history is a continuous narrative of five books that spans a period of almost eight centuries, from Julius Caesar's invasion of Britain to 731. It is, in effect, a depiction of a saint's life with the English nation as hero, and it highlights the rapid conversion of the Anglo-Saxons by missionaries from Rome and Ireland. In addition, the work serves as an authority on the early English Church, daily monastic and secular life, and major historical events of the period.

Passionate in his support of orthodoxy and in condemnation of heresy, Bede was a traditionalist whose prime concern was the spread of the accepted beliefs of the Catholic Church. Such commitment led him to write most of his works, including an exposition of the Great Cycle of 532 years that was of fundamental value to the Roman Church in calculating the date of Easter. He also introduced the custom of *anno Domini*, dating events from the birth of Christ.

In addition to writing, reciting written works to the accompaniment of music was one of Bede's great delights. He was skilled in the recitation of

the music of the liturgy, vernacular English poetry, and songs of Anglo-Saxon Britain. Despite being grievously ill the day he died, the dedication and diligence he brought to his teaching duties is best reflected in his cheerful reminders to his students throughout that day to learn their lessons quickly since he might not be there long to instruct them.

Bede is best described by the words of Peter Hunter Blair in *The World of Bede* (1970):

The scholar who never spared himself in the search for truth, the monk who loved music and was deeply moved by the beauty of his church all brightly lit for a festal day, the teacher whose last thought was for the pupils of his school, and the endearingly humble man who chose the image of griddle, frying-pan and oven to illustrate stages in the growth of spiritual understanding.

Beowulf (10th century) epic poem

One of the finest EPIC poems of Anglo-Saxon literature, *Beowulf* is a stirring adventure story and a deeply serious commentary on human life. It tells the story of the life and death of the legendary hero

Beowulf in his great battles with supernatural monsters and in his reign as a cultured and popular monarch. Beowulf is a model of heroic spirit at its finest, the ideal Anglo-Saxon image of warrior-aristocrat.

Cyclical in movement and unified by striking contrasts of youth and old age, success and failure, bravery and cowardice, *Beowulf* is a sophisticated poem following CAEDMON's style of poetry, with a Germanic hero-warrior code of honor coupled with Christian religious underpinnings. The poem is written in the unrhymed four-beat alliterative meter of OLD ENGLISH POETRY. The author is unknown. There is much debate about when the poem was written, but it was most likely composed sometime between the middle of the seventh and the end of the 10th centuries. As such, it is the longest surviving poem in Old English, containing more than 3,100 lines. While the poem was written in Anglo-Saxon England in the Old English language, the events it describes are set in Denmark, Sweden, and Geatland (now southern Sweden).

Critical Analysis

The epic opens, as it ends, with a funeral, the sea burial of the founder of the Danish royal line. Then the scene changes to King Hrothgar's court in Heorot, Denmark, where the huge demon Grendel kills and eats warriors every night. Beowulf, prince of the Geats and strongest man of his time, hears of the troubles and journeys there with his troop of men to win his fame by challenging the giant monster. He conquers Grendel barehanded, ripping off the monster's arm at the shoulder:

*... No Dane doubted
The victory, for the proof, hanging high
From the rafters where Beowulf had hung
it, was the monster's
Arm, claw and shoulder and all.*
(ll. 833–836)

There is much rejoicing at the royal banquet the next day. Many heroic tales are told in Beowulf's

honor, and a bard sings the lay of the Finnsburg episode, a tragic feud from the Danish past.

Later that night, Grendel's mother attacks the royal hall to avenge her son. Beowulf dives down to the bottom of the haunted lake where she dwells. At first she nearly kills him, but he manages to slay her with the help of a strange, magical sword. When he resurfaces, the onlookers, who had given him up for dead, rejoice in his victory.

Beowulf has thus succeeded in cleansing Denmark of the evil monsters. In a moving sermon of exceptional poetic force, the king, who is very fond of young Beowulf, warns him of the dangers of pride and weeps as Beowulf returns to Geatland.

Part I of the epic ends with Beowulf's recounting of his adventures in Denmark and of the political state of affairs there to his uncle, King Hygelac of the Geats. Beowulf bestows Hrothgar's gifts on Hygelac, who in turn rewards Beowulf with treasure and lands.

Part II takes up the last thousand lines of the poem and deals with a Beowulf of mature years, when he comes to the Geatish throne upon the death of Hygelac and his son. Beowulf rules wisely and peacefully for 50 years, a remarkable feat in those troubled times. Then one day, a robber accidentally disturbs a sleeping dragon that guards a treasure hidden in a grave mound. The dragon awakens and starts wreaking havoc in the surrounding villages by burning down houses.

Beowulf decides to meet the fire-breathing dragon in combat. Upon seeing the dragon, his troops flee in terror, but his kinsman Wiglaf refuses to leave his side. Together they kill the dragon, but Beowulf receives a fatal wound in his neck. Knowing his end is near, he rejoices over the life he has led and is at peace with his conscience. His only regret is that he leaves behind no heirs. Wiglaf grieves as Beowulf breathes his last. When the cowardly troops return, Wiglaf heaps scorn upon their heads.

Wiglaf then sends a messenger to the king's household informing them of the tragedy. The messenger's speech is a prophecy of the doom for

the Geats at the hands of their enemies, the Swedes, now that their hero-protector is dead.

Beowulf is cremated on a great funeral pyre. All the Geats, warriors and common folk alike, gather around in despair, and the poem ends as the treasure from the grave mound that the dragon was guarding and Beowulf's ashes are buried together in a monumental barrow on a headland by the sea.

Beowulf's importance and value lie in its details, which give us a glimpse of the warrior-hero's spirit and code of honor and of the attitudes and beliefs of the monk who transcribed the oral story, thus giving the poem a Christian influence and reflecting pagan England during its transition to Christianity.

Bernard de Ventadour (Bernart de Ventadorn) (fl. ca. 1147–ca. 1170) *troubadour*

Bernard de Ventadour was born in the province of Limousin in south-central France. One biographer, writing long after his subject's death, claimed that Bernard was a lowly servant in charge of heating the ovens at the viscount of Ventadorn's castle. According to this biographer, Bernard fell in love with the viscount's wife and addressed his love songs to her. The viscount discovered the affair,

and Bernard moved to Normandy, where he had a love affair with Eleanor of Aquitaine. When she left to marry Henry II of England, Bernard joined the court of Count Raymond V of Toulouse. Finally, when Raymond died, Bernard became a monk.

In reality, we know little of Bernard's life apart from what we can glean from his songs. Although he was probably not a menial servant, he almost definitely grew up in the castle of Ventadorn (or Ventadour). In the *vida* (a biographical portion of verse found in most TROUBADOUR songs) of one song, he claims to be the son of a man-at-arms and a relative of the viscount of Ventadorn. He was acquainted with Eleanor of Aquitaine, and it is certain that he knew Henry II of England. Because 12th-century Ventadour was a hotbed of troubadour activity, Bernard must have been acquainted with the works of earlier composers like JAUFRÉ RUDEL and with the more popular MEDIEVAL ROMANCE.

Bernard's songs are remarkable expressions of courtly love (see CHIVALRY AND COURTLY LOVE) and, more specifically, of *fin'amor* (expressions of the impact of love on the individual), of which he is credited as being the creator. Unlike the works of some of his contemporaries, they are neither too complicated nor difficult to understand, nor too polished or simple. "It is no wonder if I sing better than any other singer," begins one song, "for my heart draws me more towards love and I am better made for its commands." In another song, which begins with the line "I have a heart so full of love," Bernard declares himself to be so happy "That the ice appears to me a flower, / And the snow lies green." Later in the poem, however, he complains that he is suffering even more than Tristan did when trying to win Iseult (see TRISTAN AND ISEULT). Scholar James Wilhelm notes that Bernard's reasoning thus "follows the rather helter-skelter pattern of the somewhat crazed, moon-bewitched lover."

At times, Bernard implicitly and wittily compares his secular love for a woman to a pious love for the Virgin Mary. (The Provençal language in which he wrote derived from Latin, the language of

the Church.) Mentions of paradise, grace, and a lady whom the poet hopes will grant his pleas all were sure to remind medieval listeners of religion, even as the poet wished for a reward that was decidedly secular.

Several of Bernard's contemporaries enjoyed more popularity in the 12th century, but 20th-century readers and critics esteem Bernard's work far above that of rival troubadours. Wilhelm believes that Bernard

has one of the best senses of humor in medieval literature. Furthermore, he is diversified: his stanzas constantly surprise with their sudden, sometimes illogical shifts of tone that keep the reader's wits on edge. He has the same kind of brittle, inexhaustible melodic quality that crackles in Mozart's sonatas.

Approximately 40 of Bernard's songs still survive, and scholars rank his verses above those of fellow troubadours Rudel and Marcabru for their sensuality and freedom of expression.

bestiary *medieval literary genre*

The bestiary is a literary genre of the European MIDDLE AGES generally consisting of a collection of stories, each detailing the qualities of an animal, plant, or even stone. These stories were often presented in the form of Christian allegories for moral enlightenment.

The bestiaries are derived from the Greek text *Physiologus*, compiled between the second and fourth centuries by an unknown author and consisting of 48 sections, each linking a creature, plant, or stone to a Biblical text. Translations and adaptations of this and other bestiaries spread throughout Europe in the 12th and 13th centuries and were very popular in France.

Many of the medieval bestiaries, such as "The Panther" and "The Whale," were also lavishly illustrated with pictures of sometimes-fabulous beasts. Creatures in other tales included a gryphon, a lion/eagle hybrid; a basilisk, a half-bird, half-reptile so poisonous that its glance could kill; and an aphaena, a two-headed reptile. In addition, many traditional attributes of real and mythical creatures, such as the phoenix and the unicorn, derive from the bestiaries. These attributes, again intended to help teach a moral tale, have since been absorbed into folklore, literature, and art.

A 14th-century tale titled *Bestiare d'amour* applies the allegorical structure of a bestiary to courtly love, but the intent of most bestiaries was to elaborate on the virtues of abstinence and chastity and to warn against heresy. Some of the animals in the tales symbolize religious virtues or characters from the BIBLE. The lion, for example, is portrayed in one bestiary as an animal that can revive its dead offspring, reminiscent of God's resurrection of the Christ. In another tale, goats were used to symbolize sinners who strayed from God's path.

The power of using animals to teach lessons about friendship and honesty can still be seen today in tales such as those about Winnie the Pooh and Hank the Cowdog. The ancient tales and their medieval translations and adaptations, however,

found their place in world literature by illustrating how the written word was used to transfer religious teachings and concepts to the illiterate masses.

Bhagavad Gita (Bhagavad-gita, Bhagavadgita) (first century B.C.) Sanskrit text

The Bhagavad Gita is a philosophical poem that summarizes and explains the key concepts underlying Hindu religious belief and practice. The poem is staged as a dialogue between the warrior Arjuna, one of the five Pandava brothers, and his charioteer Krishna, an engaging and remarkable young man. In these conversations, Arjuna ostensibly asks for advice on how to regain his composure and courage to fight against the evil Kurowas, his half-cousins. Krishna, who is an incarnation of the Hindu god Vishnu, answers with a series of instructions that coherently unify and communicate the foundational tenets of Hindu beliefs, and also, in the guidance Krishna gives his pupil on how to

conduct himself in war and life, provides a spiritual manual for daily living.

The setting of the work is the battlefield of Kurukshetra, where the two armies led by the Pandavas and Kurowas gather for battle—also the setting of the greatest and most elaborate of Indian epic poems, the *MAHABHARATA*, of which the Bhagavad Gita forms the sixth chapter. The essential teachings of the Gita most likely existed long before the *Mahabharata* was composed, transmitted through oral teachings in the manner of the Upanishads and the four Vedas, the oldest known Sanskrit scriptures. The actual events of the *Mahabharata* are thought to have transpired between 1000 and 700 B.C. The Bhagavad Gita contains the outlines of a spiritual practice that may date to the earliest indigenous settlers in the Indus valley, around 3000 B.C.

Unlike other important works of Indian literature, like the *Ramayana*, the author of the Bhagavad Gita remains unknown. Early Indian commentators have suggested that the Gita may have been written by the Hindu god Krishna or by the seer Vyasa, who is considered the author of the *Mahabharata* and the *PURANA*.

Critical Analysis

The dramatic beauty of the Gita is that, in appearing in the midst of a physical battle, the war between good and evil provides a metaphorical parallel to the Bhagavad Gita's true topic. As translator Eknath Easwaran says, "the Gita's subject is the war within, the struggle for self-mastery that every human being must wage if he or she is to emerge from life victorious."

The poem opens with a metaphysical dialogue between Dhritarashtra, the blind king of Kurukshetra and father of the Kurowas, and his courtier sage, Sanjaya. Worried about the course of the war, Dhritarashtra asks Sanjaya (who is blessed with the ability to see all that transpires in the past, present, and future) to relate to him every detail of the war. Sanjaya first tells of the conversation that takes place between Duryodhana, Dhritarashtra's son,

and his teacher, Drona, in which Duryodhana boasts of his great number of forces and his confidence in securing victory. This sets the scene for the long dialogue between Arjuna and Krishna in which Krishna instructs Arjuna that it is the latter's duty to fight and win the war. The Greek idea of hubris, or exaggerated pride, is exemplified in the contrast between the haughtiness of Duryodhana and the unwillingness of Arjuna to engage in a war in which his teachers and kin will be killed.

Given this background of war, in the poem, Arjuna becomes concerned with the universal questions of life and death. Seeing that his courage wavers, Krishna proceeds to explain to him the nature of the soul, the soul's relation to God, the laws that govern the natural world, and the laws that govern consciousness and reality. In the end, Krishna reveals himself as an *avatar*, or incarnation of Vishnu, one of the faces of the Infinite God, the lord of life and death. Arjuna goes on to engage in battle because it is his duty; as the remainder of the *Mahabharata* describes, he will, with Krishna's help, be victorious, and the proper rulers will be restored. The heart of the Bhagavad Gita, however, is its essential teachings about living with love and compassion toward others. The Indian political and spiritual leader Mahatma Gandhi, who based his life on the tenets of the Gita, found its instructions incompatible with harming others. In learning how to transcend mortal consciousness and attain spiritual union with God, Arjuna learns how to enter his *atman*, or essential self, which transcends life and death. He learns the profound Hindu concepts of karma and dharma, which govern human life, and he understands that the demands of duty and consequence must be fulfilled.

Briefly, the ultimate goal of samsara, the cycle of birth and death, is *moksha*, or spiritual liberation, also called nirvana. Spiritual liberation is achieved through a combination of three things: *jnana*, or knowledge; *bhakti*, or devotion; and yoga, or spiritual discipline and practice. Union with the Brahman, or Infinite God, is the highest good, as Krishna explains in passage 6:30–32 of Eknath Easwaran's translation:

I am ever present to those to have realized me in every creature. Seeing all life as my manifestation, they are never separated from me. They worship me in the hearts of all, and all their actions proceed from me. Wherever they may live, they abide in me.

The challenges of human life, Krishna explains, are the result of karma and dharma. Karma, which literally means "something that is done," is often translated as "deed" or "action" and basically states that every event contains both a cause and an effect. The consequences of each action engender another act, with similar consequences, and so on in a potentially unending series of events. An individual acts out karma until he or she learns how to act in harmony with dharma. Dharma, often translated as "duty," can be thought of as the master plan to which each living thing in the universe is connected. When one learns not to pursue selfish interests but rather contributes to the welfare of the whole, the karmic debt is discharged.

One learns and understands one's duty through yoga, the disciplined practice through which one heals the splintered, unconscious self and learns how to come in contact with the *atman*, the higher self, and through that the Brahman or divine. Meditation and yoga bring one to essential truths, as Krishna instructs Arjuna in passages 6:19–21:

When meditation is mastered, the mind is unwavering like the flame of a lamp in a windless place. In the still mind, in the depths of meditation, the Self reveals itself. Beholding the Self by means of the Self, an aspirant knows the joy and peace of complete fulfillment. Having attained that abiding joy beyond the senses, revealed in the stilled mind, he never swerves from the eternal truth.

The surrounding environment of imminent war serves, in the poem, to highlight the importance of the spiritual path, transcendence, and union with the divine. Krishna's explanation of the relationships among the ideas of death, sacrifice,

and devotion exemplify the Hindu belief that transcendental truth can only be experienced and grasped when one heroically faces death and fulfills one's duty. Hence, the path to liberation lies not in the avoidance of action but through action performed simultaneously with detachment to consequences and with devotion to the divine God. Krisna teaches Arjuna that he is not being asked to commit indiscriminate violence but instead has a mortal duty to restore the legitimate rulers, who have been given their authority by the gods.

Through disciplined action combined with knowledge, committed with a detachment from selfish interest in the outcome and an interest in the greater welfare, Arjuna will be led not only to mortal victory but also to an understanding of his essential connection to the higher order. Thus, the Bhagavad Gita dramatically portrays Arjuna's inward journey and also shows in human form the possibility of union with the divine. Arjuna's recognition of his destiny, coinciding with Krisna's revelation of his divinity, is the climax of the poem.

As a document of Hindu culture and belief, the Bhagavad Gita has had a profound impact. Barbara Stoler Miller says the "Bhagavad-gita has been the exemplary text of Hindu culture for centuries, both in India and in the West." The true value of the Gita, Easwaran believes, is in the philosophical truths it contains: "Like [Jesus'] Sermon on the Mount, it has an immediacy that sweeps away time, place, and circumstance. Addressed to everyone, of whatever background or status, the Gita distills the loftiest truths of India's ancient wisdom into simple, memorable poetry that haunts the mind and informs the affairs of everyday life."

Bible, Hebrew (ca. 10th–first centuries B.C.)

The Hebrew Bible is a collection of 24 different books of history, poetry, stories, and moral instruction, compiled toward the end of the first millennium B.C. It is the most sacred book of the Jewish religion and also forms the largest part of the Christian Bible. As such, it is one of the most widely read and influential books ever written.

Standard printed editions of the Hebrew Bible divide the books into three sections: Five Books of Moses (Pentateuch in Latin, *Torah* in Hebrew); the Prophets (*Nevi'im* in Hebrew); and the Writings (*Ketuvim* in Hebrew). The initials of the three Hebrew titles form the acronym *Tanach*, which is how the Bible is known in Hebrew.

Critical Analysis

The Torah part of the Hebrew Bible consists of five books. Genesis begins with a majestic account of the creation of the universe. Out of chaos, God creates light, fashions the heavenly bodies and the physical world, makes plants and animals, and finally shapes man and woman.

Compared with the florid creation myths of other ancient cultures, this work is a tightly written poetic account of the making of the world. God creates human beings as stewards of his work, and they are expected to abide by moral laws or face the consequences.

The book continues with a history of the first humans, leading to the gradual emergence of the different nations after a great flood. Most of the book is devoted to the life stories of the first Hebrews—Abraham, Sarah, and their descendants,

especially their son Isaac, grandson Jacob (also known as Israel), and great-grandson Joseph.

God leads Abraham to the land of Canaan and promises to give it to his descendants, who are expected to obey God's laws in return. The Jews of ancient times, who compiled the Bible and claimed to live by its laws, considered this promise as their deed to the land of Israel.

The book of Exodus recounts the tribulations of the Children of Israel in Egypt, their liberation from slavery under the leadership of Moses, and their receiving of the Ten Commandments at Mount Sinai. Scholars disagree as to whether the story has factual basis.

The rest of the Torah is largely devoted to a discussion of God's laws—criminal, economic, moral, and ritual. These passages eventually formed the basis of the laws in the TALMUD and of all subsequent Jewish ethical and legal thought.

Prophets, despite its name, starts off with six history books. Joshua describes the conquest of the Land of Canaan by the Children of Israel. Judges is a collection of stories about heroes and heroines, both military and spiritual, who lived in the era following Joshua; they include such famous figures as Samson, Gideon, and Deborah.

Samuel I and II tell of the first kings of Israel—Saul, David, and Solomon—describing their victories, defeats, family struggles, and moral challenges. Kings I and II take the story from the death of Solomon, through the breakup into two kingdoms—Israel in the north and Judah in the south—to the final conquest and destruction of both kingdoms.

More than a century of archeological research has confirmed the overall historical accuracy of Kings I and II. Of course, God's role in the events and their moral significance are questions of faith rather than history. In the Bible's viewpoint, good kings and law-abiding citizens ensure prosperity, success, and peace, while injustice and idol-worship bring about national disaster and suffering.

The rest of Prophets is devoted to the words of Isaiah, Jeremiah, Ezekiel, and the 12 "minor" prophets, so called because of the brevity of their

statements. Each book records the visions and inspired sermons of a different holy man, all of them active in the era of the kingdoms and their immediate aftermath.

The prophets explore the purpose of life, for humans in general and the Hebrews in particular. In very powerful language, they chastise wrongdoers and mourn the calamities God has inflicted on the nation. They call on individuals and society to return to the ways of righteousness, promising God's pardon if they do. In Jonah, this message is explicitly aimed at all the peoples of the world. But even in despair, the prophets keep faith with their inspiring vision of eventual redemption and peace, when "The wolf also shall dwell with the lamb, and the leopard shall lie down with the kid" (Isaiah 11:6).

The Writings section of the Bible begins with the book of Psalms, a collection of 150 religious poems said to have been written by King David. Some of the psalms were apparently sung by the Levites at the Temple in Jerusalem. Others are more personal in tone, heartfelt missives to God from an individual, often in trouble, expressing faith in God's ultimate justice and mercy.

The Writings contain two examples of ancient Near Eastern "wisdom literature," Proverbs and Ecclesiastes. They are full of worldly advice written in a tone of disillusion, at least concerning human behavior. The Writings also include Song of Songs, a series of lyrical love poems set in idyllic natural settings; Job, a tale that explores the question of why good people suffer; Lamentations, a sad dirge about the destruction of Jerusalem by the Babylonians; Esther, about a Jewish queen of Persia who saves her people from the threat of genocide; Ruth, about a Moabite woman who refuses to abandon her bereaved mother-in-law, throws in her lot with the Hebrew people, and becomes the ancestor of King David; and Daniel, a series of miracle tales and strange prophecies set during the Babylonian exile.

Finally, the last two books of the Writings, and thus of the Hebrew Bible, are Ezra-Nehemiah, which describes the return of the Jews to Judea under the Persians; and Chronicles, a retelling of the royal histories first recounted in Samuel and Kings.

Nearly all the Bible is written in ancient Hebrew, a West Semitic language, though some sections of Daniel are written in Aramaic, a related tongue. The narrative sections, if not the poetry, are easily read and understood by modern Hebrew speakers in Israel, though there are some obscure words and short passages that even scholars do not understand.

The first translation of the Bible was the *Septuagint*, a Greek rendition composed in Alexandria, Egypt, in the second century B.C. by a committee of 70 scholars; this became the basis of the texts used by Christians. Together with two ancient translations into Aramaic (the spoken language of Judea in Roman times), the *Septuagint* is often used to illuminate unclear passages in the Hebrew and to resolve minor differences that exist in the earliest existing Hebrew manuscripts.

Printed versions of the Hebrew Bible have been around for hundreds of years, but the traditional format is still in use in synagogues. One long parchment scroll contains the Pentateuch, handwritten in ancient calligraphy. There are no titles and no chapter-and-verse indications, which were a later addition.

Printed Hebrew Bibles traditionally include commentaries from various medieval or modern sages. They also include musical notation marks above and below each line of text, as a guide for those who chant the text during worship services. Each week on the Sabbath, a portion of the Torah is read; the entire volume is read in the course of a year (or three years, in some communities), as are sections of Prophets and several entire books of the Writings.

Traditionally, Jews believed that Moses wrote the entire Torah at one time, although they always knew of small variations in the text. But most scholars now believe, on the basis of textual analysis, that the Torah was gradually assembled by different editors from written and oral fragments over the course of hundreds of years.

Modern archeology has discovered parallels in ancient Egyptian, Mesopotamian, and Syrian writings to certain elements of the Hebrew Bible. They

include poetic imagery, stories in Genesis, legal provisions, and even some pronouncements of the prophets. But the discovery of the DEAD SEA SCROLLS in the mid-20th century demonstrated that whatever the ultimate sources, the overall text had been largely standardized by Roman days, around the first century B.C.

In addition to the 24 books of the Hebrew Bible, several other “apocryphal” books, in Hebrew and Aramaic, were also considered sacred by many ancient Jews but were not included in the “canon,” or standard collection. Some of them, like Maccabees, Judith, and Ecclesiasticus, are included in various Christian Bibles.

Once Christianity began to spread in the western Roman Empire, it became necessary to translate the Bible, including the Greek books of the New Testament, into Latin. Since that time, the Hebrew Bible has been translated into several hundred languages. It has inspired thousands of books of commentary and interpretation, as well as a wealth of poetry, music, plays, and films. Its themes have influenced the culture and religion of nations around the world, becoming part of the cultural heritage of all humankind.

Boethius (Anicius Manlius Severinus Boethius) (ca. 480–524) *philosopher, translator, treatise writer*

Boethius was a Roman of noble ancestry. His father served under the Roman king Odovacar, and his very name, Anicius Manlius Severinus Boethius, reflects his patrician heritage as well as his relationship to some of the most eminent aristocratic families of the Western Roman Empire.

Orphaned as a boy, Boethius became the ward of Quintus Aurelius Memmius Symmachus, who would later become his father-in-law. Symmachus oversaw Boethius's education, and by the time the young man was in his 20s, he was being celebrated for his accomplishments in Greek scholarship. One of his goals was to translate and interpret the works of PLATO and ARISTOTLE to demonstrate that the Greek philosophers were fundamentally in agreement with one another.

Boethius's first published work was *De institutione arithmetica* (Principles of Arithmetic, ca. 503), followed by *De institutione musica* (Principles of Music). For centuries, this treatise was considered the foremost authority on ancient music and was an important teaching text. Boethius also wrote several theological treatises in the form of correspondence to friends.

Boethius's masterpiece is his *De consolazione philosophiae* (The Consolation of Philosophy), written in 524 after his fortunes had undergone a reversal. In 500 he began an illustrious political career in the employ of Theodoric, king of the Os-

trogoths, who deposed Odovacar and became ruler of Italy. Boethius counseled Theodoric on matters ranging from the building of a water clock to the employment of a harpist. In 510, he became Consul of Rome, and in 523, Theodoric named him *magister officiorum* (Master of the Offices), which made Boethius one of the king's closest advisers.

In 524, Theodoric became aware of a conspiracy in Rome to overthrow his rule. When Boethius defended one of the implicated parties, he himself was charged with treason and sentenced to death. Imprisoned in a dungeon near Milan awaiting execution, Boethius penned *The Consolation of Philosophy* as a dialogue between himself and Lady Philosophy. In this exchange, the character of Boethius bemoans his fate, claiming he was unjustly convicted with false evidence. He asserts that he went into public service in order to practice his philosophical principles, that he opposed abuses of power, and that he protected the oppressed in the service of what was right. Yet when Lady Philosophy first appears, Boethius is too full of self-pity to see her.

Lady Philosophy speaks of the capriciousness of human affairs and the fleeting nature of worldly achievements such as fame and wealth. For true happiness, she claims, people must free themselves from earthly concerns; otherwise, they will be enslaved by false desires. She goes on to enlighten Boethius on such complex subjects as the role of evil in the world, the fickle course of fate, the unpredictable nature of chance, the mind of God, predestination, and free will. Lady Philosophy explains that what humans call "chance" is actually part of God's plan; humans perceive certain events as unexpected or accidental because they fail to understand the grand design.

How, then, Boethius asks, is it possible to reconcile God's foreknowledge with the human perception of free will? If the choices people make do not determine the outcome of events, then rewards and punishments are meaningless and unfair. This is an age-old problem, according to Lady Philosophy. But, she reasons, the inelegant mechanism of human intelligence simply cannot compare with

the immediacy of divine knowledge, which exists outside of the concept of time.

Boethius's "consolation" lies in the ultimate understanding that good and evil will indeed be met with a divine and universal justice and that all that happens is for the best. We cannot know God's plan. But we can desire and love what God desires, and this leads to the greatest freedom and the greatest happiness. The contemplation of God reconciles humans to ill fortune on earth.

As translator Edmund Reiss writes in *Boethius*:

The Consolation of Philosophy is without a doubt one of the greatest books ever written. It possesses that certain timeless quality which marks all great works of literature, and it gives the impression that it can never be used up. The more one reads the work, the more one finds in it, and the more one comes to admire the artistry and genius of the public administrator-scientist-philosopher-theologian-poet who was its author.

This seems an accurate assessment of Boethius's work, for his use of allegory, his blend of poetry and prose, and his dialogue-debate framework profoundly influenced medieval, Renaissance, and romantic literature for centuries to come.

Book of Songs (*Shijing, Shih Ching*)

(1125–570 B.C.)

The *Book of Songs*, an anthology comprising 305 odes sung to the accompaniment of music and dance, is the earliest collection of Chinese poems. The actual date of its composition remains undetermined, even though two traditions account for the origin and survival of the songs.

The first tradition asserts that CONFUCIUS selected the songs from an earlier corpus of over 3,000 songs. He chose only songs that best exemplified his ideas about statecraft and harmonious human relations and revised the musical scores before placing them in order. The second tradition, currently held by Chinese scholars, believes that the Zhou (Chou) dynasty ruler sent out court officials to collect folk songs in the feudal states of his kingdom. The feudal lords collected the songs and forwarded them to the ruler, who would listen to them and ascertain whether his subjects lived happily under his reign. The songs also enabled the officials in the royal court to gather information regarding the prevailing customs of the vassal states. Despite these differing traditions, Confucius was, in both cases, credited with the selection and editing of the collection now known to us as the *Book of Songs*.

The songs are generally written in four-syllabic verses with occasional irregular meter. This restrictive structural style was later abandoned in favor of the freer and variant five- and seven-syllabic verses.

The anthology is divided into three unequal sections: 160 *feng*, or folk songs; 105 *ya*, or court songs; and 40 *song* (*sung*), or sacrificial songs. The *feng* ("air of the states") songs collectively represent each of the 15 feudal states in ancient China. The stylistic uniformity among them suggests that the songs have been reworked. Simple in style and spontaneous in expression, often about courtship and love, the *feng* songs look at the lives of common people, examining their hardship, joys, misgivings, and work. Since they make the common people their protagonist, the *feng* poems are read as social commentaries and protests at the state of

Chinese society. Scholars suspect these may be the latest poems in the book, dating to the period of chaos and disorder following the decline of the Chou dynasty.

The section of the *Book of Songs* containing the *ya*, or “courtly” songs, is divided into two main parts: 74 *xiao ya* (*hsiao ya*; “Lesser Courtly Songs”) and 31 *da ya* (*ta ya*; “Greater Courtly Songs”). The *hsiao ya* contain songs devoted to praises of the king and deal with concerns of courtly or royal life, such as ceremonies, feasts, and hunting expeditions. The *da ya* section, whose poems are considerably longer, discusses the legendary heroes and myths of the Zhou dynasty. The *ya* poems, which celebrate the pleasures of the world, were most likely written by aristocrats at the Chinese court.

The *song* odes are hymns of praise and ritual songs describing religious ceremonies and celebrating a particular dynasty’s victories in military campaigns. This section contains 40 religious and sacrificial hymns divided into three parts on the basis of geographical origin. Thirty-one odes are attributed to the Zhou court, four to the Lu court, and five to the Shang dynasty. These songs, accompanied by music and dancing, were performed while the king worshipped his ancestors and celebrated their heroic deeds. The *song* odes are believed to be the earliest of the songs collected in the book, and their religious character and pompous style suggest they were commissioned by the kings and written to glorify the glory of the Chinese state.

By the time of the Han dynasty, the *Book of Songs* had entered the Chinese canon of literary texts. Confucius’s interest in the book played an important part in its survival. In addition, his advice to his disciples best summarizes the importance of the work in Chinese literary tradition:

Young men, why do you not study the *Songs*? They can be used to inspire, to make you fit for company, to express grievances; near at hand they will teach you how to serve your fathers, and, looking further, how to serve your sovereign; they also enable you to learn the names of many birds, beasts, plants, and trees.

Book of the Dead (The Chapters of Coming Forth by Day) (ca. 1400 B.C.–ca. A.D. 200) *religious writings*

The Chapters of Coming Forth by Day, commonly known as the Book of the Dead, is a collection of hymns and incantations taken from the papyri buried with ancient Egyptians to help deceased souls navigate the afterlife. Altogether, the Book of the Dead consists of 189 chapters that describe Egyptian religious beliefs about life and death. The Book of the Dead not only describes the pathways, laws, and guardians of the gates of the afterlife but also contains the essential truths that would admit a soul to heaven. Knowledge was the way the soul became eternal, as texts from the sixth dynasty suggest with their simple advice: “Live your life and you will never die.”

The Book of the Dead was never a single entity or text but rather a template of prayers, hymns, incantations, instructions, and addresses to the divine. Scribes kept a principal copy, which they were commissioned to selectively reproduce and personalize for the person who had died. Those preparing in advance could select the chapters and illustrations they wished to be included. Texts that have been recovered from Egyptian burials give scholars an idea of the chapters that composed the original Book of the Dead, as well as an understanding of

how Egyptian funerary practices and religious beliefs developed over time.

The ancient Egyptians believed that the Book of the Dead was written about 50,000 B.C. by Tehuty, one of the first created beings, who brought language and speech into the world. The written language of the ancient Egyptians consisted of pictorial characters or symbols called hieroglyphs. A cursive form of hieroglyphics, called hieratic, was also used. Certain versions of the Book of the Dead are composed entirely in hieroglyphics and some in a combination of hieroglyphs and hieratic.

The earliest Egyptian funerary texts, called the Pyramid Texts, appear as inscriptions on chamber walls and passages of the pyramid of Wenis, the last ruler of the fifth dynasty, ca. 2345 B.C. The language of the texts suggests that these burial inscriptions had already been in use for centuries. In later dynasties, these standard inscriptions were copied onto many other pyramids and monuments, even sarcophagi, and are collected and printed as the Coffin Texts. The Pyramid and Coffin Texts precede the papyrus copies of the Book of the Dead, the earliest of which date to the mid-15th century B.C.

The oldest papyri, such as those of Nu, Userhat, Kha, and Yuya, tend to be brief, with a small number of chapters and few illustrations. The Papyrus of Hunefer, discovered at Thebes in 1852 and named for the man it was written for (and perhaps by), the chief scribe of Pharaoh Seti I, dates to 1400 B.C. It is perhaps the shortest text of the Book of the Dead, containing only three chapters, but it is one of the most beautifully illustrated. The chapters of the Book of the Dead known today are an arrangement imposed by Egyptologists, which provides a unified and comprehensive view of the Egyptian afterlife but sometimes fails to capture the unique beauty and distinct style of the individual papyri.

Critical Analysis

Egyptian belief sometimes varied slightly by city or dynasty, but on the whole they believed that the world was divided into three realms: Ta, which was

earth or the world of the living; Nut, the world above, a spiritual realm or heaven; and Dwat, the netherworld, or the world between. This passage from the Papyrus of Ani best summarizes the essential belief regarding the eternal nature of the soul:

Men do not live once, in order to vanish forever. They live several lives in different places but not always in this world, and between each life there is a veil of shadows.

Since the soul was able to move between varying states of being, death was simply a passageway to the Dwat, the world of shadows. Reciting and reenacting the directions of the Book of the Dead, it was believed, guided souls through the Dwat and led them to the Garden of Reeds, a place of everlasting peace inhabited by perfected souls. Those souls who were not perfected reincarnated into living forms and might return to Ta or earth as humans, animals, or insects, there to continue acquiring the knowledge that would help them succeed at their next judgment.

The Egyptians called the collection *The Chapters of Coming Forth by Day* because these writings represented the beginning of a new phase of life. During the time of the Old Kingdom, as the Pyramid Texts suggest, departed souls perambulated at will among the stars. Later, during the Middle Kingdom, Osiris emerged as the king of the underworld. Prayers in the Book of the Dead largely address him for protection and guidance, and most copies open with a hymn addressed to Osiris, as do these lines from the Papyrus of Hunefer:

Maker of heaven and earth, adoration to you!
O, you are embraced by Maat at the two seasons. You are striding over heaven with joy.
(1.4–5, trans. by Ramses Seleen)

While the earliest funerary inscriptions addressed a single divine being called Amen-Ra, as beliefs evolved over the span of several centuries,

other names and divine personifications developed, among them Isis, the patroness of fertility and love; Horus, the redeemer of good deeds, and Anubis; the guardian of secret knowledge. Part of the complexity of Egyptian spirituality is its ability to absorb and contain its own history without apparent contradiction. Chapters of the Book of the Dead simply expanded to address evolving beliefs.

Praises in homage to Osiris were part of the protective function of the Book of the Dead, to help the traveling soul reach its destination safely. There were dangers in the otherworld, one of them being that the soul could die again. Chapter 135 contains a spell to be said when the moon is new on the first day of the month. The prayer is essentially for illumination, and has enormous benefits, as Raymond Faulkner translates:

As for him who knows this spell, he will be a worthy spirit in the realm of the dead, and he will not die again in the realm of the dead, and he will eat in the presence of Osiris. As for him who knows it on earth, he will be like Thoth, he will be worshipped by the living, he will not fall to the power of the king or the hot rage of Bastet, and he will proceed to a very happy old age.

As this passage suggests, chapters from the Book of the Dead could be studied by the living to ensure a fruitful life on earth and equip oneself in advance for the journey beyond. The Egyptians imagined this further journey to be much like life on earth. One was required to eat, rest, and also work. Therefore, the practice developed of including clay figurines or other images in the burial chamber; in the shadow realms, these spirit figures could be recruited to do hard labor.

Part of the spirit's progress involved a judgment at which one had to account for the deeds done in life. The judgment took place immediately on arrival in the afterlife, and the outcome determined whether the soul would progress to the Garden of Reeds or return to earth. Therefore, many papyri contain confessions or declarations of activities its

owner has or has not engaged in, which, it is hoped, will help the judges reach a favorable decision. The confessions show what behaviors hold the soul in ignorance, among them lying, quarreling, blaspheming, or being hot-tempered, quarrelsome, or deaf to words of truth.

The chapters specify when and sometimes where incantations should be performed for maximum effect. Most are in favor of a speedy progress to the realms of bliss, while some are a safeguard against tricks or punishments. Some translators refer to the chapters as spells or magical charms, which reflects a certain long-held bias that ancient Egyptian beliefs were primitive, barbaric, confused, and often corrupt. In reality, the civilization and learning of ancient Egypt had an enormous influence on other developing cultures, particularly those of the Greeks and Romans, and the Tibetans also have a Book of the Dead. The philosophical tenets of reincarnation and the perfection of the soul are also found in the beliefs of the Taoists, the ancient Celts (*see* MYTHOLOGY, CELTIC), the Jewish Kabbalah, the writings of Zoroaster, the teachings of Buddha, and the Hindu *Vedas* of India.

Būsīrī, al- (Sharaf ad-Dīn Muhammad ibn Sa'īd al-Būsīrī as-Sanhājī)
(ca. 1212–ca. 1294) *poet*

Al-Būsīrī was the author of one of the most famous poems in the world of Islam, the “Qasidat al-Burda,” or “Ode to the Mantle,” a panegyric (poem of praise) to the prophet MUHAMMAD.

Born in the village of Abusir in Egypt, al-Būsīrī made a modest living in Alexandria copying manuscripts. He studied under a mystic Sufi master and was affected by the atmosphere of Sunni religiosity cultivated by the Ayyubid sultans. As a result, he produced a body of poems praising Muhammad that continue to be read by Muslims today. These poems, like others of the period, ascribe miracles and prodigies to the prophet.

By far his most famous work was the “Burda” (also called “Luminous Stars in Praise of the Best of Mankind”), which critics have celebrated and other poets have attempted to imitate. Admirers have learned its verses by heart and have had them inscribed in gold letters on public buildings. The poem has even been venerated as a charm against evil.

According to legend, al-Būsīrī began to compose the “Burda” after praying for a cure for a stroke, which had paralyzed half of his body. Falling asleep, he dreamed that Muhammad touched his body and threw his mantle over him—

a mantle celebrated in another poem from the prophet’s day. The poet was instantly cured, and he penned his adoring poem in gratitude. The tone of pious love can be seen in these lines:

*The merits of God’s Prophet are limitless;
No human speech can encompass them.*

*If his miracles in their greatness were equal
to his rank*

*Dry bones would revive at the mention of
his name.*

Such is the power of al-Būsīrī’s imagery and expressions of love for Muhammad that his poem continues to influence Arabic poetry to the present day.

Caedmon (seventh century) *poet*

Caedmon was a layman from Northumbria whose one surviving poem, “Caedmon’s Hymn” (658–680), had a revolutionary influence on Anglo-Saxon poetry. His application of the Germanic technique of heroic poetry to Christian themes and edification set the standards for vocabulary, style, method, and diction that were mimed by Anglo-Saxon poets for centuries thereafter.

In the monastery of the Abbess St. Hild, Caedmon was said to be distinguished by divine grace because he took what he learned from Latin scriptures and effortlessly composed poetic words of the greatest sweetness in the language of the Angles of Northumbria. His moving poetry inspired many of his listeners to despise the earthly world and long for heavenly life.

What we know of “Caedmon’s Hymn” comes from BEDE’s descriptions in his *Ecclesiastical History of the English People* (731). Bede tells us that in his youth, Caedmon had settled down to a secular life of an illiterate herdsman. Sometimes at feasts, the hosts decided that their guests would provide entertainment by reciting verses to the accompaniment of a harp. Whenever Caedmon saw the harp coming close to him, he would leave the feast and walk back to his house with a feeling of shame for his lack of skill in reciting poetry.

One day, upon leaving such a party, he went to the cattle pens to check on the cattle. He then fell asleep and dreamed that a man was standing by him and calling his name: “Caedmon, sing me something.” Caedmon replied that he did not know how to sing and that is why he had departed so precipitously from the feast earlier that evening. But the man insisted: “Yet you shall sing to me.” Caedmon decided to humor the man and asked him what he should sing about. The man replied: “Sing of the beginning of created things.”

Caedmon immediately began singing in praise of God the creator. That nine-line song became known as “Caedmon’s Hymn”: “Now let me praise the keeper of Heaven’s Kingdom, / the might of the Creator, and his thought, / The work of the Father of glory. . . .”

Caedmon is said to have composed hundreds of religious poems in his lifetime. However, despite Bede’s research and recording efforts, only the “Hymn” can be authentically attributed to Caedmon. Nevertheless, his place in history is assured by the stylistic revolution in poetry that he set in motion. As Bede tells us:

[Caedmon] made many compositions concerning divine blessings and judgments, by all of which he sought to turn men’s minds from

delight in wickednesses, and indeed to stir them to the love and skilful practice of good deeds. He was a most religious man who subjected himself with humility to the disciplines of monastic rule. But against others who wished to act otherwise he was aflame with fervid zeal. Hence it was that he closed his life with a beautiful ending.

Caesar, Julius (100 B.C.—44 B.C.) *statesman, general, writer*

Julius Caesar is arguably the most famous historical figure of ancient Rome and one of the most famous men of all time. He had an indelible influence on the political, social, and military events of his time, and his life story has become one of history's great epics, as his actions caused the downfall of the Roman Republic and the rise of the Roman Empire. In addition, he was a writer of no little talent, and his works set the standard for a unique literary genre, the military memoir.

Julius Caesar's family was aristocratic but not particularly distinguished. At the time of Caesar's birth, Rome was by far the strongest power in the Mediterranean region and was engaged in nearly continuous warfare with numerous enemies; it would be through service in these wars that Caesar would first come to prominence.

Though still a republic at the time of Caesar's birth, the governmental structure of Rome had been designed when it was a small city-state, and the republican foundations were beginning to break down under the stress of gaining and controlling a far-reaching empire. In his early years, Caesar served the government in various military, political, and diplomatic posts. As time passed, he gradually worked his way up through the Roman hierarchy. He served as the chief financial officer of Roman-controlled Spain and later became responsible for public entertainment and religious functions in Rome. In 61 B.C., he became governor of a province in Spain, and he used the position to enrich himself and gain influence. Caesar was a gifted politician, being both shrewd and indomitable. He had no particular political ideology and strove entirely to satisfy his personal ambitions. Intellectually gifted, he followed the philosophy of EPICURUS and his own highly developed sense of honor.

In 60 B.C., Caesar was elected consul, the highest office in the Roman Republic. Now one of the most powerful men in Rome, he formed a partnership with two other politicians, Crassus and Pompey, creating what was called the "First Triumvirate." In 58 B.C., hoping to raise his prestige through military victories, Caesar took command of the Roman armies in Gaul, now modern France. Over several years and numerous campaigns, Caesar's armies waged relentless war on the Gallic tribes and fought several battles against native settlements in Germany and Britain. Caesar displayed a cunning military genius and a ruthless command of strategy. In 52 B.C., at the Siege of Alesia, the Gauls still resisting Roman rule were crushed.

During lulls in the fighting, Caesar began writing his famous *Commentary on the War in Gaul*. He wanted his achievements to be recorded so he could use them as political propaganda and as justification for his decisions. His was the first true military memoir.

Political leaders in Rome became increasingly fearful of Caesar's growing power. Crassus had been killed, leaving Pompey and Caesar as rivals. After Caesar completed the conquest of Gaul, he

turned his attention once more to political matters in Rome. In 49 B.C., the Senate demanded that Caesar turn over the command of his army. He refused to do so and instead marched his forces toward Rome, beginning a civil war that would topple the Roman Republic. Over the next several years, Caesar fought Pompey and his allies in numerous campaigns throughout the Mediterranean. By the time the war was over in 45 B.C., Caesar had emerged victorious and was completely in control of Rome and all its territory.

Caesar's writings during the time of the civil war were produced mainly to increase his support among the people and damage his enemies' reputations. He penned a bitter denunciation of his deceased rival Cato, named the *Anticato*, and also wrote *Commentary on the Civil Wars*, which was very similar to the work he had written on the war in Gaul. In his clear and straightforward style, Caesar gives accounts of the military and political events of the conflict. He writes in the third person, and his prose resembles that of a newspaper reporter, giving a simple and clear description of what is happening. Nevertheless, these accounts served primarily as propaganda to embellish Caesar's achievements at the expense of his opposition.

Once in possession of Rome, Caesar made himself dictator and thereby became the unchallenged ruler of the Roman world. He began a program of ambitious reforms designed to improve life for average Roman citizens and ensure his popularity. Many people, however, feared Caesar would attempt to make himself king and thus completely destroy whatever was left of the Roman Republic. On March 15, 44 B.C., Caesar was assassinated by a group of senators. The circumstances surrounding Caesar's assassination have fascinated people for 2,000 years and serve as the subject matter for one of the greatest plays in English history, William Shakespeare's *The Tragedy of Julius Caesar* (1623).

Caesar was one of the most influential figures of Western history. His political, military, and literary skills were remarkable, and his personality, willpower, and amazing abilities continue to fasci-

nate people to the present day. He is remembered as one of the most capable men of ancient times.

Critical Analysis

Caesar is best known for his political and military achievements, but it is also acknowledged that he was a writer of considerable ability. The most famous piece of literature he produced was *Commentary on the War in Gaul*, a firsthand account of his campaigns in that region. The *Commentary's* seven books describe the campaigns from 58 to 52 B.C. Sometime later, a former staff officer of Caesar's named Aulus HIRTIUS added an eighth book, which completes the narrative.

Caesar writes in the third person, referring to himself as Caesar, though he makes occasional references to "our" troops. His commentary describes battles and sieges not dramatically but rather dispassionately, seemingly striving for accuracy instead of excitement. Yet his prose contains its own dynamic energy, as in this description in S. A. Hanford's translation of a turn in the battle against the Nervii:

. . . the Roman cavalry and light-armed troops, routed by the first attack, were in the act of retreating into the camp, when they found themselves face to face with the Nervii . . . The servants . . . on looking back and seeing the enemy in the camp immediately ran for their lives. Meanwhile shouting and din arose from the drivers coming up with the baggage, who rushed panic-stricken in every direction.

For the most part Caesar strives to portray himself as a determined man performing a necessary mission, but at times he likes to add a touch of the dashing hero, for instance in this passage where he describes how he turned the Nervii battle with a heroic gesture:

As the situation was critical and no reserves were available, Caesar snatched a shield from a soldier in the rear . . . made his way to the front

line, addressed each centurion by name, and shouted encouragement to the rest of the troops. . . . His coming gave them fresh heart and hope; each man wanted to do his best under the eyes of his commander-in-chief, however desperate the peril.

Caesar also describes himself as a merciful man and uses such opportunities to remind his readers how grateful they should be to him. After sending word to Rome of his victory against the Atuatuci, he observes that “a public thanksgiving of fifteen days was decreed to celebrate his achievements—a greater honour than had previously been granted to anyone.”

Despite the ostensibly objective tone of the *Gallic Wars*, it focuses more on Caesar’s successes and less on his failures, glossing over many of the serious setbacks and atrocities committed by his men. He intended that this work, like his *Commentary on the Civil War*, would serve first as political propaganda and later as a record of achievements that would elevate his reputation well after his death. Caesar presents himself as a traditional soldier, serving the interests of Rome, and nowhere in the narrative does one find any hint of the ambitious and unscrupulous politician that Caesar truly was.

Caesar’s *Commentary on the War in Gaul* has become the classic military memoir, which has evolved into a unique literary genre. Like the records of Cornelius TACITUS, Caesar’s account is a valuable source of historical information as well as an admirable piece of Latin prose.

Callimachus (ca. 305–ca. 240 B.C.) poet, scholar

Callimachus was born in Cyrene (in present-day Libya) and received his education in Athens. A distinguished scholar and poet, he opened his own school in the suburbs of Alexandria, where many distinguished grammarians and poets, including ARISTOPHANES, attended.

Since it was customary at the time to assign library work to scribes and scholars, Ptolemy II of Egypt employed Callimachus as the chief librarian of the Alexandrian Library. Callimachus occupied this position for the rest of his life, and his outstanding achievements in the field of librarianship earned him the title “Founding Father” of librarians. He created the chronological subject catalog called *Pinakes*, consisting of 120 volumes and containing critical information on the library’s holdings, as well as biographical information on all the authors. *Pinakes* is not only the first catalog of the largest library in the ancient world but also the first complete literary history of Greek literature.

It is Callimachus’s witty and elegant poetry, however, that brought him fame. He is said to have written about 800 works, of which only six hymns, 64 epigrams, and some fragments of longer poems are extant.

Callimachus’s hymns are written in an extremely learned, intricate language. His “Bath of Pallas” is a story about the bathing ritual of Athena’s statue in Argos, and “The Blinding of Tiresias” refers to Athena’s retaliation against Tiresias,

who saw her bathing in a stream. These and Callimachus's hymns are known for their lyric quality.

Callimachus's elegies and epigrams were among his greatest achievements. He was referred to by his contemporaries as the chief of the elegiac poets, and Roman poets used his elegies as models for their erotic poetry. History tells us that Callimachus once engaged in a literary dispute with APOLLONIUS OF RHODES, arguing that well-crafted short poems of quality are superior to long ones of quantity. He wrote of this dispute in *Ibis*, in response to the long, epic poems of Apollonius's *Argonautica*.

Callimachus's most famous work, written ca. 270 B.C., was the *Aetia* (also *Aitia*, meaning "causes"), a four-book collection of legend-like, narrative elegies (totaling 7,000 lines) that explore the causes (or origins) of the foundation of cities, religious ceremonies, and other customs. OVID used the *Aetia* as a model for his *Metamorphoses*.

Of Callimachus' epigrams, the scholar Kathryn J. Gutzwiller says that they "formed the most famous and admired of Greek epigram collections" and that they "belonged to the canon of works read by boys in school." These works were praised not only for their perfect literary form but also "for their charm and human feeling, their sweetness, expressiveness, and wit." In one epigram, Callimachus praises Ptolemy II's wife: "Blest, radiant Berenikê, / Without whom the very Graces are graceless." And in another epigram, Callimachus honors a fellow poet:

*They told me, Heraclitus, they told me you
were dead,
They brought me bitter news to hear and
bitter tears to shed.
I wept as I remember'd how often you and I
Had tired the sun with talking and sent
him down the sky. . . .*

Callimachus's longer works include *Hecale*, an EPIC in which the old woman Hecale shelters the hero Theseus from a storm; and *Iambi*, a collection of 13 poems written in iambic form and covering various themes such as criticism, fables, and poetic voice.

Callimachus recognized literature as a powerful means for expressing and sharing knowledge and wisdom. His works influenced later Greek and Roman poets, including OVID, CATULLUS, HORACE, and PROPERTIUS.

Cao Zhi (Ts'ao Chih) (192–232) poet

Cao Zhi is considered to be one of China's greatest early lyric poets. The son of a famous northern Chinese ruler and general, he showed great literary promise at an early age. Though the young poet had an easygoing personality, he also liked to drink heavily and was thought to be undignified. Because of this reputation and the tradition of primogeniture, his father named Cao Zhi's older brother and poet, Cao Bi, as his sole heir, which led to a lifelong rift between the two brothers. After Cao Bi's ascension to the throne in 220, Cao Zhi was exiled by his brother to a number of minor provincial areas, where he served as a feudal lord until his death.

Cao Zhi's poetry is highly personal, reflecting his feelings about his political situation, his lack of leadership skills, and his strained relationship with his brother. The following untitled poem, for example, serves as a metaphor for Cao Bi (the stalks) and his torture of Cao Zhi (the beans):

*Frying beans with bean stalks as fuel.
Beans weep sadly in the pan
From the same root we both grew.
Why is the hurry in the grill?*

In "Dew upon Grass," Cao Zhi offers an ambiguous lament—sorrow that his talents do not serve to protect his homeland against invasion, or sorrow that his country's leader, his brother, is not "enlightened":

*Man's lifetime in this world goes by
as quickly as the wind upon the dust
Would I be able to employ my talents
To exert myself in the service
Of the enlightened ruler!*

Cao Zhi is recognized as one of the first Chinese poets to put himself at the center of his poetry, which he uses as both a reflection of his inner thoughts and a means by which he could achieve immortality. By the time of his death, he had written hundreds of highly regarded poems and prose works.

carpe diem term

Carpe diem, Latin for "seize the day," is a popular motif in love poetry. In such lyrics, the speaker ex-

horts the listener to grasp and enjoy the immediate pleasures of youth and everyday life, particularly love, because the future is uncertain and time is fleeting.

The theme of seizing and making the most of the moment appears in the earliest of poetry. In the Sumerian *Epic of Gilgamesh*, dated to 3000 B.C., Gilgamesh's heroic quest to recover his lost friend Enkidu leads to his learning he must make the most of mortal life. The teachings of the Greek philosopher EPICURUS (fourth century B.C.) encourages the pursuit of pleasure as an antidote to pain caused by human frailty and the inevitable recognition of mortality. The carpe diem motif appears frequently in early Greek poetry, particularly in the poems of ALCAEUS, who advocates drinking and other pleasures as a salve for despair caused by brutal events, and SAPPHO, as well as the lyric poems of HOMER.

The term *carpe diem* first appeared in the 11th poem of Book One of Horace's *Odes* (23 B.C.) in a slightly less romantic context. Affixed with the title "Enjoy the Passing Hour," by translator C. E. Bennett, the verse urges:

Busy thyself with household tasks; and since
life is brief, cut short far-reaching hopes! Even
while we speak, envious Time has sped. Reap
the harvest of today, putting as little trust as
may be in the morrow!

Book I, Ode IX, conveys a similar injunction:

Cease to ask what the morrow will bring forth,
and set down as gain each day that Fortune
grants! Nor in thy youth neglect sweet love nor
dances, whilst life is still in its bloom and
crabbed age is far away!

In Book II of the *Odes*, Horace continues this theme, observing "Fresh youth and beauty are speeding fast away behind us . . . Why not rather quaff the wine?"

Due in part to the frequency with which Horace was read in the MIDDLE AGES and later, and also in

part to its broad human appeal, the theme frequently appears in poetry of the Renaissance and beyond. The French poet Pierre Ronsard (1524–85) famously uses the passing seasons in his sonnets addressed to Hélène to introduce a wistful, poignant tone into the consummation of their love; all is in bloom on May 1, but when fall winds blow and winter storms rage, the only solace they may have is in each other.

Carpe diem was a favorite theme among the English lyric poets as well. The sonnets and plays of William Shakespeare take up this motif, most notably the comedy *Twelfth Night* and Sonnet 73, where he entreats his reader to “love that well, which thou must leave ere long.” The “cavalier” poets of the 17th century made a jaunty use of the theme as a means of persuading their sweethearts to yield to their demands. In “To the Virgins, to Make Much of Time” (1648), Robert Herrick writes:

*Gather ye Rose-buds while ye may,
Old Time is still a flying;
And this same flower that smiles to day,
To morrow will be dying. . . .*

Similarly, in “Corinna’s Going A Maying” (1648), Herrick urges his love to join him on a pleasure outing, since “[o]ur life is short, and our dayes run / As fast away as does the Sunne.” Andrew Marvell employs the carpe diem motif in “To His Coy Mistress” (1681) with the resonant line, “Had we but world enough, and time.” In contrast to Herrick’s somewhat joyous and reckless tone, Marvell moans that “at my back I always hear / Times winged Chariot hurrying near,” lamenting the transience of life.

Eastern poetry also employs the carpe diem theme to observe a lament on the inevitable passage of time and to encourage the pursuit of pleasure. In the 11th-century Persian collection of verses called the *Rubáiyát*, as translated by Ahmad Saidi, the poet muses:

*Why worry whether wealth I have or not,
And life in happiness shall end or not—*

*Come, fill the cup; for ’tis unknown to me
The breath inhaled shall be exhaled or not.*

The carpe diem motif continues to appeal to modern poets and appears particularly in the poetry of Robert Frost and W. B. Yeats as well as the novels of Saul Bellow and Bruno Francés.

Catullus, Gaius Valerius (84–54 B.C.) *poet*
Gaius Valerius Catullus was born in Verona to an elite family; his father was a close friend of Julius CAESAR’s. In his early youth Catullus moved with his family to Rome. He was expected to have a brilliant political career and traveled in Asia in the entourage of the governor of Bithynia Memmius to satisfy the requirement of all politicians to spend time in the army. In spite of his training and his father’s influential connections, though, Catullus devoted himself to writing poetry.

In his poetry, Catullus is as daring as he was in his personal life. He was educated in the classical tradition and translated the works of many of the old masters, including CALLIMACHUS and SAPPHO. He also became one of the first “neoteric poets,” who used colloquialisms and even obscene words in their works.

Catullus’s poetry was unique for the period, because he made good use of his education, combin-

ing the conversational language with the learned one and using elaborate sentence structure and subtle allusions. His successors gave him the name *doctus*, which recognized his mastery in the skill of literary technical perfection, known as the ideal of Alexandrianism.

Another of Catullus's revolutionary innovations was to employ poetry to express his personal feelings and reflect on his unique experiences. Thus, in some of his early poems, Catullus mocks the established custom of networking among the elite, which was practiced by his family: "So much for running after powerful friends!"

The majority of Catullus's poems, however, reflect his personal feeling toward the two loves of his life: Juventius, his unfaithful boyfriend; and Clodia, an older, married woman from high society who was accused of poisoning her husband during her affair with Catullus. Under the name *Lesbia*, Clodia became the inspiration and the heroine for 26 of Catullus's poems. These poems not only describe his feelings for Clodia but also provide a lively account of the lovers' passionate quarrels, including Catullus's criticism of his lover's immorality and his disappointment of and anger about her infidelity.

Other themes in Catullus's poetry are his sadness over the death of his brother, who died at Troy; the life of the young elite of the Roman Empire; and his friendship with Gaius Julius Caesar. Catullus is often critical of Caesar, this criticism, however, is not political, but very personal, characteristic of most of his poetry. In one poem, he even says, "I HAVE no very great desire to make myself agreeable to you, Caesar," to emphasize that he believed himself to be independent of Caesar's patronage.

Catullus's influence is apparent in the lyrics of VIRGIL, who often openly expressed his admiration for Catullus, and of HORACE. In the century following Catullus's death, he was mostly remembered for his epigrams in which he attacked his rivals and enemies and which the first-century poet MARTIAL once described as masterpieces. Today Catullus is considered to be one of the most effective lyric poets of ancient Roman literature.

Chinook myths and tales *folklore*

As with most Native American tribes, the Chinook did not have a written history; rather, their history was passed down generation to generation through oral tradition. Many of their tales were formulated from their surrounding area. Located in the Pacific Northwest, near the mouth of the Columbia River and the Pacific Ocean, the Chinook relied primarily on the influence of the ocean, river, and land.

One creation myth of the Chinook is about the first Chinook people. According to Chinook legend, Old Man South Wind was traveling north along the Pacific Coast when he met Giant Woman near the mouth of the Columbia River. There she taught him how to fish and gave him a net. Old Man South Wind used the net and pulled a whale

out of the ocean. When he tried to cut the whale, though, it turned into a large Thunderbird that flew to the top of a great mountain and nested. As the legend goes,

Atop Saddle Mountain, Thunderbird built a large nest and laid several eggs in it. One day when Thunderbird flew away, Giant Woman climbed high to the bird's nest. She mischievously cracked an egg, but it was bad, and she threw it down the mountain. She cracked another and another until she had broken them all and hurled them from the peak. Each time an egg landed at the base of the mountain, it became an Indian. This was how the first Chinook men, women, and children came to be.

This myth is very important to the Chinook and is still told to their children to this day.

Another important aspect of Chinook history was their belief that the coyote, or Italapas, was a cocreator with Ikanam, the creator. According to Chinook belief, Italapas waited in the tree for floodwaters to subside after a great flood. While waiting, he threw sand into the water and created land. Italapas then helped Ikanam create humans and taught them to hunt and weave.

Yet another Chinook tale is about the first “white man.” An important part of the Chinook oral literary tradition, this was retold for many generations. The tale starts with a Chinook woman mourning the death of her son. While on a walk for the first time in more than a year, she went to the ocean where she saw something in the water coming to shore:

When it landed on the beach it appeared to be a monster with two giant spruces planted in its body and sprung with many ropes that evidently sprouted out of the monster's back. Also on the back of the monster stood two hairy animals, probably bears, although their faces seemed to be human.

The tale continues with the woman getting two Chinook to look at the creature. The two Chinook men boarded the boat where they met two friendly white traders. The story of how the Chinook met the “white man” was very important to the Chinook because for some time they had a good trade relationship with the “white man.”

chivalry and courtly love

Chivalry and courtly love are social concepts that strongly influenced the literature of western Europe during the later MIDDLE AGES. Both concepts attempted to describe the rules for polite behavior for the aristocrats of a feudal society. Feudalism bound all classes of society in mutual oaths of loyalty in exchange for patronage or service.

The code of chivalry dictated a knight's behavior in battle and in relationships with his overlord and his own servants, while the code of courtly love dictated how the knight should behave at court, particularly in his amorous addresses to the court's ladies. Portrayals of chivalry and courtly love in the literature, however, suggest that these artificial modes of behavior were difficult to actually practice, and even in their fictionalized versions, characters adhering to the standards of chivalry and courtly love do not find them free of contradictions.

Chivalry required knights and nobles to swear loyalty to their superiors and show compassion and mercy to the weak and socially inferior. The

ideal chivalric knight was brave, loyal, and determined as well as compassionate, just, and helpful to those in distress—an exemplar of Christian virtue. As the CRUSADES into the Holy Land began, many knights took vows of chastity and poverty to give their exploits a more spiritual dimension.

The beginnings of the code of chivalry in the MEDIEVAL ROMANCE can be traced to the French *Le Chanson de Roland* (SONG OF ROLAND), which dates to the late 10th century. The narrative retells the story of an actual battle in 778 when a group of Basques attacked the rearguard of Charlemagne's army as he withdrew from Spain. The *Roland* poet, composing near the end of the 11th century, turns the attacking party into Saracens (Moors, who were Muslims from the Moroccan coast), making a central issue of the poem a defense of Christianity. He also turns Charlemagne's army into a set of feudal nobles governed by feudal attitudes and bonds of loyalty. Roland and his warriors refuse to abandon one another even though it appears they will all likely die. In addition, Roland hesitates to blow the horn that will summon reinforcements, since this act, suggesting that he is not heroic enough, would shame his and his family's honor. Roland's tragic death and the vengeance of Charlemagne valorize the behavior of the hero in war, a theme that would continue into other French *chansons de geste*, or songs of adventure. In addition, as literature elaborated on the conduct of the hero in war, it also elaborated on the conduct of the hero in love. In love, poetically imagined as a type of polite warfare, hearts were at stake instead of lives. Thus, the concepts of chivalry and courtly love develop simultaneously in the romantic literature.

The practice of courtly love developed around the 11th century. C. S. Lewis, in his classic study *The Allegory of Love*, claimed that courtly love developed suddenly and spontaneously in the lyrics of the Provençal TROUBADOURS of southern France. Other scholars, like Denis de Rougemont, suspect that the troubadours drew inspiration from the Arabic and Hebrew lyric poems circulating in the courts of Muslim Spain. For example, the system

of love described in the Arabic work *The Dove's Necklace* by Ibn Hazm (1022) closely resembles Andreas Capellanus's *The Art of Courtly Love* (1174), a Latin text that codifies the practice of courtly love along the lines of OVID's first-century *Art of Love*. Thus, courtly love as a literary device had its roots in both a Latin and a vernacular poetic tradition.

The elements of courtly love, according to Lewis, are humility, courtesy, adultery, and the religion of love. In this religion, Cupid, or Amor, and Venus preside as god and goddess. Courtly convention requires that the lover be hopelessly devoted to a lady who is his social superior; most often, she is married to his overlord, and he refers to himself, in feudal terms, as her servant and she his master. She is universally described as beautiful, graceful, and refined. The lover puts himself through grueling tests to prove the extent of his devotion. He suffers torments of the heart and spirit; often, he has a rival for the lady's love (never her husband), and just as often, the lady is cold or indifferent to him. The lover describes himself as wounded by love's arrows, near death with despair. Frequent plot devices include a springtime setting, an image of the court and all the ladies dancing, and a debate wherein the lover must defend himself.

Using the elements established by the troubadours and by Capellanus, the French romances of the 12th century refined the concept of courtly love in such works as the *ROMANCE OF THE ROSE* by GUILLAUME DE LORRIS and Jean de Meun. Courtly conventions also appear in the *Lais* of MARIE DE FRANCE and the Arthurian romances of CHRÉTIEN DE TROYES. The characters from the Arthurian legends, called "the matter of Britain," were popularly recast as feudal heroes and made models of chivalric conduct. Later incorporated with the story *TRISTAN AND ISEULT* and legends of the HOLY GRAIL, Arthurian tales by GOTTFRIED VON STRASSBURG, WOLFRAM VON ESCHENBACH, and others repeatedly returned to the themes of chivalry and courtly love. Chrétien's *Erec and Enide* shows the hero experiencing a crisis of reputation when his absorption

in love makes him neglect deeds of chivalry, and he is thus thought to be losing his touch. The English poem *Sir Gawain and the Green Knight* explores the demands of the chivalric code as it governs behavior at court, behavior at love-play, and the necessity of keeping one's promises and preserving one's honor.

Love as a noble and ennobling concept reached its finest expression in the poetry of DANTE ALIGHIERI and his contemporaries in Italy. Dante, along with Petrarch, elevated the worship of a distant lady to its highest degree. Later authors working in this tradition, including Geoffrey Chaucer, Charles d'Orléans, and Jean Froissart, borrowed images from Dante and Petrarch to describe their own adventures in love.

Almost as soon as the literature of courtly love developed, it began to satirize itself. The concept contained inherent contradictions, not least being that a hero was required to be a ferocious killer as well as a courteous lover. In actual practice the application of chivalric codes could be dangerous as well as absurd, as demonstrated by the conflicted hero of Miguel de Cervantes' *Don Quixote*. Arguably, Ovid and Capellanus were writing tongue-in-cheek, suggesting that that taking love seriously was, itself, a joke. Capellanus's insistence that courtly love could only exist between an adulterous couple, and that marriage prohibited romance, was certainly a morally troubling stance for a cleric to take. Chrétien's romances, while articulating the concepts of fine love or *fin amor*, also made gentle fun of them, as in the episode from *The Knight of the Cart* where Guinevere shuns Lancelot for hesitating to use a criminal's cart as a means to come to her rescue.

Also, the practice of courtly love, while appearing to elevate women to near-sacred status, did very little to ameliorate the positions of actual medieval women. Critics have argued that the code of chivalry more correctly governed male social relations than it described or governed male-female romantic relations. Moreover, courtly literature frequently objectified or even maligned women, as Christine de Pisan pointed out in her querulous response to the *Romance of the Rose*.

Nevertheless, the concepts of chivalry and courtly love persisted into literature of the later MIDDLE AGES and the Renaissance, in the Arthurian romances of Thomas Malory, the poetry of Edmund Spenser and Philip Sidney, and the sonnets of William Shakespeare and Pierre de Ronsard. The idea of suffering for love marks romantic literature from Abbe Prévost's *Manon Lescaut* to Samuel Richardson's *Clarissa*. C. S. Lewis observes that the code of chivalry and courtly love "have made the background of European literature for eight hundred years . . . They effected a change which has left no corner of our ethics, or imagination, or our daily life untouched."

Chrétien de Troyes (fl. 1160–1185) *poet*

As scholar D. D. R. Owen observes, Chrétien de Troyes has been called one of the great figures of world literature, the father of Arthurian romance, precursor to the modern novel, and a brilliant chronicler of French chivalry. But biographical information on Chrétien is scarce. In his writings he gives his name as Chrétien de [of] Troyes and says he studied under Peter of Beauvais. Chrétien was trained as a cleric, but he may not have taken orders in the priesthood and instead made his living as a court poet. His dedications show that he had wealthy patrons; he began *The Knight of the Cart* at the prompting of Marie de Champagne, the daughter of Eleanor of Aquitaine, and he wrote *The Story of the Grail* for Count Philip of Flanders.

Troyes, France, functioned as a center for trade, financial business, and the court of Champagne. Chrétien was thus exposed to two traditions of literature: the antique EPIC style, which focused on the deeds of great heroes, and the resurgence of French or vernacular literature. In his lifetime, the MEDIEVAL ROMANCE had begun to flower, writers were inspired by the codes of CHIVALRY AND COURTLY LOVE, and the TROUBADOURS were developing a new style of poetry. Chrétien's early works follow in the footsteps of the Latin tradition. He translated three of OVID's works, though only the story of Philomela survives. He then began to write poems, such as *The Bitten Shoulder* and *King Mark and Iseult the White*, in the more current courtly style. These early efforts are also lost.

Another poem, *William of England*, gives its author's name as Chrétien, but scholars disagree whether this is the same Chrétien who composed the Arthurian romances. Though Chrétien was not a common name in 12th-century France, some scholars, like Jean Frappier, believe that *William of England* "lacks the turn of mind, style, and subtlety of the author of *Lancelot*, *Yvain*, and *Perceval*." The five poems involving characters from the King Arthur legends, which are collectively referred to as the *Arthurian Romances*, are considered Chrétien's greatest achievement.

Critical Analysis

Chrétien is not the father of Arthurian romance in the sense that he invented King Arthur; those legends had long existed in the popular imagination of both England and France, originating as Celtic or Breton tales told about a warrior who resisted the Anglo-Saxon invasions. In the medieval period, Arthur became a fashionable topic for chronicle and romance. GEOFFREY OF MONMOUTH gave a legendary history of Arthur in his *History of the Kings of Britain*, translated into French by the poet Wace. The legend of *TRISTAN AND ISEULT* and the *Lais of MARIE DE FRANCE* refashioned the folkloric material into matter worthy of courtly attention. These lines from the opening of *The Knight with the Lion* suggest that Chrétien found Arthur the ideal character around which to structure his romances:

So it is my pleasure to relate a story worth listening to about the king whose fame spreads near and far. And I do agree with the belief of so many Bretons that his renown will last forever. Thanks to him, people will recall his chosen knights, fine men who strove for honor.

Chrétien re-creates in the court of Arthur all the attitudes and structures that prevailed in 12th-century France: its nobility of knights and ladies, its staged battles in the form of jousts, and its oaths of loyalty as demanded by the structure of feudalism. In his hands, the fierce warriors from the Celtic legends become courteous, highly trained knights devoted to honor, loyalty, and the service of ladies, and the tales of their quests explore ideals of love and chivalry during the story of each knight's quest for adventure, fame, recognition, and the love of his lady fair.

The first of Chrétien's Arthurian romances, *Erec and Enide*, describes the romance of the two title characters. After their marriage, Erec is in danger of losing his reputation for prowess because he spends all of his time with his lovely wife. She does not want to see his reputation damaged, and so together they go on a series of adventures which proves the valor of the knight and the strength of love.

The second romance, *Cligés*, blends British history with legends of Constantinople, as Cligés is born of both Greek and British cultures. Though the story has magical elements, it is realistic in the ways in which Chrétien explores the motives, conflicts, and struggles of his main characters.

Chrétien worked on *Yvain, or the Knight with the Lion* the same time as he worked on *Lancelot, or The Knight of the Cart*. Both tales abound with heroic idealizations, fantastic adventures, mystical events, and psychological challenges. Both tales also focus at some length on Gawain. The tale of Yvain frequently introduces comic and sentimental elements, while Lancelot is the most reflective and inwardly torn of Chrétien's characters. *The Knight of the Cart* was finished, so the manuscript says, by one Godfrey of Lagny, who took up the tale at Chrétien's request.

The last and most complex of the tales, *Perceval, or the Story of the Grail*, was never completed.

A distinct characteristic of Chrétien's style is his use of the conventions of courtly love and his depictions of beautiful if somewhat remorseless women. His narratives are also marked by frequent battles. Chrétien takes great delight in describing fight scenes, as in this description of a joust in *The Knight of the Cart*:

After the swearing of the oaths, their horses, fair and fine in every way, were led forward. Each knight mounted his and charged at the other as fast as his horse could carry him. With their horses galloping at top speed, the vassals struck each other so hard that there was nothing left of their two lances except the shafts they held in their hands.

Like many poets composing in Old French, Chrétien writes in octosyllabic couplets, meaning his lines are rhymed and contain eight syllables. English translators most often translate his poetry into prose, sacrificing the structure in favor of preserving the sense. Chrétien did not use any archaisms or colloquialisms in his language, but instead wrote in a direct, accessible

style. He incorporates dialogue and makes frequent use of humor. His individual approach and flexible voice had an enormous impact on later romance writers. As translator David Staines writes, Chrétien “reshaped his Arthurian inheritance, and created a design that would serve as the standard and an essential source for all subsequent Arthurian literature.”

One chief contribution Chrétien made to the Arthurian legends was the introduction of the story of the HOLY GRAIL, which translator Urban Holmes calls “a mystery so vast that men have never ceased to be intrigued by it.” Topsfield calls Chrétien's story “the imaginative high point” of the author's Arthurian romances and “the zenith of his literary achievement.” Readers have endlessly speculated on Chrétien's vision for the remainder of the poem, and several have tried to write continuations.

Chrétien had a permanent effect on the body of Arthurian legend and thus influenced all Arthurian writers who followed. The romances of the German WOLFRAM VAN ESCHENBACH borrow from Chrétien, and in France the Merlin romances of Robert de Boron and the *Prose Lancelot* continued to elaborate on the subject. “The Wife of Bath's Tale” in Geoffrey Chaucer's *The Canterbury Tales*, the alliterative Sir Gawain and the Green Knight, and Sir Thomas Malory's *The Death of Arthur* are all set in Arthurian times. Edmund Spenser in *The Faerie Queene* and Alfred Tennyson in *The Idylls of the King* wrote their own versions of the Arthurian romance. John Milton considered writing about Arthur before choosing the biblical book of Genesis as the subject matter for his epic *Paradise Lost*. Modern masterpieces such as T. H. White's *The Once and Future King* and Marion Zimmer Bradley's *The Mists of Avalon* also contain echoes of the tales of Chrétien. As Jean Frappier says, Chrétien “raised a still new and uncertain genre to a high degree of excellence,” and he succeeded in “the classic task of endowing old materials with a more exquisite flavor, a clearer meaning, and broader human values.”

Cicero, Marcus Tullius (106–43 B.C.)

orator, statesman, writer

Cicero was born in the village of Arpinum in the Volscian hills near Rome. Cicero's family was of the equestrian order, which denoted some degree of privilege and social standing. Caius Marius, a relative, dominated Roman politics and military affairs for the first two decades of Cicero's life, which influenced the aspirations Cicero's father would have for his own sons. The family took advantage of connections with distinguished Romans to secure the brilliant young Cicero a first-rate education in rhetoric (the art of persuasion) and law.

Although Cicero desired a career in politics, he decided first to make a name for himself as a public advocate. Many of his existing writings are from speeches he made on behalf of his clients in the courtroom. He proved to be a captivating public

speaker with an exceptional gift for oratory. His talent, connections, and an advantageous marriage to a moneyed woman named Terentia all contributed to his successful candidacy for quaestor in 75 B.C., the lowest ranking of the magistrate positions. Ultimately, Cicero was elected to the supreme magistrate seats, that of praetor in 66 B.C. and consul in 63 B.C., an extraordinary achievement for a nonaristocrat.

Cicero enjoyed his greatest professional triumph in 63 B.C. when he single-handedly thwarted a conspiracy organized by the politician Lucius Catiline. Because he summarily executed some of the conspirators without benefit of trial, however, Cicero was briefly exiled from Rome in 58 B.C.

His last years were ones of despair and bitterness. He and Terentia divorced; his beloved daughter Tullia died in childbirth; his son Marcus was a hopeless underachiever; and, as Classics scholar Jasper Griffin writes in the *New York Review of Books*:

The Republic that he loved, in which he had won his spectacular successes, the Republic which had conquered the world, had crashed to defeat at the hands of one of its own generals, the invincible Julius Caesar, who was in the process of establishing a monarchy, with himself as its king.

Nevertheless, Cicero's literary output during these last years was prodigious, since he viewed writing as an occupation to distract him from his sorrows.

After Caesar was assassinated, Cicero collaborated with his killers to restore the Republic and delivered a series of scathing denunciations of Mark Antony, head of the Caesarian faction. The *Philippics*, as the 14 orations were known, portray Antony as despicable in personal appearance, lifestyle, ancestry, background, morals, and political skills. The vindictive Antony drew up a proscription list with Cicero's name on it. Cicero was slain by bounty hunters on December 7, 43 B.C., and his head and hands were displayed over the public speaking platform in the Forum.

Cicero's best-known speeches as an advocate include *Pro Murena* (63 B.C.), a successful defense of the politician Lucius Murena against charges of bribery, in which Cicero deflected the accusation by satirizing lawyers' nitpicking ways; *Pro Sulla* (63 B.C.), which helped acquit Publius Sulla of conspiracy even though, due to an obscure law, the prosecutor hand-picked the jury; *Pro Archia* (62 B.C.), which appealed to Roman self-satisfaction and patriotism in a petition to gain citizenship for the poet Archias; and *Pro Flacco* (59 B.C.), which argued that a person of the defendant Lucius Flaccus's character and achievement was incapable of committing the malfeasance with which he was charged.

In *De oratore* (*On the Orator*, 55 B.C.), Cicero provided instruction in the art of speaking to arouse, persuade, or entertain an audience and included vivid examples of the tricks of his trade. In 46 B.C., he composed two additional treatises on public speaking: *Brutus*, which discusses the history of the art as well as the role of the audience; and *Orator*, a depiction of the ideal speaker.

In his later years, Cicero's work became increasingly philosophical in nature. *De re Publica* (*On the Commonwealth*, 51 B.C.), an homage to the Greek philosopher PLATO's *Republic*, is an account in dialogue form of different types of government and how they degenerate. He presents the Roman Republic as the ideal state.

In 45 B.C., the year Tullia died, a heartbroken Cicero produced *Disputationes Tusculanae* (*Discussions in my villa at Tusculum*), which undertakes to demonstrate that widely held notions, such as that death is evil, are false; and *De natura Deorum* (*The Nature of the Gods*), a theological discussion from the viewpoints of various philosophical schools.

The following year saw the publication of the dialogues *De Divinatione* (*On Divination*), *De Senectute* (*On Old Age*), and *De Amicitia* (*On Friendship*), as well as *de Officiis* (*On Duties*), an essay to Cicero's son providing principles of proper conduct for those who aspire to political office.

Cicero was also an avid and accomplished correspondent, and hundreds of his letters survive.

The conspiracy of Lucius Catiline inspired some of Cicero's greatest orations. Catiline came from an aristocratic but rather dissipated family. A reckless opportunist with a conspicuously self-indulgent and decadent lifestyle, he held several public offices in Rome, but the consulship eluded him year after year and he did not have the financial resources to run indefinitely.

A desperate Catiline decided to organize a revolt. He began soliciting support from disgruntled and volatile citizens, both destitute and patrician, whose treatment by previous governments had left them facing financial ruin. Catiline promised them the cancellation of debts, and a scheme was devised to seize the government by wreaking havoc in Rome with arson and the massacre of aristocrats and senators, and by instigating armed insurrection in Etruria. The murder of Cicero was another item on the agenda.

Cicero was politically shrewd. He had many well-placed observers and became aware of Catiline's plot. The day after Cicero thwarted his would-be assassins, he arranged an emergency meeting of the senate and delivered an impassioned speech, the first oration of *In Catilinam*. As translated by Louis E. Lord, it begins with great vehemence and endless rhetorical questions:

In heaven's name, Catiline, how long will you abuse our patience? How long will that madness of yours mock us? To what limit will your unbridled audacity vaunt itself? Is it nothing to you that the Palatine has its garrison by night, nothing to you that the city is full of patrols, nothing that the populace is in a panic, nothing that all honest men have joined forces, nothing that the senate is convened in this stronghold, is it nothing to see the looks on all these faces? Do you not know that your plans are disclosed? Do you not see that your conspiracy is bound hand and foot by the knowledge of these men? Who of us do you think is ignorant of what you did last night, what you did the night before, where you were, whom you called together, what plan you took?

In the second, third, and fourth orations against Catiline, Cicero describes the measures being taken to protect the city, reveals how the evidence against the conspirators was obtained, and argues that the penalty for the crimes against Rome should be death. Cicero also states that, as consul, if a senatorial decree empowering him to order an execution of the conspirators were passed, he would do so. The decree was passed.

“This was the proudest moment of Cicero’s life,” writes Olivia Coolidge in *Lives of Famous Romans*:

He had saved the State he loved and had also shown himself as prompt as those who called themselves men of action. Perhaps he had even surprised himself on this occasion, for he never allowed anyone to forget it. He even wrote a long poem on his own consulship, most of which has unhappily vanished except for one crashing line of self-admiration: “Oh lucky Rome that I was consul then!”

Cicero was a master of Latin prose, which served his purposes as a philosopher, politician, or persuader. His use of the language transformed Latin from a rough and serviceable tongue suitable for military or commercial use to a supple, melodious means of expressing the range of human thoughts and emotions. Scholar Jasper Griffin calls him “incomparably the greatest stylist and the greatest writer that the Latin language had ever seen.”

Cid, El (Rodrigo Díaz de Vivar) (ca. 1043–1099) *legendary Spanish warrior*

“El Cid” was the name given to the 11th-century Spanish warrior who was one of the greatest sources for legend and poems of the MIDDLE AGES and later centuries. Though often depicted in literature as a hero of the Spanish Reconquest, the Cid of history often fought alongside Muslims. The name *Cid* came from his Muslim vassals and allies, who called him *Sayyid*, or “My Lord.” He is also known as the Cid Campeador, which means “doctor (or master) of the battlefield.”

Historical records reveal that Rodrigo Díaz was probably born around 1043 in the village of Vivar near Burgos in the kingdom of Castile. His father, Diego Laínez, belonged to the *infanzones*, or lesser landowning aristocracy under Fernando I of Castile, but his mother was of a more distinguished lineage. Rodrigo entered the service of Fernando’s son, Sancho II, and was probably knighted when he was 18 or 20. He quickly distinguished himself on military campaigns. After Sancho was killed in 1072 by supporters of his brother, who became Alfonso VI, Rodrigo entered the new king’s service. In 1074, when he was about 30, Rodrigo married a relative of Alfonso, Doña Jimena, the daughter of Diego, the count of Oviedo. They had two daughters, María and Cristina, and a son, Diego. However, in 1081, Rodrigo fell out of favor with the king and was exiled.

At the time, about two-thirds of Spain was made up of small Muslim taifa kingdoms. El Cid’s campaigns were sometimes directed against the Muslims and sometimes in alliance with them. At one time he fought in the service of the Muslim ruler of Zaragoza (Saragossa). He was reconciled with King Alfonso in 1087 but was exiled again from 1089 until 1092. In 1084, he captured the Muslim-held city of Valencia and successfully held it against attacks by the Almoravid. He died on July 10 and was buried in the monastery of San Pedro in Cardena, near Burgos. Jimena, who probably died around 1116, was buried there as well.

Historians disagree about whether El Cid was a Christian knight or a self-serving mercenary, but

the Cid most loved by poets was the devout Christian warrior and ever-loyal vassal to an ungrateful lord. In early medieval Spain, few people other than kings and saintly monks attracted the notice of chroniclers and biographers. El Cid was the first to break with this tradition. He appears in two Muslim chronicles of Spain, written shortly after his death. One is by Ibn 'Alqama, called the *Eloquent Testimony of the Great Calamity* (ca. 1110), which describes the Cid's conquest of Valencia. The other is Ibn Bassam's *Treasury of the Excellencies of the Spaniards*. Though the tone of these works is understandably hostile, they both show that El Cid was a formidable warrior.

The earliest poem about El Cid is an incomplete work called the "Carmen Campidoctoris," or the "Song of the Campeador," which may have been written in his lifetime. The author, perhaps a learned cleric, describes in vigorous Latin verses some of Rodrigo's early campaigns. The earliest biography of the hero, also written in Latin, is the *Historia Roderici* (History of Rodrigo, ca. 1150). It is extraordinarily detailed in some instances and may have been written by someone involved in Rodrigo's campaigns.

The legend of El Cid soon found its way into the Spanish vernacular. A Latin poem from 1147 says that the story of "Meo Cid" was celebrated in song. Some believe this song may actually have been the later famous "Cantar de mio Cid," while others believe it refers to a simple popular song. Another Spanish work, the *Lineaje del Cid* (ca. 1197), is a genealogy with an account of the hero's life that gives him a royal pedigree.

The culmination of this early development of El Cid's legend was the EPIC poem *El Cantar de mio Cid*. It omits the campaigns in which Rodrigo fought for the Muslims, instead characterizing him as a devout Christian warrior fighting against them.

A further development of the legend appears in a work by the monks of Cardena, El Cid's burial place, called the *Estoria del Cid*. Later, a team of writers working under Alfonso X (1221–84) incorporated the *Estoria* into their *Crónica de veinte reyes*; they also took much of the *Cantar de mio Cid* into their *Primera Crónica General*.

Later works include a series of *romances*, which began around 1300. The ballads they contained were translated as *Ancient Spanish Ballads* by Lockhart Scott, the son of Sir Walter Scott. These romances give the legendary account of El Cid's romance with Jimena, in which he kills her father in a duel but later wins her love and marries her.

Many works of later centuries drew on these *romances*, including Guillén de Castro's play *Mocedades del Cid* (1618) and French dramatist Pierre Corneille's masterpiece *Le Cid* (1637).

Critical Analysis

The most famous medieval work about El Cid is *Cantar de mio Cid*, also known as *Poema de mio Cid*. It is the only complete epic poem in Spanish surviving from the Middle Ages. Early scholar Ramón Menéndez Pidal believed it had its origins, like the French *chansons de geste*, in the song of a minstrel and that it was written down before 1140. Most scholars now believe the poem is a purely literary work, written around 1207, the date found in the only surviving manuscript from a nunnery in Vivar.

The manuscript says that Per Abad wrote the work, but it is unclear whether he is the actual author or the copyist. He was probably associated in some way with the monastery of San Pedro de Cardena, which plays an important role in the story. According to scholar and author Colin Smith, the details of the *Poema* (poem) show that the author had an interest in genealogical and legal matters. He knew the *SONG OF ROLAND* and possibly other 12th-century French epics. He also may have had access to documents about El Cid contained in Spanish archives in Salamanca, which enabled him to fill the poem with the names of people who appear in historical records of the time.

The *Poema* is divided into three parts, or *Cantars*. The first recounts El Cid's departure into exile after his second dismissal by Alfonso VI and his subsequent military campaigns, through which he gains wealth and a number of followers. It incorporates some adventures that actually took place during Rodrigo's earlier life. The second part tells of El Cid's conquest of Valencia,

where he is joined by his wife and daughters. After winning back his honor in military glory, he is pardoned by King Alfonso and marries his daughters to two Leonese noblemen. In the third part, El Cid's cowardly sons-in-law abuse their young brides, and El Cid wins redress for their dishonor in Alfonso's court through judicial duels.

The poem is written in lines with a caesura (pause) in the middle and an irregular number of syllables in each line. It also makes use of assonance, or similar vowel sounds in the lines.

The description, dialogue, and characterization are vivid. El Cid is an attractive hero, a man of military prowess, stoic endurance, and gravity but also good humor. He is not only brave but generous to his men and honorable. He is an exemplary husband and father, but most importantly, he is loyal to his feudal lord, Alfonso, even when the king rejects and exiles him. In the poem's most thrilling passage, the conquest of Valencia, the poet evokes greatly varied moods. When El Cid's young daughters hear the drums of the Muslim army, for example, the hero comforts them:

*He strokes his beard calmly, the good Cid
Campeador.
"Don't be afraid, everything's in your favor;
Before fifteen days are up, if it please the
Creator
We'll have those drums in the house [for
you to play with]."*

(11.1663–1666)

This image of El Cid contrasts nicely with images of him during the heat of battle:

*Using his lance first, the Cid got his hand
on the sword,
He killed so many Moors you could not
have counted them,
The blood was streaming from his arm
above the elbow.*

(11.1722–1724)

In his introduction to *The Poem of the Cid*, scholar Ian Michael compares the poem to the *Song of Roland*, suggesting that the Cid's character is "an amalgam of the poetic Roland's youthful boldness and Charlemagne's elderly caution." While *Cantar de mio Cid* lacks the tragic grandeur of the *Song of Roland*, it is a stirring work that illustrates the virtues the medieval Spanish most admired in a man and a warrior. It is a vision of heroism that many other cultures respond to as well.

Confucius (Kong Qiu [K'ung Ch'iu], Kongfuzi [K'ung Fu-tzu]) (551–479 B.C.) philosopher

Kong Qiu (K'ung Ch'iu) is best known in the West as Confucius, the Latinized form of Kongfui (K'ung Fu-tzu; "the master Kong"). Confucius was born in Nishan, Qufu (Ch'ü-fu), a town in central China in what was then the state of Lu. During his lifetime, the Zhou (or Chou) dynasty (11th–third century B.C.) no longer wielded the authority it once had enjoyed. China was experiencing a period of feudalism, during which power essentially rested with the leaders of a number of small states. Struggles for influence often occurred within individual

states and between neighboring leader-warlords. In his philosophy, Confucius would look back to a supposed golden age earlier in the Zhou dynasty, a time when order reigned and when rulers and subjects behaved as befitted their roles in society.

Confucius's father, who held a minor government post, died when his son was three, leaving the boy to grow up under his mother's influence. Married at age 18, Confucius had children and worked at a number of menial jobs. Despite his love of learning and desire to serve the state, Confucius was unable to obtain a meaningful government position until, in his late 40s or early 50s, the duke of Lu appointed him minister of public works, then minister of justice. He soon left office, however. Tradition says he was disgusted with government corruption, but he may also have offended important members of the nobility. He spent some years traveling outside of Lu and in 484 B.C. returned to his home state, where he died five years later.

History credits Confucius with editing the *BOOK OF SONGS*, from which he often quoted, as well as the *Book of Documents* and Lu court chronicles. Most important, about 520 B.C. he established a school to teach others how to govern. The curriculum focused on writing, mathematics, music, ritual, archery, and chariot driving. Confucius emphasized morality over practical skills, and he cultivated an informal teaching style that seems to have included many question-and-answer sessions.

Confucius's answers to his pupils' questions often came in the form of brief but memorable sayings. Like SOCRATES, to whom Western readers have often compared him, Confucius never recorded his teachings. It was his pupils who later recorded a number of his sayings and comments in the *Lun Yu (Analects)*, a book that became the basis for his later fame as a philosopher. His reputation grew greatly after his death. A later philosopher, Mencius (ca. 371–298 B.C.), claimed, "Ever since man came into this world, there has never been one greater than Confucius."

In the third century B.C., the first Qin (Ch'in) dynasty emperor ordered massive book burnings

that consigned many ancient texts to oblivion. The state also buried Confucian scholars alive. Nevertheless, the *Analects* lived on, and Confucius's life took on an aura of legend. The historian Sima Qian (Ssu-ma Ch'ien, ca. 185–145 B.C.) claimed that Confucius's impoverished family descended from an imperial dynasty and that Confucius was acquainted with LAOZI (Lao Tsu). Beginning in the second century B.C., Confucianism was required knowledge for government officials, and every government examination given between A.D. 960 and 1905 (except during the Yuan (Mongol) dynasty, 1271–1368) required would-be civil servants to display extensive familiarity with Confucian texts.

Later philosophers criticized and revised Confucian texts. In the 10th century, scholars, including WANG ANSHIH (Wang An-Shih), drew on the *Analects* in developing their philosophies, collectively called Neo-Confucianism.

Critical Analysis

The *Analects* are divided up into 20 sections, or "books," that contain approximately 500 brief subsections, or "chapters." Each chapter consists of a snippet of dialogue, a comment, or an anecdote, including some of Confucius's jokes and occasional complaints about his life, as well as his more profound thoughts. Other chapters included the recorded sayings of his disciples.

Rather than being composed all at once, the *Analects* came together gradually, as various individuals added their memories of Confucius or other Confucian teachers. It probably did not coalesce into the book we know today until sometime around the second century B.C. Scholars have concluded that books three through nine and 11 through 15 are most likely genuine stories from Confucius's life rather than additions from writers in later centuries.

The cornerstone of Confucius's philosophy is *ren*, a word that appears more than 100 times in the *Analects*. It means "showing magnanimity, compassion, and humaneness in one's thoughts and actions." To exhibit humaneness is the epitome

of virtue. In one passage, Confucius asserts that “the humane man, wishing himself to be established, sees that others are established, and wishing himself to be successful, sees that others are successful. To be able to take one’s own familiar feelings as a guide may definitely be called the method of humaneness.” Elsewhere, Confucius reiterates this idea: “Zigong asked: ‘Is there a single word such that one could practise it throughout one’s life?’ The Master [Confucius] said: ‘Reciprocity perhaps? Do not inflict on others what you yourself would not wish done to you.’”

The *Analects* also stress the importance of loyalty, filial piety, and harmony. Individuals prove they are fit to govern others by exhibiting these qualities, observing traditional rituals, and showing humaneness. They should concern themselves with their own virtue rather than with pleasing those in power or attempting to obtain a salary. According to Confucius, “One is not worried about not holding position; one is worried about how one may fit oneself for appointment.”

Confucius does not believe that everyone can exhibit true virtue and humaneness. He comments, “the people may be made to follow something, but not to understand it.” It is for this reason that the “gentleman” must provide others with an example to follow. “To govern,” he says, “means to correct. If you take the lead by being correct, who will dare not to be corrected?”

Confucius developed the philosophical and ethical concept of *ren*, and he was the first to describe his ideal method of behavior as the Way. Translator Raymond Dawson notes that many of the *Analects*’s chapters “may be seen as seminal expressions of some of the typical ideas of Chinese civilization.” He adds: “The earliest parts of the *Analects* are the earliest [Chinese] writings . . . which deal primarily with ethical matters for their own sake and feature [people’s] inclination to act for ethical reasons rather than for reasons of practical advantage. This is an important breakthrough in the history of Chinese thought.” Thus, the *Analects* are a key to understanding not only

Chinese philosophy but also human nature and behavior.

Coyote tales (Hopi)

In the ORAL LITERATURE of the Hopi, who originally settled in the southwestern regions of the United States, the coyote features prominently as a trickster figure that possesses qualities both animal and human, and sometimes divine. Coyotes appear frequently in the folklore, myths, legends, and sacred teachings of many Native American tribes. Scholars of tribal religions believe that the coyote and other animals represent the First People of the Native American CREATION MYTHS and therefore serve as prototypes for human life and culture. In these tales, wherein divine figures are given human personalities, stories about the coyote serve many purposes. Intended for audiences of all ages, these stories combine sacred and spiritual teachings,

moral instruction, and humorous entertainment in the form of the character Coyote's adventures.

Scholars like Ekkehart Malotki and Michael Lomatuway'ma, who have dedicated their careers to the preservation and understanding of Hopi tales, believe that the function of the coyote in the stories reflects the impact of the coyote on Hopi life. To a tribe whose livelihood consisted mostly of agricultural practices, the coyote was sometimes a dangerous predator, but most often a nuisance and a useless creature that provided neither pelt nor meat. In Hopi literature, the coyote is not given the status of *kachina*, a powerful spirit in animal form that protects and benefits humans. The tales most often portray Coyote as a trickster figure whose inquisitive and highly gullible nature always gets him into trouble.

In Malotki and Lomatuway'ma's *Hopi Coyote Tales*, for instance, many of Coyote's interactions with other animals end with his defeat. Grasshopper confounds Coyote's efforts to eat him and leaves him starving; both Badger and Porcupine trick Coyote into bleeding himself to death. The tales can be taken as a lesson about gullibility; Porcupine, when he finds his friend's corpse on the hearth, yells at him: "Why do you have to believe everything? What I told you had to be a lie!" Badger's tale serves a moral purpose, for Coyote's death is his punishment for lechery, gluttony, mayhem, and disobedience to Badger, who is the medicine man of their village and therefore a wise and powerful being who ought to be obeyed. Badger, too, berates Coyote's corpse, telling him, "It's your own fault that you are so wicked."

A characteristic of the Hopi Coyote tales is that they make little attempt to drive home a moral point; rather, they simply end the narratives with "and here the story ends." What the audience makes of the Coyote tales is left to their own discretion. Close readers can find a wealth of information about life among the Hopi, everything from social relations, etiquette, and advice for raising children to detailed descriptions of spiritual practices, village ethics, geographical descriptions, and tasty menus. Many of the tales contain etio-

logical elements or explanations on how something came to be; the story of Coyote and the turkeys, for instance, tells why no turkeys are found in a Hopi village.

Coyote's flexibility, however, makes him more than a simple buffoon character or lampoon. Coyote can take the form of a male or female, a hunter or mother, a boy or a girl, and can roam through any landscape, including the underworld and the sky. Some tales show Coyote engaging in the more sinister side of witchcraft and sorcery, but these tales, too, always end in disaster. In "Coyote Learns Sorcery" in Malotki and Lomatuway'ma's collection, Coyote gets turned into a jackrabbit and goes home to some very hungry children.

Other tales show a better side to Coyote's nature. In "Coyote and So'yoko," Coyote saves the children of the Orayri village from being eaten by an ogre. Later he defends his village from the Korowiste Kachinas. Coyote even experiences romance, falling in love with and marrying a girl from Musangnuvi.

As a literary tradition, the coyote tales function as more than other animal fables like those of Aesop in European literature. Like the folklore of all cultures, these tales, as Malotki observes in *Hopi Animal Stories*, are "an important way of expressing culturally shared values, attitudes, and concerns." In this way the Hopi Coyote tales have something in common with literatures of many other cultures, from the *PANCHATANTRA* of India to the German fairy tales of the Grimm brothers.

creation myths, Native American

Each of the cultures that inhabited the continents of North and South America before the arrival of the first European settlers had a unique and distinct explanation for the creation and ordering of the world as they knew it. As part of the ORAL LITERATURE that was handed down through generation after generation, the origin stories explained how the world had come to exist, how humans were formed, how and why plants and animals were given their functions, and why such natural cycles as sunrise, sunset, and the seasons governed the world. These creation myths might explain anything from why the landscape appeared as it did to how a tribe had gotten its name, and from the explanation of the deer's antlers to the origins of corn.

As a whole, the creation myths take place in a prehistoric time when the same natural laws did not apply. Animals could speak and reason, elements had personalities and could communicate with each other, and humans were created not to rule the world but simply to be one of an infinite variety of creatures who lived in it. These mythic First Beings, who brought forth by one means or another the world as it was known to listeners of the story, were often regarded as still having an interest in the business of human life. Therefore many Native American religions regarded the elements, the heavenly bodies, and the spirits of animals to have the supernatural ability to understand and participate in human affairs. Plants, animals, insects, and even aspects of the landscape were frequently treated as sentient beings that could either provide assistance if appropriately addressed or might cause harm if scorned or offended. Many ceremonies, rituals, daily practices, and even whole systems of thought in Native American life acknowledged and celebrated the

gifts that had been given humans by their divine predecessors, and in this way, the creation myths played an intimate and ongoing role in the daily life of the tribe.

The creation stories are more than just literature. As David Martinez observes in *The Legends and Lands of Native North Americans*, "they are the foundation of culture itself, stemming from the most basic and fundamental experiences required for founding a people."

Critical Analysis

Many of the creation myths told by different cultures share similarities, not just with each other, but with cultures from other parts of the world. In the Hopi tradition, like the creation story in the Hebrew BIBLE, the earth was originally covered with water. The Lakota tell of a great flood that wiped out humans except for one girl, who was saved by Spotted Eagle. Later she married him and bore children, thus repopulating the new earth with the Lakota people. Aside from the story of the Bible, a worldwide flood is also described in the Sumerian epic *GILGAMESH*, set in an entirely different hemisphere.

The creation myths traditionally describe how, in the dawn of the world, before humans were created, the earth was populated with creatures that had animal, human, and divine qualities. Different cultures account for the creation of humans in different ways, but many share the common theme that humans were created out of a natural substance—earth, or sometimes corn—that was animated by one of the First Beings, perhaps the Wind, Old Spider Woman, or Old Badger Man. Several Native American tribes regard the sun as the first generative being. The Aztecs in the ancient NAHUATL POETRY and the Inca in the MYTH OF MANCO CAPAC recount stories of how their tribal ancestors were descendants of the sun, and the Navajo also tell a story of how the sun fathered a child with the First Woman.

Often the prehuman world was inhabited by water monsters, giants, or other creatures that needed to be defeated so that humans could sur-

vive. Most of the stories account, in some way, for the progression from a prehistoric time when humans and animals could communicate with one another, when all existed in harmony and balance, to a fallen state where violence and conflict exist in the world, humans experience strife with one another as well as the natural elements, and animals have lost the power of speech, though they might retain powers of another type.

Many cultures also preserve creation myths that explain how humans came to possess certain skills. In the OKLAHOMA CHEROKEE FOLKTALES, Selu provided humans with the first corn, and set the example for women to plant, harvest, and prepare it as food, while her husband, Kana'ti, showed the first men how to be hunters. In the creation myths of the Crow, Old Man Coyote is responsible for fashioning the first humans; it was he who decreed the functions of the animals, and he who created the separate tribes with different languages, which, for the Crow, explained why there was warfare, tribal rivalries, and the practice of wife stealing. In the creation myths of the Sanpoil, Coyote was the one who taught the first humans how to catch and prepare salmon, a staple of the Sanpoil diet.

The stories of creation and of the first interaction between humans and the divine beings who instruct them serve as more than entertaining stories; they convey the wisdom that ancestors of native peoples have deemed important for the preservation and satisfaction of life. The NAVAJO NIGHTWAY CEREMONY SONGS might call it *hózhó*, the ZUNI INDIAN NARRATIVE POETRY might call it the Pollen Way, and the YAQUI DEER SONGS might refer to it as the “flower world,” but in all cases, the songs, poems, and stories that furnish the creation myths of a people preserve directions for a way of life lived in harmony with the divine things of the world and their plan for human survival. As Jeremiah Curtin explains in *Creation Myths of Primitive America*: “Every act of an Indian in peace or in war, as an individual or as a member of a tribe, had its only sanction in the world of the first people, the American divinities.” Part of the responsibility

of the listening audience, it was understood, was to remember and continue to observe the wisdom that the First People had brought to humans.

Particularly in cultures that do not make use of written language, stories become a way to preserving and communicating cultural memory. In each retelling, with the contributions of each storyteller and the reception of the audience, the story inherits something. In this way, stories, like the lands they describe, become living things with a history of their own. Creation myths from many Native American cultures share a common belief that a territory, with its sacred features, its provisions, and its abundance, is not given to people to own but is given rather as a trust, a gift that must be cared for and preserved. Scholars who understand the value that the creation myths hold in preserving and communicating cultural foundations and ancient wisdom have made efforts, in the past century, to capture tales in writing and translate them into English so their knowledge might be communicated to a broader audience. The settlement of Europeans in the Americas irrevocably changed the conditions under which the native tribes lived, and our contemporary world, which depends on written media and print culture, has made traditions of oral communication such as storytelling seem quaint, old-fashioned, and obsolete. It requires care and attention on the part of present-day scholars to preserve the language, history, and mythologies of the Native American creation myths and thus ensure that entire cultures do not become extinct.

Crusades (ca. 1095–ca. 1291) *historic event*

The Crusades were a series of wars fought by European Christians between 1095 and 1291 to recover the Holy Land, especially Jerusalem, from the followers of Islam, known as Muslims. In the first century A.D., Christianity spread through the Roman Empire, including the Middle Eastern lands of Palestine, Syria, and Jerusalem. By the end of the fourth century, the Romans' vast empire was officially Christian. It remained so until the seventh century, when the religion of Islam rose out of Arabia. While Islam officially condemned the use of force as a means of conversion, states often found the use of force necessary. Arab armies of Muslims began conquering the Middle East, beginning with Persia (now Iraq) and Byzantium. By A.D. 638, the city of Jerusalem, considered by Christians the holiest of cities, was under Muslim control.

Though the Holy Land was under Islamic rule, Christians who came to worship at the holy places were, for the most part, tolerated. One exception was "Mad" Caliph Hakim (996–1021), who destroyed the Church of the Holy Sepulcher, Jesus' tomb, and persecuted both Christians and Jews. After his death, relations between Muslims and other religious groups became more and more strained. In the middle of the 11th century, the Arabs were displaced as leaders of Islam by the

Turks, who disapproved of Christian pilgrims. When Byzantine emperor Alexius I found his empire overrun by the Seljuk Turks, he appealed to the West for help. In 1095, Pope Urban II, speaking at the Council of Clermont, urged all of Christendom to go to war to end Muslim rule of the Holy Land.

The result of Urban's speech was the first Crusade (1095–99). Combatants called themselves "crusaders" because they took as their emblem the Christian cross. The crusaders reached Jerusalem in the summer of 1099, took it back from the Muslims, and established four Latin states in the Middle East: Edessa, Antioch, Tripoli, and the Kingdom of Jerusalem.

The second Crusade (1147–49) transpired after the Turks took Edessa. This attempt by the Christian soldiers to regain the country ended in failure, and by 1187 most of the four Latin states set up during the first Crusade had again fallen back under Muslim control.

In 1187 the Kurdish Muslim military leader Salah ad-Din Yusuf (1138–93), or Saladin as he was known in the West, captured Jerusalem. Pope Gregory VIII called on Christians to embark upon a third Crusade (1189–92). For the next 100 years, crusades continued to be fought by Christians hoping to overturn Muslim rule over the Holy Land. The ninth and final crusade (1271–72) was led by Prince Edward of England, later Edward I. Edward landed in Acre, near Jerusalem, but retired after negotiating a truce. In 1289 Tripoli fell to the Muslims, and in 1291, Acre, the last Christian stronghold, followed. Conflicts between the Eastern and Western cultures did not end at that point, but after the loss of Acre, crusades were discussed but not launched.

The causes for the Crusades are deep and varied, and their consequences infinitely complex. Author Jean Richard, as translated by Jean Birrell, suggests that the "crusade poses a problem that is still present in the human consciousness, that of the legitimacy of war." Divine law for the Christians demanded the preservation of human life, but the business of government often required defense

or aggression. The code of CHIVALRY in Western Europe evolved as a way to reconcile Christian virtues with life in violent times. Richard speculates that “when the barbarian monarchies settled in the old Roman Empire, warlike societies replaced a civil society, and this led to an exaltation of war.” Literature of the Charlemagne cycle depicted the emperor’s battles against the “Saracens” of Italy and Spain as a holy war, particularly in the *SONG OF ROLAND*. The concept of the “just war” evolved as Western Europe after Charlemagne found itself besieged on virtually all sides: Scandinavian tribes attacked from the north, Hungarian cavalry invaded from the east, and Saracen (the medieval Christian appellation for adherents of the Islamic faith) armies waged war from the south. The papacy felt that the defense of the “patrimony of St. Peter” was imperative, and the Crusades, as they developed, had dual aims: to defend Christian lands against Turkish invasion, and to secure Christian possession of the ancient Holy Land, where Christ had lived and died.

Contemporary accounts reveal that, from the start, the questions surrounding the Crusades have received different answers at the hands of different authors. Several writers of the early 12th century preserve Pope Urban II’s speech at the Council of Clermont, among them Baldric, archbishop of Dol, and Robert and Monk, who wrote *History of Jerusalem*. The eyewitness accounts of the First Crusade such as *The Deeds of the Franks* (ca. 1100–01), written by an anonymous crusader who followed Bohemund of Antioch, reveal the complex maze of motivations and consequences of events. Fulcher of Chartres, who was also close to the action, began his chronicle in 1101, which is commonly held to be the most reliable of contemporary sources for the First Crusade. Raymond of Aguilers, Odo of Deuil, and Oliver of Paderborn were also clerics in close association with leaders of various crusades.

The Fourth Crusade was memorably observed and chronicled by Geoffroi de VILLEHARDOUIN, whose account is remembered and read as much

for its historical value as for its lively prose. Villehardouin (ca. 1160–1213) deals with the facts of the Crusade rather than its deeper historical implications, and while he writes from a strong belief in the rightness of his cause, his narrative makes clear the internal opposition and debate among the crusaders. Robert of Clari, a knight who fought under Pierre of Amiens, also wrote of the Fourth Crusade in his *Conquest of Constantinople* (ca. 1216), though his account has been overshadowed in popularity by Villehardouin’s.

Jean de Joinville (1224–1317) completed his *Chronicle* in 1309, describing his activities on crusade under Louis IV. Translator Frank Marzials observes that while Villehardouin writes “soberly, with an eye on important events . . . Joinville writes as an old man looking lovingly, lingeringly, at the past—garrulous, discursive, glad of a listener.” Joinville’s account shows keenly the conviction and idealism that motivated the men and women who gave up their familiar lives to go on a holy crusade.

The above chronicles were written by either combatants or clerics who had a stake in the success of the Christian armies. A thorough evaluation of the Crusades requires looking at the viewpoint of the other side. Fortunately, accounts of contemporary Arab historians and studies of the Crusades’ effect on the Eastern states are becoming increasingly available to English audiences.

In the West, literature following the Crusades tended to glorify the accomplishments and valorize the heroes. The French *chansons de geste* (literally, “songs of adventure”) frequently embellished actual events with legendary material, as in the *Song of Antioch* by Richard the Pilgrim or the anonymous *Song of Jerusalem*. These verse narratives preceded other chivalric romances like Torquato Tasso’s *Jerusalem Delivered*, which portrays Godfrey of Bouillon as an EPIC hero. Likewise, Western historians up until the Enlightenment tended to exalt heroism and faith. However, Denis Diderot, and Jean d’Alembert, authors of the massive *Encyclopedia*, described the Crusades as “a time of the deepest darkness and of the greatest

folly.” Voltaire, too, referred to the Crusades as “that epidemic fury . . . marked by every cruelty, every perfidy, every debauchery, and every folly of which human nature is capable.”

The Crusades have been viewed, positively, as bringing the West in contact with the East and revealing a whole new continent, Asia, which could then be explored (as Marco POLO proceeded to do). But they have also been blamed for deepening gulfs between Christians and Muslims. Some histories have argued that these wars were no less bloody than any other wars in human history; others see them as a tragic and destructive episode, “nothing more,” as Steven Runciman writes in his *History of the Crusades*, “than a long act of intolerance in the name of God.”

Daibu, Lady (Kenreimon-in Ukyo no Daibu) (13th century) *poet, memoirist*

Lady Daibu lived during the decline of the Heian court in Japan, between the 12th and 13th century. Like most female writers of the Heian court, little is known of her life, including her real name. The first part of her name, Kenreimon-in, comes from the name of the empress she served as a lady-in-waiting. The second part of her name is the name of her male sponsor at court. Several of Lady Daibu's poems appeared in the imperial anthology *Shinchokusenshu* (1232), but she is mostly known for her memoirs, the *Kenrei Mon'in Ukyo no Daibu shu* (The Journal of Kenreimon-in Ukyo no Daibu, ca. 1233). Her writing can be studied in relation to other Japanese female court writers. The most famous of these writers is MURASAKI SHIKIBU, author of *The Tale of Genji* (ca. 1000).

Lady Daibu is not considered a first-rate writer by most critics, but her writing contains vivid descriptions of court life and moving reflections on her tragic affair with the imperial regent Taira no Sukemori. Although she never writes directly about political events, her words reflect the tumultuous times she lived in, particularly when she describes her despair at the death of her lover in battle. Her memoirs describe her personal experiences,

interspersed with the poetry that these events inspired. She also includes poetry that she used to privately communicate with other members of court. She wrote short lyrical poems that used images from nature to express her emotions:

*Unforgettable!
That time I gazed
At the morning glory,
With the dawn moon in the sky—
But would I had some way to forget!*

The sincerity of Lady Daibu's writing, together with her portrayal of life in uncertain times and her use of imagery to convey emotion, has given her a place in the history of world literature.

Dante Alighieri (1265–1321) *poet, philosopher*

Dante Alighieri, known simply as Dante, was born in Florence, Italy, to Alighiero di Bellincione d'Alighiero, a notary, and his wife, Donna Bella, who died during her son's childhood. Although details of Dante's youth in Florence are scarce, it is likely that during his early years he received a standard Latin education, including schooling in the *Trivium* (grammar, logic, and rhetoric) and the *Quadrivium* (arithmetic, music, geometry, and astronomy). Dante eventually engaged in the advanced study of grammar and rhetoric under the tutelage of Brunetto LATINI, a renowned philosopher, poet, and politician.

Among his most well-known works are *La vita nuova* (*The New Life*, ca. 1292), *Convivio* (*Banquet*, 1304–1308), *Monarchia* (*Monarchy*, 1309–1312), and *La Divina Commedia* (*The Divine Comedy*, completed in 1321). *Banquet* was a philosophical piece comprised of 14 treatises containing the author's opinions on his own works. *Monarchy*, another Latin treatise, concerned Dante's views on the Roman Empire, the emperor, and the pope. Dante's greatest works, however, were *The New Life* and *The Divine Comedy*, the first of which was inspired by a childhood event.

When he was nine years old, he met a young girl named Beatrice Portinari (1266–90). This meeting would prove to be one of the two most important events in Dante's life—and an equally important event in the history of world literature. In an early collection of autobiographical poems and prose commentary entitled *The New Life* Dante describes the profound impact that meeting Beatrice had on him. “[From] that time forward,” Dante reflects in that work's opening prose section, “Love ruled over my soul. . . .” Dante's love for Beatrice became a guiding force in his life and is considered the inspiration for his greatest sonnets and odes.

Dante and Beatrice were not destined to be together, however. On January 9, 1277, when Dante was only 11 years old, his father arranged for him

to marry a nobleman's daughter, Gemma Donati, whose considerable dowry Dante's family received when the marriage ceremony finally took place, probably around 1285.

In 1290, when Dante was 25, Beatrice died. Despite having met her only twice, Beatrice's death propelled Dante into a state of profound despair. In *The New Life* the poet laments:

*To weep in pain and sigh in anguish
destroys my heart wherever I find myself
alone,
so that it would pain whoever heard me:
and what my life has been, since
my lady went to the new world,
there is not a tongue that knows how to
tell it.*

In a way, the remainder of Dante's life as a poet would be devoted to finding the “tongue” to describe both the impact that Beatrice had on his life and the state of his soul after she died. Although *The New Life* ends on a note of failure, because it closes with Dante's decision “to write no more of this blessed one until [he] could more worthily treat of her,” he ultimately finds the language worthy of his subject in his greatest poetic achievement, *The Divine Comedy*.

Before writing *The Divine Comedy*, however, Dante endured a second life-altering loss, this time losing his status as a citizen of his beloved Florence. Dante belonged to the Guelphs, the party that controlled Florence at the time, but it was divided into two factions, the Blacks and the Whites, who constantly battled for political control. Dante was a member of the Whites, and in 1301 he went to Rome as part of a delegation to regain the support of Pope Boniface VIII. While Dante was away, the Blacks regained power in Florence and subsequently banished many of the Whites (including Dante) from the city. When the Blacks decreed that he would be executed if he returned to Florence, Dante went into permanent exile, leaving his wife, his four children, and his birthplace behind. He

spent the rest of his life in different cities in Italy and other countries, and he died at Ravenna.

Critical Analysis

As scholar Robert Hollander notes, the premise on which Dante's poetic masterpiece *The Divine Comedy* is founded would be a difficult one to sell to a publisher today: "Take a not-very-successful (though respected), soon-to-be exiled civic leader and poet, then send him off to the afterworld for a week." Yet this is, succinctly put, the plot of *The Divine Comedy*. Dante's great poem is the fantastic story of his journey through Hell, Purgatory, and Paradise. And while Hollander's plot summary makes it sound like an unlikely candidate for inclusion among the world's greatest works of literature, *The Divine Comedy* is a poem of such power and beauty that critic Harold Bloom has been moved to rank Dante second only to Shakespeare among the Western world's literary figures: "When you read Dante or Shakespeare you experience the limits of art, and then you discover that the limits are extended or broken."

Dante's ability to transcend the traditional limits of art derives from his strength in three areas. First, as the *The Divine Comedy* illustrates, Dante is a master storyteller. The poem, divided into 100 cantos, takes the reader on a journey through Hell (*Inferno*), Purgatory (*Purgatorio*), and Paradise (*Paradiso*). The reader encounters various figures from the Christian religious tradition, history, literature, and Dante's own life, all of whom are woven into a compelling narrative structure. Even if a reader chooses to interpret *The Divine Comedy* primarily as a Christian allegory, he or she can hardly deny the allure of the literal level of the story. On this level, the poem is a spellbinding journey that rivals the great epics of HOMER in plot, characterization, and imagery. All of these narrative elements come together at the end of "The Inferno," as readers find themselves climbing with the poet and his guide, a shadow of the poet VIRGIL, through the afterworld, over the disgusting body of Satan. To escape Hell and enter Purgatory, Dante

and Virgil must literally and figuratively surmount the beast who

... wept with six eyes, and the tears
beneath
Over three chins with bloody slaver dropt.
At each mouth he was tearing with his teeth
A sinner, as is flax by heckle frayed.
(Canto XXXIV)

This vivid description is just one example of Dante's power as a poet. Not only is his language rich and vivid but he also maintains an elegant and challenging poetic structure throughout his long poem. Dante composed his verse in *terza rima*, an interlocking rhyme scheme in which the last word of the second line of each tercet (a group of three lines) rhymes with the first and third lines of the preceding tercet. In the original Italian, the opening lines of *The Divine Comedy* read:

*Nel mezzo del cammin di nostra vita
mi ritrovai per una selva oscura
ché la diritta via era smarrita.
Ahi quanto a dir qual era è cosa dura
esta selva selveggia e aspra e forte
che nel pensier rinolva la paura!*
(Canto I)

According to Robert Hollander, "Dante's invention of *terza rima* was, as Erich Auerbach observed, a brilliant solution for a narrative poem, for it both 'looses and binds,' at once bringing the verse to momentary conclusion and propelling it forward."

In addition to the poem's structure, Dante's use of an Italian vernacular (as opposed to Latin) was a significant poetic achievement because he demonstrated that a vernacular language could be a suitable vehicle for great literature. He makes this argument more completely in an unfinished work entitled *De vulgari eloquentia* (Eloquence in the Vernacular, 1303–07). The fact that he did use an Italian vernacular is one of the reasons that Dante called his work a "comedy"; this term distinguishes

the poem from the tragic literature generally composed in Latin.

The third distinguishing strength of Dante's masterpiece is its spiritual vision. This is without question a Christian (specifically a Catholic) poem, and any reader must be impressed by the power of Dante's faith. The work opens with Dante lost in a dark wood at the midpoint of his life's journey, and it is ultimately Virgil and Beatrice (who takes over as his guide in Purgatory) who lead him from darkness and despair to the light and hope offered by God. (This upward, positive trajectory is the second reason the poem is called a "comedy.") The journey to salvation—in both a literal and an allegorical reading of the poem—is an arduous one that takes great strength, determination, and conviction. By the end of the poem, however, we, as readers, are thankful that Dante had the courage to undertake it and to allow us to share his experience. It is a testament to his brilliance as a poet that even those who do not share his religious convictions can appreciate the power and the beauty of his *Divine Comedy*, a work that is truly one of the landmarks of Western and world literature.

Davanzati, Chiaro (ca. 1235–ca. 1280)

poet

Chiaro Davanzati was born in Florence, in the Italian province of Tuscany. Though the dates of his birth and death are not known for certain, he is recorded as having fought in the Battle of Montaperi in 1260 and maintaining a residence in the Santa Maria quarter of Florence with his wife and five sons. His surviving work includes 64 *canzoni*, or lyric poems, and about 100 sonnets on everything from philosophy and religion to politics and love.

His early poetry shows Davanzati borrowing largely from the lyric traditions of the Provençal TROUBADOURS and the vernacular tradition of Sicily. The next phase of his poetry shows him participating, along with his contemporaries Guittone d'Arezzo and Guido Guinizelli, in the development of a poetic style that came to be known as the *dolce stil nuovo* (the "new sweet style"), used by later poets Guido Cavalcanti, Cino da Pistoia, and, most famously, DANTE ALIGHIERI. Davanzati's later and more mature poetry shows, in the words of one biographer, "conservative imagery, graceful phrasing, and new themes and sentiments inspired by personal experiences and ardent patriotism." As a whole, the body of his poetry shows the broad range of Davanzati's interests, his personal commitment to his Florentine homeland, his ability to skillfully use the standard poetic imagery and devices, and his willingness to explore themes personally important to him, particularly political and ideological issues.

Translator Kenneth McKenzie says the Davanzati “is at his best in poems of a semi-popular style, when he casts loose from the conventionality and the metrical intricacy of the Sicilians, and appears as a poet of the Florentine people.” Davanzati’s poetry received little attention after his death, and for centuries he was discussed only as a forerunner to Dante. However, current scholarly opinion now recognizes him as an important and accomplished poet in his own right.

David of Sassoun (ca. 10th–12th centuries) *epic poem*

A medieval EPIC poem, *David of Sassoun* is the most widely cherished literary work of the Armenian people.

Armenians have lived in the eastern regions of present-day Turkey and adjacent areas since the second millennium B.C. Though exposed to many diverse cultural influences, the common people preserved their own language even while the aristocracy adopted Greek during the Hellenistic and Byzantine eras.

After the country adopted Christianity around A.D. 400, an alphabet was developed and a literature emerged using a standard literary tongue that survived up to the 19th century. ORAL LITERATURE, however, continued to flourish in the spoken dialects of the various regions. For most of its history, the *David* cycle existed solely in oral form, the possession of often poorly educated bards and storytellers from every region of historic Armenia who, as early as the fifth century, performed at pagan festivals.

The cycle, whose stories may partly be based on incidents in ninth- and 10th-century Armenia,

probably reached its highest development during the 11th century. Armenians were then reeling from the onslaughts of the Seljuk Turks, and the glorious victories of the epic’s heroes may have consoled and inspired them. It probably reached its final form in the 12th century.

In the second half of the 19th century, a nationalistic cultural revival began to champion the popular dialects, both in West Armenia (under Turkey) and East Armenia (under Russia). In 1874 an Armenian bishop recorded and published the first *David* tale, causing a literary sensation. Over the next few decades, scholars combed the mountains of Armenia looking for storytellers who could add episodes and complete the cycle, publishing some 50 different versions. From 1936 to 1951, a major project was conducted in Soviet Armenia that published 2,500 pages of variants. In 1939 a standard version was issued in a unified dialect, though under Soviet aegis the Christian religious aspect was downplayed.

The work is divided into four sections, each dealing with a different hero, or pair of heroes, fighting to defend the common folk of the Sassoun region. Scholars detect echoes from many different episodes in the country’s history, from prebiblical days to the struggles against the Arab Muslim invaders in the early Middle Ages. However, the details are confused, with cities, countries, and kingdoms exchanging names and switching centuries. Thus, the work cannot be a reliable guide to historical events.

The chief inspiration for the character of David, who gives his name to the entire work, may well have been Hovnan of Khout. Hovnan was a peasant youth who led a successful rebellion of Christian Armenians against Arab overlords in the Sassoun region in A.D. 851.

The *David* cycle is written in a mixture of prose and poetry; the poetry, originally meant to be sung, has a fairly loose meter and rhyming pattern. Action predominates, described in compact, vivid prose with many metaphors taken from rural life.

Though the saga is explicitly Christian, it also alludes to pagan legendary and mythological

themes and symbols, such as apparent references to soma, the intoxicating beverage of Indo-European deities. Scholars find echoes from Sumerian, Hittite, Indian, Persian, Greek, and biblical literature. On the other hand, many Armenian critics detect a particular Armenian national ethos, or value set, that brings all the elements together.

David and the other heroes all show a strong sense of justice and duty. They are egalitarian and have no use for wealth and power, they marry princesses but reject the accompanying crowns, and they are steadfast in defense of the oppressed.

David of Sassoun, in its various classic and popular versions, has remained an important cultural reference point for Armenians in the home country and in the diaspora. The character of David, often represented in paintings and sculpture, acts as the Armenian national hero.

Dead Sea Scrolls (ca. 200 B.C.–A.D. 135)

religious texts

The Dead Sea Scrolls are a collection of ancient Jewish religious manuscripts, written mostly in Hebrew on leather (parchment) or papyrus. They were discovered in the 1940s and 1950s in caves at various spots along the Dead Sea and the Jordan River Valley. They include the earliest known texts of the Hebrew BIBLE as well as other documents that shed light on early Judaism and Christianity.

The scrolls rank among the most important literary and religious discoveries of the 20th century. The dramatic story of how they were found, the controversies surrounding their eventual release to

the public, and their interpretation have only added to their renown.

In the winter of 1946–47, a group of Beduin shepherds were tending their flocks near the ancient ruin of Qumran near the northern end of the Dead Sea, in what was then the British Mandate of Palestine. High up the cliffs they chanced on the narrow opening of a cave. One of them managed to pass inside, and he retrieved some moldy ancient scrolls wrapped in cloth.

After some months, the scrolls were brought to the attention of antique dealers and scholars. Further explorations in the region eventually yielded five major manuscript sites, including well over one dozen separate caves. In all, more than 15,000 fragments were retrieved, which scholars have assembled into some 800 discrete books, some with multiple copies.

Most of the manuscripts came into the possession of a scholarly committee, which began analyzing the material and publishing major documents. The slow pace of publishing and the restricted access to the fragments led to charges of a conspiracy to withhold documents that might overturn traditional views of early Christianity or Rabbinic Judaism. However, when all the fragments were released in the 1990s by the Israel Antiquities Authority, which had inherited control during the Six-Day War in 1967, no new surprises were uncovered.

After the original discoveries were made in the caves near the Qumran ruins, archeologists spent several years poring over the site on the theory that the manuscripts found nearby were written or owned by the original residents of the ruins. Most scholars believe that the ruins, and thus the manuscripts, belonged to the Essenes, an ascetic, messianic sect of the Jews mentioned by Josephus and other historians of the time. Many of the manuscripts seem to reflect the beliefs and practices of a tightly knit monastery or religious community. These beliefs generally conform to what was previously known about the Essenes.

Other scholars theorized that the Qumran manuscripts, whatever their date and origin, constituted a “library” that was taken in its entirety from the

Temple and placed in the caves for safekeeping during the first-century revolt against the Romans. Still another theory emerged in which the caves' residents were said to be Sadducees, another Jewish faction.

Archeologists were eventually able to determine dates for most of the manuscripts. Accurate radiocarbon testing confirmed earlier guesses based on analysis of the various Hebrew, Aramaic, and Greek scripts used in the scrolls. Artifacts like pottery and coins associated with some of the finds also helped in pinpointing their period of origin—or at least the time they were deposited in the caves.

The manuscripts were written from as early as the third century B.C. up to the early second century A.D., during the time of the Jewish rebellion led by Bar Kochba against the Romans. Most of the material dates to the first century B.C.

In terms of Christian history, this is the era that precedes and frames the lifetime of Jesus. For Jews, the same period saw the rise and fall of the last independent Jewish dynasties, the Roman conquest, and the destruction of the Temple in Jerusalem. It was also the time when Rabbinic Judaism arose (so called because rabbis took the place of the temple priests in leading the people).

The documents that comprise the Dead Sea Scrolls fall into three major categories: texts from the Hebrew Bible; sectarian texts probably relating to the Qumran community; and other material, also for the most part of a religious nature.

Some 25 percent of the documents are biblical. Apart from the Book of Esther, every single book of the Hebrew Bible is represented, from a single fragment in the case of *Ezra-Nehemiah* and *Chronicles* to a nearly complete book of Isaiah (also represented by 20 partial copies). Thirty-seven partial copies of *Psalms* were found at Qumran, as were over 80 copies of the Books of Moses—including one scroll with both *Genesis* and *Exodus*.

These Bible manuscripts are about 1,000 years older than any previously known texts. In addition to the standard books found in Jewish Bibles, several of the apocryphal books found in some Christian Bibles were also found. Taken together,

the findings shed dramatic light on the process by which the Bible was standardized.

When scholars compared the various fragments of biblical books from the Dead Sea hoards with the earliest previously known Hebrew, Greek, and Samaritan Bible manuscripts, several patterns appeared. Perhaps most importantly, scholars found that the later the fragment was in date, the closer it resembled the standard Hebrew text. Fragments from the Bar Kochba era (ca. A.D. 135) are virtually identical to Bibles in print today. This gives dramatic confirmation to extra-biblical evidence in later Jewish works such as the TALMUD, which seems to point to a similar date for the “canonization” or standardization of the Bible.

The earlier scrolls and fragments show hundreds of differences from the standard Bibles of today, but most of these are minor variations that do not affect the meaning of particular verses, let alone the message of the books. These variations include differences in spelling, the addition or deletion of a word or short phrase, and obvious copying errors.

Some texts showed more significant differences, such as the addition of several previously unknown psalms and the occasional insertion of explanatory verses. Scholars have noticed three different “textual families,” that is, groupings of texts with similar variations. Some have made a case that these families are those that gave birth to the Septuagint (the Greek translation produced in Egypt in the third century B.C.); the Hebrew text in use today; and the Samaritan Bible, still used by the tiny community of Samaritans in Israel. The nonbiblical texts cover a large variety of genres, including hymns, commentaries on biblical books, so-called pseudepigraphic works (books supposedly written by prominent biblical characters), wisdom literature, and legal documents.

Many of these texts, including several large scrolls, have been labeled “sectarian,” as they refer to the beliefs and practices of the Qumran sect (perhaps the Essenes). Some of the major sectarian texts are (in the names scholars have given them)

The Rule of the Community (Manual of Discipline), *The War of the Sons of Light against the Sons of Darkness*, and a commentary on the prophet Habakkuk. The Temple scroll, which is largely devoted to a plan for the construction of an ideal Holy Temple, may be connected to the sect as well.

The Community Rule, which was found in one fairly long scroll as well as fragments of about 10 other copies, is considered to be one of the oldest documents of the sect, composed around 100 B.C. Designed to be used by the Guardians or Masters of the community, it contains instructions concerning religious ceremonies and the holiday calendar, rules for entering the community, and guidance in disciplinary and penal matters.

The War scroll, found in seven copies, prophesizes a 40-year struggle between the sons of light and the sons of darkness, possibly including the entire Gentile world. It goes into great detail about battle plans, weapons, tactics, prayers, and personnel. In the end, God's intervention will ensure the prearranged victory of the just. Scholars have found correspondences between this scroll, composed in the early or mid-first century B.C., and certain concepts and language found in the New Testament.

The Habakkuk commentary gives some details on the origins of the sect, perhaps as early as the early second century B.C., during the struggles between Jewish traditionalists and those who favored assimilation into Hellenistic culture. It describes the conflict between the Teacher of Righteousness (perhaps the founder of the sect and probably a temple priest of Jerusalem) and the corrupt Wicked Priest (apparently a ruler of Israel who persecuted the members of the sect).

The Copper scroll, so called because it is embossed on copper foil, has also aroused great curiosity and analysis. It describes 64 hiding places for a huge quantity of silver, gold, and ritual objects. Some scholars believe the scroll refers to the treasure of the Temple in Jerusalem, either somehow rescued from the destruction of A.D. 70, or collected in the years thereafter in anticipation of its ultimate reconstruction.

All of the scrolls and fragments are now in the public domain and housed in the archaeology wing of the Israel Museum in Jerusalem, providing sufficient material to keep scholars and historians busy for years to come.

Demosthenes (384–322 B.C.) orator

Demosthenes was born in Athens to a wealthy sword maker who died in 377 B.C. When he reached his majority and discovered that his guardians had misused their power and brought his estate to near bankruptcy, Demosthenes made

his first public speech in a lawsuit against his guardians and won some damages. This was surprising, since he suffered from a severe speech impediment; stammering made his words hardly distinguishable, and he was often the object of ridicule.

Demosthenes, however, overcame this hardship. To improve his speech, he would go to the beach and shout over the roar of the waves or talk with his mouth full of pebbles. To avoid distractions, he built himself a place underground and remained there for months, training himself to speak properly. He even went so far as to shave half his head so that he would not be tempted to make a public appearance before he was ready.

All Demosthenes' efforts paid off. At age 25, he entered public life as an influential orator, speechwriter, and politician. He wrote speeches for clients in law courts, but those he wrote for the general public concerning important political and social issues are among his best works. He became not only a leading speaker in Athens' assembly, but also a spokesman for the military and for Athens' need to be prepared for war. So effective was he as an orator and political leader that he was eventually forced into exile to escape prosecution for treason.

Demosthenes' death was as illustrious as his life. Tracked down at a temple where he was hiding, he asked for permission to write a letter. The guards granted him this right, not knowing that he had poison hidden in his pen, and after finishing his last letter, he bit his pen and died.

About 60 of Demosthenes' orations survive today. Most of them, such as *Against Polycles* and *Against Apatourius*, denounce political figures, while others, such as *Against Aristocrates*, criticize a particular social class. His *Erotic Essay* reflects on the nature of physical attractiveness and the often destructive effect it has on people.

Demosthenes' best-known works are the eloquent speeches in which he bids Athenians to unite against King Philip of Macedon, who was then conquering Greece. These speeches became known as *Philippics* (351, 344, and 341 B.C.), the work for which he is most widely famed.

Critical Analysis

One of Demosthenes' best orations was *On the Crown*, which he wrote to defend Ctesiphon, another orator, against Aeschines' claim that Ctesiphon had broken the law by suggesting that Demosthenes be given a golden crown in honor of his speeches for Athenian freedom. As a result of this speech, Aeschines, Demosthenes' opponent in the assembly, was forced into exile.

Demosthenes wrote *On the Crown* using short, concise sentences and avoiding excessive literary figures that might have confused or distracted his listeners. He makes his thoughts clear by using repetition and explanation. The logically sound structure of the speech is combined with highly emotional appeals, as when Demosthenes refers to Aeschines as a "bombastic phrase-monger."

In Ancient Greece, an oration was not only a piece of literature but also a performance. Thus, to make his argument more visual, Demosthenes presents different documents as evidence and invites witnesses who support his point. He denounces Aeschines by alluding to his mother's promiscuous behavior. A brilliant politician and spokesman, Demosthenes characterizes Aeschines as an incompetent, disrespectful fool, while portraying himself as noble and wise: "I saw a man enslaving all mankind, and I stood in his way."

It is this image of Demosthenes that remains: a hero who dared to stand up against the overwhelming political powers and who appealed to his people with passionate, patriotic speeches. In *Demosthenes: Statesman and Orator*, Ian Worthington says that Demosthenes is "regarded as the best of the Greek orators whose works have survived today." For contemporary readers, Demosthenes' speeches are an invaluable source of knowledge about Ancient Greek society and culture.

deus ex machina term

Deus ex machina, a Latin term that means “god from the machine,” refers to a theatrical device used in ancient Greek drama, most conspicuously in the fifth century B.C. by the tragedian EURIPIDES. At the end of a play, when the character’s difficulties seem beyond resolution, a deity such as Apollo or Athena (the “god”) soars onto the stage in a basket maneuvered by a mechanical contraption (the “machine”), untangles the plot, and extricates the protagonist.

In contemporary usage, the term refers to any extraordinary mechanism or intervention used to resolve a situation in a theatrical or literary work. Even in Euripides’ time, the agent was not always a *deus*, or god. For example, his *Electra* tells the tale of the ill-fated and murderous house of Aetreu and of the final deadly acts that will bring the familial curse to an end. While the great general Agamemnon is fighting in the Trojan War, his daughter Electra and son Orestes, with some justification, slay their adulterous mother and her lover. Immediately, they are stricken and incapacitated by what they have done, at which point Zeus’s sons Castor and Polydeuces (the *deus ex machina*) appear overhead to mete out the appropriate punishment: Electra is exiled, and Orestes is pursued by vengeful spirits.

In another of Euripides’ plays, *Medea*, the protagonist is princess of Colchis and a sorceress who has tricked her father, murdered her brother, and fled her homeland, all to help her beloved Jason procure the mythic Golden Fleece. The self-serving Jason, however, has taken a Corinthian princess as

his bride. Medea punishes him by slaying their two young sons. As Jason swears vengeance, Medea appears above the house in a dragon-drawn chariot, poised to travel to Athens and seek refuge with the old king Aegeus. For some critics of *deus ex machina*, this is an unsatisfactory resolution to the plot, because Medea does not solve the princess’s problem; rather, she complicates it.

A more satisfactory use of *deus ex machina* is in Euripides’ *Alcestis*. In this play, Admetus, king of Thessaly, is fated to die young. The god Apollo intervenes on his behalf by persuading Death to take a substitute. Death agrees, on the condition the substitution is voluntary. Admetus assumes his elderly parents will die in his stead, but it seems they are enjoying their twilight years and refuse. Alcestis, Admetus’s wife, however, volunteers to die in his place. The legendary hero Heracles, godlike but not a deity, travels to the underworld, successfully wrestles Death, and, as the *deus ex machina*, returns the queen of Thessaly to life.

The use of external or improbable means to solve a dramatic problem is generally considered a clumsy plot device and suggests the dramatist was unable to resolve the story in a more acceptable dramaturgical fashion. In the fourth century B.C., the philosopher ARISTOTLE gave his opinion of the use of such a device in his *Poetics*, an instruction manual of sorts for aspiring tragedians:

In portraying character, too, as in constructing the events, the poet should always look for what is either necessary or probable, so as to have a given agent speak or *act* either necessarily or probably, and [hence] to have one event occur after another either necessarily or probably. It is evident, then, that the resolutions of the plots, too, should come about from the plot itself and not by the use of *deus ex machina*, as in the *Medea*. . . .

Some contemporary Euripedean scholars have argued that he deliberately used the device to make a dramatic statement. These scholars suggest that Euripides used supernatural or superhuman forces

to make an ironic comment on the events and to restore a sense of myth and the supernatural to his stories after the tragic meaning of the human drama was already conveyed. Regardless of the impact of the earliest uses of *deus ex machina*, the device has evolved throughout time to become the means by which the resolution is achieved in most stories in world literature.

Diodorus (Diodorus Siculus) (ca. 90–21 B.C.) *historian*

Although the city-states of ancient Greece had lost their political independence by the first century B.C., their culture remained intellectually vibrant, producing many great writers and thinkers; in particular, Greek historical writing continued to flourish. One of the Greek historians who lived and worked during the time of Roman domination was Diodorus.

Diodorus was originally from Agyrium, a Greek city on the island of Sicily. He lived during the time of Julius CAESAR, AUGUSTUS, Mark Antony, and Cleopatra, and traveled extensively throughout his life in Asia, Egypt, Europe, and other countries, living part of the time in Rome. He is known today for the massive history he composed, titled *Bibliotheca Historica* (Historical Library). This work was nothing less than a massive effort to record the universal history of the part of the world known to

Greeks and Romans. In *Bibliotheca Historica*, Diodorus discusses the ancient civilizations of Egypt, the Middle East, and the Mediterranean.

It took Diodorus approximately 30 years to compile *Bibliotheca Historica*. He divided it into 40 volumes, beginning with the mythical origins of various civilizations and continuing until his own time. Many of these volumes have vanished, and only fragments exist of others. Volumes one through five and 11 through 20 have survived completely intact.

Compared to other classical historians, such as HERODOTUS and THUCYDIDES, Diodorus is not particularly skilled as a historian, showing minimal understanding of historical cause and effect and making little effort to substantiate his claims. Nevertheless, his work is important for the information it provides on the people, culture, and events of ancient civilization, including Alexander the Great, Ptolemy, Eumenes, Macedonius, Antigonus, the Gallic Wars, India, Iran, and details of the first few years of the Roman Empire. *Bibliotheca Historica* also provides information on the now-lost written works of Hecataeus of Abdera, Ctesias, and Megasthenes, and draws on other histories (such as those written by Ephorus, Philistus, Hieronymus of Cardia, Timaeus, Philinus, and Posidonius), thus giving historians a means by which they can compare and confirm historical information. The *Bibliotheca Historica* is also important for the vast amount of information Diodorus provides on Sicily, information that would otherwise be lost.

Dionysius of Halicarnassus (ca. first century B.C.) *historian*

Dionysius was a Greek from the city of Halicarnassus who traveled to Rome in the late first century B.C., when civil war was transforming the Republic into the Roman Empire. He worked as a teacher for some time but soon turned to writing history.

Unlike other classical historians who wrote during the reign of the Roman Emperors, among them PLUTARCH or LUCAN, Dionysius does not focus on simply telling a good story or extolling the virtues of the noble man. His writing engages social history, and he was particularly concerned with the question of the origin of Rome and its connections with Greece. He did not think highly of historians who chose to write about useless subjects, and he criticized those who were careless in how they obtained their information. For Dionysius, writing history was a serious business.

In his best-known work, *The Roman Antiquities*, Dionysius analyzes the various claims made by previous historians concerning the rise of Rome. He provides historical details of Rome to 264 B.C. and of the Etruscans, who inhabited Italy before the rise of Rome. This information is invaluable to modern historians, as the works of many writers whom Dionysius mentions have disappeared, and their contents are known only through him.

Dionysius believed that the founders of Rome were, in fact, Greeks. By popularizing this theory, he attempted to spread the idea that the Greeks and Romans were one people. Similarly, VIRGIL's *Aeneid* portrays Trojans as the founders of Rome. Dionysius wanted to represent the Roman Empire not as a conquering force but as a universal Greco-Roman civilization.

In addition to his history, Dionysius also wrote *The Arrangement of Words*, *Commentaries on the Attic Orators*, and *On Imitation*. These works about rhetoric and composition were not as popular as his

historical writing at the time, but they provide an important insight into Roman culture and thought. Three literary letters that survive are also much studied as examples of Dionysius's critical thought.

Dionysius pioneered techniques still used by modern historians. Extremely careful in the use of his sources, he believed in the study of cause and effect, and he believed a strong knowledge of history was important to society at large.

Donzella, Compiuta (La Compiuta Donzella) (13th century) *poet*

Nothing is known about Compiuta Donzella except that she lived and wrote in Florence, Italy, in the early 13th century. This was the time of the TROUBADOURS, who were spreading a new type of lyric poetry first developed in southern France. Donzella most likely considered herself a *trobaritz*, one of the female troubadours, and her poetry shows a familiarity with the themes and poetic devices used by the troubadours in their Provençal lyrics.

Donzella is sometimes referred to as "La Compiuta Donzella," which may have been a pen name

because it effectively means, in Italian, “an educated lady” or “a lady of perfection.” This was not an unheard-of practice, and other female *trobairitz* wrote under assumed names. For a time some scholars doubted that La Compiuta was an actual person, since nothing about her true identity was known. However, the fact that three sonnets attributed to her survive in a manuscript of early Italian poetry suggests that she did indeed possess a poetic skill, and two contemporary references during her own time indicate that La Compiuta was known to her larger literate society. Two sonnets of Maestro Torrigiano, also of Florence, referring to “a lady skilled in poetry” and a lady who “tries to rhyme,” are thought to be speaking of Donzella. Also, a passage in a letter written by the Tuscan poet Guittone d’Arezzo expresses great admiration for Donzella and her work.

Donzella’s surviving poems show her using the motifs and images common to troubadour poetry with an individual freshness and sadness. One of her sonnets opens with the declaration “I wish to leave the world and serve but God” and goes on to poignantly document the disillusionment of an idealist who, in the words of editor Rinaldina Russell, feels “contempt for a corrupt and vicious world.” In another poem, a love sonnet in the Provençal and Sicilian traditions, the female poet speaks with independence and self-determination, adopting the narrative stance frequently adopted by male poets to address her beloved, another poet.

In a third sonnet, set in the “season when the world is leaves and flowers,” the poet contrasts the images of the joyous rebirth of spring with her

private despair over a marriage being forced upon her by her father. The beauty of the season accentuates her sadness over the fact that she has no choice over her future. Taken together, Donzella’s three poems explore the only two life paths available to a woman in 13th-century Italy—to marry or lead a life of holy seclusion. “These motifs,” Russell says, “are a sad commentary on the destiny of this talented and soon-forgotten poet and on the options open to women in medieval society.”

Partly because of the lack of information about her life, and partly because so few of her poems survive, very little scholarship exists on La Compiuta Donzella. Yet she is considered the first known woman writing in Italian and, as such, begins a long tradition of literate Italian women producing works of art and poetry. Despite her awareness of and discomfort with the limited roles available to women in medieval culture, Donzella managed to make her voice heard. She and the other *trobairitz* mark the origin of feminist literature in the vernacular as known to Western Europe.

E

Edda (ca. 800–ca. 1250) *Icelandic literature collections*

The term *Edda* refers to two key collections of medieval Icelandic literature, frequently distinguished by age as well as genre. The *Elder Edda*, also called *Poetic Edda*, is a collection of poems composed by a series of anonymous poets between 800 and 1100 and written down in Iceland between 1150 and 1250. The surviving manuscript, which dates to 1270, contains 33 lays, or poems, describing figures and events from Norse mythology (see MYTHOLOGY, NORSE). Though some of the material is not Scandinavian, these poems, which were originally written in Old Icelandic, vividly portray the heroic and frequently violent world of the pre-Christian Scandinavian cultures.

The *Younger* or *Prose Edda* (ca. 1220) is a guide to early Scandinavian poetry and mythology. SNORRI STURLUSON composed this *Edda* in an effort to preserve the art of Icelandic poetry. Together, the three books—“The Tricking of Gylfi,” “The Language of Poetry,” and the “List of Verse Forms”—provide a systematic review of the poetic rules and forms in addition to a comprehensive discussion of Norse beliefs on the creation and end of the world as well as the doings of various Norse gods. Part of his discussion contains advice on

kennings, a poetic device that uses a compound descriptor to convey the qualities of a person or thing. The kenning often serves as a striking metaphor, for instance calling the sea the “whale-road,” a person’s speech a “word-choard,” and chest a “heart-locker.”

The *Poetic Edda* shares material with the Icelandic *Volsunga Saga* and the German *Nibelungenlied*, while tales of Norse gods and heroes contained within the *Prose Edda* have inspired artists for centuries. German composer Richard Wagner (1813–83) based his *Ring of the Nibelung* on the *Poetic Edda*, and writer J. R. R. Tolkien (1892–1973) drew widely from the Norse myths for *The Hobbit* and *The Lord of the Rings*.

Ennius, Quintus (239–169 B.C.) *poet, playwright*

Considered the first of the great Latin poets, Quintus Ennius is often referred to as the father of Roman poetry. His writings were the first examples of EPIC and tragic poetry to be written in the Latin language, and his influence touched almost every Latin writer who came after him.

Ennius was born in the town of Rudiae, southern Italy, in a region where Greek and Latin culture came together. His education provided a healthy mixture of Greek and Roman influences. While serving in the Roman army during the Second Punic War, his poetry was discovered by the Roman politician Cato the Elder, who brought Ennius to live in Rome. After settling down in the capital, Ennius pursued his literary ambitions by writing poetry and plays, both tragic and comic. Although he supplemented his income by working as a teacher and translator, and despite his numerous connections with noble Romans, he lived in poverty.

Unfortunately, only fragments of Ennius's works survive. It is known that he wrote at least 20 plays, many in honor of mythological heroes such as Ajax and Achilles. He also wrote a poem in honor of Scipio Africanus, the great Roman hero of the Second Punic War. He is most remembered, however, for the *Annals*, a history of Rome in the form of an epic poem. It covers the entire history of Rome from its legendary foundation by Romulus to the defeat of Hannibal, but only 550 lines of the epic survive today. Its popularity during En-

nius's time may have been due as much to its patriotic vision of Rome's destiny as to Ennius's metrical use of language, specifically the hexameter, and other poetic devices and forms that he borrowed from Greek literature.

Ennius set the standard of Latin literature for many years. His work combines Greek and Latin influences, which has greatly affected Latin literature throughout its existence. The work of many of the great Roman writers of later centuries, particularly VIRGIL and LUCRETIUS, would be profoundly shaped by Ennius's earlier writings.

epic term

An epic is a lengthy narrative poem recounting in lofty language the feats of a heroic personage whose achievements either contribute to the development of a race or nation or reflect the ideals of a culture. Typically, the narrative announces the moment in the story at which the epic begins and then proceeds chronologically to the tale's completion. The epic hero is characteristically courageous, chivalrous, and proud. He is also accomplished on the battlefield, a seeker of glory who fears disgrace more than death and who may be more than a little pessimistic about the fate of mankind. Other characteristic elements of an epic include a central mission or journey upon which the hero embarks; encounters with mythic beasts, sorcerers, or deities that may be either threatening or auspicious;

promises of immortality; and a descent into the underworld.

Epic poetry has its origins in the oral tradition of storytelling. In ancient times, minstrels would travel to the courts of noblemen and entertain their patrons by singing of great heroes and their exploits. Some of the poem was memorized and some was improvised, and the songsters often reused fixed descriptions or expressions for recurring subjects, such as sunrises and sunsets, meals, and the equipping of a hero with weapons. Metrical patterns and specific rhythms were also employed to help bards remember the words.

According to classics scholar W. F. Jackson Knight, specific types of literature arise from different social conditions, and oral poetry pertaining to action and adventure tends to be generated in a heroic age. This, according to Knight, is a time when an emerging culture is influenced by a more sophisticated and advanced neighboring culture and spawns an audacious, individualistic upper class that thrives on warfare and glory. The deeds of the heroes of this time are retold and in later generations develop into an epic tradition. Ancient Babylonia, Greece, Germany, Britain, and other countries have all produced epic literature.

Epics may be divided into two types. Folk epics are those that accumulated over time from works of various unknown poets, while classical epics are the product of a single known author. By far the best-known folk epics are the *Iliad* and the *Odyssey* (both eighth century B.C.), attributed to the Greek poet HOMER. Both poems begin with the traditional invocation of the muse, along with a statement of the purpose of the work, and feature numerous references to supernatural phenomena and deities. True to the oral tradition, Homer used numerous stock phrases (such as “swift-footed Achilles,” “resourceful Odysseus,” “the wine-dark sea, and “rosy-fingered dawn”) to create his epic adventures. The *Iliad* tells how the great Greek warrior Achilles, insulted by his army’s leader during the Trojan War, withdraws from the battlefield to sulk in his tent with disastrous consequences for the Greeks. The *Odyssey* follows the hero Odysseus’s adventure-

filled and mishap-laden efforts to return home to Ithaca after the war with Troy.

Other well-known folk epics include *GILGAMESH* (ca. 2500–1300 B.C.), the first great epic ever written, which relates the exploits of a semi-divine Babylonian king; the *MAHABHARATA* (ca. 400 B.C.–ca. 400 A.D.), an ancient Indian poem centering around royal brothers who battled for the throne; *BEOWULF* (A.D. 900s), an Old English tale of a dragon-slaying warrior; *KALEVALA*, the 2,000-year-old Finnish national epic; *El Cid* (ca. 1207; see *CID*, *EL*), concerning a Castilian warrior; and the medieval romances *SONG OF ROLAND* (ca. 1130–70), about a paladin in Charlemagne’s court, and *NIBELUNGENLIED* (12th century), based on German folk legend.

Among the important classical epics are VIRGIL’s *Aeneid* (19 B.C.), whose protagonist is a Trojan hero; DANTE’s *Divine Comedy* (1321), which takes the reader through hell, purgatory, and heaven; *The Faerie Queene* (1590–96) by Edmund Spenser, an allegory of moral virtues; and *Paradise Lost* (1667), John Milton’s account of man’s expulsion from the Garden of Eden.

Epic of Son-Jara (13th century) *epic poem*

The *Epic of Son-Jara* records the deeds and exploits of Son-Jara, otherwise known as SUNDIATA, a 13th-century king and the legendary founder of Mali, a West African kingdom. The original *Epic of Son-Jara* was composed in the Mande language as an oral tale passed down by generations of griots to their descendants. It is a story that is not only recited orally in social functions but also performed in accompaniment with music and dance. The griots (*jeli* in Manding) are keepers of oral traditions and can be compared to the minstrel knights of medieval Europe as they sing of the heroic deeds of the kings of the past.

The EPIC opens with a praise venerating the bravery, glory, and powers of Son-Jara, followed by a narration of the casting of Satan out of paradise and the genealogies of various religious figures such as Adam, Noah, and Konde. Konde is the family name of the Buffalo-Woman, Sogolon Konde, who would later give birth to Son-Jara. The story of Son-Jara begins midway through the long poem.

The poem relates Son-Jara's struggle in his childhood to overcome his handicap (at his birth he is crippled by a curse), his kindness and generosity to his people, as well as his filial piety to his mother, Sogolon. Unfortunately the wicked Sasouma, jealous of both mother and son, forces them into exile. The travels strengthen Son-Jara's character and give him the opportunities to learn new ideas and skills. With the help of his faithful sisters, half brother, and friends, Son-Jara successfully defeats the evil sorcerer, Sumamuru, and returns to Mali in triumph.

The *Epic of Son-Jara* as narrated by Fa-Digi Sisoko offers valuable information on the function of the bard, or griot, in traditional Mali society. Sisoko, it is said, attended a reroofing ceremony in Kaaba, West Africa, which improved his status and made him able to recite and thus preserve the epic

of the hero king Son-Jara. Kaaba was and is still considered the sacred center of the world in Mande traditions. The importance of the griot as a social recorder and observer is also represented in the character of Kouyate, Son-Jara's own griot within the story. In addition to being an adviser and spokesperson, the *griot* functioned as a historian, recording the important deeds and events in a king's life and singing him hymns of praise as well as of chastisement when necessary. As John William Johnson observes in his translation of *Son-Jara*, the interaction between music and words are essential to the performance of the tale.

Predestination and the supernatural constitute two major themes in the poem. The importance of destiny is represented in the prophecy of Son-Jara's birth and his future greatness. The prophecy is revealed first by the two hunters who brought Sogolon Kunde to Fara Mangan, king of the Manden and the father of Son-Jara. It is challenged briefly when Son-Jara is found to be crippled, but he eventually overcomes his handicap and displays his extraordinary strength by wielding a giant iron staff. Perhaps the importance of predestination is best represented in the inevitable battle between Son-Jara and Sumamuru. Son-Jara must defeat the sorcerer-king to fulfill his destiny, and his victory over the latter is not perceived as a victory of good over evil but as a completion of his predestined task.

The theme of the supernatural surfaces throughout the story. Son-Jara's prowess is derived from his maternal and paternal inheritances. He inherits occult power from his mother, Sogolon, the wraith of the Buffalo-Woman; and he derives grace and knowledge from his father, the descendant of Muslim migrants tracing their ancestry back to Bilal, the second convert of MUHAMMAD. Due to his lineage, Son-Jara possesses the ability to wield occult powers without succumbing to evil. This attests to his great strength, both physically and psychologically.

The *Epic of Son-Jara*, besides being a literary masterpiece and a representation of the richness of West African oral tradition, also contains important information about Mande culture. As Johnson

observes in the introduction to his translations, the *Epic of Son-Jara* is “indeed filled with descriptions and catalogues of cultural information useful to those wishing to understand the remarkable society from which this famous epic has emerged.”

Epictetus (55–135) philosopher

Epictetus was born a Greek slave in the Roman Empire and suffered from a permanent physical disability. These circumstances might have influenced him to turn to the philosophy of Stoicism, which promoted stern acceptance of all the external life facts without complaint or regret. At age 33, Epictetus finally gained his freedom but was expelled from Rome by Emperor Domitian. He settled down as a teacher of his own school of philosophy in Nicopolis, Greece.

Epictetus’s teachings exist in two works compiled by Arrian, one of his students and a Greek historian and philosopher. One, the *Encheiridion (Handbook)*, exists in its entirety; of the other, *Discourses of Epictetus*, only four of eight books survive.

In *Discourses*, Epictetus explores the development of self-discipline and moral stamina as a means of accepting one’s fate. “The good or ill of a man lies within his own will,” he states. He also believed that in spite of hardships, people could live happy lives by accepting everything that comes their way as temporary and passing: “Make the best use of what is in your power, and take the rest as it happens.”

Epictetus’s teachings of morality, humanity, and freedom greatly influenced Stoicism and affected

a great number of later writers, such as George Chapman, John Dryden, and Matthew Arnold.

Epicurus (341–270 B.C.) philosopher

Born on the island of Samos (in the Aegean Sea) to father Neocles and mother Chaerestrata, Epicurus was raised on a commune and later trained as a boy-soldier for the Athenian military. In approximately 306 B.C., he found his way to the city of Athens, where he established the center of his philosophical school in the garden of his home. The school attracted a devoted group of followers who separated themselves from the influences of city life and doggedly practiced the tenets of Epicureanism, the school of thought named for its founder. Epicureanism bases itself on the beliefs that man’s existence is characterized by mortality; that the universe came about accidentally rather than as a result of divine design; and, perhaps most famously, that the pursuit of intellectual pleasure marks a fulfilled life.

Because its teachings flew in the face of more typical ascetic philosophies, some looked down on the Epicurean way. The Stoics, for instance, subscribing to a system of thought developed by Zeno around 308 B.C., believed that humans should seek

to free themselves from passion and calmly endure all events as the decree of a divine will. Stoics regarded Epicureans as little more than flagrant hedonists, and critics purposely misunderstood Epicurus's teachings as instructions to blindly pursue one's every whim.

Still, Epicurus remains one of the most studied of the ancient thinkers, and scholarly investigations document that he produced more work than any other philosopher of his day—in total, 300 manuscripts covering topics from physics to love. Only a handful of these documents remain, all of which are included in *Lives of Eminent Philosophers, Book X* (translated by R. D. Hicks, Harvard University Press, 1925). We have gained a more comprehensive understanding of Epicurean philosophy, however, through the famed Latin poem by Lucretius, *De rerum natura* (On the Nature of Things).

Epicurus prioritized moral philosophy above all other categories of the discipline, as it concerns itself with how humans may become and remain happy. Pleasure, the main element of mortal happiness, comes about not when it is obsessively and inexhaustibly pursued, but when one's present desires are adequately satisfied and when these pleasures counterbalance the pains that inevitably accompany them. Philosophical study best cultivates the healthy quest for pleasure, since philosophy encourages the intellectual contemplation of corporeal pleasure rather than the actual acts of satisfying desires, which, Epicureanism argues, is less important than metaphysical rumination.

Famous works by Epicurus include *Letter to Herodotus*, a treatise on natural philosophy; *Letter to Pythocles*, which reflects on astronomy and meteorology; and *Letter to Menoeceus*, the definitive work of Epicurean moral philosophy. In this work, Epicurus makes clear his belief that the individual, and not a pantheon of ancient deities, retains the power to determine the course of his or her life. With the directness of a true metaphysician, Epicurus encapsulates his school of thought in *Menoceus* 128: "We say that pleasure is the beginning and end of living happily."

Euclid (fl. ca. 300 B.C.) mathematician

Euclid lived in the time of the Egyptian king Ptolemy I, who had been a general in the army of Alexander the Great. Alexander's conquests had taken him to Egypt, where he founded the city of Alexandria on the Nile Delta in 332 B.C. The metropolis flourished, accumulating half a million residents and becoming the world's seat of scientific and literary scholarship. Among its chief attractions was the Alexandrian Library, which boasted more than 500,000 Greek manuscripts and translations.

Euclid, who probably received his mathematical education in Athens from followers of PLATO, was among the scholars drawn to Alexandria's offerings, and he established a school of mathematics there. It is said that one of his pupils asked Euclid what advantage he would gain by learning geometry. Euclid instructed his slave to give the boy a threepence, "since he must make gain out of what he learns."

The world's most famous geometer did not discover or invent the laws of geometry, as his theorems and proofs came from the existing body of Greek knowledge. Rather, his genius lay in organizing and presenting them in a logical fashion. *Stoicheia*, or *Elements*, totaling 13 books, is Euclid's

masterpiece. The first six books cover plane geometry (straight lines, intersection of lines, angles), and the last three cover solid geometry (pyramids, cones, cylinders, spheres). The middle books address such subjects as ratios, proportions, magnitudes, and prime numbers.

Euclid begins *Elements* with 25 definitions of points, lines, plane surfaces, circles, parallels, and other terms. This is followed by a list of five postulates, which assume that it is possible, for instance, to draw a line from one point to another; and five axioms, such as “Things which are equal to the same things are also equal to one another” and “The whole is greater than the part.” From these fundamentals, the first proposition—“On a given finite straight line to construct an equilateral triangle”—is demonstrated. From these elements plus the proven first proposition, the second proposition may be demonstrated, and so on. Each new proposition can be traced to the previously proven propositions on which it is based, all the way back to Euclid’s initial descriptions of assumptions and self-evident truths. There are a total of 465 propositions. Ptolemy once wondered whether there was a shorter way to reach these invaluable conclusions, to which Euclid replied, “There is no royal road to geometry.”

In addition to *Elements*, Euclid published several other less-famous works. *Fallacies*, no longer extant, provides methods for detecting illogical conclusions; *Data* proves that if certain magnitudes in a geometric figure are given, other magnitudes may be deduced; *Figures* shows how to divide figures proportionally; *Surface-loci* concerns curved surfaces; *Conics* studies cones; *Optics* addresses visual perspective; *Elements of Music* is based on Pythagorean theory; and in his pioneering work *Phenomena*, Euclid applies spheric geometry to astronomy.

Through the centuries, Euclid’s *Elements* has appeared in more than 2,000 different versions. According to William Dunham, author of *Journey through Genius* (1991), “This work had a profound impact on Western thought as it was studied, analyzed, and edited for century upon century, down

to modern times. It has been said that of all books from Western civilization, only the Bible has received more intense scrutiny than Euclid’s *Elements*.” Great minds from Archimedes and CICERO to Isaac Newton, Napoleon, and Lincoln have studied this classic work, and it remains the definitive geometry text in many classrooms.

Euripides (ca. 484–406 B.C.) playwright

Euripides was born on the Greek island of Salamis near Athens into a reasonably prosperous family. He made his home there, most likely on an estate owned by his father, and it is said he penned many of his dramas in a seaside cave. He was married twice, both times unhappily, and had three sons. A scholar and an intellectual, Euripides counted among his friends some of the leading philosophers of the day, including SOCRATES, an admirer of his plays; and the Sophist Protagoras, who debuted his agnostic work “Of the Gods” at Euripides’ home.

Euripides saw roughly 88 of his plays produced, but he was honored at the Greek drama festivals only four times. Visionary and avant-garde, Euripides’ plays reflected his unorthodox views, which were not shared by the general public during his lifetime. He was soundly ridiculed, and the comic playwright ARISTOPHANES parodied his plays in *The Thesmophoriazousai* (411 B.C.), which includes a

group of women conspiring to punish Euripides for his depiction of deranged female characters.

Around 408 B.C., Euripides, an embittered, dispirited old man, went into self-imposed exile at the court of Archelaus of Macedon, where he wrote his masterpiece *The Bacchae*. There he died. His son Euripides the Younger produced the dramatist's final plays posthumously in Athens, where they won the prizes that had proven so elusive when their author was alive. It is said that the tragedian SOPHOCLES clad his own actors in mourning upon learning of his great rival's death.

Euripides was an iconoclast from the outset. He did not treat with the traditional reverence the legends that were a playwright's source material. Instead, he manipulated and reinterpreted them and introduced within that context the conflict between fate and free will. The "bad boy of Athenian drama," as Euripidean scholar Daniel Mendelsohn calls him, Euripides "questioned the established Olympian pantheon," slyly rearranging "traditional mythic material in bitter fables" and deconstructing tragic conventions. He also attacked traditional Greek customs and ideas, such as the treatment of women as inferior, the shaming of illegitimate children, the practice of slavery, and the glory of war.

Euripides' greatest contribution to dramatic art is his penetrating character studies, psychological analyses that investigate how human beings behave when they are subjected to sudden ill fortune. He creates pathos without descending to the maudlin or sentimental. The philosopher ARISTOTLE called Euripides the most tragic of the tragedians.

Improbably enough, Euripides' oldest surviving work, *Alcestis* (438 B.C.), is a comic drama. In this play, as in *Electra* (413 B.C.) and *Medea* (431 B.C.), Euripides uses DEUS EX MACHINA, a literary device in which the gods appear or an unexpected event occurs to resolve the conflict.

Other tragedies by Euripides include *Children of Heracles* (ca. 429 B.C.), which follows Heracles' disinherited family, who are persecuted by the king of Argos; *Hippolytus* (428 B.C.), in which a vengeful

god causes a queen to fall in love with her stepson; *Hecuba* (ca. 424 B.C.), in which the Queen of Troy is driven mad by the brutality and injustice of the Trojan War and exacts violent revenge; and *Suppliant Women* (422 B.C.), which dramatizes the pleas of the mothers of fallen soldiers to bury their sons' bodies.

Euripides' later plays include *The Trojan Women* (415 B.C.), another compelling indictment of war. According to writer Erich Segal, "The ruthless tyrant Alexander of Pharae was so ashamed to be crying at the sorrows of Hecuba that he had to leave the theater before *The Trojan Women* was over."

Critical Analysis

The Bacchae (also *The Bacchantes*, 408–406 B.C.) features a well-constructed plot in which the title characters are the priestesses and female worshipers of Bacchus, also known as Dionysis. Dionysis is the offspring of Zeus and of Semele, the deceased daughter of Cadmus, the Phoenician prince who founded Thebes.

Dionysis is a young and new god. When the play opens, he has returned to Thebes from his travels in the Orient. Slander against Semele is rife in the land of Dionysis' birth; the Thebans say that Zeus is not the father of Dionysis, that Cadmus perpetrated that rumor to save his daughter's good name, and that Dionysis is therefore not of divine birth.

To teach the city a lesson and assert his mystical powers, Dionysis has bewitched the women of Thebes, and the city "shrills and echoes to [their] cries":

I bound the fawn-skin to the women's flesh
and armed their hands with shafts of ivy. . . .
I have stung them with a frenzy, hounded them
from home up to the mountains where they
wander, crazed of mind and compelled to wear
my orgies' livery. . . .

Dionysis, disguised, appears in the city, where he is ill-treated by the young king Pentheus. Pentheus refuses to recognize Dionysis as a god, failing to re-

alize that the stranger he repeatedly attempts to shackle and imprison, whose “girlish curls” he has forcibly shorn, is indeed the deity.

After repeated confrontations, Dionysis finally hypnotizes Pentheus into donning the outlandish attire of the Bacchae, complete with a blond wig, and a possessed Pentheus flees to the mountains to join the revelers. There, as a messenger later recounts in garish detail, Pentheus’s own mother, Agave, “foaming at the mouth and her crazed eyes rolling with frenzy,” leads a pack of madwomen who rip him limb from limb. In a ghoulish climax, Agave picks up her dead son’s disembodied head and impales it on her staff. As she is released from the Dionysian spell and recognizes her trophy, Agave sees “the greatest grief there is,” and the wretched woman is banished from Thebes.

The play demonstrates that the irrational, amoral, ferocious, chaotic forces of nature, as symbolized by Dionysis, can wreak hideous destruction if they are denied. Pentheus is a callow youth and vulnerable to the dangers of his own lack of self-knowledge. He rejects the god instead of embracing the primitive part of himself. According to translator William Arrowsmith, when Pentheus becomes a parody of Dionysis, “we see in his costume and madness not merely his complete humiliation but the total loss of identity the change implies.”

Arrowsmith pronounces *The Bacchae* “a masterpiece: a play which, for dramatic turbulence and comprehensiveness and the sheer power of

its poetry, is unmatched by any except the very greatest among ancient and modern tragedies.”

Euripides’ plays are frequently produced. His contemporary attitudes, social criticism, psychological insights, and especially his humanity make his work timeless.

F

Fan Chengda (Fan Ch'eng-t'a)

(1126–1193) *poet, travel writer*

Fan Chengda is one of the great poets of the southern Song (Sung) dynasty in China. He lived during a period of great political transition following the Qin (Ch'in) dynasty's conquest of the northern portion of the Song dynasty. He passed the important *jinshi* (*chin shih*) civil service examination for placement in the imperial bureaucracy in 1154. His friend and fellow poet, YANG WANLI, also passed the examination that year, and the two maintained a literary correspondence throughout their lives.

Fan Chengda's temperament and literary ability helped him to advance to high government positions during his career. In 1170 he became an ambassador to the Qin court in Beijing (Peking). This appointment served as the basis for one of his many travel writings, *Lanpei lu* (Lan-p'ei lu; Register of grasping the carriage reins). His travel writings provide a glimpse of the day-to-day life of a government official of the era and detail the local folklore, social and economic conditions, and natural wonders of the region. They also show Fan Chengda's familiarity with the works of earlier writers such as LI BAI and SU SHI.

Fan Chengda, like Yang Wanli and another friend and contemporary Lu Yu, achieved his

greatest fame as a poet. His poetry combines Confucian, Buddhist, and Taoist elements while reflecting on nature and social concerns. Fan Chengda's poems consist of seven-character verses brimming with content. Some sing the praises of honest civil servants, others describe northern landscapes while infused with politics, such as the poem entitled "The Streets":

*Nearby runs Heavenly Street
Where elderly dwellers still await his
majesty
They hold back tears and question his
envoy
Shall we one day see his triumphal return?*

Fan Chengda's series of 60 poems, *Impromptu Verses on the Four Seasons of the Countryside*, is widely available in English translation.

Farazdaq, al- (nickname of Tammām ibn Ghālīb Abū Firās) (ca. 640–728) *poet*

Tammām ibn Ghālīb Abū Firās, or al-Farazdaq (“lump of dough”), was one of the most prominent and widely popular of the “court poets” of the Umayyad, or early Muslim period. He was known for his dissolute life as well as his brilliantly insulting *hija* (lampooning).

Born and raised among the Tamim tribal confederacy in eastern Arabia, Farazdaq spent most of his career in the city of Basra in southern Iraq. At one point, he was forced to flee to Medina after choosing a too-powerful target for one of his *hija*, but he was expelled from Medina as well after a particularly indiscrete adulterous escapade.

Farazdaq made his living by writing fawning panegyrics (superlative praises) for the Umayyad caliphs and viceroys and by winning the patronage of other wealthy men who paid dearly to keep clear of his vicious pen. He was also an enthusiastic participant in Basra’s intellectual and social life. According to some traditions, he was a supporter of ‘ALĪ IBN ABĪ TALĪB, the murdered caliph, and was jailed for a while at the age of 70 for supporting ‘Ali’s grandson Zayn.

Farazdaq’s personal life was stormy, which is not surprising in light of the venom and bragging found in his poetry. He had six or seven wives at various times, but none brought him happiness. The decades-long drama of his marriage with his cousin al-Nawar bint A’yun and then his longing for her and regrets after their divorce provided the subject of many of the poems in his *Divan*. “The repentance of Farazdaq” became a popular expression, fed by such lines as “She was my Paradise from which I was exiled, / like Adam when he rebelled against his Lord.”

The poet is quite frank in describing his immoral personal life. Departing from the Arabic tradition of

ghazal lyrics, which often depict passionate, unrequited love, Farazdaq’s poems do not idealize his lovers nor show infatuation for them.

Farazdaq was an energetic, prolific writer whose poems display a rough style and diction as well as an awkward syntax. Some critics decry these characteristics as poetic incompetence, a clumsy attempt to exploit the rapid changes that were emerging in spoken Arabic. Others speculate that the poet was simply trying to update the literary language, in keeping with the brash and cosmopolitan urban life of the new Islamic Empire. Indeed, he was among the first generation of Arab poets to work in the cities and towns of Iraq and Syria, rather than the desert of the Bedouin.

Farazdaq’s enduring fame, however, derives from a 40-year *naqa’id* (literary feud) that he pursued with rival poet Jarir ibn ‘Atiyya. The poems that resulted comprise the *Naqaith of Jarir and al-Farazdaq*. Although Arabic poetry was only just beginning to be written down in this era, the streams of rhymed, metered insults and obscenities that poured forth from the combatants were repeated by thousands of supporters of the two poets all across the Umayyad realm. The feud was originally based on tribal and political disputes, but it eventually became a debate over literary style. Arab literary circles have continued to debate the relative merits of the two camps ever since.

Farazdaq played a key role in developing Arabic literature from its spare desert origins to a vehicle more suitable for an urban-based empire. His sometimes-profane spirit won a wide mass audience for poetry in the new Islamic civilization.

Firdawsī (Abū ol-Qāsem Mansūr

Firdousi) (ca. 935–1020 or 1026) *poet*

Firdawsī is considered the national poet of Persia. As author of the great epic the *SHAHNAMEH* (Book of Kings), he has been an enduring source of pride and entertainment to Iranians for more than 1,000 years.

Firdawsī was born in Tus, near present-day Mashhad, in the Khorasan region of Iran, and was apparently a modest landowner. To earn money for his daughter's dowry, he decided to write an epic poem devoted to Persian history. He planned to present it to the local governor, Abū Mansūr, a descendant of the old Sassanian royal dynasty and a generous patron of the arts.

Several of Firdawsī's immediate literary predecessors had been engaged in an attempt to free Persian literary language of the many Arabic words that had entered the language in the centuries following the Arab conquest in the seventh century. At the same time, a tradition of prose epics had emerged, celebrating the ancient glories of the Persian Empire. Firdawsī based his *Shahnameh* on one such prose epic. Like its predecessor, his poem was written in pure Pahlavi, a Middle Persian dialect. This has kept the work readable to the present day.

Firdawsī admitted that he built the poem's 60,000 couplets around an original core of 1,000 lines written by an earlier poet. This may have been a ruse to protect the poet from charges of pagan heresy, since the poem extols Zoroastrianism, the official religion of Persia before Islam.

The *Shahnameh* begins with the creation of the universe and ends with the defeat of Yazdigard, the last Sassanian king. The mass of material in the 50 intervening episodes is less a systematic history than a collection of legendary tales, historical exposition, lyrical interludes, and love stories. The heroes, all men, are larger than life and live and rule for hundreds of years. The chief hero is the

fierce Rostam: "On the day of battle that worthy hero with sword, dagger, mace and lasso / Cut, tore, broke and bound, the heads, breasts, legs and hands of his foes." Rostam's many battles were won astride his horse Rakhsh. The horse's eyesight was so keen he could see an ant crawling on a piece of black felt two miles away on a dark night. The pair are often depicted in Persian miniatures.

Despite the storybook tone of the poem, Firdawsī includes many interesting details about ordinary life and material culture, especially in the Sassanian period, information which might otherwise have been lost to history.

More than 30 years after he began, Firdawsī completed the epic in 1010. By this time, a Turkish sultan, Mahmud of Ghazna, ruled Khurasan. Mahmud accepted the work but paid a paltry sum of 20,000 dirhams. He may have believed the charges that Firdawsī was a Shi'ite heretic, and he may have been unsympathetic to Persian national feeling. In a rage, Firdawsī gave the money away to a bath attendant and a beer seller. He then penned a 1,000-line satirical attack on Mahmud, which is still read with enjoyment today as a model of the genre. He then had to flee until the sultan's anger subsided. Some years later the sultan repented, but the 60,000-dirham prize came too late; the 90-year-old poet had died shortly before.

Firdawsī is revered by Iranians as one of the heroes of Persian culture. He is also recognized by Muslims in general as one of the greatest figures in Islamic cultural history, even though he never hesitated to honor pre-Islamic national and religious traditions.

Francis of Assisi, Saint (Francesco di Pietro di Bernardone) (ca. 1181–1226) *religious writer, poet*

Francesco di Pietro di Bernardone was born in Assisi, Italy, to Pietro di Bernardone, a wealthy cloth merchant, and Madonna Pica di Bernardone. At the grammar school in Assisi, Francis learned only enough Latin to read the Psalter. The lively young man's imagination was aroused more by *chansons de geste* like the *SONG OF ROLAND* and the works of the TROUBADOURS.

Francis hoped to find glory as a knight, but in his first battle, with the neighboring town of Perugia, he was captured and imprisoned. Released after a year, he fell ill and almost died. When he recovered, he began to question his previous life and started caring for the lepers he had previously shunned. Finally he gave up all his possessions and began to serve God. In 1209, Francis and a few companions obtained Pope Innocent III's permission for their way of life, and they became known as the Order of the Friars Minor ("Lesser Brothers"), or the Franciscan Order. Inspired by hearing Francis preach, Clare of Assisi, the daughter of a count, left her home, took religious vows, and founded the Order of the Poor Clares, the sister order to the Franciscans.

Francis loved all nature and even preached to the birds, but most of all he pleaded for peace among the feuding factions in the Italian cities. He particularly stressed that greed for riches was the root cause of war. In 1219, he visited Egypt during the Fifth Crusade (see CRUSADES) in hopes of making peace between Christians and Muslims. Ill on his return, he devoted his last years to prayer. In 1224, while he was meditating on Mt. Alverna in

Tuscany, the stigmata, or the marks of the passion of Christ, reportedly appeared on his body.

Francis believed that actions were more important than words. In his *Admonitions* to the friars, he said: "The saints have accomplished great things and we want only to receive glory and honor by recounting them." This may be why he left only a few short writings, most of which were dictated to scribes. His Latin works include the two rules for his order, *Admonitions*, some letters and prayers, his *Testament*, and a poem for Clare (later Saint Clare) and her sisters.

All of Francis's works are marked by poetic imagery, deep knowledge of the Bible and the courteous language of CHIVALRY. His most famous work, the *Canticle of the Sun*, is one of the earliest lyric poems in the Italian language. Francis wrote it in 1225, when he was dying and almost blind, yet it is the most joyous of his works. Written in his native Umbrian dialect, it is based on an irregular rhythm and has much assonance (the use of words with similar vowel sounds but different consonants) and rhyme. In *Canticle of the Sun*, Francis declares that humanity is not worthy of the goodness and power of God, who is to be praised instead through all His creation:

*especially my Lord Brother Sun,
who is the day and through whom You give us
light.*

Francis also calls for praise through Sister Moon, Brother Fire, Sister Water, and "Our sister, Mother Earth." He later added a stanza praising those who pardon others, and this was sung at his request to the quarreling bishop and mayor of Assisi, who immediately reconciled. A stanza written when he learned he was about to die adds "Sister Death" to the things that praise God. The principle of the song is mediation: God's praise extends from Himself and His own glory throughout creation, and is returned to Him by humanity through all created things.

Francis was so widely loved that only two years after his death at Portiuncula, Italy, he was canon-

ized as a Catholic saint. His life and works were widely taught, and a collection of popular legends began to grow up about him, written down as the “Little Flowers of St. Francis of Assisi” in the early 14th century. By stressing the brotherhood of all men and women and all things created under God, Francis offered a corrective to the excesses of medieval asceticism and instead returned to the theme of the love of creation found in the Hebrew BIBLE. Partly because of his winsome biography, and partly because his teachings are primarily moral rather than doctrinal, which makes them easier to understand and identify with, Francis is one of the best-remembered saints in the Catholic calendar.

Fujiwara no Teika (Fujiwara Sadaie)

(1162–1241) *poet*

Fujiwara no Teika was born into a family of Japanese noblemen and poets. He was a direct descendant of Fujiwara Michinaga, who ruled Japan from 995 to 1028. However, his family line descended through a succession of younger sons, so his position in the Japanese court, while respectable, was not powerful. His father, Shunzei, was a great poet and literary critic who compiled the seventh imperial literary anthology, the *Senzaishu*, in 1183.

Fujiwara held minor court positions throughout his life. His opportunities for advancement through the imperial ranks were often stymied by

political intrigues or, in one case, by his own temperament, as evidenced when he struck a court official with a candlestick after being provoked. Still, Fujiwara’s literary skill and his father’s favorable reputation allowed him to achieve great fame as a poet and critic. He wrote and taught TANKA, and he was an accomplished essayist. For these reasons, he was asked to compile the eighth imperial anthology, the *Shinkokinshu*, by the ex-emperor Go-Toba in 1201. Fujiwara included many of his own poems in the collection.

Later in his life, Fujiwara began to teach young writers about poetry. His *Maigetsusho*, or *Monthly Notes*, was a detailed series of essays about poetic style and sensibility. He also collected shorter anthologies of representative poems that he used to teach young poets by example. He advised poets to look forward in their work and not to “become enamored of the archaic style.” As a champion of poetry and as a master poet, Fujiwara continues to influence Japanese literature.

Fulgentius, Saint (Fulgentius of Ruspe, Fabius Claudius Gordianus Fulgentius) (468–533) *theologian*

After the collapse of the western half of the Roman Empire in the fifth century, Western Europe entered a period of cultural decline and political disunity. The Christian Church, however, remained intellectually active, producing a large number of important theologians. One of these was Saint Fulgentius.

Fulgentius was born in the city of Telepte, North Africa, and received an excellent education in the Greek and Latin classics; it is believed he memorized all of HOMER’S works. After beginning a

political career, he abruptly took monastic vows and became a monk. Although he traveled throughout the Mediterranean, he lived in voluntary poverty for the rest of his life.

The early centuries of the Christian Church were a time of tremendous theological controversy and debate, as proponents of rival interpretations of Christianity struggled with one another for supremacy. Fulgentius was deeply involved in these intellectual quarrels, writing numerous theological treatises to promote his views of scripture. He believed fervently in the ideas of St. AUGUSTINE and accepted the absolute damnation of all nonbelievers, as can be seen in the three books that make up his *Ad Monimum*. He also struggled mightily against the Arian sect of Christianity, writing numerous sermons against them, including *Contra Arianos liber unus* (A Work Against Arians), which still exists today. By the time of his death, these struggles were not yet over, but they would end in triumph for the forces Fulgentius supported.

His best-known work, still extant, is “De Fide” (“Of Life”), about the matter of “true” faith. His “Liber ad Victorem” and “Liber ad Scarilam de Incarnatione” concern the religious view at the time of incarnation and the Holy Trinity. These, along with his other existing works, make Fulgentius one of the leading theologians of his day.

G

Galen (129–ca. 199) *physician, philosopher, treatise writer*

When Greece was absorbed into the Roman Empire, the Greeks' political freedom came to an end. But Roman domination did not prevent them from continuing to achieve great heights in culture and science. Indeed, some of the greatest Greek thinkers and writers produced their work after Greece had become part of the empire. One of the most important of these men was the brilliant physician and philosopher Galen.

The son of wealthy parents, Galen was born in the influential Greek city of Pergamon, in what is today Turkey. His family's status gave him the ability to study medicine in various Greek cities and undertake a serious study of physiology and anatomy. He dissected corpses to better understand the human body and became a highly skilled physician. He eventually won the favor of the Roman government and became the court physician to both Emperor Marcus AURELIUS and Emperor Commodus. In addition to his standard duties, he prepared a potion for Marcus Aurelius as a protection against assassination by poison. For unknown reasons, he left Rome for a time but eventually returned and resumed his place.

Fortunately for scholars, about 500 of Galen's works have survived. Many of them are in the original Greek or Latin, while others are translations made by later Arabic scholars. Galen wrote extensively on a multitude of medical topics. In his treatise *On the Uses of the Parts of the Body of Man*, he pays particular attention to questions regarding the circulation of the blood (describing how blood flows through arteries) and the functions of organs (describing the functions of the kidney and bladder). He also discusses the methods and treatments doctors should use with their patients.

Medicine was not very advanced in ancient times and Galen's writings were, in many cases, breakthroughs of medical knowledge. However, his writings still reflect the lack of scientific knowledge at the time. For instance, he believed in the then-traditional concept of the "four humors" as the basis of his medical theories, which has long since been proven false. Nevertheless, when viewed in the context of his time, Galen's work was astonishing, and he is considered one of the two greatest medical thinkers of the ancient world, the other being HIPPOCRATES.

In addition to his vast contributions to medicine, Galen was also a philosopher of considerable

importance. He accepted many of Aristotle's ideas and expounded greatly on the need for direct observation as a basis for scientific knowledge. Galen also wrote on the subjects of history, linguistics, and philology, and social commentaries occasionally found their way into his writings.

In terms of his influence on later writers and thinkers, Galen must be ranked among the most important of classical figures. His emphasis on direct observation and experiment as the foundation of medical knowledge was critically important to the physicians who came after him, and his writings on medicine formed the basis of Western medical science for a millennium after his death.

Gao Ming (Kao Ming) (1305–ca. 1370) playwright

Though only one play by Gao Ming remains in existence, his work, *The Lute*, ranks among the greatest of China's literary creations. Gao Ming's early life was spent under Mongol rule. His father died when Gao was very young, and the playwright was raised by his mother. At an early age, he showed the deep respect for family tradition that would become a hallmark of his dramatic work.

Because the *jinshi* (*chin-shih*) examination, a civil service test, was not given during the Mongol regime, Gao Ming was not able to pursue a career in the government immediately after finishing his schooling. The *jinshi* was not reinstated until 1342, when Gao was almost 40 years old. He passed the

exam in 1344 and received his first government post later that year as a judicial officer in Chuzhou (Ch'u-chou), where he became respected for his literary talents and his integrity. A transfer to a naval post in 1348 began a swift decline in his political ambitions.

Gao Ming retired from government service in the 1350s and moved to the town of Lishe (Li-she), where he began to develop his writing skills in earnest. He wrote *The Lute* during this period, as well as many poems (*shi*, or *shih*) and songs (*ci*, or *tz'u*). Though he achieved some fame during his lifetime for his poetry, only one *ci* and 50 *shi* remain in existence. As a result, *The Lute* is the source of Gao Ming's present fame.

The Lute tells the story of an ambitious young student, Cai Bojie (Ts'ai Po-chieh), who has spent his youth studying for the *jinshi* examination. However, when it is time to take the exam, Cai is reluctant to leave his poverty-stricken, ailing parents and his young wife, Wuniang (Wu-niang). After his parents and wife insist that he go to the capital to take the test, Cai reluctantly leaves and passes the test with the highest marks in the country. He marries the daughter of a government minister and lives in his father-in-law's mansion. Meanwhile, a famine ravages his hometown, and his parents soon die from malnutrition. Wuniang journeys to the capital in search of Cai, singing and playing the lute on her travels. When she reaches the imperial city, she is reunited with Cai, and the two, along with Cai's second wife, return to his hometown and observe the traditional three-year mourning period for Cai's parents. The play ends with Cai and his wives receiving a commendation from the emperor for their displays of virtue during their period of mourning.

The play has been recognized for its strong moralistic themes, and it is regarded as one of the Ming dynasty's greatest plays. Technically, *The Lute* also stands out for its complex songs and Gao Ming's use of colloquial and poetic dialogue. The play has become part of the standard repertoire

of the Chinese theater and was adapted into a Broadway musical, *Lute Song*, in 1946.

Geoffrey of Monmouth (ca. 1100–1155) nonfiction writer, historian

In some of his writings, Geoffrey of Monmouth refers to himself as *Gaufridus Monemutensis*, which suggests he was born in Monmouthshire. Probably of Breton origin, he was raised in Wales. From 1129 to 1151, he lived in Oxford and was thought to have been a canon of the secular college of St. George. During his time there, he wrote his two well-known literary works, *Historia Regum Britanniae* (History of the Kings of Britain, 1136) and *Life of Merlin* (1148), both in Latin. His *Prophecies of Merlin*, first written as a separate piece, was later incorporated into the *History*.

In 1151, Geoffrey became bishop-elect of St. Asaph, in northern Wales. He was ordained priest at Westminster in 1152 and consecrated the same year at Lambeth by Archbishop Theobald. According to the Welsh Chronicles, he died in 1155.

Geoffrey's *History of the Kings of Britain* has held an important place in English literature since its completion. It is alternately a mere genealogy of royal primogeniture, a terse chronicle, a detailed sequence of dynastic lore, and a stirring narrative of an event or anecdote. Though the form and content of the *History* vary, the work as a whole is an epic tale spanning nearly 2,000 years. It begins with the fall of Troy in 1240 B.C. and tells the story of Brutus, great-grandson of the Trojan Aeneas, who was the first king of Britain and reigned for 23 years in the 12th century B.C. The epic ends with the death of the last British King Cadwallader in A.D. 689, after which the country was abandoned to the Saxons.

Geoffrey's remarkably vivid prose grips the reader and is as exciting today as it was in the 12th century. His purpose for writing the *History* was to highlight the story of the Breton and Welsh peoples, who were driven from the mainland by the Saxons, and to describe the dominions and ambitions of the Norman kings.

Some of Geoffrey's writings are rooted in facts he culled from various existing and authentic sources, including BEDE's *Ecclesiastical History of the English People*, the *British History* by Nennius, and *Concerning the Ruin of Britain* by Gildas. However, what material he couldn't find he simply made up.

To this day, Geoffrey is remembered for the romantic and heroic stories of valor, CHIVALRY, and mystery in his *History*. These stories occupy an important place in English literature through Geoffrey's well-paced, well-crafted, emotionally skillful handling of characters, places, and events. Readers of all ages continue to delve into his tales of King Arthur, Camelot, Avalon, the Knights of the Round-Table, Queen Guinevere, Lancelot, Mordred, and Merlin the Magician.

Gilgamesh (ca. 2500–1300 B.C.) *epic*

In the second half of the third millennium B.C. (ca. 2500–2000), stories and poems about the half-legendary god-king Gilgamesh came to be widely told in Sumer. Within a few hundred years, these stories were compiled and edited into a long Babylonian poem, known today as the *Epic of Gilgamesh*. It can be considered the oldest surviving literary masterpiece in the world.

The Sumerian civilization is the oldest known to history. It emerged in the southern Tigris-Euphrates valley of Iraq (Mesopotamia) sometime in the fourth millennium B.C. Large city-states appeared by the third millennium, boasting massive civic and religious structures, elaborate irrigation systems, long-distance trade, a written language, and all the other attributes of a sophisticated culture. Hereditary kings, who attained semidivine status in the eyes of later generations, ruled the major cities.

One such king was Gilgamesh of Uruk (Erech of the Bible). According to inscriptions, he ruled sometime between 2700 and 2500 B.C., building up the walls of the city and dedicating a temple in Nippur. A body of oral legends soon grew up about his superhuman achievements; these tales began to be recorded on clay tablets soon after, written in cuneiform script in the Sumerian language.

By around 2000 B.C., Sumerian ceased to be a widely spoken language. However, the Babylonians, the neighboring people who eventually conquered all of Mesopotamia, accepted most elements of Sumerian civilization, including the literary and religious heritage. Babylonian scholars and scribes adapted their own language, Akkadian, to the Sumerian cuneiform script. They also kept Sumerian alive as a literary language, much the way Latin was kept alive in Europe long after the fall of Rome. Fortunately, they also preserved many old Sumerian texts by rendering them into Akkadian.

Though archeologists have found and deciphered several Sumerian-language Gilgamesh tablets, they have found many more such poems and stories in other, later languages at digs across the ancient Near East. The most famous and

widely copied version of the Gilgamesh story was written in Akkadian, a Semitic language. That version was probably first composed in the Old Babylonian period (ca. 2000–1600 B.C.). It went through various permutations and adaptations in subsequent centuries, both in Akkadian and in Hittite and Hurrian translations.

Eventually, toward the end of the Middle Babylonian period (ca. 1600–1000 B.C.), the work seems to have settled into its final form. This revised edition, which included a new introduction and an additional section tacked on to the end, is generally known today as the “standard version.” Ancient catalogues referred to it as the Gilgamesh “series” because it was written across several tablets. It was also known by its first line, “He who has seen everything.”

A catalog from the library of Assyrian king Ashurbanipal attributes the standard version to a scholar/priest named Sin-Leqi-Unninni. His exact role in writing, editing, or transmitting the epic is not known, but scholars tend to agree that the work as we know it bears the stamp of a single writer.

Many ancient copies of the standard version have been uncovered in recent years, including a later Assyrian translation and a rendition in Elamite that may have been intended for performance as a religious ritual. The latter discovery has led some scholars to speculate that at least parts of the epic may have been performed at religious festivals in Babylonia too. The standard late Babylonian edition is the basis of all modern translations.

Critical Analysis

It should be noted that a complete text of *Gilgamesh* has not yet been found. Scholars have labored to piece together the existing fragments like a jigsaw puzzle and to fill in the remaining gaps with inspired literary guesswork. They know that the full text ran to 12 numbered tablets, with six columns of text on each.

Enough survives to make the work engaging even today. As it opens, the reader is drawn into the tale through a tour of the majestic walls of Uruk, built by the mighty Gilgamesh. Hidden in the walls

is a copper box containing the tablets that tell the tale of “he who has seen everything . . . but then was brought to peace.”

Though a great king, son of gods, supremely strong and beautiful, Gilgamesh oppresses the young men and women of Uruk. The gods decide to create a rival, Enkidu, who is depicted as an innocent child of nature, at home with the animals. Enkidu is soon seduced by a prostitute; he then makes his way to Uruk and challenges Gilgamesh. The king wins the hand-to-hand combat, but the two become fast friends despite the vast difference in status and personality. (Professions of friendship and love are a recurrent theme in the rest of the poem.)

Gilgamesh proposes a joint quest to visit the Cedar Forest and slay its demon protector Humbaba, thus gaining a kind of immortality through eternal fame. After a long journey, they succeed in slaying the demon, and Enkidu also fells the tallest cedar to use as a door in the famous temple at Nippur.

Feminist critics claim that the next episode, about the goddess of love, Ishtar, may signal a change in gender relationships in Babylon. After Gilgamesh rejects Ishtar’s proposal of marriage, Ishtar has the gods send down the destructive Bull of Heaven. The hero slays the beast, reducing Ishtar and her priestesses to impotent grief.

The gods decide to kill Enkidu in punishment for the slayings of Humbaba and the Bull. When Enkidu asks for revenge against those who had seduced him away from his original state of innocence, the sun god Shamash lectures him on the simple civilized pleasures of food, wine, clothing, and friendship he has known, and assures him he will be properly mourned.

Gilgamesh cannot be consoled after the death of his friend. Consumed with despair about his own mortality, he decides to seek out Utnapishtim, the only human who ever achieved eternal life.

On the way, surviving a series of dangerous adventures, Gilgamesh is lectured on the futility of his quest. He is admonished to

*“Make every day a delight,
Night and day play and dance . . .
Look proudly on the little one holding
your hand,
Let your mate be always blissful in
your loins,
This, then, is the work of mankind.”*

Ignoring this advice, the hero eventually succeeds in crossing over the Waters of Death. Utnapishtim recounts how he himself survived the great flood, which had been designed by the gods to exterminate all of mankind. He was granted immortality; perhaps if Gilgamesh can remain awake for seven nights, he, too, will receive the gift. But Gilgamesh drops off to sleep the moment he sits down. When a serpent then makes off with a youth-restoring herb that Utnapishtim has given him, Gilgamesh accepts that he must return to Uruk and reconcile himself to mortality.

Accompanied by the ferryman Urshanabi, Gilgamesh returns to Uruk. He invites Urshanabi to ascend and traverse the walls, in language that recapitulates the opening device; thus, the poem comes full circle.

As it has come down to us, *Gilgamesh* is an amalgam of many different elements. The basic Sumerian hero tales were enriched with motifs taken from royal hymns and temple hymns, independent creation myths, sacred marriage rituals, curse texts, and stories about deliverance from unjust rulers. The flood story seems to have been taken, albeit in modified form, from the Old Babylonian tale of *Atrahasis*. The style of the writing does not depart from tradition; there are many parallelisms and repetitive chant-like phrases, and a great deal of hyperbole.

Modern critics note that all these elements were gracefully unified to focus on a number of themes, centered on the problem of mortality. As more fragments are discovered, and more translations are made into modern languages, one conclusion becomes hard to evade. This ancient work, dating back almost to the dawn of literacy, shows a level of

psychological and philosophical awareness that can speak to contemporary readers.

Gilgamesh the king became one of the most popular heroes of ancient times, at least amongst the scholarly elite. His bearded face and muscular body were depicted on cylinder seals, monuments, and other works of art. He was the model of the courageous but tragic figure whose search for fame, glory, and eternal life was doomed to ultimate failure.

Echoes of *Gilgamesh* have been discerned by some scholars in Greek mythology and in HOMER. Possible references to the king show up in the DEAD SEA SCROLLS and in a Syrian Christian manuscript from the seventh century A.D. Parallels with the Hebrew BIBLE have been widely debated, for example concerning concepts of life after death. The biblical story of Noah and the flood almost certainly drew on *Gilgamesh* or related Babylonian material.

When the civilization of Mesopotamia died by the end of the first millennium B.C., a moving and thought-provoking narrative that had entertained listeners and readers for some 2,500 years faded into oblivion. Thanks to the accumulated work of archeologists, historians, scholars, and poets, and the epic has been reborn.

Gottfried von Strassburg (ca. 1180–ca. 1225) poet, novelist

Little is known about the life and personality of Gottfried von Strassburg because there are no records of his birth, activities, or death. All that remains are brief references to him in his own works and those of contemporary writers. It is not known exactly when Gottfried was born, but from his name it is to be assumed that he was active as a writer primarily in the city of Strassburg. In terms of a chronology, all that can be said is that he probably composed his masterpiece, *Tristan*, between 1210 and 1215. Though apparently not a nobleman, Gottfried nevertheless attained a high level of education in such fields as theology, mythology, and philosophy, and this education served as the foundation for his literary work.

Apart from individual poems in various anthologies of medieval German verse, Gottfried is known essentially only for one work—his Arthurian verse novel, *Tristan*. This book recounts the courtly adventures of the protagonist, culminating in his search for the HOLY GRAIL. At the center of the novel is the story of *TRISTAN AND ISEULT* (called Isolde in Gottfried's novel), who flee from the court of King Marke (Isolde's lover and Tristan's patron) to live together in forbidden love. It is this passage of the novel that has captured the imagination of artists over the centuries and given rise to any number of musical, literary, and artistic interpretations.

Left unfinished, presumably because of the author's early death, the general plots, as well as individual episodes of Gottfried's *Tristan*, are largely based on CHRÉTIEN DE TROYES's and WOLFRAM VON ESCHENBACH's Arthurian romances, as well as on the Middle English verse narrative of the same name. And yet Gottfried's *Tristan* departs from these sources to a great extent and is in many ways revolutionary for MIDDLE AGES literature and

thought. For example, the lovers' insistence on personal happiness over the norms and expectations of society, and their disavowing of the knightly value system in the face of the intensity of their love set Gottfried's *Tristan and Isolde* apart from similar works. The couple's defiance of the aristocratic codes has in turn been read as a kind of criticism of courtly life and values in general. This is an example of the great subtlety of Gottfried's writing, for although *Tristan* is a work primarily for and about the aristocracy, through the characters and their tragic fate Gottfried calls this aristocratic culture into question.

Other aspects of Gottfried's *Tristan* were also highly innovative and suggest an at-times surprisingly modern orientation on the part of the writer. The representation of love as the guiding life principle of the protagonists, more important than social norms and expectations, spoke against medieval ideas of societal harmony and individual submission. It would be this kind of vision of love, however, that would dominate in the Renaissance and modern eras, and in this sense Gottfried was far ahead of his time.

Gottfried von Strassburg was praised during his own time as a great artist and his *Tristan*, even in its unfinished state, was considered a masterpiece by audiences and peers. Later generations would also recognize the beauty and accomplishment of the work. In 1812 Jacob Grimm called Gottfried's *Tristan* "one of the most charming works of poetry ever written." More recently, the critic Rüdiger Krohn has said of Gottfried, "No author of the German Middle Ages was able to put into practice the ideal of medieval poetics with the same mastery (218)." It is Gottfried's version of the *Tristan* saga that has come to predominate in the European imagination through the 20th century and into the 21st, and in this way the mysterious author's legacy lives on through the present.

Guillaume de Lorris (ca. 1215–ca. 1237)

poet

Guillaume de Lorris is the author of the first 4,000 lines of the French verse poem *Le Roman de la Rose* (*ROMANCE OF THE ROSE*, ca. 1225–40), one of the best-known love poems of the MIDDLE AGES. The remaining 18,000 lines were written by JEAN DE MEUN.

Nothing is known of De Lorris's life, but scholars speculate that he was most likely born in Lorris, a small town near Orleans, France. Based on his writing, he was probably an educated man, was familiar with OVID's *Art of Love*, and had an intimate knowledge of court society and courtly love poetry (see CHIVALRY AND COURTLY LOVE).

The *Romance of the Rose* is the story of a young man who tries to win the love of a young woman, personified as a rose. No one knows who the Rose is. She may have been De Lorris's beloved, his patroness, or a fictional character. In any case, the rose allegorically represents a beloved woman, while the garden in which the rose grows represents courtly life.

In the beginning of the poem, the poet suggests that the story is autobiographical and based on a dream that came true later in his life. It is, in essence, an ideal vision of the nature of love, and the poet prays:

*That she for whom I write with favor look
Upon my work, for she so worthy is
Of love that well may she be called the Rose.*

De Lorris died before completing the poem, and despite the fact that Jean de Meun's section presents a more cynical view of love, *Romance of*

the Rose remains one of the greatest achievements of courtly love poetry.

H

Hadewijch (fl. mid-13th century) *poet, mystic, theologian*

Hadewijch lived in the duchy of Brabant, in what is now Belgium, around 1250. Her writings reveal that she was well educated and therefore probably a noble. She seems to have served as the leader of a group of Beguine women. Beguine communities, which first appeared in the late MIDDLE AGES, had less structure and fewer rules than traditional religious orders and consisted of individuals (usually women) who attempted to lead lives of poverty, prayer, and good deeds. Other members of Hadewijch's community eventually seem to have questioned her leadership, perhaps because of her unorthodox ideas about Christian love, and there is some speculation that they may have forced her to leave the community.

In the 1830s, German scholar F. J. Mone rediscovered Hadewijch's works, which had been preserved in 14th-century manuscripts. These works, which are written in Dutch, include 16 *Didactic Poems*, most of which are rhyming couplets; 45 *Poems in Stanzas*; 14 *Visions*; and 31 *Letters* to admirers and friends. They show that Hadewijch knew some Latin and French and that she had read many of the earlier Church fathers. She was aware

of Ptolemy's theories on astronomy as well as contemporary ideas about music and rhetoric. Her writings also raise the possibility that she had read Pierre Abélard's poetry and listened to many TROUBADOURS' love songs.

Like her near-contemporary BEATRICE OF NAZARETH, Hadewijch concerns herself with the idea of Christian love. She writes in one letter that she has loved God since she was 10 years old: "In the end, I cannot believe that I have loved Him best, and yet I cannot believe that there is any living man who loves God as I love Him." In another writing, Hadewijch names individuals whom she sees as displaying a surpassing love for God. Her list includes the Virgin Mary, Mary Magdalen, Saint AUGUSTINE, HILDEGARD VON BINGEN, and Bernard of Clairvaux.

Bernard of Clairvaux had argued in the 12th century that individuals should strive above all to love God, because by doing so they could become one with God. Hadewijch, too, believes that through love an individual can become one with God. She perceives this union as both a burden and a joy: "We all want to be God along with God; but God knows that there are few of us who want to be man with Him in His humanity, to carry His

Cross with Him, to hang upon it with Him, to pay with Him the debt of human kind.” It seems to some scholars that Hadewijch believed she was capable of such suffering. At the same time, she shows humility and an awareness of her own limitations in other works, as in her love poem “Drawing Close to Love:”

*I drew so close to Love
That I began to understand
How great the gain of those
Who give themselves wholly to Love:
And when I saw this for myself,
What was lacking in me gave me pain.*

Such expressions of belief and love were uncommon during her time, especially for laywomen of the Church, as was her style of writing. Unlike most medieval Christian writers, she rarely quoted the BIBLE. In addition, she wrote in a Brabantine dialect of Dutch, no Latin, and thus addressed a wider, less-learned audience. Rather than composing scholarly treatises that her audience would find incomprehensible, she communicated her thoughts in poetry, letters, and stories of visions. Even more remarkably, her descriptions of religious love contain passion and exaltation not often seen in religious writings of previous centuries. In one poem, love brings a “high, loud gift of low silence” and “completely rob[s] me of myself.” Similarly, during one of her visions Hadewijch “remained in a passing away in my Beloved, so that I wholly melted away in him and nothing any longer remained to me of myself.” When medieval writers employed such paradoxical, self-annihilating language, they usually had courtly love in mind (*see* CHIVALRY AND COURTLY LOVE), not religious love. Hadewijch was using the language and style of the troubadours.

Scholar J. Reynaert has recently argued that the “borrowing of a profane courtly model for communicating a religious ‘content’” may not have origi-

nated with Hadewijch, and it did not make her unique. Nevertheless, it adds a layer of meaning and beauty to the mysticism that saturates her writing, as do her references to Love and the Soul as female:

... The soul is the way that God goes when he proceeds from his depths to his liberty, that is into his ground, which is beyond the reach of all things but the soul’s depths. And as long as God is not wholly her own possession, she will not be satisfied.

(“The Deepest Essence of the Soul”)

*In the beginning Love satisfied us,
When Love first spoke to me of love—
How I laughed at her in return!
But then she made me like the hazel trees,
Which blossom early in the season of
darkness,
And bear fruit slowly.*

(“Love’s Maturity”)

Halevi, Judah (Yehuda ben Samuel Halevi) (before 1075–after 1141) *poet*

Judah Halevi is often considered the most exalted of all post-biblical Hebrew poets. His secular, religious, and national poetry have served as models for Jewish poets in various languages ever since.

Halevi was born in Toledo, the chief city of Christian Spain. He studied in Lucena and returned to Toledo to practice medicine. He later moved with his wife and daughter to Córdoba, then under Muslim rule. Overcome with longings for Zion, he left his family when he was in his 50s to go on a pilgrimage to the Holy Land. After visiting Cairo, Tyre, and Damascus, he disappeared; legend has it that he died a martyr at the gates of Jerusalem.

Halevi's secular poems, written mostly during his youth and early manhood, are linguistically rich and complex. They have a bright, harmonious, musical quality and a primarily optimistic tone. They vary in subject matter, from friendship, love, wine, and beauty to the vicissitudes of life.

For most of his life, however, Halevi focused his poetry on religious themes. Like most of his fellow Hebrew poets of the Andalusian school, he often expressed an intense longing for God. His God was a stern, distant ruler but also the ever-present source of love in nature and human affairs. In "Lord, Where Shall I Find You," he writes: "Lord, where shall I find You? Your place is lofty and secret. And where shall I not find you? The whole earth is full of Your glory."

It is Halevi's "national religious" poems that have endeared him to generations of pious and secular Jews. He lived in a more troubled era than the earlier poets of the Spanish Jewish Golden Age. His lifetime was marked by intermittent religious persecution in Spain from both Christian and Muslim rulers. In his poems, he frequently questions God's justice in allowing the Jewish people to suffer in exile. As the years pass, his sense of exile and longing for Zion grow stronger, as vividly recorded in his work. In perhaps his most famous poem, "My Heart Is in the East," he cries out: "My heart is in the East and I am at the edge of the West. / Then how can I taste what I eat, how can I enjoy it?"

Halevi's later poems chronicle his departure from Spain, his sea voyage, and his visit in Cairo on the way to the Land of Israel. Whether he ever reached Jerusalem, and what poetry he wrote there if he did, will probably never be known.

Hanged Poems (*Mu'allaqāt*, Seven Odes, Golden Odes) (sixth century)

Most Arabic poetry from the fifth and sixth centuries is attributed to anonymous authors. However, literary scholars generally agree that the *Hanged Poems* (also called the *Mu'allaqāt*, or "The hanging ones") were written by the following seven poets: IMRU' AL-QAYS, TARAFAH 'AMR IBN AL-'ABD, Zuhayr ibn Abi Sulma, LABID, Antara ibn Shaddad, 'AMR IBN KULTHUM, and al-Harith. They were displayed in the Ka'aba, the chief religious shrine in Arabia.

Little is known about the lives of most of these poets. They likely read their works aloud in a poetry competition during an annual meeting of the Arabic tribes. It is believed that the seven best of the *qasidas* (long poems or odes) chosen through these competitions were the ones hanged for display in the Ka'aba, hence their collective title as the "hanged ones." They address the topics of warfare, love, and famous cities of the region.

The oldest of the *Hanged Poems* was written by Imru' al-Qays, otherwise known as "the vagabond prince." He was of royal descent from the ancient kings of Yemen, and the stories about his life differ. In one telling, Imru' took vengeance on his father's murderer and then fled the region for fear of retaliation. In another story, Imru' became a wanderer because his father banished him for writing of love rather than spending more time warring. In both stories, Imru' eventually arrived in Constantinople and became a celebrated poet in the palace of the Roman emperor Justinian (530). He was later poisoned as punishment for falling in love with a Byzantine princess.

Imru' al-Qays is said to be the greatest of the *Mu'allaqāt* poets, the first to capture in a regular rhythm the chanting of the earlier desert singers. His poem speaks of the loss of love:

There my companions halted their beasts awhile
over me saying, "Don't perish of sorrow; re-
strain yourself decently!" Yet the true and only
cure of my grief is tears outpoured: what is there
left to lean on where the trace is obliterated?

Antarah, another of the poets, was a son of an Arab and his slave woman; he was raised as a slave in his father's house. He desperately loved Abba, a young woman of his tribe, but never had a relationship with her because his tribe did not consider Antarah, a slave, to be Abba's equal. His poem speaks of their unrequited love:

I was enamored of her unawares, at a time
when I was killing her people, desiring her in
marriage; but by your father's life I swear, this
was not the time for desiring.

The poet Zuhayr is regarded as the philosopher of the group of *Mu'allaqāt* poets, a man of rank and wealth from a family noted for their poetic skill and religious earnestness. He sought, through his poetry, to instill noble ideas in the people around him. In this poem, he encourages peace among the tribes:

And war is not but what you have learnt it to
be, and what you have experienced, and what is
said concerning it, is not a story based on sup-
positions. When you stir it up, you will stir it
up as an accursed thing, and it will become
greedy when you excite its greed and it will
rage fiercely.

Many of the Arabic tribal poets passed their works along orally. It was solely the public selection of these seven poems, which were said to have been written in gold on the walls of the Ka'aba, that allowed for their preservation for future generations.

Han Shan (fl. 750–800) poet

Little is known of Han Shan, not even his given name. While his poetry is well known and widely available, his life is shrouded in mystery. The poet was a Zen Buddhist recluse who lived in the Tientai (T'ien-t'ai) Mountains of Danxing (Tang-hsing), China, during the Tang dynasty (618–907); his name means, literally, "The Master of Cold Mountain." Han Shan lived on Cold Mountain with his friend, Shi De (Shih-te). Known for their light-hearted manner, the two men were immortalized in later pictures showing them laughing heartily.

Han Shan's poetry was introduced to China by a Tang government official, Lu Jiuyin (Lu Chiu-Yin), who met the poet while visiting the local Buddhist

temple. Han Shan wrote more than 300 poems, which he inscribed onto trees, rocks, and walls. Lu Jiuyin took it upon himself to copy these poems, along with a few poems by Shi De, and collect them in a single volume, collectively known as Hanshan poetry.

Han Shan's poetry is deeply religious. He wrote mainly on Buddhist and Taoist themes, specifically enlightenment, in simple, colloquial language, using conventional Chinese rhyming schemes within the five-character, eight-line verse form. Although his poetry was not groundbreaking, the imagery and spirit of his poems in creating what scholar Burton Watson has called "a landscape of the mind" and his ability to express Buddhist ideals have given Han Shan a place among the finest of Chinese poets.

Han Yu (Han Yü) (768–824) poet, prose writer

Han Yu is one of the most important Neo-Confucian writers of the late Tang dynasty. The son of a minor government official, Han Yu was born in the Honan province of China. His father died when he was only two years old, and he was raised by his older brother, Han Hui, and sister-in-law. He spent his youth studying the Confucian classics in preparation for the *jinshi* (*chin-shih*) government examination, which he failed twice before passing in 792.

Han Yu showed a predilection for Confucian political critique early in his career. In 795 he wrote the government's ministers to seek employment and to remind them of their duty to surround themselves with talented writers and scholars, such as himself. His initial pleas did not work, and it was

only after his marriage into a politically connected family in Loyang the following year that he obtained the first of many government posts.

Han Yu's first job was in Bianzhou (Pien-chou), an important military outpost, where he was in charge of supervising the provincial government examinations. Through this position, he developed a reputation as a man of letters, and a growing number of scholars and poets came to Bianzhou to become part of his circle. One such poet was Meng Jiao (Meng Chiao), with whom Han Yu developed a long literary relationship. In 806, the two wrote a series of "linked verses," poems in which the poets alternate sets of verses. Han Yu's assignment in Bianzhou ended in 799 with the death of the imperial governor Dong Jin (Jong Jin) and the subsequent mutiny of the soldiers under the new leadership.

Throughout his life, Han Yu used his connections with the imperial universities in Chang'an and Loyang to cultivate a group of Neo-Confucian scholars who would enter the imperial government after passing the examination. Despite his outspoken criticism of the bureaucracy and run-ins with many upper-level officials that led to several periods of exile, he was able to find allies within the administration who allowed him to return to the capital and positions of power.

Han Yu's strict Confucian adherence to proper bureaucratic procedures often gained him enemies, but his trustworthiness and moral code also allowed him to rise to great heights of power in his later years.

Critical Analysis

Throughout his career, Han Yu used his poetry and prose to elucidate political and social problems. He led what is known as the "ancient style" (*du-wen*) movement, which espoused clarity and simplicity in writing, and he combined his beliefs about how government should handle itself (sans heresy and decadence) with his beliefs about literary quality. In "An Enquiry into Slander," for example, he theorizes over the loss of morals in people of his day. He discusses how, in the past, men of high morals

expected as much, if not more, from themselves as they did from others. “With the great men of the present day, however,” he writes, “things are quite different. They make the most searching demands of others, but are sparing in what they ask of themselves. . . . How they can have any self-respect passes my understanding.”

In another essay, “Against the God of the Wind,” Han Yu uses satire to condemn the emperor’s demand that taxes be paid during a hard year. “The sentence of Heaven will fall upon you; when it does there can be no repentance,” he writes, adding, “even if you die, what man will mourn for you?”

Han Yu wrote a critique of the emperor’s inept handling of the mutiny of 799 in his “Two Poems on the Bianzhou Rebellion.” A later poem, “Craven,” serves as a commentary on the social and political situation at his next posting in Zhengzhou (Cheng-chou) after the Yellow River flooded.

One famous critique, however, cost Han Yu his job and nearly his life. The incident involved a Buddhist relic purported to be the finger bone of the Buddha. In 819, the finger bone, normally kept in a Buddhist temple west of Chang’an, was put on display in the capital. According to tradition, the relic helped to ensure the health of the nation, and thousands of people flocked to the capital to pay their respects to this sacred piece of history. The relic also brought in a large amount of money for several government officials. Han Yu wrote “Memorial on the Bone of Buddha,” in which he attacked those who catered to the emperor’s use of the ritual to gain public favor. He addresses the emperor directly in the essay, saying, “Were he [the Buddha] still alive today, were he to come to court at the bidding of his country, your majesty would give him no greater reception than an interview in the Strangers’ Hall, a ceremonial banquet, and the gift of a suit of clothes, after which you would have him sent under guard to the frontier to prevent him from misleading your people.” Han Yu does not understand why the emperor insists on escorting the Buddha’s bone into the building where it will be viewed by the masses. He says, “To my shame and indignation none of your ministers says

that this is wrong, none of your censors has exposed the error.”

The emperor evidently read the essay as a ridicule of the ritual and a personal attack on himself rather than what it was—a call for government officials to demonstrate strong values and proper conduct. As a result, he commanded that Han Yu be executed for his insolence, but two ministers rallied support for Han Yu and were able to persuade the emperor to exile him instead to southern China. Han Yu immediately regretted his harsh testimonial and suffered the further pain of losing his 11-year-old daughter to illness on the journey south. The incident became famous in Chinese history and served as an indication of Han Yu’s skill at using literature as social and political commentary.

Hartmann von Aue (ca. 1160–1200) poet, novelist

Like virtually all great writers of medieval Germany, little is known regarding Hartmann von Aue’s life. From references made in his own works and in the writings of his contemporaries, it can be surmised that the writer was born to an aristocratic family and grew up near the southern German city of Freiburg. He likely received a clerical education and learned Latin and French before beginning his activities as a writer in royal and aristocratic courts.

Hartmann’s first works were poetry and courtly religious tales, but his literary fame and impor-

tance rests on the strength of his longer verse narratives written between 1180 and 1200. His first novel, *Erec* (ca. 1187), was the first story about King Arthur's court written in the German language. He based *Erec* and his other Arthurian romance, *Iwein* (ca. 1193), on the work of the French writer CHRÉTIEN DE TROYES, but he often diverged from his source to impart his own unique vision of courtly life and morals.

Hartmann's most well-known and personal work is his *Poor Heinrich* (ca. 1200). Written in rhyming verse, the work tells the story of the hero's illness and ultimate physical and spiritual redemption. It is a kind of miracle tale with a strong Christian message. For his mercy and faith, Heinrich is ultimately healed by God and therefore serves as a model of Christian belief and self-sacrifice. Considered by many as Hartmann's masterpiece, *Poor Heinrich* established the writer as a key figure in medieval German literature, and the work has given rise to many modern interpretations and variations, from the Grimm Brothers' fairy-tale version to Longfellow's *Golden Legend*.

The scholar Volker Mertens has written of Hartmann von Aue, "In his poetic precision and sensibility . . . his mild irony and his feeling for social and existential problems . . . Hartmann emerges as a writer with modern subjectivity and vision." These qualities continue to make Hartmann's work both relevant and moving for present-day readers.

Heinrich von Veldeke (ca. 1140–ca. 1210) *poet*

No official records have been found that give the exact birth and death dates of Heinrich von Veldeke, but it is known that he was a member of a family of minor nobility in Limburg, then a German province in what is now part of Belgium. He is best known for his medieval adaptation of VIRGIL's *Aeneid*, but he also wrote a narrative about the life and miracles of the fourth-century saint Bishop Servatius of Tongeren, as well as a series of love songs.

Heinrich began the *Eneit* around 1174 but did not finish it until 1190, during which time, as he relates in his epilogues, the manuscript was stolen. He supposedly loaned it to Margareta, the countess of Cleve and his patron. When she was married to Ludwig III of Thuringia, it was "stolen" by Count Heinrich (Ludwig's brother), who sent it home to Thuringia. Heinrich did not get the manuscript back until he journeyed to Thuringia nine years later. Count Palatine Hermann (another brother) finally returned it to him and asked that he finish the story. Thus the poet gained the patronage of the two counts.

Heinrich's *Eneit*, alternately called the *Eneas*, is based heavily on an anonymous French translation of the *Aeneid* called *Roman d'Eneas* (Book of Aeneas, ca. 1160). Heinrich had also read Virgil's epic in Latin, and the *Eneit* maintains Virgil's original narrative; Heinrich changed only those elements necessary in keeping with the Christian world of medieval CHIVALRY, adapting the epic to fit court fashions and customs of the 12th century and to emphasize activities, such as jousting, of the noble classes.

Perhaps the biggest difference between the two works involves details of the gods. In the *Eneit*,

Heinrich includes the pagan gods of Rome but gives them a much smaller role. As a whole, the characters in his adaptation have more responsibility over their choices, and the story is about both the struggle for self-fulfillment and the role of fate in our lives.

Love also plays a much more prominent role in Heinrich's version than it does in Virgil's. For example, Virgil uses the scene with Dido to explain the politics of Carthage and Rome, but Heinrich uses it to theorize on the meaning of love and obsession. As a result, the scene in the *Eneit* becomes much larger and more important to the poet's message. In addition, the relationship between Aeneas and Lavinia is established in a very minor scene in Virgil's *Aeneid*, but it carries more weight in terms of its relevance to the theme in the *Eneit*, revealing what love can be like when it is reciprocated. Heinrich's attention to the idea of love is a direct result of his having read OVID's works and his being aware of his audience—medieval nobles for whom courtly love was a way of life.

In terms of artistic achievement, the *Eneit* is no match for the *Aeneid*; however, it is important in that it was one of the first successful books to be written in vernacular German rather than in traditional Latin. This accomplishment made Heinrich one of the founders of German court EPIC poetry, and his influence on later German writers was profound. In the introduction to his translation of the *Eneit*, J. W. Thomas quotes the Middle High German poet GOTTFRIED VON STRASSBURG, who comments on Veldeke's influence:

[I]t was he who made the first graft on the tree of German verse and that the shoot put forth the branches and the blossoms from which they took the art of fine composition. This craft has now spread so widely and become so varied that all who devise tales and songs can break off an ample supply of the twigs and blooms of words and music.

Herodotus (ca. 480–425 B.C.) *historian*

Herodotus, whom the Roman statesman CICERO would later hail as the father of history, was born at the Greek colony of Halicarnassus in Asia Minor, now Bodrum on Turkey's Aegean coast. His mother and father, Lyxes and Dryo, were prominent in the community as well as wealthy and possibly aristocratic. Herodotus had at least one sibling, a brother named Theodoros.

Exposure to historical traditions was part of Herodotus's upbringing. The city of Halicarnassus maintained a listing of the priests who had served the temple of Isthmian Poseidon from the time of its founding 15 generations earlier. Furthermore, the EPIC poet Panyassis was a close relative, perhaps an uncle or a first cousin, who composed verse about the settlement of the Ionian cities in Asia Minor.

Herodotus's family relocated to the island of Samos to escape the tyrant Lygdamis, who put Panyassis to death. Herodotus returned to Halicarnassus years later to participate in Lygdamis's overthrow. When he was living for a time in Athens, Herodotus became an intimate of the tragedian SOPHOCLES. He finally made his home in Thurii, in southern Italy, when it was being colonized by the Greeks.

The first historian was an avid traveler, a zealous sightseer, and an intrepid explorer. His insatiable curiosity and hunger for knowledge led him to Egypt, Cyrene (now Tripoli), Babylon, Scythia in the Black Sea region, Ukraine, Thrace, North Africa, and India.

In the early years of the Peloponnesian War between Athens and Sparta, Herodotus published his

life's work, *History*. In English, it is also sometimes called *The Histories*, *The Persian Wars*, or *History of the Persian Wars*. The work made Herodotus the first scholar to undertake research on the events of the past and impart them in a rational, rather than mythical, fashion.

Herodotus died in Thurii not long after publication of the *History*.

Critical Analysis

The *History* is contained in nine books, each named for one of the muses. Its subject matter is the legendary conflict between a motley band of Greek city-states and the mighty invading Persian Empire. Herodotus's intentions in producing this work, as he states in the very first lines, are to preserve the record of the events for posterity and to investigate why they occurred in the first place:

These are the researches of Herodotus of Halicarnassus, which he publishes, in the hope of thereby preserving from decay the remembrance of what men have done, and of preventing the great and wonderful actions of the Greeks and the Barbarians from losing their due meed of glory; and withal to put on record what were their grounds of feud.

(Book I)

Herodotus does not share his countrymen's disdain for foreigners. He did not use the word *barbarian* in a pejorative way; it was simply the Greek word for non-Greeks. His youth in a Greek city that was not in Greece and his travels to far-off, exotic lands had given him an outsider's perspective and an appreciation for other cultures that would inform his magnum opus. He presents a balanced treatment of the opposing sides and even reveals an admiration for the Persians, whom he finds valiant and heroic.

Herodotus represents the events in a vigorous and high-spirited prose style, casting the Persian Wars as a contest between tyranny and liberty; liberty emerges gloriously victorious. Freedom triumphs, he says, because the Greeks are free men

defending their self-government, while the Persian soldiers are slaves risking their lives on behalf of a despot. But the Greeks are not inherently superior to the Persians; under tyranny, they behave similarly:

And it is plain enough, not from this instance only, but from many everywhere that freedom is an excellent thing; since even the Athenians, who, while they continued under the rule of tyrants, were not a whit more valiant than any of their neighbors, no sooner shook off the yoke than they became decidedly first of all. These things show that, while undergoing oppression, they let themselves be beaten, since then they worked for a master; but so soon as they got their freedom, each man was eager to do the best he could for himself.

Although the Persian War is the ostensible reason for the tome's existence, Herodotus makes frequent digressions. Two-thirds of *Histories* is devoted to the oddities he witnessed, was told of, and otherwise learned about during his sojourns to far-off lands. The people, places, things, and incidents are recounted merely to set the stage for the central conflict. For example, Herodotus tells of one-eyed men, gold-digging ants, Babylonian temple treasures, Egyptian crocodile hunters, and men with the heads of dogs. He tallies the amount of money spent on radishes, onions, and garlic for the slaves who built the pyramids; describes what unattractive girls in Illyria do to get husbands and how people travel by boat over land when the Nile floods; reveals that Scythian royalty are buried in tombs containing sacrificed humans and horses, Libyan women are honored for having multiple lovers, Danube island dwellers become intoxicated by scents, and the king of Persia will drink only boiled water when he travels. More than the father of history, Herodotus was the father of ethnography, geography, archaeology, sociology—indeed, all the social sciences that are concerned with people, places, and customs.

In his translation of *The Persian Wars*, George Rawlinson writes:

Apart from all deficiencies of historical technique and all merits of intrinsic interest, charm of literary style, and more or less accidental preservation of important historical facts, one solid and important achievement stands out in the work of Herodotus. He has succeeded once and for all in expressing the conflict between the ideal of the free man defending his autonomy and basing his state on the rule of law, and the despot who bases his rule on force and whose subjects have the status of slaves.

Hesiod (eighth century B.C.) poet

Hesiod's father was a seafaring merchant from Asia Minor who fell upon hard times and emigrated to Ascra, on the lower slopes of central Greece's Helicon mountain range, where he became a farmer. When the patriarch died, he left his farm to his sons, and Hesiod lived there most of his life.

According to legend, Hesiod visited a sacred grove in his later years and was slain by his hosts for seducing and impregnating their sister. His

body was flung into the sea, but dolphins brought it ashore, where it was buried. The lyric poet Stesichorus is said to be the product of the illicit union.

Like his father, Hesiod was a poor farmer, for his primary occupation was poetry. He entered at least one poetry contest, at the funeral games of Amphidamas in Euboea, and won a prize. He may have been a contemporary of the epic poet HOMER, and the biographer PLUTARCH has him defeating Homer in a poetry competition.

Hesiod is often called the father of Greek didactic poetry. His *Works and Days* is an 800-line poem addressed to Perseus, his wastrel brother. It describes Ascra and the life of a farmer and also contains some elements of EPIC poetry (such as the use of hexameter verse, lofty language, and myths), which is perhaps why VIRGIL used the poem as a model for his *Georgics*.

In *Works and Days*, Hesiod observes the decline of the world since the glorious Golden Age, which was followed by the foolish Silver Age, the fierce Bronze Age, and the age of the Heroes. Now is the Age of Iron, which he characterizes as endless hard drudgery, hardship, and weariness; "And I wish that I were not any part of the fifth generation of men, but had died before it came, or been born afterward."

Works and Days is also scattered with tidbits of advice, such as "Get two strong, seasoned oxen and a mature, staid hired hand"; "Have one son to help with the chores"; and "When the cranes fly overhead, it's time for winter planting." Hesiod's descriptions and language have led translator Richard Lattimore to write: "Hesiod is the poet of the roadside grass and the many colored earth, and of men who live by the soil. . . . Echoes of ancient peasant wisdom and of the mysteries of the earth linger in his pages."

In another poem, *Theogony*, Hesiod describes in 1,000 lines the creation of the cosmos and the genealogy of the early gods. He begins by invoking the muses, who kept a sanctuary at Mt. Helicon. It was here, he says, when he was "shepherding his lambs," that the goddesses taught him his "splendid singing" (i.e., poetry). They handed him an

olive staff, breathed a voice into him, and told him to sing “the race of the blessed gods everlasting.”

Hesiod goes on to chronicle the origins of the earth, oceans, fate, death, and dreams in *Theogony*. He also personifies cheating Deception, loving Affection, malignant Old Age, and hateful Discord. He describes the origins of the more familiar deities as well: Zeus bedded Demeter, who bore him Persephone; he loved “Mnemosyne of the splendid tresses, from whom were born to him the Muses”; and from his head he produced gray-eyed Athena, leader of armies.

Hesiod did not name the gods, but he was the first to classify them. Greek scholar Edith Hamilton marvels that “a humble peasant, living on a lonely farm far from cities, was the first man in Greece to wonder how everything had happened, the world, the sky, the gods, mankind, and think out an explanation. . . .” It is this explanation that influenced later writers such as John Dryden, Edmund Spenser, and John Milton, and gave Hesiod a place in world literature.

Hildegard von Bingen (1098–1179)

religious writer, mystic, composer

Hildegard von Bingen was born of noble parents in Bockelheim, West Frankonia (now Germany). She was educated at the Benedictine cloister of Disibodenberg by the prioress, Jutta, whom she succeeded in 1136. Throughout her life she was subject to mystical visions, which she reported to her confessor at age 43. The archbishop of Mainz called a committee of theologians to convene to confirm the authenticity of her visions, after which a monk was appointed to help her record them in writing. The finished work, *Scivias*, which took over 10 years to complete, contains 26 of her prophetic and apocalyptic visions concerning the church, redemption, and the relationship between God and humans. The vivid images and poetic symbols of *Scivias* have been compared to those of William Blake and DANTE ALIGHIERI. One such image is her portrayal of “life’s journey as a struggle to ‘set up our tent.’” As Matthew Fox writes in his foreword to *Hildegard von Bingen’s Mystical Visions*, “The tent, in Hildegard’s view, comes folded up in us at the time of our birth as original blessings. But our life journey is that of setting up the tent.”

In 1147 Hildegard founded a new convent at Rupertsberg, where she continued to record her visions. She also wrote prolifically on a variety of other subjects such as medicine, natural history, and the lives of saints. Her *Symphonia armonie celestium revelationum* (The Symphony of the Harmony of Celestial Revelations), which she finished in the early 1150s, is a collection of 77 of these lyric poems and chants, each with a musical setting. As she states in her letters, she regarded music as divine inspiration: “Sometimes when we hear a song we breathe deeply and sigh. This reminds the prophet that the soul arises from heavenly harmony.” *The Symphony* has recently enjoyed renewed critical interest.

Before 1158, Hildegard completed another musical work, *Ordo*, a collection of 82 melodies that is important as one of the first morality plays, in which good is pitted against evil. In her lifetime,

Hildegard von Bingen overcame almost insurmountable obstacles as a medieval woman and was consulted by bishops, popes, and kings for her religious insight. Though she has not been formally canonized, she is listed as a saint in the Roman Martyrology.

Hippocrates (ca. 460 B.C.–ca. 377 B.C.) physician, medical writer

During the fourth century B.C., the classical civilization of ancient Greece flourished. The Greeks, particularly the Athenians, achieved new heights in art, literature, and science that have remained a standard of human accomplishment up to the present day. Of the many great thinkers and philosophers who lived and worked during this time, one of the most important and influential was the physician Hippocrates, often considered the father of medicine.

Hippocrates was born on the island of Cos, in the Aegean Sea. Aside from his birthplace and the years in which he lived, very little is known about his life. It is known that the city-state of Cos contained a thriving medical school, which may be attributed to Hippocrates' presence. His teachings, however, are well known because they were collected into a series of books known as the *Hippocratic Corpus*.

Before Hippocrates, medicine in the ancient world was hardly more advanced than supersti-

tion. Illness and disease were thought to be caused by evil spirits or the disfavor of the gods. The remedies provided for patients were more like religious rituals than medical treatments.

Hippocrates changed this by transforming medicine into an empirical science, based on observation and experiment. He taught his students to search for natural explanations of medical symptoms, as opposed to attributing illnesses to supernatural phenomena. Rather than relying on rituals or prayers to heal the sick, Hippocrates favored the use of dietary changes and other such devices. Although his medical knowledge was primitive compared with that of the modern world, the fact that he recognized the empirical basis of medicine was a considerable achievement.

Hippocrates is also famous for the so-called "Hippocratic Oath." A modified version of the oath is still taken by many graduates of medical schools today. By taking the oath, doctors swear to assist any person who needs help, no matter whom they are or what they may have done, and they also pledge never to harm any patient under any circumstances.

The teachings of Hippocrates are collected in the *Hippocratic Corpus*. It consists of about 60 books, written on a variety of medical subjects. Most of them were likely written by Hippocrates' students rather than by Hippocrates himself. In addition to suggested treatments for a variety of ailments, the *Hippocratic Corpus* speculates on the causes of disease in general and can be considered a philosophical and scientific text or a collection of medical treatises.

Hippocrates' teachings greatly influenced the development of medicine and science. The Roman doctor GALEN, the second most important physician of ancient times, greatly respected Hippocrates. Indeed, Hippocrates' work dominated Western medical thinking until the Renaissance, 2,000 years later. Although the medical knowledge of the modern world far surpasses that known to Hippocrates, he is still greatly respected for his teaching of medicine as an empirical science.

Hirtius, Aulus (ca. 90–43 B.C.) *historian, politician*

During the first century B.C., the Roman Republic was thrown into political and social chaos as rival generals and politicians fought one another for supremacy. Despite this anarchy, however, many Romans continued to make important intellectual and literary contributions. One of these men was Aulus Hirtius.

Hirtius was a military and political ally of Julius CAESAR who served as a general in numerous military campaigns, as well as an administrator in various political posts. Caesar apparently trusted him enough to nominate him to become a consul, which was the most important office in the Roman Republic. After Caesar's assassination, Hirtius became an ally of Mark Anthony but was persuaded by the orator CICERO to switch sides. During an attack on Anthony at the Battle of Mutina, in which Anthony was defeated, Hirtius was killed.

Hirtius's literary reputation comes from his important historical contributions to Caesar's *Com-*

mentaries. It is thought that he authored the eighth book of Caesar's *Commentaries*, including *De Bello Gallico* (The Gallic Wars) and *Bellum Alexandrinum* (The Alexandrian War). It is for these contributions, as well as his written records of Caesar's African and Spanish campaigns, that Hirtius is remembered.

Holy Grail *religious object*

The Holy Grail has been variously identified as a cup, dish, or a life-giving stone, but each story about it has shown it to be mysterious and spiritual in nature. According to legend, the Grail has magical powers and can only be found by someone who fulfills the highest ideals of Christianity and CHIVALRY. Whatever it was or is, some scholars believe the Grail originated from the sacred cauldron of Celtic mythology (see MYTHOLOGY; CELTIC); others say that legend became combined with apocryphal Christian stories about Joseph of Arimathea, the rich man who buried Christ in his tomb, then took the Grail with him and supposedly ended up in Britain. The early 20th-century folklorist Jessie Weston sees the Grail and its mystic powers of restoring potency and youth as a vestige of pagan spring renewal ceremonies.

The great French poet CHRÉTIEN DE TROYES first mentions the Holy Grail in his last unfinished work, *Perceval* (1190). According to Chrétien, Perceval, a young, inexperienced knight of King Arthur's court, witnesses a solemn procession in which a beautiful maid carries a beautiful golden platter with a single Mass wafer. This item sustains the Fisher King, a wounded leader whose kingdom has become barren. Only a pure and chivalrous

knight who can ask the right question about the procession can eventually heal the Fisher King and restore his kingdom to plenty.

Shortly after Chrétien de Troyes failed to finish *Perceval*, Robert de Boron wrote *Le Roman du Graal* (1200). His contribution to literature about the Grail identifies it as the vessel used by Christ at the Last Supper and by Joseph of Arimathea to catch Jesus' blood as He hung upon the cross. Significantly, this characterization of the Grail not only became the dominant one in legend and literature but also spiritualized the quest motif. This spiritual quest can be seen as well in *Le Haut Livre du Graal* or *Perlesvaus*, written around the same time as Boron's work by the monks of Glastonbury. Their text emphasized adventure and chivalry (through the characters of Lancelot, Gauvain, and Perceval) as a means by which the monks could attract wealthy nobles to support an abbey known for its Arthurian relics. This theme of spiritual quest and chivalric adventure was continued in a later collection of Arthurian stories, *La Queste del saint Graal* (1225), in which Galahad, the son of Arthur's greatest knight, Lancelot, becomes the only knight pure enough to find the Grail.

Chrétien's unfinished poem also influenced one of the greatest works of medieval literature, the *Parzival* (1200) of WOLFRAM VON ESCHENBACH. Wolfram's version is more serious and allegorical than Chrétien's, as it portrays Parzival's spiritual growth. In his poem, the Grail is a stone that fell from heaven during Lucifer's fall. As in Chrétien's version, Parzival fails to ask the right question about the Grail that will lead to the Fisher King's healing, but Wolfram has Parzival going through a long process of spiritual purification and successfully fulfilling his task.

Wolfram's version became the most influential in Germanic literature and inspired the 19th-century composer Richard Wagner's great opera *Parsifal*. Alfred, Lord Tennyson's *Idylls of the Kings* (1869) was also inspired by the legend of the Holy Grail, as were Sir Thomas Malory's *Le Morte D'Arthur* (ca. 1469), T. H. White's Arthurian novels *The Once and Future King* (1958) and *The Sword in*

the Stone (1937), Charles Williams's novels *Taliesin through Logres* (1938) and *The Region of the Summer Stars* (1944), and T. S. Eliot's *The Waste Land* (1922).

The motif of the Holy Grail quest gave a serious moral and spiritual weight to the adventures of King Arthur's knights, which dominated the medieval and early Renaissance imagination. It exists to this day as a symbol of perfection, spirituality, and Christianity in literature, art, and music.

Homer (eighth century B.C.) epic poet

Homer is the name given to the man credited with composing the *Iliad* and the *Odyssey*, great Greek EPIC poems that are the earliest surviving examples of European literature. The *Iliad*, or "poem about Ilion (Troy)," recounts an episode during the Trojan War with Greece. The *Odyssey* follows one

Greek warrior, the shrewd and wily Odysseus, as he winds his way back home after the siege of Troy.

Almost nothing is known about Homer, including whether he truly existed, but the ancient Greeks in the centuries that followed the poems' composition considered him a distinct individual and depicted him in sculpture. Many scholars are convinced that the two epic poems were created by the same person, as they seem stamped with a single artistic sensibility, sharing such traits as individualized characters, humor (often derived from the all-too-human antics of the gods on Mount Olympus), and deeply moving scenes. They are written in hexameter verse and reveal a structural, stylistic, and dramatic harmony. The narratives are characterized by swift descriptions, straightforward storytelling, generous use of simile (but little if any metaphor), and such oft-repeated epithets as "swift-footed Achilles," "gray-eyed Athena," "resourceful Odysseus," "Hector, tamer of horses," and "Zeus the cloud-gatherer." Common themes include a reverence for lineage and the heroic code, destiny and fate, and the role therein of the gods, who guide arrows, bring false dreams, and directly and indirectly influence human lives.

These masterpieces influenced almost all Greek poetry that followed and much of Western literature. As H. C. Baldry, a scholar of Greek literature, wrote, "For epic [Homer's poems] were accepted as models which all must imitate but none could equal."

It is not known whether Homer was literate or composed the poems orally while others wrote them down. It is known that what has come to us of the *Iliad* is not entirely the original composition. The ancient Athenians altered the narrative to enhance their role in the Trojan War. Additionally, each of the poems was divided long after their creation into 24 convenient sections, or "books."

Of the two eminent Homeric epics, the *Odyssey* was probably composed first, although the events it relates take place at a later date than those in the *Iliad*. The first four books of the poem tell two important background stories, one concerning Mount Olympus and the other concerning the

state of Odysseus's household in Ithaca. This is the first documented use of the narrative device in which the story is begun in the middle, and the beginning is recounted at a later stage of the tale. The Roman epic poet VIRGIL used this strategy in the *Aeneid*.

As the story opens, the war goddess Athena had been the Greeks' greatest divine ally, but after the Greeks sacked Troy they failed to pay proper tribute to the gods, so she gives them bitter homecomings. Odysseus, who had spent 10 years fighting the Trojan War, is doomed to spend another decade returning home from it. His son Telemachus, who had been an infant when Odysseus left, is now a fine young man.

Meanwhile, in Ithaca, Odysseus's wife Penelope, beautiful, wealthy, and presumably a widow, is fighting off an onslaught of suitors who have taken up residence in Odysseus's home, devouring his provisions and ordering his servants about. To discourage the parasitic petitioners, Penelope tells them she cannot select a husband from among them until she has finished weaving a shroud for Odysseus's father; and she delays the odious obligation by unraveling by night what she has woven during the day.

Odysseus ventures into many a familiar folktale. He escapes from the island of Calypso, a sea nymph who loves him and wants to give him immortality, and is washed up on the shores of Scheria, home of the mythic Phaeacians, whose king is a grandson of the sea god Poseidon. Here, Odysseus tells of his adventures since he left Troy: He and his crew had traveled to the land of the Lotus-eaters, where men forgot their pasts; blinded the Cyclops, a one-eyed monster; encountered the sorceress Circe, who turns men into swine; traveled to the underworld; averted being tempted by the Sirens' singing by placing wax into their ears; and tried, not altogether successfully, to avoid being eaten by the sea serpent Scylla.

The Phaeacians return Odysseus to Ithaca, where he summarily slaughters his wife's wooers in a gruesome bloodbath. Penelope, no less cunning and resourceful than her husband, tests him to

make sure he is who he claims to be. When Odysseus reminds her that he built one of their bedposts out of a growing olive tree, Penelope welcomes her husband home.

Critical Analysis

The *Iliad*, sometimes titled “The Wrath of Achilles,” takes place over a few action-packed days during the 10-year conflict between Troy and Greece. Paris, the son of Priam, king of Troy, has absconded with the beautiful Helen, wife of Menelaus, king of Sparta. In retaliation, the Greeks, led by Agamemnon, Menelaus’s brother, have waged war on the Trojans. At the opening of the poem, a priest of the sun god Apollo visits the Greeks’ camp to request the return of his daughter, who has been kidnapped to serve as Agamemnon’s concubine. To appease Apollo, Agamemnon agrees, but he insists that one of his colleagues give up his own mistress to replace the girl he is relinquishing. Achilles, the Greeks’ greatest warrior, objects, so Agamemnon punishes him by seizing Achilles’ mistress to take the place of the priest’s daughter.

An enraged Achilles retreats from the battlefield and withdraws his men. He prays to his mother, Thetis, a sea nymph, to persuade Zeus to give the Greeks ill fortune in battle so Agamemnon will be humiliated and his fellow soldiers will realize how essential Achilles is to their victory.

A series of savage battles follows. The Trojans, led by Hector, son of Priam and brother of Paris, and assisted by Zeus, trounce the Greeks in the next day’s battle. Alarmed, Agamemnon sends an envoy to Achilles, still sulking in his tent, offering many gifts and honors if Achilles will return to the battlefield. The warrior rejects the attempt at reconciliation, but when his dearest friend, the kind-hearted Patroclus, is slain by Hector, he leaps to his feet and lets forth his famous war cry:

*There he stood, and shouted, and from her
place Pallas Athene
gave cry, and drove an endless terror upon
the Trojans.*

*As loud as comes the voice that is screamed
out by a trumpet
by murderous attackers who beleaguer a
city,
so then high and clear went up the voice of
Aiakides.
But the Trojans, when they heard the
brazen voice of Aiakides,
the heart was shaken in all, and the very
floating-maned horses
turned their chariots about, since their
hearts saw the coming afflictions . . .
Three times across the ditch brilliant
Achilleus gave his great cry,
and three times the Trojans and their
renowned companions were routed.*

(XVIII, 217–224)

With reinforcement from Achilles, the Greeks massacre the Trojans. Achilles slays Hector and drags his body by the heels behind his chariot around the walls of Troy and back to the army base. Patroclus’s body is buried amid much ceremony, and Achilles is persuaded by Priam to permit Hector to have a suitable burial as well.

Critic David Denby describes the vividness of the poetry:

The brute vitality of the air, the magnificence of ships, wind, and fires; the raging battles, the plains charged with terrified horses, the beasts unstrung and falling; the warriors flung face-down in the dust; the ravaged longing for home and family and meadows and the rituals of peace, leading at last to an instant of reconciliations, when even two men who are bitter enemies fall into rapt admiration of each other’s nobility and beauty—it is a war poem, and . . . it has an excruciating vividness, an obsessive observation of horror that causes almost disbelief.

According to scholar Howard W. Clarke, Homer’s epics have “retained a primacy . . . as the first and probably the finest example of its genre,

the beginning of the Western literary tradition, and the ideal introduction to literature. . . .”

Horace (Quintus Horatius Flaccus) (65–8 B.C.) poet

Horace was born at Venusia in southern Italy. His first memories were of a nurse, so his mother must have died when he was young. His father, Flaccus, was a freed slave who farmed a small plot of land and may have elevated himself to the position of district tax collector. Flaccus made a modest living, but he was able to save his money and accompany his talented and vivacious young son to Rome for a better education than could be had in their isolated village. In Rome, Horace received scholarly instruction and moral training. Flaccus remained in the city, walking the boy to and from his classes. After he became a poet, Horace wrote movingly about his father's devotion and sacrifice on his behalf.

When he was about 19, Horace traveled to Athens to complete his education with the study of philosophy and Greek poetry. Some two years later, in 44 B.C., Julius CAESAR was slain. Brutus, one of his assassins, arrived in Athens, filled with patriotic zeal for the tradition of aristocratic republicanism, to recruit officers for his army. He was an

imposing presence, the very embodiment of the republican ideal, and his fervor was infectious, leading Horace, among many others, to join Brutus's forces.

It was an inauspicious career move that came to an end, along with dreams of a republican revival, at the battle of Philippi in 42 B.C. Horace returned to Rome and meager prospects. His father had died; what little Horace might have inherited had been confiscated by Octavian, Caesar's adopted son and heir (later Emperor AUGUSTUS), and his old friends had fallen out of political favor.

A failed revolutionary, Horace took a menial job as a magistrate's clerk. Undefeated in spirit, however, he began spending his leisure time composing verse and hoping to secure the support of a benefactor. He became intimate friends with the fledgling Roman poet VIRGIL, and his fortunes soon brightened. Virgil recommended Horace to Maecenas, the trusted counselor of Augustus and, like the emperor, a generous patron of literature. (This era would become known as the Golden Age of Roman literature.) Around 33 B.C., Maecenas made Horace a gift of the Sabine Farm, some 25 miles northeast of Rome, complete with tenants and servants, so he might devote all of his time and energy to writing poetry. Horace's subsequent fame reflected well on Maecenas for having "discovered" the brilliant lyricist.

Horace's friendship with the powerful political adviser, his talent, and his considerable social skills (he loved parties and flirtations and was a shrewd observer with a good sense of humor) provided him entry into the upper crust of Roman society, and his eminent friends found their way into his poetry. Although the poet had opposed the future emperor at Philippi, he developed a sincere patriotic devotion to the new regime, its leader, and peace. These sentiments, too, he expressed in his writings.

Upon the unexpected death of his dear friend Virgil in 19 B.C., Horace became the official poet of the Augustans. As such, he was chosen to commemorate and immortalize imperial affairs in verse. These compositions became his celebrated *Odes*

and ensured his enduring fame. He died shortly before his 58th birthday and a few weeks after the passing of his benefactor and friend Maecenas.

Horace's first published works, written between 41 and 30 B.C., were called *Satires*, but they do not contain the caustic invective we associate with satire today. Rather, they poke gentle fun at human foibles (avarice, the yearning for wealth and status, hypocrisy), cults of philosophy, various fashions of the day, or whatever strikes the poet's fancy (a journey from Rome to Brundisium with Maecenas; Flaccus's devotion to his son). While the tone is affectionate and good-natured and the style chatty, the poems signify Horace's distinguished intellect, sharp wit, and sophistication. He frequently identifies by name exactly whom he is caricaturing, and Horace himself is no less than others a target of his own barbs.

The *Epodes* were published around 29 B.C. They serve as a transition between the *Satires* and the *Odes*, with the controversial character of the former and the lyric form of the latter. Their subject matter ranges from a tribute to friendship, to the joys of country living (his farm at Sabine was a constant source of pleasure to Horace), to the ill effects on one's social life of eating garlic.

The *Odes* were first published in 23 B.C., followed by two books of *Epistles*, or letters, in roughly 20 and 14 B.C. The *Epistles* are addressed to Horace's friends, including Maecenas and Augustus, and feature agile, entertaining, and erudite ruminations on contemporary life and art.

Critical Analysis

The brilliant and lyrical *Odes* "at once raised Horace to the front rank of Roman poets," writes translator C. E. Bennett, and their popularity has proved enduring. By the time he wrote these poems, Horace was a more recognized artist than he was when he composed his previous works. He was self-sufficient and established, professionally, socially, and financially. These factors are reflected in a more confident and authentic poetic voice.

Because Horace was interested in artistic experimentation, each of the first nine poems exhibits a

different meter and a range of subject matter: a dedication to Maecenas; a tribute to Augustus; Virgil's voyage to Greece; the arrival of springtime; an entreaty to a flirt; and an exhortation to enjoy the indoor pleasures of wine, women, and song while winter rages outdoors. Other subjects in these works include the gods, pastoral life, jealousy, vanity, and the poet's immortality. The *Odes* are by turns patriotic and sentimental, formal and light-hearted, dotted with laughter and lamentations, entertaining, and profoundly philosophical.

The *Odes* are presented in four books. The best-known and most beloved poems are I:XI, to which C. E. Bennett gave the title "Enjoy the Passing Hour!"; and the dignified, majestic first six poems of the third book, known as the Roman *Odes*, particularly IV:VII, "Spring's Return," on the constant beat of the passage of time; and *Carmen Saeculare*, a hymn that was officially commissioned by Augustus to be sung at the ceremonies of the Secular Games that celebrated the peace and prosperity of the age.

Horace's poem "Carpe Diem" is also well-known because it introduces the enduring concept of CARPE DIEM, or "seize the day," a concept Horace also uses in Ode I:XI: "Life Is Brief," the poet counsels. "Even while we speak, envious Time has sped. Reap the harvest of to-day, putting as little trust as may be in the morrow!" Carpe diem later became a pet motif among 17th-century English lyric poets.

"Spring's Return" is rich in mythological, theological, and natural imagery:

The snow has fled; already the grass is returning to the fields and the foliage to the trees. Earth is going through her changes. . . . The Grace, with the Nymphs and her twin sisters, ventures unrobed to lead her bands. . . . The cold gives way before the zephyrs; spring is trampled underfoot by summer, destined likewise to pass away so soon as fruitful autumn has poured forth its harvest; and lifeless winter soon returns again.

In his translation of Horace's works, C. E. Bennett calls Horace "unexcelled among Roman poets."

hubris term

Hubris is a literary term meaning "overweening pride." It was originally used to describe a theatrical or literary device employed in classical tragic drama but is more often used now to describe people who exhibit too much pride, to their own and others' detriment.

The word was introduced by the Greek philosopher and scholar ARISTOTLE in his work of literary criticism, the *Poetics*, of which only fragments remain. Aristotle defined the term *hamartia* as a tragic flaw or error in judgment that leads to a

hero's inevitable downfall. Hubris is a type of *hamartia*: excessive insolence, overconfidence or arrogance that causes a great (or, at least, honorable) man to disregard the warnings of the gods, ignore the established moral order, or violate the heroic code. Examples of hubris can be seen in the writings of the EPIC poet HOMER, the *Histories* of HERODOTUS, and the tragedies of SOPHOCLES and EURIPIDES.

Homer's masterpiece, the *Iliad*, recounts events that take place over a few days' period toward the end of the war between Troy and Greece. Achilles, Greeks' greatest warrior, has received a young woman, Briseis, as a sort of war trophy. The commander in chief of the Greeks, Agamemnon, has been compelled to appease the gods by surrendering his own mistress and so seizes Briseis to take her place. Achilles wages a monumental tantrum, withdraws from combat, and prays to his mother, who has influence with the gods, to cause the Greeks to be defeated in the next battles. Agamemnon tries to make amends, but Achilles continues to pout. As a result of his hubris, Achilles' comrades are massacred, including his best friend, whose death rouses Achilles to revenge. In brutally executing his friend's killer, however, Achilles precipitates his own demise; for it has been preordained that his death would soon follow that of the man he has slain. Achilles' hubris hastens his own death.

Herodotus, considered the world's first historian, wrote an exhaustive account of the great wars between the Persian Empire and Greece. Persia was a colossal force, while Greece was just a fledgling group of city-states, poorly organized and barely united. But the Greeks prevailed, Herodotus suggests, because of Persia's hubris. The invading empire's arrogance lay in the belief that it was appropriate for the mighty to enslave and tyrannize the weak and in its attempts to achieve victory in battle by dominating and defying nature (diverting a river's natural flow, for example). These actions brought divine retribution, and so the Persian Empire was defeated. The tragedian AESCHYLUS dramatizes a corresponding point of view in *The Persians* (472 B.C.).

In *Oedipus Rex*, SOPHOCLES tells of the Theban king and queen Laius and Jocasta, who learn from a prophesy that their son will murder his father and marry his mother. When Jocasta bears a son, the couple casts him out to be exposed to the elements, but unbeknownst to them, he survives. Later, when Laius is traveling on a sacred mission, he is killed on the road by bandits. Oedipus then arrives in Thebes and saves the city from the monstrous Sphinx with his cleverness. As a reward, he is pronounced king and marries the widow Jocasta. But a terrible plague descends on Thebes, and when a prophet presages blindness and ruin for Oedipus, the king dismisses him. Oedipus's exceeding confidence in his own cunning and omniscience has tragic consequences. When they discover the truth—Oedipus was, of course, Laius's murderer and he has indeed married his mother—Jocasta commits suicide and Oedipus blinds himself with her brooches and condemns himself to exile. Laius and Jocasta, too, have been punished for their own arrogant conviction that they could defy an oracle from the gods.

The Bacchae, Euripides' master work, has as its main characters Dionysis, a novice god who represents primal forces, and Pentheus, who is the young ruler of Thebes. With the reckless self-assurance of youth, Pentheus refuses to recognize Dionysis as a god and treats him with bald-faced contempt. Pentheus's hubris leads him to reject both religion and nature. As a consequence, he is killed by his own mother, who has been hypnotized by Dionysis.

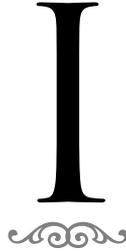

Greek myths, as documented by OVID, HESIOD, and others, also feature examples of hubris. Among the most memorable is the tale of Prometheus, who steals fire from the gods to give it to humans. He is punished by being shackled to a cliff and ultimately cast into the underworld.

Ibn Gabirol, Solomon ben Yehuda
(Abu Ayyub Sulaiman Ibn Yahya Ibn
Jabirul, Avicbron) (ca. 1021–1058) *poet,*
philosopher

Solomon Ibn Gabirol, one of the giants of Hebrew poetry, was born in Malaga, Spain, around 1021. His deeply personal poems are the source of most of what is known of his life, though two critiques from those days also survive. One Arab poet called him a brilliant if shy student of philosophy, while the Hebrew literary historian Moshe Ibn Ezra wrote of his “angry spirit” and “his demon within.”

The poet was raised in Saragossa and educated in literary Arabic, biblical Hebrew, and Greek philosophy. Frail, short, and ugly by his own description, he was beset in his teens by the painful ailments that would embitter his life. In T. Carmi’s translation (*The Penguin Book of Hebrew Verse*), Ibn Gabirol writes: “Sickness burned my innards with a fever like fire, till I thought my bones would melt.”

Ibn Gabirol suffered one reversal after another, beginning with his father’s death, followed by the death of his court patron Yequiel Ibn Hasan. Still, by age 19, Ibn Gabirol had made his name as an accomplished poet.

After his mother died, Ibn Gabirol moved to Granada and attached himself to its vizier (minis-

ter of state), Samuel HaNagid, himself a great Hebrew poet who influenced the young Solomon. His ambition stymied by court intrigues and the jealousy of lesser men, whom he skewered in verse, Gabirol departed for Valencia, where he died while still in his 30s. Over 400 of his poems survive, covering the full range of secular, religious, and philosophical Hebrew forms. He also wrote a major work of philosophy, *Fons Vitae* (The Well of Life), an ethical treatise, *On the Improvement of the Moral Qualities*; and some 20 other books that have apparently been lost.

Ibn Gabirol was one of the founders of the “Andalusian school.” Nourished in the aristocratic courts of the region, these poets derived their secular subject matter and their “quantitative” meters from Arabic models while continuing to embellish the rhyming traditions of the earlier Jewish religious poets (*paytanim*). They helped revive biblical Hebrew as a literary medium, building on the linguistic studies of such scholars as the 10th-century Babylonian rabbi Sa’adia Gaon.

Ibn Gabirol’s nature and love poems can be intensely lyrical, as evidenced in his poem “The Garden”:

*Its beads of dew hardened still,
he sends his word to melt them;*

*they trickle down the grapevine's stem
and its wine seeps into my blood.*

These secular verses, written for a sophisticated public or for wealthy patrons, are considered less innovative than Ibn Gabirol's religious poetry. His most famous work, *Keter Malkhut* (A Crown for the King) is still read on Yom Kippur in Sephardic congregations. It combines exalted visions of the creation according to Ptolemaic cosmology with a humble plea for divine mercy, totally out of keeping with the poet's otherwise arrogant persona. "Adon Olam" (Master of the Universe), perhaps the most popular hymn in the Jewish liturgy, is usually attributed to Ibn Gabirol as well.

The poet's religious works attest an ecstatic love of God as his only consolation. In the poem "In Praise of God," he professes:

*I sigh for You with a thirsting heart; I am
like
the pauper begging at my doorstep. . . .*

Other poems, such as "Pitiful Captive," show a yearning for Jewish national redemption that may have influenced the later poet Judah Halevi.

Ibn Gabirol is considered one of the transmitters of Neoplatonism to the Christian scholastics of the high MIDDLE AGES. They knew only the Latin translation of his *Fons Vitae* (The Well of Life), and thought the author to be a Muslim or Christian. The 19th-century discovery of Hebrew excerpts rendered from the Arabic original helped identify Ibn Gabirol as the true author.

In the *Fons*, Ibn Gabirol connects the earthly and heavenly realms, composed alike of matter impressed with form. By a spiritual effort, we can exploit this similarity to achieve divine wisdom and bliss. His treatise *On the Improvement of the Moral Qualities* was the first systematic Hebrew work of ethical philosophy. He claims a close correlation between moral impulses and physical senses, which can be trained to promote right conduct.

From his day to the present, Ibn Gabirol has kept his place in the Jewish literary canon. His

original mix of secular and religious achievement influenced Hebrew poets for 400 years in Muslim and Christian Spain and continued to bear fruit in other lands even after the decline and destruction of the fabled Spanish Jewish community.

Imru' al-Qays (Amru al-Qays, Ibn Hujr) (d. ca. 550) poet

Imru' al-Qays is considered the most important of the pre-Islamic Arab poets—those who lived and wrote in the era before MUHAMMAD. He is traditionally credited with formalizing the rules of Arab poetry, and his work has influenced Arab poets throughout the centuries.

Imru' lived in the mid-sixth century. His father was king of the Kinda tribe of central Arabia, which was in turn part of the Qays clan, which

boasted the finest Arabic poetry of that era. Imru's pleasure-loving youthful years ended abruptly when his father was killed as a result of feuds with rival clans. The rest of his life was a fruitless quest to regain power and avenge his father's death. In his *Mu'allaqāt* ode, he writes: "Many a desolate wadi have I crossed wherein a wolf howled . . . and when it howled I replied: 'We are both destitute.'" After finding refuge with the Jewish chief Samuel of Taima, Imru' won the support of the Byzantine emperor Justinian, but when he seduced the emperor's daughter, Justinian had him poisoned.

In Imru's era, poetry was still transmitted orally. Imru's works were collected into a *diwan*, or anthology, but scholars doubt the authenticity of many of them. The poet is mostly known for a long, complex poem (untitled) that was included in the *Mu'allaqāt* (The Seven Odes), also called the Hanged Poems) an anthology of major pre-Islamic poems first collected 200 years after the poet's death.

Imru's *Mu'allaqāt* poem has 82 lines. It is constructed along fairly conventional lines, but its imagery and descriptive power have made it one of the most popular poems in the Arabic repertoire. It begins with an unusually erotic, self-congratulatory account of former lovers, recalled in sadness at a deserted campsite: "Stop, both of you. Let us weep for the memory of a beloved and an abode in the lee of the sands." This is followed by the obligatory animal section, which praises the poet's horse and describes an antelope hunt, and, finally, by a powerful rendering of a thunderstorm.

Muhammad considered Imru' the greatest of the Arab poets. Subsequent generations of Arab critics have confirmed that judgment.

Isaeus (fourth century B.C.) lawyer, orator, speechwriter

During the Golden Age of ancient Greece, which was dominated by the powerful city-state of Athens, questions concerning legal issues became extremely important. With commerce expanding and wealth increasing, a profession of lawyers developed whose requirement it was to deal with questions concerning property and personal estates. One such lawyer was Isaeus, of whose life virtually nothing is known. It is believed that he was born in the Greek town of Calcis, he was a student of ISOCRATES, and he subsequently passed on his knowledge of rhetoric to the Athenian orator DEMOSTHENES.

Only a very small portion of Isaeus's works has survived: 11 speeches involving inheritance cases and a fragment of a speech protesting a man's exclusion from citizenship. Isaeus wrote most of his speeches for other people, yet he is counted among the ten ATTIC ORATORS (a group of public speakers and speechwriters). His writing and speaking style, as revealed in his extant texts, were direct and to the point but rather dry and academic, characteristic of the Attic style. He was also not above making personal attacks against his opponents, a common practice among lawyers in ancient Greece.

Despite the limited information on his life and the small amount of surviving material, Isaeus's works provide important historical information on the legal, social, and economic conditions of Greece during his lifetime.

Isocrates (436–338 B.C.) *orator, teacher, speechwriter*

In the fourth century B.C., the city-states of ancient Greece were caught up in political turmoil and constant warfare. At the same time, the Greeks were making astonishing advances in literature, art, and science. During this turbulent time, many great thinkers and writers lived and worked, among them Isocrates.

Isocrates was an Athenian, born into a well-to-do family that lost most of its property during the Peloponnesian War. After receiving a good education, he turned to speechwriting and teaching to make a living. He developed strong opinions about politics and education, and established a school in Athens that soon rivaled the famous Academy of PLATO.

Isocrates believed that an effective education, particularly in the art of speaking, was extremely important for the people who would become leaders of the Greek city-states. Students such as ISAEUS, Timotheus, and Hyperides came from all over Greece to study at Isocrates' school, and many of them went on to outstanding political careers. The concept of a well-rounded, humanistic education, which became a crucial part of Western civilization, was largely his creation.

Isocrates also believed that the disunity plaguing Greece was its chief weakness. He believed Greeks to be superior to all other people and called on them to unite in a great crusade against their mutual enemy, the Persian Empire. In particular, he believed that a single strong leader was needed to bring the Greeks together, and toward the end of his life, he came to feel this man was Philip II, king of Macedonia and father of Alexander the Great.

All but 21 of Isocrates' speeches have been lost. In a speech titled *Panegyricus*, he states his belief that being Greek is more about believing in Greek culture and adopting a Greek mind-set than about simply being born Greek. In many other speeches, he repeatedly states his belief that the Greeks must stop fighting amongst themselves and unite against the Persians. In his most famous speech, *Philip*, he calls on King Philip II to unite all city-states under his leadership.

Isocrates was a fierce opponent of the Athenian statesman DEMOSTHENES, who was strongly against Philip. By the time Isocrates died, Philip was close to consolidating his control over Greece, just as Isocrates had hoped.

Izumi Shikibu (ca. 970–1030) *poet, diarist*

Izumi Shikibu lived during the highest point of the Heian era and is considered by many to be one of the greatest Japanese female poets. Little is known of her early life, but historical and literary texts indicate that at age 18 she married a provincial official (the lord of Izumi Province) and had a daughter named Koshikibu. Despite her marriage, she began a passionate affair with the Empress Masako's stepson, Prince Tametaka, when she joined the court. Disowned by her family, she was separated from her husband, and then her lover died, leaving her heartbroken.

Three years later, Izumi became the mistress of her dead lover's brother, Prince Atsumichi, and moved into the royal compound. When Atsumichi died, Izumi went into a period of mourning, during which she wrote more than 240 poems about her loss.

Izumi eventually returned to court and became a lady-in-waiting to Empress Akiko, along with MURASAKI SHIKIBU, author of *The Tale of Genji*. At age 36, she married again and accompanied her husband, Fujiwara no Yasumasa, to his post in the provinces. She never returned to court.

Although Izumi is best known for her poetry, there is also a diary associated with her called the *Izumi Shikibu Nikki* (*Izumi Shikibu Diary*, also referred to as *The Tale of Izumi Shikibu*). This diary is written in a mixture of poetry and prose, a common form for diaries written during the Heian era, and mostly describes the events surrounding Izumi's relationship with Prince Atsumichi. There is some question as to whether Izumi actually wrote the diary, as the entries are not dated, and while the narration is intensely personal, it is written in the third person.

Little doubt exists about the authorship of her poetry, however, for it was well known even in her own time, and 67 of her poems appeared in the *Goshuishu*, the Imperial anthology compiled in 1086. Her poetry often uses highly stylized language, but it is also deeply emotional and at times intensely erotic. Much of her work also reflects a strong religious consciousness and her interest in exploring the fleetingness of love and life:

*The fleeting world
of white dew,
fox fires, dreams—
all last long,
compared with love.*

Izumi's poetry, written mostly in the TANKA form, shows both a great passion for life and a great sense of melancholy. She is regarded as one of the few female tanka poets of the first century worthy of note.

Jacopone da Todi (Jacopo dei Benedetti) (ca. 1230–1306) *poet, prose writer*

Jacopone da Todi, along with DANTE, was the greatest religious poet of his time. Born into an aristocratic family in Todi, Italy, he studied law and became a notary. He lived a worldly and sensual life until he married Vanna di Bernardino di Guidone around 1267. Only a year later, his young wife died in an accident. Jacopone, shocked out of his complacent life, spent the next 10 years dressed in rags and living as a wandering penitent, influenced by the spirituality of FRANCIS OF ASSISI.

In 1278, Jacopone became a friar at the Franciscan convent of San Fortunato in Todi. Though the friars there lived according to the relaxed interpretation of the Franciscan rule, Jacopone sympathized with the Spirituals, those who wanted to emulate the complete poverty of St. Francis.

In 1294, the unexpected election of Pier da Morrone, a poor hermit, as Pope Celestine V, excited the Spirituals. They sought his protection against the Conventuals, the friars who favored a more relaxed rule. Many Spirituals saw Celestine as a savior who would end the greed and corruption of the clergy. But Jacopone was more skeptical, writing in one of his poems:

*Now we'll see what comes
Of all those meditations in your hermit's
cell.*

*Disappoint those who have placed their
hopes in you*

And they will rain curses on your head.

(Lauda 54)

As Jacopone feared, Celestine proved weak and soon abdicated. His successor, Boniface VIII, withdrew the protection that Celestine had accorded the Spirituals. In 1297, the Spirituals defied the pope but were defeated, and Jacopone was thrown into prison, where he continued to write poems. He was freed in 1303 and died three years later.

During his life, Jacopone wrote approximately 100 poems, called the *Laude* because many were written in the style of the popular religious songs (*laude*) sung by wandering groups of flagellants in imitation of St. Francis. The poems are difficult to interpret, however, since scholars do not agree on the order in which the poems were written, or which of the many poems attributed to Jacopone are really his.

Jacopone's poems describe his spiritual experiences and political and religious struggles. Some poems satirize businessmen who grasp after mate-

rial things and, metaphorically, the friar whose learning does him no good now that he is dead. Other poems describe Jacopone's imprisonment and denounce Boniface VIII.

Two other prose works have been attributed to Jacopone: *Il Trattato*, a Latin treatise interpreting his more philosophical poems; and the *Detti*, or sayings written down by his admirers.

Jacopone's religious poems celebrate the Nativity, Franciscan poverty, and above all his intoxication with God and the steps by which he passed from grief for his sins to mystical contemplation. Many of his works use the techniques and imagery of the Provençal TROUBADOURS and the Italian poets who imitated them; yet, rather than describing love for a woman as the troubadours did, Jacopone focuses on loving God.

"Amor de caritate" (Lauda 90), like the Provençal *tenso*, is a dialogue in verse. Evelyn Underhill, a student of mysticism, calls it "a masterpiece of dramatic construction." Jacopone begins by exulting in the contemplation of Christ:

My heart melts, like wax near fire.
Christ puts his mark on me, and stripped of
myself (O wondrous exchange) I put on Christ.
Robed in this precious garment,
Crying out its love,
The soul drowns in ecstasy!

But Christ answers him with

O you who love me, put order into your love,
For without order, there is no virtue!

Jacopone replies:

If it was temperance you wanted,
Why did you lead me to this fiery furnace?

The language of ecstatic love and the images of the furnace and the heart melted like wax are typical of the 13th-century Tuscan and Sicilian poets.

Another of Jacopone's most famous *laude*, "Lady of Heaven," is a dramatic dialogue between

the Virgin Mary, her son Jesus, and the bystanders at the Crucifixion, and it influenced the development of medieval Italian drama. A popular Latin hymn of the MIDDLE AGES with a similar theme, the *Stabat Mater*, has been erroneously attributed to Jacopone.

Jacopone's religious lyrics were popular throughout the Middle Ages, but modern critics outside of Italy have neglected his work. Some consider him coarse, unbalanced, and often incomprehensible, but Jacopone's works have recently attracted new interest. George Peck writes that "Rarely has a poet revealed the marrow of his inner life with more precision and more passion."

Jāhiz, al- (ʿAbu ʿUthmān ʿAmr ibn Bahr ibn Mahbūb al-Jāhiz) (ca. 776–868) *essayist*

Al-Jāhiz (meaning "goggle-eyed") was a very prolific prose writer who authored nearly 200 books of essays covering a very broad range of topics from science to politics. He is considered the foremost Arab intellectual of his era.

Al-Jāhiz was born in Basra, reportedly the grandson of a black porter. He lived most of his life there. Basra was then at the peak of its economic and cultural glory under the new Abbasid Caliphate, as Arab civilization began to assimilate the cultural contributions of all the great peoples that had been assembled together in the realm of Islam.

Al-Jāhiz was known for his cosmopolitan knowledge; his clear, accessible prose; the logic of

his argumentation; and most of all for his talent to entertain. There was no topic in the sciences, literature, religion, or philosophy that escaped the attention of his pen. He treated all subjects with the same combination of seriousness and humor. His humor, however, led some critics to accuse him of triviality, and indeed it is not always clear whether or not al-Jāhiz is being sarcastic; for example, he wrote one book condemning wine and another defending it.

Al-Jāhiz was a master of rhetorical argument, often specializing in *munazara*, or parallels, a contemporary genre in which different people, animals, objects, or concepts argue their respective virtues. Not surprisingly, he wrote a popular book on rhetoric, titled *Kitab al-Bayan wa al-tabayyun* (The Book of Excellence and Rhetoric). Among the many topics he illuminated were the conduct of kings, the customs of misers, the virtues of the Turks, cripples, bureaucrats, mispronunciation, singers, Christianity, and jokes. One widely read work was a collection of sayings attributed to Ali, MUHAMMAD'S son-in-law.

Like many Basrans, al-Jāhiz was a Mu'tazilite, one whose relatively rationalist Islamic philosophy held that the current caliph could supplement the laws of the KORAN with new rulings. He is considered one of the first great practitioners of *adab*, or the cultivation of worldly knowledge. However, al-Jāhiz was also a consistent defender of Arab and Islamic culture against the claims of Greeks, Indians, and Persians. He participated in the great literary debate against the Shu'ubites, who sang the virtues of the non-Arab Muslim cultures, especially that of Persia.

Al-Jāhiz gained his greatest renown with his seven-volume *Kitab al-Hayawan* (Book of Animals). In addition to animals, it addressed many other topics in endless digressions, including religion, climate, crime, and the nature of matter. His underlying purpose may have been to demonstrate that Arabic scientific and practical knowledge had become equal or even superior to its pagan predecessors in Greece and Persia.

Al-Jāhiz's life was a celebration of the culture of books. As he wrote in the *Book of Animals*: "[A

book] will amuse you with anecdotes, inform you on all manner of astonishing marvels, entertain you with jokes or move you with homilies, just as you please. . . . there is no pleasanter neighbor, no more fair-minded friend, no more amenable companion."

In the final irony, al-Jāhiz's love of books proved his undoing. From time to time, he would have himself locked into a bookstore at night to read through the stock. On one such occasion, when he was 92, a pile of books collapsed and crushed him to death.

Jataka (fifth century) sacred texts

The Jataka tales constitute part of the canon of sacred Buddhist literature. The main body of Jataka literature is a collection of 547 stories of Buddha's previous births in prose and verse, written in Pali. Originally the Jatakas were oral tales that came from the Varanasi region of north central India and consisted of both animal and human tales as well as parables for instruction. These were then absorbed into the Buddhist literary canon, and the stories later became an important part of the Southeast Asian canon of Buddhist literature after its indigenous kingdoms adapted Indian cultural and religious philosophy.

The Jatakas contain stories that relate the self-sacrificing spirit of the Buddha in his previous lives. Several major themes and types are represented in the stories. These consisted of pre-

Buddhist animal fables, heroic adventure tales, tales of renunciation, and tales exemplifying total charity and generosity. The themes of sacrifice and continuous rebirth reveal the similarity between Buddhist and Hindu beliefs regarding reincarnation. They also represent Buddhist and Hindu aims to escape the cycle of rebirth by attaining enlightenment or release from this world.

Though the stories originated as oral fables, Buddhists believe that the Buddha told these stories as lessons to his followers. In the Theravada Buddhist areas of Burma and Thailand, the most popular Jataka is the story of Prince Vessantara, who is known for his charitable nature; this a virtue that most Buddhists wish their kings would emulate. Vessantara leaves the comforts and luxuries of his palace to wander all over his kingdom. In his travels, he gives away many of his possessions, including his wife and children when he has nothing else to give away. The last 10 Jatakas, including the story of Vessantara, are frequently depicted in murals, temple reliefs, and paintings in Burma and Thailand.

Jaufré Rudel (Jaufré Rudel II, lord of Blaye [Gironde]) (early 12th century) *troubadour, poet*

Jaufré Rudel was born into a noble French family in the first half of the 12th century. He inherited the lordship of Blaye, a territory in southwest France, from his father Girard after 1126 and be-

came known as a TROUBADOUR. He joined the Second Crusade (see CRUSADES) in 1147, arriving in Palestine in 1148, where he seems to have died.

According to legend, Jaufré fell in love with the Countess of Tripoli, a woman he had never met, and supposedly wrote several songs about her, including the following lines from “When the Days Are Long in May”:

*But I'll find no love or joy
without the joy of my love far away,
for I know none gentler, better,
north or south, near or far away;
so high is her true and fine worth
that upon Saracen earth
I'd be called captive for her.*

As the legend continues, Jaufré also became a crusader in order to travel to Tripoli, where the countess was alleged to be, but unfortunately fell ill on the way. After his arrival in Tripoli, the countess visited his sickbed. Jaufré thanked God for allowing him to see his love and then died.

Six of Jaufré's poems remain in existence, along with the melodies meant to accompany four of them. As most troubadour songs do, Jaufré's concern courtly love (see CHIVALRY AND COURTLY LOVE) and are written in Provençal, which he calls “a plain old Romance tongue.” As scholar Frede Jensen notes, “troubadours of southern France were the first European poets to write in the vernacular” rather than in Latin.

Jaufré's songs are comprised of lines of seven or eight syllables. Between six and eight lines make up each stanza, and each poem contains five to eight stanzas. “When the days are long in May,” which is regarded as his best song, repeats the same rhyme scheme (ababcc) for seven stanzas, then concludes with a final three lines whose rhyme scheme is ccd.

While Jaufré lingers on the feelings he has for his “distant love,” he remains vague about whom the “distant love” is. Some critics have theorized that his poems were really about a love for the Vir-

gin Mary or for Jerusalem. Others have pointed out that Jaufré occasionally speaks of his beloved in words that could only apply to a living woman. Either interpretation could be correct.

Perhaps partly because of their ambiguity, the poems reach beyond the time and place of their composition to speak to readers of every century. During World War II, French exiles and prisoners of war read and reread Jaufré's poems. In addition, his works and legendary life have inspired numerous writers, including the author of the French MEDIEVAL ROMANCE *Guillaume de Dôle*; Petrarch, who mentions Jaufré in his "Triumph of Love"; the 19th-century poet Robert Browning, who wrote a poem entitled "Rudel to the Lady of Tripoli"; and the 20th-century poet Ezra Pound, who refers to Jaufré in his *Cantos*.

Jaufré's poems remain appealing less because of their beauty than because they describe a universal feeling: the longing for love. As scholar James Wilhelm writes, Jaufré acknowledges his "earthbound condition" yet "constantly keeps striving for higher ideals. These ecstatic flights, more clearly pronounced in him than in any other troubadour, show him as a forerunner of DANTE."

Jean de Meun (Jean de Meung, Jean Chopinel, Jean Clopinel of Meung-sur-Loire) (ca. 1240–ca. 1305) poet, translator

Jean de Meun, best known as the author of the final 18,000 lines of the *ROMANCE OF THE ROSE*, was born in the French town of Meun-sur-Loire. Very little is known about his life. Since he was known to contemporaries as Master Jean de Meun, scholars believe that he received a Master of Arts degree at the University of Paris and that he likely taught there. He was living near the university at the time of his death. His work contains satires of the Franciscan and Dominican orders of friars, who were under attack at the university at the time. He had also studied Alan of Lille and other philosophical poets of Chartres who exalted Nature.

Jean's works show that he was an expert in Latin with an encyclopedic knowledge of many subjects. He describes himself in the *Romance of the Rose* as "joyous of heart, agile and sound of limb." He also describes himself as a lifelong servant of love. His style is lively and filled with satirical wit, and he popularizes abstract philosophical ideas through the pungent dialogue of his characters.

The variety of works attributed to Jean reflect the interests that led him to complete the *Romance of the Rose*. Among these works is his translation of the Latin work *de re Militaria* by Vegetius, which he called *The Art of Chivalry* (1284). He also translated *The Consolation of Philosophy* by BOETHIUS and the letters of the famous lovers ABÉLARD AND HÉLOÏSE. Two other works, the *Testament of Jean de Meun* and the *Codicil of Jean de Meun*, have also been attributed to him. The dedications of his works show that he had many friends in high places, including Jean de Brienne, count of Eu, and King Philip the Fair of France (1285–1315).

De Meun said that he read GUILLAUME DE LORRIS's *Romance of the Rose* and liked it so much that he decided to finish it. But he had things in mind that went beyond Guillaume's work. While Guillaume wrote somewhat uncritically from within the courtly tradition (see CHIVALRY AND COURTLY LOVE), De Meun, writing as a next-generation poet,

had a more critical, satirical view of courtly love and its conventions. He brings in satire of women and relations between the sexes, and sets forth arguments that passionate love has no importance in comparison with procreation. His digressions are encyclopedic in length and cover a wide range of topics to interest his medieval listeners.

De Meun's contribution to the *Romance of the Rose* was a popular one; all of the medieval manuscripts except one include his continuation of the text. The work has both survived and become controversial because of him.

Jerome, Saint (Sophronius Eusebius Hieronymus) (ca. 340–420) translator, prose writer

Saint Jerome was born in Strido, where Croatia is now, into a family that highly valued education. Although they were Christian, Jerome's parents sent their young son to a prominent pagan school in Rome, where he studied classical literature and became fluent in Latin and Greek.

Concerned that secular studies had corrupted his love of God, Jerome left Rome and spent many years traveling. He befriended monks and other young Christian scholars who had renounced material concerns to dedicate themselves to their faith. This spiritual quest led him to the Syrian desert, where he lived as a hermit for several years.

Taunted and tempted by memories of Roman decadence, Jerome gained mastery over his desires

with acts of penance, contemplation, and the discipline of learning Hebrew. He then journeyed to Turkey and became engaged in the theological debates of the day. Sharp-tongued and hot-tempered, Jerome strongly criticized the clergy's worldly pursuits, earning himself many foes. While addressing these controversies at a council in Rome, Jerome found favor with Pope Damasus, who made him his private secretary. At Damasus's behest, Jerome translated the New Testament into contemporary Latin. He also translated the Old Testament from Hebrew to Latin. For centuries, Jerome's Vulgate ("of the common people") was the only version of the Bible sanctioned by the Catholic Church.

When his champion Damasus died, Jerome left Rome and established a monastery at Bethlehem. There, he reportedly extracted a thorn from the paw of a lion, who remained his loyal companion.

While the Vulgate was his crowning triumph, Jerome was also a prolific writer of letters, commentaries, biographies, and translations of historical works. In the MIDDLE AGES, Jerome was designated "Doctor of the Church" for his outstanding piety, contributions to Christianity, and learnedness.

Jerome is the patron saint of translators. "One need only utter the name of Jerome and the most humble of us immediately feels taller, and reminded of the duties and the honor of his calling," wrote 20th-century translator Valery Larbaud.

Josephus, Flavius (Joseph ben Mattathias) (ca. 37–ca. 101) *historian*

Flavius Josephus was born in Jerusalem during Roman rule. His father was a Jewish priest, and his mother was a member of Jewish royalty. He was well-educated, studying both Greek and Hebrew literature, and it is said that at one point he spent three years with a hermit in the desert.

In his early 20s, Josephus traveled to Rome to negotiate the release of several Jewish priests held hostage by Emperor Nero. When he returned home after completing his mission, his nation was beginning a revolution against the Romans (ca. 66). Josephus immediately became a commander of the revolutionary forces in Galilee (present-day Israel).

In one battle, Josephus successfully defended the fortress in Jotapata for almost two months. He eventually surrendered and was taken prisoner by the Roman general Vespasian, who planned on sending him and other prisoners to Emperor Nero, who most likely would have had them executed. Josephus avoided this fate by presenting himself as a prophet and professing Vespasian's rise to imperial power. After this successful move, Josephus served the Romans by assisting them in understanding and negotiating with the Jewish nation. The Jewish revolutionaries considered Josephus a traitor and refused to follow his advice to surrender. Thus he became a witness to the destruction of Galilee, Judea, and the Holy Temple. When Vespasian released him, Josephus joined Vespasian's family name, Flavius, with his own, and eventually followed Vespasian's son Titus to Jerusalem (70).

Josephus's experience as Vespasian's captive resulted in his first work, *Jewish War*, which was published in seven books in 78, when its author was serving at the Flavian court in Rome. The work did not merely state the facts of the war but proclaimed the emperor's military might, flattered his wisdom, and warned other nations against opposing his power. A significant part of the *Jewish War* is devoted to poorly masked adulation of its author's qualities as a warrior and a writer. Josephus first wrote the book in his native language

of Aramaic but then translated it into Greek, which was the most widely used language of the Roman Empire.

Josephus's later work *Jewish Antiquities* was published in 93 or 94 in 20 books. In this written work, entirely in Greek, Josephus explains the history of the Jews to the general non-Jewish audience of the time and explains the title of his work by emphasizing the age of the Jewish culture and the Bible. Almost half of the work consists of Josephus's rephrasing of the Hebrew BIBLE, for which he used the works of earlier historians as his sources. *Jewish Antiquities* was zealously read by the early Christians, and numerous translations in later centuries revived interest in the work. One of the best English translations was done by William Whiston (1667–1752) in 1737.

Two shorter works by Josephus include *Autobiography* (or *Life*), in which the historian attempts to justify his position at the beginning of the Jewish uprising; and *Against Apion*, in which he refutes Apion's charges against the Jews in the first century. This, like Josephus's other works, provide significant details on the Roman-Jewish conflict of the ancient world, as well as information about written texts that no longer survive.

Juvenal (Decimus Junius Juvenalis)(ca. 50–ca. 127) *poet*

Throughout history, writers have sought to use sarcastic comedy as a means to express their concerns about the society in which they live. Such authors as Voltaire and Jonathan Swift achieved their fame through satire, while also articulating important observations about life. Among the ancient Romans, no one made better use of satire than Juvenal.

Juvenal was born in the town of Aquinum, Italy, at a time when the Roman Empire was at its height. This age was known as the *Pax Romana*, or “Roman Peace.” The empire controlled the entire Western world, ruling millions of people and outwardly appearing to be a model of tranquillity and stability. All was not perfect, however, and Juvenal’s writings articulated this fact quite well.

Little is known about Juvenal’s life. He came from a wealthy family and served both in the army and as a public official. It is not known if he ever married or had children, but records indicate that MARTIAL was one of his friends. His knowledge of the workings of rhetoric schools have led some to speculate that he might have been a teacher, but there is no proof.

Juvenal’s writings got him into trouble with the authorities, a fate suffered by many other socially conscious writers both before and after him. The Emperor Domitian sent him into exile for having criticized Domitian’s favorite comedian, but Juvenal was apparently held in high regard by another emperor, the cultured Hadrian.

Juvenal wrote his most important work between 110 and 130, during which time he published his 16 major satires, composing them in dactylic hexameters. His themes vary, but every satire revolves around Juvenal’s conviction that Roman society was rapidly decaying and losing its sense of purpose. He writes about the corruption of the aristocracy, moral degeneration and sexual depravity among all classes, congestion in Roman cities, and numerous other social ills. He also displays strong anti-Semitism as he approaches all of his subjects with derisive sarcasm and intense bitterness.

Juvenal did not expend all his energy on serious social commentary. Some of his works also lampoon less crucial problems. In his *Satire I*, for example, he begins by making fun of banal and long-winded poets:

*Must I always be stuck in the audience at
these poetry-readings, never
Up on the platform myself, taking it out on
Cordus
For the times he’s bored me to death with
ranting speeches
From that Theseid of his?
. . . When you find
Hordes of poets on each street-corner, it’s
misplaced kindness
To refrain from writing. The paper will still
be wasted.*

By cloaking these feelings with wit and humor, Juvenal both infuriates and amuses his readers. Furthermore, his meticulous and precise style gives his works a sense of poetic perfection, which was emulated by many poets who came after him.

One of Juvenal’s most famous phrases became a part of the lexicon of historians who studied Rome. Juvenal claimed the Roman people were interested only in “bread and games.” In other words, as long as Roman citizens had enough to eat and were entertained, they did not care about the critical issues facing their society, such as reforming the government, managing the economy, or protecting the borders from barbarian enemies. The “bread and games” observation thus became an analogy for everything that caused the collapse of the Roman Empire.

Juvenal’s works are important for several reasons. From a purely literary standpoint, his poetic style and satirical technique served as models for many later writers. He also provides information that has been extremely useful to historians as they attempt to piece together a picture of Roman culture during the *Pax Romana*. Finally, the social ills Juvenal lampooned were hardly unique to his own time and culture, and his bitter criticisms, aside

from his anti-Semitism, can be seen as a warning to our current societies, just as they were to his own.

Kalevala (400 B.C.–A.D. 1849) *Finnish national epic*

In the early 19th century, Finnish folklore was assembled into a massive EPIC called the *Kalevala* (Land of Heroes). Compilers from the universities of Turku and Helsinki traveled throughout Finland collecting these stories, called runes, which had been transmitted orally for centuries, a task deemed necessary before Finland's oral traditions were lost to modernization. Fifty runes consisting of almost 23,000 lines of poetry had been collected by 1849, and Elias Lönnrot, the Finnish philologist who discovered the *Kalevala*, worked to organize them into a cohesive whole. (An earlier collection was published by Zacharius Topelius in 1822.)

The *Kalevala* (pronounced *Kah leh vah luh*) contains the songs and stories of the ancient Finnish people and includes the beginnings of Christianity in Finland. It has been compared to other national mythologies, specifically Vedic mythology from India. For example, in both traditions the myths surrounding the origin of the

world—stating that it was hatched from an egg—are very similar.

The ancient Finnish people were animists, which means they worshipped nature and believed that everything around them had an inner spirit. Seers and shamans, key figures in Finnish mythology, undertook visionary journeys, using the reindeer as their animal spirit companion. Many of the songs in the *Kalevala* come from shamanistic ceremonies, and it was believed that some of these songs, or chants, had healing powers. Other chants were said to take shamans, in spirit, to the origins of the world.

The three main characters of the *Kalevala* are Väinämöinen, Lemminkäinen, and Ilmarinen, all sons of *Kalevala*. Väinämöinen is the primal first shaman. He is the master word-weaver and musician in the tales, offering counsel to his people. Lemminkäinen is a young romantic adventurer whose exploits are recounted in many of the runes. Ilmarinen is the primeval smithy, the master architect of the stellar dome and forger of the Sampo. The Sampo is a central object in the *Kalevala*, described as a spinning wheel and seen as a magic mill that grinds out food, money, or gold. The Sampo can also be seen as a cosmological image of the spinning World Axis centered upon the Pole

Star. In Finland the Pole Star can be seen almost straight ahead in the night sky.

The epic was originally written in the trochaic tetrameter, which means each verse had four meters written in the pattern of one accented (long) syllable followed by one unaccented (short) syllable. The following lines from Eino Friberg's 1988 translation are a good example of the style and philosophical subject matter of the runes: "Knowledge cannot stay concealed, / Hidden in some secret burrow; / Words of wisdom never vanish, / Though the wise men pass away."

The *Kalevala*'s words of wisdom remain vital to the Finnish people because it contains their traditions, such as the Finnish wedding ceremony, as well as magical incantations and ancient spells. It also gives a specific spiritual outlook connected to the traditional emphasis on nature. Most importantly, the *Kalevala* provides the Finnish people with a connection to their past and a sense of national pride. Pekka Ervast describes the impact of this epic in his work *The Keys to the Kalevala*: "From the rune stories of the *Kalevala* arose a lively picture of the Finnish people's past, their religion, traditions, struggles, ideals, and heroes." Similarly, as Jaakko Ahohas states in *A History of Finnish Literature*, the *Kalevala* "supported [the Finns'] belief in the creative powers of the Finnish nation and in this way contributed to the development of Finnish literature. . . ."

Kalidasa (fifth century) playwright, poet

Much of Kalidasa's life is surrounded by legend. One of the most common stories about Kalidasa,

whose name means "servant of Kali," is that he was born a fool and begged the goddess Kali for wisdom so that he could marry a cunning princess. In reality, he is said to be the son of Pandit Sadasiva Nyayavagisa ("pandit" means "scholar") of Paundra, India, and most scholars associate Kalidasa's life with the reigns of Chandragupta II and Skandagupta in the fifth century.

Many consider Kalidasa, who was called one of the nine gems for his expertise in poetry and drama, the greatest Sanskrit writer of all time. Most of his plays have happy endings, and most of his works are about love. He uses five different kinds of meter based on various patterns of long and short syllables, as well as frequent alliteration and assonance to express the sounds of nature.

Sanskrit poetry is a form of music, and Kalidasa's poems have the lilting rhythm and sensual tone of many love songs. For example, in *Ritusamhara* (The Seasons), a famous poem of 144 stanzas, Kalidasa relates nature to emotion:

*Their cliffs are cloud-kissed by the midst of
lotus white, . . .
They're spread with thick masses of dancing
peacock flocks;
They make the heart yearn, do these earth-
supporting rocks!*

Another of Kalidasa's poems is "Megha Duuta" ("The Cloud Messenger"), an elegy divided into two parts: The first 63 stanzas are called "Purva-megha" ("The Former Cloud"), and the final 52 stanzas are called "Uttara-megha" ("The Latter Cloud"). The poem tells of Yaksha, a young man, and his sorrow at being separated from his wife. In "The Former Cloud," Yaksha describes the cloud's journey, and in "The Latter Cloud," Kalidasa tells us what Yaksha's message is and describes his wife. The poem is written in the Mandakranta ("slow-stepping") meter to create a sense of the cloud's movement (as the wind blows it on its way) and sound (as rain pours forth from it). In the following lines, Yaksha addresses the cloud, praising it for its beauty:

While favouring breezes waft thee gently
 forth,
 And while upon thy left the plover sings
 His proud, sweet song, the cranes who know
 thy worth
 Will meet thee in the sky on joyful wings
 And for delights anticipated join their rings.
 (ll. 41–45)

Such beauty and lyricism did not escape Kalidasa's plays, most of which are based on stories told in the *MAHABHARATA*. His themes, however, are love and courtship, and the plays were very popular in the royal court. In his most famous play, *The Recognition of Sakuntala*, Kalidasa tells the story of Sakuntala and King Duhsanta. After Sakuntala is cursed, the king loses his memory of her, and Sakuntala must find a ring that he gave her to restore his memory. In another story, *Malavikagnimitra* (Malavika and Agnimitra), Kalidasa describes how King Agnimitra falls in love with the picture of an exiled servant girl named Malavika. In *Vikramorvashe* (Urvashi Conquered by Valor), he tells how King Pururavas falls in love with a celestial nymph named Urvashi.

Kalidasa's works were highly praised during his time, and they continue to be popular today. For many centuries after he wrote "The Cloud Messenger," so many poets imitated his style that their Sanskrit poems were collectively called "Duuta poems." He was admired by the German poet Goethe and imitated by Schiller (in his play *Maria Stuart*, 1800). Later playwrights have written stories about the legends surrounding Kalidasa's life. For example, Shri Mathura Datt Pandey's play *Kalidasakavyasambhavam* (1979), tells the origins of "The Cloud Messenger," a poem about which scholar Arthur Berriedale Keith comments in *A History of Sanskrit Literature*:

It is difficult to praise too highly either the brilliance of the description of the cloud's progress or the pathos of the picture of the wife sorrowful and alone. Indian criticism has ranked it highest among Kalidasa's poems for brevity of

expression, richness of content, and power to elicit sentiment, and the praise is not undeserved.

Similar praise abounds for Kalidasa's *Sakuntala*, as critics continue to praise his language for its clarity, his imagery for its power, and his verse for its perfection.

Kama Sutra (Kamasutra, Kama-sutra)

(fourth century) *scriptural manual*

The *Kama Sutra* is an Indian text, written in Sanskrit, which provides a prescriptive set of instructions elevating the pursuit of pleasure to an art. Hindus of the fourth century, when the *Kama Sutra* was composed, believed that a properly fulfilling life required balanced attention to three areas: religious piety or duty (dharma), material provisions or success (*artha*), and sensual pleasure (*kama*). Complementing other Hindu texts that provided instruction in the first two areas, the *Kama Sutra*, or "pleasure treatise," advised readers on how to maximize their enjoyment of the sensual pleasures of

life, in everything from home furnishing to interpersonal relationships.

The original author of the *Kama Sutra* was Vatsyayana Mallanga, about whom nothing is known outside of what the text reveals. He appears to have been a Brahman, a member of the priest caste, who resided in the city of Pataliputra in southern India during the Gupta era when Indian arts, culture, and literature were flourishing. In his text, Vatsyayana claims he compiled the *Kama Sutra* for two main reasons: first to ensure the survival of works on the subject, and second to cater to the needs of circles of educated and refined connoisseurs who would appreciate good poetry. He also claims that he wrote the work “in chastity and highest meditation,” which may mean that ancient Hindus cultivated the pursuit of pleasure as sincerely as they practiced religious devotion. The number of serious passages in the text suggests that, unlike OVID’s *Art of Love* (ca. 1 B.C.), Vatsyayana expected readers to put weight on his advice and regard the pursuit of love and pleasure as an important aspect of human life.

Being born into the priestly caste, Vatsyayana would have received a brahminical education, which included knowledge of the teachings of the Vedas and the grammatical structure of the Sanskrit language. He cites earlier sages and works who have treated the topic of love, but Vatsyayana’s is the first work to offer a comprehensive guide to living the sensual life. Though a precise date of composition cannot be safely ascribed to the *Kama Sutra*, the classical poet Subandhu, who lived in the court of the Gupta monarch Chandragupta II during the fourth century, mentions the *Kama Sutra* in his own work.

The first extant commentary on the *Kama Sutra* was written in the 12th century by the Indian scholar Yasodhara, which began a tradition of translation and interpretation continuing up to the present time. Narsingha Shastra wrote a commentary called the *Sutra Vritti* in the 18th century. The work of contemporary Hindi scholar Devadatta Shastri puts the *Kama Sutra* in the context of a continuing Indian literary tradition and also presents

a new assessment and interpretation of the concept of *kama*.

Critical Analysis

Complementing the *Artha Shastra* and the *Dharma Shastra*, to which it makes frequent reference, the *Kama Sutra*, in the words of translator Alain Daniélou, offers “a picture of the art of living for the civilized and refined citizen, competing in the sphere of love, eroticism, and the pleasures of life.” The text of the *Kama Sutra* is divided into seven books, which together address all aspects of a man’s adult life.

The target audience of the work includes both the *rasikas* (connoisseurs) within the Gupta ruler’s court and the city dwellers, or *nagaraka*, a class of men who possess both the wealth and leisure to cultivate artistic pursuits. As Book 1 makes clear, one must possess all the conveniences and facilities of a *nagaraka* to properly enjoy sensual pursuits. The author recommends establishing a pleasant home within the confines of a city and equipping its spacious rooms with comfortable beds, garden access, and plenty of fresh flowers. Vatsyayana’s ideal city may be his native Pataliputra, but he refers to other cities in India, including Gandhara and Bactria. In these details, as well as in the rules of etiquette discussed throughout the text, the *Kama Sutra* offers a useful source of information on the culture of Indian cities during the first century.

Book 2, which contains a discussion of recommended sexual techniques, is undoubtedly the most-translated and the reason the *Kama Sutra* is frequently, but erroneously, thought to be exclusively and explicitly a sex manual. Books 3 through 7 go on to advise young men on how to approach virgins, how to marry and establish their own households, and how to conduct extramarital affairs and seduce other men’s wives. Book 6 discusses the patronage of courtesans, and Book 7 addresses the aging man’s anxieties about how to preserve his attractiveness and his libido.

Throughout, the *Kama Sutra*’s advice reveals the standards and habits of conduct for men and women of various classes. Some of the advice

seems surprisingly progressive; for example, the text makes reference to same-sex relationships and acknowledges the existence of variant groups later marginalized in many societies. In fact, according to Vatsyayana, male homosexual prostitutes are people to know in Indian society; they symbolize good luck and should be invited to weddings to bestow good fortune on the newlyweds. Courtesans, too, are considered essential members of an urban society. The courtesans were themselves art lovers, or *rasikas*, who perfected techniques of music and dance. A number of these courtesans fulfilled religious roles as temple dancers.

The *Kama Sutra*, though directed at men, acknowledges that women can be equal participants in erotic activities and equally capable of sexual pleasure. For example, Books 3 and 4 contain information instructing women on how to attract men and how to be good wives. It tells a wife how to keep her husband happy, and how to deal with his infidelity, recommending that she scold him both when they are alone and in company. At the same time, the *Kama Sutra* contains instructions that some readers may find objectionable. If a young girl is too resistant to advances, for instance, the text recommends getting her drunk and then taking advantage of her. Also, while it presumes that a good wife is faithful, the attention devoted to discussing extramarital affairs suggests that many wives were not.

Overall, the main purpose of the *Kama Sutra* is to explain how supreme enjoyment of the divine can be achieved through the successful blending of eroticism and mysticism. It therefore serves as both a popular manual on erotic practices and as a sacred text. In later periods of Indian history, the pursuit of pleasure was relegated to a lesser status in the context of Hindu life. However, sections of the *Kama Sutra* continued to be used as a text in Indian schools, though with much of the erotic material excised. Certain later commentaries inserted concepts such as *suttee*, the requirement that a widow cast herself on her dead husband's funeral pyre, into a text originally free of these ideas.

The great popularity of the *Kama Sutra* in the Western world rested for a long time on its misin-

terpretation as a pornographic text. Victorian adventurer Sir Richard Burton obtained and published an English translation of the *Kama Sutra* in 1883. Burton's version focused on the erotic material, largely ignoring the spiritual seriousness of the advice, which reflected the tendencies of Burton's own society to limit the agency of and deny the capacity for sexual pleasure to women. More recent translations, such as the one undertaken by Professor Wendy Doniger, attempt to do justice to the original work. In Doniger's words, the *Kama Sutra* reflects a time "when the erotic was associated with all that was bright, shining and beautiful in the ordinary world." For this reason, its appeal is universal; as Daniélou observes, "the *Kama Sutra* retains a surprising topicality. It is a breviary of love valid for all times and places."

Kamo no Chomei (ca. 1155–1216) poet, essayist

Kamo no Chomei was born into a family of Shinto priests in Kyoto, Japan, during the late Heian period (794–1192). In the 1170s and 1180s, political power shifted from the court at Kyoto to the newly established shogunate (military government) in Kamakura. During Kamo's youth, inept and inefficient governance in the capital resulted in the mismanagement of various natural disasters that

struck Kyoto. Kamo lived through a huge fire, a tornado, an earthquake, and lingering famine and pestilence that the government could not seem to eradicate. The famine of 1181 killed more than 42,300 people in just two months, and Kamo was an astute and horrified observer of these disasters and their effects. As he remarks in his essay *Hojoki*, “I have seen not a few strange happenings.”

As a poet, Kamo showed talent at a young age and eventually was named to the Imperial Poetry Bureau by the retired emperor. The bureau was made up of Japan’s leading poets, and Kamo quickly found his place among them. Eventually, however, disgusted with life in the city and exhausted by the overwhelming disasters, he moved into the wooded mountains, where he set up a new life in a small, isolated hut. There, at age 60, he produced his masterpiece, an essay account of the events of his youth and his subsequent retreat to isolation. In poetic detail, he describes his solitary life, writing that “the hut in which I shall spend the last remaining years of my dew-like existence, is like the shelter that some hunter might build for a night’s lodging in the hills, or like the cocoon some old silkworm might spin.” The work, called *Hojoki* (*An Account of My Hut*), is recognized as a masterpiece of the Japanese essay tradition and is one of the earliest examples of literature as conscience.

In *Hojoki*, Kamo describes the horrific sights and smells of famine in detail, tells of the other disasters he lived through, and then extols the virtues of solitude and isolation. He finds the serenity of his life favorable to the turbulence of city life, preferring his quiet days of chores and walks to the human misery he encountered in the past. At the end of the work, however, he questions his own sanity, wondering whether he has not grown too attached to detachment in the world he has cultivated.

Kamo also wrote the *Heike Monogatari*, a story of the rise and fall of the Heike clan of Japan, which was the most dramatic such political epic in the history of the empire. In the story, the chaos brought on by the Heike clan’s decline is the background to Kamo no Chomei’s fraught life. His sentiment is genuine as he describes the clan’s tragic end; de-

feated by the Minomoto clan, the leaders of the Heike throw themselves into the sea to drown.

By confronting the horrors of his past while cultivating a contented yet reclusive life, Kamo no Chomei addresses the universal human concerns of suffering, moral reflection, and recovery.

Kebra Nagast Chronicles (The Book of the Glory of the Kings of Ethiopia) (13th century) *chronicle*

The *Kebra Nagast Chronicles* contain the history of the origins of the line of Ethiopian kings who claimed descent from Solomon. The text is widely perceived to be the authority on the history of the conversion of the Ethiopians from their indigenous, animistic worship to Christianity.

The book opens with the origins of the Christian religion, beginning with the decision of the Trinity to make Adam. It asserts that the Trinity lived in Zion, the Tabernacle of the Law of God. The foremost purpose of the *Chronicles* is to legitimize the authority of the Solomon line of the Ethiopian kings. They were credited with the bringing of Christianity to the eastern kingdom of Ethiopia, or Axum, as it was known in those days. The text suggests that Christ descended from Solomon. The main theme deals with the legendary relationship between Queen Makeda of Sheba and King Solomon of Jerusalem.

The *Chronicles* describes Makeda as a beautiful, intelligent, and wealthy queen who lives in the southern regions of the African continent. She desires to meet King Solomon after hearing about his power and wisdom. Makeda leaves her kingdom and travels to Jerusalem, where she is won over by the king's wisdom and his staunch faith. She decides that her descendants will abandon their worship of the sun and adopt Christianity as their new religion. After frequent visits with the king, Makeda eventually sends a message informing Solomon of her impending return to her country. The king invites her to a banquet and requests that the queen spend the night on his couch. Makeda agrees on the condition that the king promises not to take her by force. In return, she grants Solomon's request not to take anything that is in his house. The richness of the meats of the banquet unfortunately made the queen extremely thirsty, and when she seizes a vessel of water to drink, the king surprises her by accusing her of breaking her promise. Unable to suppress her thirst, Makeda agrees to sleep with Solomon, and from their union springs a line of Ethiopian kings.

The *Kebrā Nagast Chronicles* became known to the Western world through European excursions into Africa during the 16th century. Many sources indicate that P. N. Godinho (a traveler, historiographer, or writer) was probably the first European to publish accounts of King Solomon and his son, Menyelek, in the first quarter of the 16th century. In the following century, Baltazar Teitez (1595–1675), author of the *Historia General de Etiopia Alta* (1660), incorporated stories from the *Chronicles* into his text. Later authors, including Alfonso Mendez and Jerónimo Lobo (1595–1678), used information from the *Kebrā Nagast* in their histories. The most complete and possibly least-known of the translations is the *History of the Kings of Ethiopia* by Enrique Cornelio Agrippa, published in 1528. Manuel Almeida (1580–1646), a Jesuit priest who went to Ethiopia as a missionary, learned about the *Kebrā Nagast* and translated the chronicles in his *History of Ethiopia*.

The original text remained unknown until explorer James Bruce's travels to Ethiopia near the close of the 18th century. Bruce (1730–94), who went to Ethiopia in search of the Nile, received several valuable Ethiopian manuscripts from King Takia Haymanot of Gondar. Among these was a copy of the *Kebrā Nagast*. The third volume of Bruce's *Travels in Search of the Sources of the Nile* (1790) contained a detailed description of the contents of the original text. The documents obtained during Bruce's expeditions now reside in the Bodleian Library at Oxford University.

The various versions of the *Kebrā Nagast* and generations of copying and recopying by scribes have made the task of dating and ascertaining the identity of the compilers exceedingly difficult. Scholars such as Almeida and E. A. Wallis Budge were nonetheless fully aware of the value of this text. As Budge writes in his preface to his translation, "This work has been held in peculiar honour in Abyssinia for several centuries, and throughout that country it has been, and still is, venerated by the people as containing the final proof of their descent from the Hebrew Patriarchs, and of the kinship of their kings of the Solomonic line with Christ, the son of God."

Khansā', al- (Tumadir bint 'Amr ibn al-Hārith ibn ash-Sharīd al-Khansā') (575–ca. 645) *poet*

Al-Khansā', whose name means "the snub-nose" or gazelle, is the foremost exponent of the Arabic *ritha*,

or funeral elegy. She is also considered perhaps the greatest female Arabic poet of the classical period (ancient and medieval).

Few biographical details are known about al-Khansā' apart from her six children and unhappy marriage. She was born a pagan but converted to Islam, traveling to Medina with tribesmen to meet MUHAMMAD. Her brothers Sakhr and Mu'awiya were killed in different tribal battles early in her life. Lamenting these losses and demanding revenge from her Banu Sulaym tribesmen became her chief poetic themes, as can be seen in the poem "The Dust Is Blown Over His Beauties."

The *ritha* was a particularly important genre in pre-Islamic Arabic poetry, which generally celebrated military prowess and courage. Most of these dirges were written by women, and Al-Khansā' was the first to render these themes in exalted literary meters and rhymes.

Contemporary and later poets celebrated Al-Khansā's passion and intensity. She would recite her poetry as if in a trance, adding great emotional impact:

*To the pool that all men shun in awe
you have gone, my brother, free of blame,
as the panther goes to his fight, his last,
bare fangs and claws his only defense.*

(from "For Her Brother")

Al-Khansā' reputedly won a competition in the annual gathering of poets at the 'Ukaz market, and so impressed was Muhammad with her recitation that he made her repeat several lines over and over. As a result of the quality of her work, Muhammad's appreciation, and her own passion for poetry, al-Khansā' became a much-imitated model for later generations of Arabic women poets.

Ki no Tsurayuki (ca. 872–946) poet, travel writer, literary theorist

Ki no Tsurayuki was born to a prominent family in Japan. Little is known of his personal life, but Tsurayuki served as a government official and librarian of the Imperial Records Office in the early 10th century. Between 902 and 905, he was asked by the Imperial Court to compile a collection of Japanese poetry, the *Kokinshu*, or *Collection of Old and New Japanese Poems*. He was also given the task of writing the Japanese preface to the collection, in which he provided an explanation of how to criticize poetry. Believing that the artistic value of poetry lay in its effect on the emotions, he wrote: "It is poetry which, without effort, moves heaven and earth, stirs the feelings of the invisible gods and spirits, smooths the relations of men and women, and calms the hearts of fierce warriors."

Tsurayuki was himself a first-rate poet. His collection *Tsurayuki Shu* appeared first with 700 poems, and in a second version containing 900 poems. Translator William Porter says his poetry is distinguished by "artless simplicity and quiet humor." In addition, he wrote a travel book, *Tosa nikki*, or *The Tosa Diary*, (935), in which he relates the details of a journey that he took from Tosa to Kyoto in 934. *The Tosa Diary* ranks among the Japanese classics, and is valued as a model for composition in native Japanese style. The *Diary* introduced a significant development into Japanese literature because Tsurayuki wrote this work, as he had the preface to *Kokinshu*, in the phonetic *kana* syllabary, rather than in Chinese characters. The use of phonetic characters was considered "women's language," as opposed to the ideographic characters that constituted the "men's language;"

therefore, in the *Diary*, Tsurayuki writes from the point of view of a woman character and refers to himself in the third person. Altogether, Tsurayuki's brilliant prose and poetry rank him among the greatest of Japanese writers of the early Heian period (794–1185).

Kojiki (712) *historical and literary compilation*
The *Kojiki*—literally Record of Ancient Things—was compiled by Ō no Yasumaro. At the behest of Japan's Emperor Temmu, Yasumaro put together a history of Japan's emperors, ceremonies, mythology, magical practices, and legends. The subject matter of the *Kojiki*, already considered ancient history by the eighth century, became the official sourcebook of Japanese culture and customs for future generations. The process of compiling the records took many years, and Temmu died before the *Kojiki* was completed. Empress Gemmei, his niece and daughter-in-law, urged Yasumaro to complete the collection, and he presented the finished books to her in 712.

The *Kojiki* also contains 111 songs that are among the oldest recorded in the Japanese language, many of them describing scenes of hunting, fishing, farming, and other humble activities. Several texts and songs in the *Kojiki* recount the adventures of the legend of Jimmu,

an invading god/emperor, the gods who came before him, and the Mikados who came after him. All of this also appears in the *Nihon shoki*, although that work reflects a heavy Chinese influence. The first English translation of the *Kojiki* was undertaken by B. H. Chamberlain and published in 1882.

The *Kojiki* is the oldest extant book in the Japanese language, and because of its references to the origins of the imperial and leading families of Japan, it serves not only as a source for the beginnings of Japan as a nation but also, as translator Donald Philippi observes, as “a compilation of myths, historical and pseudo-historical narratives and legends, songs, anecdotes, folk etymologies, and genealogies.” The *Kojiki*, written before the influence of the Chinese, and the *Nihon shoki*, which was completed in 720, serve as sacred texts in the Shinto religion.

Koran (Qur'an) (ca. 610–632) *sacred scripture of Islam*

Muslims believe that the Koran (or Qur'an, Arabic for "recitation") is the word of God as revealed to MUHAMMAD in a process that began in the year 610, during the month of Ramadan, when the angel Gabriel called out to him and commanded him to "recite in the name of the Lord." For more than 20 years, until his death in 622, Muhammad continued to receive further revelations when in a trance-like state, and he would then convey the words to his followers. Each revelation eventually became part of a *surah*, or chapter, in the Koran.

After the prophet's death, different versions and arrangements of the *surahs* began to spread across the expanding Muslim realm. To counteract this trend, Muhammad's secretary, Zayd Ibn Thabit, collected all the written fragments he could find and recorded the recollections of those "reciters" who had memorized parts of Muhammad's visions.

Together with other scholars, Zayd produced an authoritative text sometime during the reign of the Caliph 'Uthman (ruled 644–56). This text is the basis of all subsequent editions of the Koran and is recognized by all Muslims, regardless of doctrinal differences.

Muslims often refer to the Koran as the "Arabic Koran (Recitation)." It is considered impossible to translate and impious even to try. Thus, non-Arab Muslims use the Arabic original for prayer, recitation, and study. When Muslims render the text into other languages, it is considered a paraphrase or interpretation.

The written Koran has always been intended for reading aloud, following carefully preserved traditions of pronunciation and emphasis. In this way, difficult Arabic passages can be made accessible. Translators of the Koran will generally add additional wording to preserve the meaning.

Printed editions of the Koran appeared in Europe from the Renaissance on, first in Arabic and then in European languages. Eventually, critical editions were published in Europe in which the text was often rearranged and "corrected" in light

of modern linguistic and historical research. Scholarly but strictly orthodox Arabic versions also appeared in the 20th century.

Critical Analysis

Muslims consider the classical Arabic of the Koran to be the very standard of purity, grammar, and diction. Nearly all the vocabulary is of Arabic origin, although some words appear to scholars to be derived from Greek, Aramaic, and Hebrew.

There are also several different styles of writing in the Koran. Many of the short, earlier verses are written in the clipped rhymed prose of the *kahins*, or pagan priests. Other verses in the *khatib* style have the flavor of sermons, while still others follow the style of stories or dramatic poetry. Finally, many of the legal rulings follow the format of treaties or agreements.

Most of the verses appear to be spoken by God. Many of those spoken by Muhammad begin with the command, "Say," often when the prophet is being instructed to answer questioners or doubters.

English-language prose versions of the Koran run to about 400 pages. The content is divided into 114 chapters. Some chapters correspond to individual revelations, while others are composites that Muhammad himself assembled from shorter revelations.

In the standard text, the chapters are presented roughly in size order, rather than following a chronology or thematic plan. The longer chapters appear near the beginning, even though many of them date from the last years of the prophet's life. For example, following a brief introductory chapter invoking God's guidance, Chapter 2 has 286 verses, while the final 10 chapters range from three to seven verses each.

The verses themselves (*ayat* in Arabic) vary greatly in length. Many of them, especially in the shorter chapters, consist of one brief line, while the longer verses run the length of a full paragraph.

The title of each chapter is taken from its text but does not necessarily describe the chapter as a whole. Beneath the title is an indication of whether

the *surah* was revealed at Mecca or Medina, followed by the number of verses the chapter contains. All but one chapter continues with the standard invocation, "In the name of Allah (God), the Compassionate, the Merciful." Finally comes the text itself, except for 29 chapters that precede the text with some stand-alone letters whose mystical significance is not known.

In terms of content, the main theme of the Koran is that the world was created and is ruled by a single all-powerful and merciful God, who demands both faith and righteousness. Failure to obey will result in punishment on the Day of Judgment, when evildoers will be sent to hell and the righteous to heaven.

The Koran says that God, to instruct human beings in proper faith and conduct, sent a series of prophets at different times and to different peoples, all with the same essential teaching. The last prophet was Muhammad, who was sent to the Arabs in particular and to the entire world.

Among the Old Testament characters found in the Koran are Adam and Eve; Cain and Abel; Abraham, Isaac, Ishmael, and Jacob; Joseph and his brothers; Moses and Aaron; David and Solomon; Job; and Jonah. The most important of these figures are Moses, who freed the Israelites from Egypt and led them to the Promised Land, and Abraham. The Koran praises Abraham as the first man to abandon idol-worship. It also credits him with building the sacred Ka'bah shrine in Mecca, which Muhammad later designated as the holiest site in Islam. Interestingly, the Koran considers Ishmael, the ancestor of the Arabs, to be Abraham's heir, while the Hebrew BIBLE attributes that role to Isaac, the ancestor of the Jews.

The Koran also contains many references to Jesus, who is revered as a prophet and miracle worker, and Mary, but the Koran rejects the Christian concept of the Trinity and denies that Jesus was crucified.

Many of the later chapters of the Koran (which appear earlier in the standard text) deal with laws and society. These chapters have been carefully studied by generations of Muslim legal scholars

and form the basis of much Islamic law. Among the topics treated are the laws of prayer, purification, fasting, and pilgrimage; almsgiving and respect for the poor; theft, violence, and revenge; the distribution of spoils when fighting nonbelievers; usury, debts, and inheritance; food and drink; marriage; and the role of women.

Muslims consider the Koran to be the miraculous, infallible, primary source for all basic legal and religious doctrines. The Koran we know is said to be a reflection of a divine, uncreated Koran that has always existed. Because of the crucial importance of every word in the text, many schools of interpretation (*tafsir*) have arisen over the centuries, using a variety of approaches. The earliest interpreters actually created the science of Arabic linguistics to fix the exact meaning of the text. They pored over every word and studied other contemporary and earlier Arabic writings for clues to meaning, even studying pagan poetry.

Scholars collected and commented on the vast body of *hadith*, the traditions about the life and sayings of Muhammad not found in the Koran, hoping to clarify the meaning of disputed passages. Each of the many theological camps within medieval Islam produced its own interpretation, and mystics from the Sufi tradition wrote allegories as an aid to understanding the Koran.

In the 19th century, European scholars began to approach the Koran with the linguistic and historical tools developed in the critical study of the Hebrew and Christian Bibles. They challenged the authenticity of some of the *surahs* (chapters) and published editions that rearranged the material in a more chronological fashion.

In recent decades, some academic specialists have gone further. They claim that parts of the Koran were written perhaps a century later than the date of Muhammad's death. They also speculate that the Koran was largely composed in Syria and Palestine. Other secular scholars dispute these conclusions.

To date, very few Muslim scholars have shown an interest in such speculation, for the historical validity and divine origin of the entire book

remains a matter of faith for nearly all Muslims. Researchers and critics have compared the Koran to both the Hebrew Bible (noting differences between the two texts) and the Hebrew *midrash*, folktales and sermons that were recorded in the centuries after the Bible was completed (noting similarities). Regardless of ongoing scholarship and debate, one fact remains true: The Koran has had a profound influence on all subsequent Arabic literature and continues to influence contemporary religion, culture, and literature.

L

Labid (Diwan Labid ibn Rabi'a al-'Amiri)
(ca. 560–661) *poet*

Labid, the son of a celebrated philanthropist, Rabi'a, was born into a prominent family in the 'Amir tribe in central Arabia. As a teenager, he made his name at the court of the Lakhmid king, a famous patron of poetry. He was said to have converted to Islam while visiting Medina and after hearing Muhammad recite verses from the KORAN. His own poems display a deep religious feeling, but there is speculation among scholars that he abandoned poetry after his conversion.

Labid's brother Arbad was killed by lightning, inspiring a very famous elegy, "The Deserted Camp," in which Labid philosophically laments the futility of human existence and the difficulties of old age: "Man is but a little flame. A little while after it has risen into the air, it turns to ashes."

One of Labid's longer poems was later included in the *Mu'allaqāt* (The Seven Odes), an anthology of major pre-Islamic poems collected in the late eighth century. While Labid's odes follow the traditional format, he is noted for his vivid animal descriptions and intense celebration of his tribe's noble qualities and traditional customs and laws. He calls his tribesmen "generous, assisting liberality, gentlemanly, winning and plundering precious prize, sprung of a stock whose fathers laid down a

code for them." Labid was among the prominent pagan poets who converted to Islam, and his poems celebrate the Bedouin values that served as models for later Muslim poets.

Laozi (Lao Tzu, Master Lao, Li Erh) (sixth century B.C.) *philosopher, essayist*

Laozi was born in the Quren (Ch'ü-Jen) hamlet of Li village in the state of Chu. There is no information on his life and exploits, as there exists no comprehensive or even brief description of Laozi's life other than that found in Sima Qian's (Ssu-ma Chien's) works and a few other isolated statements in historical documents of the Chu and Zhou (Chou) states.

There are, however, legends and traditions associated with Laozi. According to one legend, he lived in the state of Zhou for a long time as the keeper of the imperial archives. Disappointed with the decline, constant chaos, and disorder of the state, he saddled a water buffalo and set off for the West.

Sima Qian's brief biography of this old sage contains two interesting facts. The first pertains to a meeting between Laozi and CONFUCIUS during which Confucius asks Laozi to instruct him in the performing of ancestral rites, then chastises and rejects him for his ignorance. This episode of the meeting between the two philosophers set the basis for a philosophical rivalry that was perpetuated by their followers. The second fact relates Laozi's westward journey through a mountain pass. According to Sima Qian, the keeper of the pass pleaded with the old man to write a book. Laozi did, and the book became known as the *Daodejing* (*Tao Te Ching*), Laozi's definitive work. Based on the *Daodejing*, most scholars consider Laozi to be the founder of Daoism (Taoism), an important school of thought in China and Chinese-influenced areas.

One of the basic concepts of Laozi's teachings is *wuwei*, which means "no excessive action." This has often been misinterpreted to mean passivity, but Laozi emphasized nonaction as the most effective form of action because he believed that if people are immersed in activity, they will become one with the act, rather than becoming bored or restless and looking for something else to do or forcing acceptance. The emphasis of nonaction is on softness, endurance, and adaptability. As Laozi explains in the *Daodejing*:

*Less and less do you need to force things,
until finally you arrive at non-action.
When nothing is done,
nothing is left undone.*

In spite of Laozi's teachings of *wuwei*, he was at times dissatisfied with his wandering lifestyle:

*I alone am inert, showing no sign of desires,
like an infant that has not yet smiled.*

*Wearied, indeed, I seem to be without a
home.
The multitude all possess more than
enough,
I alone seem to have lost all . . .
Common folks are indeed brilliant;
I alone seem to be in the dark.*

The *Daodejing*'s importance has not diminished with time. It has had a deep influence on Chinese culture, thought, and literature throughout history, and it is one of the most widely read books in both China and the world. In English alone, there exist well over 30 translations. Not only does the *Daodejing* embody and reflect the variety of teachings and ideology that emerged during the chaotic period of the Warring States (402–221 B.C.), it also exemplifies the literary creativity of what is often perceived as the Golden Age of Chinese philosophical thought.

Critical Analysis

The key idea in Laozi's text is the *Dao* (referred to as both "the way" and "the One"):

*The way that can be spoken of
Is not the constant way.
.....
The valley in virtue of the One is full;
The myriad creatures in virtue of the One
are alive;
Lords and princes in virtue of the One be-
come leaders
in the empire.
It is the One that makes these what they
are.*

Laozi saw the *Dao* as the essence, or foundation, for the creation and preservation of the universe. The idea of the *Dao* as the creator of the universe deviates from the traditional Chinese concept of Heaven, or *Tien*, as the entity that created the universe.

The central idea of the *Daodejing* is simple: Human beings should model their lives on the *Dao*. Whether people are rulers of nations or peas-

ants working in fields, they must first and foremost survive. According to Laozi, it is submissiveness that enables people to live life most efficiently. The *de* element of Laozi's philosophy, which refers to "virtue," constitutes the manner in which a person must live according to the *Dao*.

There are, however, some contradictions within the *Daodejing*. For example, Laozi believed people became enlightened when they learned to accept life as it is. Yet he states at one point in the text, "The reason I have great trouble is that I have a body. When I no longer have a body, what trouble have I?" This idea of transcending the limits of corporeal form hints at the influence of Hindu-Buddhist ideology and repudiates to some extent the Daoist belief in nonaction.

In another part of the *Daodejing*, Laozi comments on the balance of opposition:

Thus Something and Nothing produce each other;
The difficult and the easy complement each other;
The long and the short off-set each other;
The high and the low incline towards each other;
Note and sound harmonize each other;
Before and after follow each other.

As explained in the passage, what is high is determined by its opposite, which is low. If either one is removed, the other cannot exist in isolation. Therefore, perhaps Laozi's comment on transcending life balances the realities of life with dreams, for what person does not dream beyond their real abilities?

This balance is most clearly revealed in the *Daodejing*'s themes: the mundane and worldly concerns of human life and mysticism. Laozi clearly presents these themes in two distinct types of passages. The first concerns cosmogony and the origins of the universe. A common metaphor that he uses in these passages is the womb. Just as living beings emerge from a mother's womb, so is the

universe born from the womb of what Laozi refers to as the "mysterious female":

The spirit of the valley never dies.
This is called the mysterious female.
The gateway of the mysterious female
Is called the root of heaven and earth. . . .

The second type of passage details the actions and practices of the individual. Laozi uses the image of a newly born baby to represent a being that is submissive, weak, and helpless. The baby's frailty and innocence has the power to cause adults to care for it. Ironically, this frailty symbolizes strength, and this, Laozi suggests, is the ideal form of human virtue.

Laozi's descriptions of balance—nonaction as effective action, having all and nothing, everything in view of the One, submissiveness and force, acceptance versus transcendence, reality versus dream, and the worldly versus the mystical—are what have made the *Daodejing* a work for all ages and all time. As Stephen Mitchell states in the introduction to his translation of the text, "Like an Iroquois woodsman, [Laozi] left no traces. All he left us is his book: the classic manual on the art of living, written in a style of gemlike lucidity, radiant with humor and grace and large-heartedness and deep wisdom: one of the wonders of the world."

Latini, Brunetto (Brunetto Buonaccorso Latini) (ca. 1212–ca. 1294) *translator, nonfiction writer, poet*

Brunetto Latini was a native of Florence, Italy, a married man, and the father of three children. He belonged to a powerful family and enjoyed a long and distinguished public career that began in 1254. In 1260, as Manfred of Sicily threatened to invade Florence, Latini headed a diplomatic mission to seek help from Alfonso X of Spain. Unfortunately, Manfred's army conquered Florence before Latini returned home, and for the next seven years, he lived in exile in France. After Manfred died in 1266, Latini returned to his native city, where he soon resumed his political career.

In addition to his political activities, Latini worked as a teacher, training his students by having them copy translations of Pier delle VIGNE's letters. The most famous of his students was DANTE ALIGHIERI, who placed Latini (for reasons now unknown) among the Sodomites in Canto 15 of his *Inferno*.

Latini's literary works include Italian translations of works by CICERO; the *Favoletto*, a letter containing poetry about friendship; and *Tesoretto* (Little Treasure), an allegory written in rhyming couplets. Scholar Julia Bolton Holloway believes Latini composed *Tesoretto* for Spain's King Alfonso. Partially modeled on the *ROMANCE OF THE ROSE*, the poem includes scenes in which Latini meets Nature, escapes the garden of Love with OVID's help, and talks to Ptolemy. It may be the first Italian poem intended to educate more than to entertain.

Latini's most popular and enduring work, composed while he was in exile (1260–66), was *The Book of the Treasure*. Europeans of the MIDDLE AGES placed little value on originality; they viewed authors who referred to (or even copied) well-known works as more knowledgeable and authoritative.

Thus, many medieval books are essentially compilations of earlier writings. Latini's *Book of the Treasure* is just such a compilation. Holloway posits that Latini intended it to teach Charles of Anjou the proper way to govern. Other scholars speculate that the book targeted less-prominent readers who wished to advance in the world. Latini most likely intended the work to be used by learned men as a reference source, for he begins with an appeal to the wise:

This book is called the *Treasure*, for just as the lord who wishes to amass things of great value . . . puts into his treasure the most precious jewels he can gather together according to his intention, in a similar manner the body of this book is compiled out of wisdom, like the one which is extracted from all branches of philosophy in a brief summary.

Latini divides the *Treasure* into three parts. In the first part, he discusses “the nature of all things celestial and terrestrial.” It includes a history of the world, much of which comes from the BIBLE; information on astronomy and the elements; and a BESTIARY. In the second part, he discusses ethics, “what things one should do and not do,” drawing heavily on ARISTOTLE's writings. Finally, in the third section, he discusses rhetoric and city government—or, as he says, “knowing and demonstrating why one should do some things and not others.” In this section he mentions Cicero's ideas about rhetoric and describes his personal experiences as a government official.

Chapter headings of the *Treasure* include “The paths of day and night, and heat, and cold”; “How one should choose land for cultivation”; “The cetacean called whale”; “The three manners of good”; “The five parts of rhetoric”; and “Which man should be elected to be lord and governor of the city”.

Adding to the *Treasure's* authority, Latini mentions and uses information from the works of Aristotle; Cicero; PLATO; SOCRATES; SALLUST; LUCAN;

Palladius; SENECA; VIRGIL; JUVENAL; MARTIAL; HORACE; AUGUSTINE, SAINT; JEROME, SAINT; BOETHIUS, and AMBROSE, SAINT.

Translators Paul Barrette and Spurgeon Baldwin note that the *Treasure* appeared “in the very twilight of the life of such compendia,” meaning it was one of the last of its breed. Nevertheless, it enjoyed great popularity for being the first compendium to be written in a vernacular language (French) rather than in Latin and for its extravagance of information based on the classics. In their translation of the work, Barrette and Spurgeon write, “Another key to [its] special popularity seems to be associated with Brunetto’s skillfully organized plan . . . but the most compelling reason would have to be the venerable and unassailable authority of Brunetto’s sources.”

Li Bai (Li Bo, Li Po, Li Pai, Li T'ai Po) (701–762) poet

Li Bai was born in Sujab, near Lake Balkash in then-Chinese Central Asia. When he turned five years old, he was brought back to Jiangyu (Chiangyu) County in Sichuan (Szechuan), where he spent most of his boyhood and youth until he turned 18. Li Bai wrote poetry for a living, and his greatest supporters were members of the official class. He traveled extensively during his lifetime, and his easygoing personality enabled him to make

many friends wherever he went. For a brief time, Li Bai enjoyed the favor of Emperor Xuanzhong (Hsüan-tsung) and lived in the palace until his involvement in political intrigue resulted in his banishment to the southwest. He later died of sickness at Tangtu, in modern Anhui, when he was 61.

Of Li Bai’s 20,000 poems, only 1,600 survive. The main themes of his poetry are beautiful women and friendship. Some of his most moving poems deal with the sadness that results from the separation of friends. His poems also reflect the influence of the Chinese philosophy of Daoism (Taoism). An example of a poem containing Daoist imagery is “Dialogue in the Mountains,” in which Li Bai describes his love of nature:

*You ask why I dwell in the green hills
Smiling, I reply not, heart in peace.*

This otherworldliness in his poetry has gained Li Bai the title of “Poetic Immortal.” His disregard for convention reveals itself in the free style and lack of rules in the structure of his poetry.

Li Bai’s masterpieces are his *Yueh Fu*, songs, which exemplify his romantic style and celebrate his carefree spirit and his love for both wine and lovely women. His fellow poet Du Fu (Tu Fu) praised him, saying that his name would survive for 10,000 years. Translator Rewi Alley agrees, saying Li Bai “had a magic touch which took men high above the mundane affairs of life.”

Li He (Li Ho) (791–817) *poet*

Li He was born in Henan (Honan) province in central China, the son of a minor bureaucrat who was descended from a cadet branch of the ruling Tang dynasty. One story holds that he composed his first verse at age seven in honor of a visit by the famous poet HAN YU. By the time of his father's death in 805, he had acquired a considerable literary reputation. Five years later, at age 21, he arrived at the imperial capital at Chang'an to take the Confucian examinations for a prestigious career in the imperial civil service.

Li He promised to excel in the arduous literary examinations, and some historians believe the newcomer's obvious brilliance excited the envy of higher-placed yet mediocre poets. Incredibly, officials barred him from the exams because of an arcane technicality known as a "character taboo": a Chinese written character in his father's name had the same sound as a character in the title of the exam. Heartbroken and embittered, Li He accepted a menial post in the Chinese bureaucracy, but he resigned only two years later. In dire poverty, he turned to his friend Han Yu for aid in finding another position, but five years of disappointment and struggle had taken their toll. He died in Changgu (Ch'ang-ku) at age 26, supposedly summoned from this world by a heavenly messenger on a red dragon.

Literature remembers Li He as a "demon-gifted" poet who composed his later verses in a unique fashion. Each morning, he would ride through the countryside on horseback, followed by a servant boy carrying an embroidered black bag on his shoulder. As inspiration struck, he would jot down single lines at random on small strips of paper, drop the strips into the bag, and assemble a finished poem from the strips in the evening.

In contrast to the formal, concrete, and traditional styles favored by most poets of the later Tang period, Li He's dark and sensual work is characterized by its beautiful imagery, unique word choice, jarring metaphors, and, not infrequently, pessimism tinged with compassion, the last undoubtedly stemming from the poet's melancholy

life. In the words of translator David Hodges, "This poet is very much an aesthete, drawn to curious artifacts, ancient legends, beautiful women (courtesans and dancing girls), picturesque ruins and strange rites."

"Haunting" is the adjective modern scholars most often use to characterize Li He's verses. One of the most famous of these is "Song of the Jade-hunter," about an elderly jade-cutter in rural China, one of the men who daily risked their lives in conditions of great privation to procure the prized stone:

*Like the blood that wells from the cuckoo's
maw
Are the old man's tears*

Another of Li He's verses noteworthy for its imagery and metaphors is "Cold is the North," describing a river in winter:

*The Yellow Stream—all ice, so fish and
dragon died.
Tree barks, three foot—a script of frost-
cracked runes.*

A common Chinese aphorism, comparing Li He with two of his better-known and more conventional contemporaries, holds that Du Fu's (Tu Fū's) genius was that of a Confucian sage, Li Bai's of a Daoist (Taoist) immortal, and Li He's of a ghost or demon. To quote Hodges, Li He was "a poet so striking and so different that readers are still not sure what to think of him." Although he is not as famous today as several other poets of the Later Tang period, many scholars believe that the untimely and tragic death of the "Chinese Keats" deprived his nation of one of its greatest poets-to-be.

Li Qingzhao (Li Ch'ing-chao) (1083–ca. 1141) poet, nonfiction writer

Li Qingzhao, who is considered China's greatest female poet, was born in Shandong (Shantung) Province to Li Gefei (Li Ko-fei), a famous prose writer; her mother was also a poet. Being born into such a family allowed Li Qingzhao to cultivate her natural talents as a writer at a time when women were not often permitted to be educated.

At the age of 18, Li Qingzhao married Zhao Mingzheng (Chao Ming-cheng), a student at the Imperial Academy who later served in the imperial administration. During this time, Li Qingzhao was able to write poetry, acquire a vast collection of books, and, with her husband, collect antiques such as bronze vases, goblets, pots, and stone inscriptions. She also wrote a book on antiquities with her husband called *Critical-Analytical Studies of Metal and Stone Inscriptions*.

Li Qingzhao and her husband loved each other very much, and their poems to each other, vivid and sensuous, reflect their delight in the married state. In "Plum Blossoms" the poetess speaks of their love as a flower and compares the reunion with her lover to the coming of spring, saying:

*I come, my jade body fresh from the
bath . . .
Even Heaven shares our joy.*

In 1126, Zhao Mingzheng was appointed the Magistrate of Zizhuan (Tzu-chuan) in Shandong. As first lady of the province, Li Qingzhao retained her vigorous love for both poetry and the beauty of nature. Relatives told stories of how she would climb the city walls, even in the middle of a snow-storm, to gain poetic inspiration from the view of the mountains in the distance. Then tragedy struck in 1127, when the city was invaded by the Jin (Chin), a tribe of barbarians from the north, who burned Li Qingzhao's home, including her 10 rooms of books. When her beloved husband fell ill and died, her poetry acquired a tone of terrible sadness. In "Remorse," the narrator wanders in a dark room, looking at the rain, and says in her grief:

*Every fiber of my soft heart
Turns to a thousand strands of sorrow.*

Even after she remarried, Qingzhao wrote poetry to her first husband that expressed her loss and her longing, as in "Boat of Stars," where she writes:

*. . . since you've gone
even the wine has lost its flavor.*

Several of her poems lament the passing of time, as in "The Washing Stream," with its tone of wistful sadness:

*The pear blossoms fade and die
and I can't keep them from falling.*

Poetry of Li Qingzhao's time was largely set to music, and the manuscripts of her poems contain directions for the tune to which each poem is to be performed. The work of her mature years lack the patriotic fire of some earlier poems, but they still reflect her continued sense of the beautiful and the artistic. Often her later poems contain a haunting sense of exile and loneliness, as in these lines from an untitled lyric:

*This year I am at the corner
Of the sea and the edge of Heaven.
I am old and lonely.*

Li Qingzhao was the only Chinese woman author to write in both the *shi* (*shih*) and *ci* (*tz'u*) forms of poetry, and she used a wide variety of styles and imagery. She had a great feeling for nature and lived a life filled with love and loss. Translator Sam Hamill calls her a “stylistic innovator” whose writing is “remarkable for its emotional integrity, poetry at once beautifully erotic, coyly charming, while retaining an inner tensile strength of self-assurance.” Altogether she wrote six volumes of poetry, and the 50 poems which remain in existence today are enough to justify her title as the “Empress of Song.”

Li Shangyin (Li Shang-yin) (ca. 813–858) poet

Li Shangyin was born in Zhengzhou (Cheng-chou) in southeastern China. He grew up in various cities throughout the region because his father was a government official who was often transferred to differ-

ent towns. After his father's death in 821, Li Shangyin and his mother moved back to Zhengzhou, where he was taught the Confucian classics by a scholarly uncle. Consequently he became a literary prodigy.

Despite Li Shangyin's obvious talents, in 833 he failed the government-administered literary examination, a test that identified qualified candidates for government positions. In 835, he failed the test once more, but finally passed it two years later. After his successful examination, Li obtained a position on the staff of a military leader, Wang Maoyuan. Soon after, he married one of Wang's daughters, and though he held a succession of minor government posts, he never rose to a high rank. One reason for this might have been his reputation for writing political poems, some of which may have ruffled the feathers of his superiors.

Li Shangyin's poetry also gained him the notice of the famous poet BAI JUYI. Legend has it that Bai Juyi wished to return as Li Shangyin's son after his death. Upon Bai Juyi's death in 846, Li wrote the older poet's epitaph, an indication of the high regard he had for his colleague.

Li Shangyin died relatively young, at age 45. In the years before his death, he began to study Buddhism and made many donations to temples in his area. His devoutness in his later years runs counter to his reputation, gained through his romantic poetry, as a man who had many secret love affairs. It is not known for certain, however, whether this reputation was justified. Li Shangyin's poetry ran the gamut from political commentary, as in his long poem “Written While Traveling through the Western Suburbs,” to romance, exemplified in his series of poems dedicated to a young girl he calls “Willow Branch,” who fell in love with him during one of his official assignments. Whether writing of political intrigues or love affairs, Li Shangyin remains one of the great poets of the Tang dynasty.

Livy (Titus Livius) (59 B.C.–A.D. 17) *historian*
Livy was born in the Northern Italian city of Padua and spent most of his life in Rome. His family did not belong to the influential circles of the Roman Empire, yet Livy early attracted the attention of AUGUSTUS and was invited to supervise the literary activities of the young Claudius, who later became the Roman emperor. Augustus appreciated Livy's independent and sincere mind, and he expressed his respect by giving Livy the nickname "Pompeian."

At a young age, Livy started his work entitled *The History of Rome from Its Foundation*, a history of the Romans from ancient times to his day. Initially, he published his writing in units of five books, the length of which was determined by the size of the ancient papyrus roll. With time, however, his work became more complex; Livy abandoned the symmetrical pattern and wrote 142 books. Books 11–20 and 46–142 have been lost; they are known mostly from surviving summaries. Letters from Livy to statesman PLINY THE YOUNGER reflect the historian's doubts about his work and his fears that the scope of the undertaking was too huge. However, the work turned out to be so fascinating that he continued writing. As a result, he became famous and was deeply respected throughout the Roman Empire.

What attracted contemporary readers to Livy's work was the way he explained history. Unlike his predecessors, who were entangled in political battles that affected what they wrote, Livy saw history in more personal, moral terms. This tendency to step away from the politics and concentrate on moral values was characteristic of Augustus's rule. Through legislation and propaganda, Augustus tried to strengthen moral ideals. Such prominent figures as HORACE and VIRGIL wrote poetry stressing the same message—that moral qualities make the Roman Empire great and allow Rome and its citizens to retain their power. Ironically, the Italian

historian Niccolò Machiavelli (1429–1527), who was known for his deceit in diplomatic negotiations, wrote an in-depth analysis of Livy's *History*, titled *Discourses on Livy* (1551), in which he espouses the ideals of an autocratic government made effective only by conflict, rather than stability—a far cry from the morality Livy discusses.

In addition to his contributions to the moral ideals of the Roman Empire at the time, Livy also affected the use of Latin as the language of writing. The earliest Romans wrote in Greek, which was considered the language of culture. Therefore, Latin had formed no appropriate style for the recording of history. Livy filled this void. In his *History*, he developed a varied and flexible style that the ancient critic QUINTILIAN described as "milky richness."

By contemporary standards, Livy can hardly be considered a serious scholar. His history is more personal than "formal," and some of the information he includes in *History* can hardly be considered faultlessly accurate. In addition, he borrows greatly from Virgil's *Aeneid*, giving his work almost a fictional aspect. His *History*, however, tells much about the moral values and attitudes of the Romans: who they were and what they thought of themselves and the rest of the world in the first century. The *History* became a classic in Livy's own lifetime and exercised a profound influence on the style and philosophy of historical writing down to the 18th century.

Longinus (ca. A.D. first century) *rhetorician, literary critic*

Very little is known about the Greek writer called Longinus. His writings describe early travels with his parents, which he said enlarged his mind and diversified his experience. He studied humanities and philosophy and was well acquainted with the genius and spirit of Greek literature. Eventually he established residence in Athens, a seat of learning in the world of ancient Greece. One tradition identifies him with the third-century Cassius Longinus, described in PORPHYRY's *Life of Plotinus* (see PLOTINUS) who was hired by Queen Zenobia to educate her children. When she was defeated by Emperor Aurelian, she and Longinus fled but were captured, and Longinus was executed. For centuries this commonly held but possibly inaccurate belief cast a heroic glow on the man otherwise established as an important literary critic. The majority of scholars place him in the first century, but most modern researchers recognize that it is now next to impossible to identify the real man. If he indeed lived in the first century, Longinus would have been contemporary with DIONYSIUS OF HALICARNASSUS, another critic of the Augustan age.

The early biographer Eunapius described Longinus as "a living library and a walking university." The scope of his learning reveals itself in his one known work, *On the Sublime*. Also known as "the Golden Treatise," this work ranks only slightly less important than the *Poetics* of ARISTOTLE in the field of literary criticism and the history of aesthetics. *On the Sublime* is also one of the earliest "how to write" manuals. Longinus defines the sublime as "an image reflected from the inward greatness of the soul."

This quality, also translated as "height," distinguishes the greatest writing and explains the impact that the most profound poetry has upon readers.

Longinus begins the treatise with an address to his friend Terentianus declaring his threefold purpose: to outline a method, to be useful to those who use the art of public speaking, and to provide a moral answer to the question: "How can we develop our natural capacities to some degree of greatness?" His scheme for recognizing and cultivating the sublime involves a combination of nature and craft. The artist must possess the ability to perceive or entertain important thoughts ("high thinking"); the ability to experience profound emotion ("high feeling"); and the command of imagery, diction, and composition that would enable the best expression of these combined thoughts and emotions. The sublime was not simply the result of natural genius, but aptitude disciplined with knowledge. Longinus wrote that "greatness, when left to itself with no help from knowledge, is rather precarious—unsupported and unballasted . . . as greatness often needs the spur, so too it needs the rein." Good fortune, he concludes, must be tempered with good judgment.

To support his points, Longinus draws examples of both successes and failures from the long tradition of Greek literature, including HOMER, HESIOD, PLATO, XENOPHON, DEMOSTHENES, and EURIPIDES. The treatise ends with a lament that materialism, moral decline, and greed are responsible for the decline in the quality of literature. This sentiment, it must be observed, was already a literary commonplace by the first century, also expressed by but not original to Plato. For Longinus the sublime was a moral as well as a stylistic ideal, and integrity was a prerequisite for great writing. Only "the man of dignity and integrity who does his duty in human society and understands his station as a citizen of the cosmos" was capable of high thought and feeling. Longinus shares this ideal with other Latin rhetoricians, including CICERO, SENECA, and QUINTILIAN.

Editor D. A. Russell observes that the work of Longinus had "an immense influence on critical

thinking” and “retains a power of immediate attraction.” Alexander Pope and Jonathan Swift, in their works of literary criticism, stressed the importance of reading Longinus’s work. The standard translation of *On the Sublime* was published by Nicolas Boileau in 1674, and subsequent readers regarded Longinus as a critic and hero in the tradition of SOCRATES and Cato. Philosophical thought focused once more on the sublime in the 18th century and the beginning of the Romantic movement in English literature. Even to the modern eye the book has a certain appeal, perhaps because, as Russell says, Longinus simply “loves literature and wants to communicate his love to others.”

Longus (third century) poet

Nothing at all is known about Longus but that he composed the first pastoral romance, titled *Daphnis and Chloë*. The Latin style of Longus’s name may suggest he was a native of Italy, but it is also possible that Longus was a *nom de plume*, or pen name. Some scholars suggest that he was born on the Aegean island of Lesbos, also home to the poet SAPPHO. The story is set there, and the author describes the setting as though he were familiar with it.

Daphnis and Chloë is a prose poem in Greek that tells the story of the love of Daphnis, a goatherd, for Chloë, a shepherdess. It combines two traditions that emerged around 300 B.C.: the development of the novel, and the pastoral tradi-

tion, which concerns the doings of simple folk in an idyllic country setting. Critics often classify *Daphnis and Chloë* as a romance or a love story of the type also written by XENOPHON and Heliodorus. The Greek novel, as developed by such writers as LUCIAN and PETRONIUS, typically featured themes of love, separation, and mutual fidelity, and the lively plots contained kidnappings, pirates, near escapes, wolves, feasts, people falling in love, trials, weddings, and grand reunions. Longus’s story incorporates all of these elements. In addition, he enlivened a genre that had come to rely on formulaic plots, stock characters, and mundane sentiment by adding irony and sophisticated humor. The story shows that Longus was familiar with the EPICS of HOMER and VIRGIL; the dramas of EURIPIDES, ARISTOPHANES, MENANDER; and even the history of THUCYDIDES. He frequently references the pantheon of Greek gods, some of whom function as characters. Though Longus likely lived at the same time as the influential Christian teachers and thinkers Origen and Clement of Alexandria, his work adheres closely to the ancient pagan tradition. Scholar William McCulloh calls *Daphnis and Chloë* “the last great creation in pagan Greek literature.”

True to pastoral convention, Daphnis and Chloë lead an idealized country life, tending their animals in the peaceful countryside. As infants, both were abandoned in the woods, taken in by animals, and finally discovered and raised by humble families. This plot device was not so far-fetched then as it seems now; it was a Greek practice to expose unwanted children on the hillside, leaving a token that could identify the infant if necessary. The young Daphnis and Chloë meet while pasturing their animals, and as it is springtime, they naturally fall in love. Enforced separations test their innocent passion in the form of accidents, rival suitors, abductions, and deceit, but throughout they remain true and devoted to each other. Their fidelity convinces the gods to intercede and arrange matters so that Daphnis and Chloë may be together. Ultimately their birth tokens reveal that both of them are the offspring of rich and upper-

class parents, so the last impediments to their marriage are removed.

Longus's *Daphnis and Chloë* has had a pervasive influence on art, music, and literature. Early manuscripts survived into the 16th century, but with missing passages. Jacques Amyot published the first print translation in French in 1559, and Angell Daye brought out an English version in 1587. In 1809 excitement stirred the world of Longus scholars when a French soldier in Italy discovered an earlier manuscript containing the missing portions, and the first complete Greek text was released in 1810. The pastoral setting used by Longus inspired later writers in the English tradition, particularly the *Arcadia* of Philip Sidney. The novels of Samuel Richardson and Henry Fielding also borrow from the pastoral ideal.

Throughout the ages the critical reception of the work has varied widely; Goethe called *Daphnis and Chloë* a masterpiece, and Elizabeth Barrett Browning referred to it as "an obscene text." But the story is no more obscene than any of the Greek romances of its kind, and more restrained than some. The author proposed to write of love as a means of both comforting and instructing his readers. In his Prologue he hopes his story will be "something to heal the sick and comfort the afflicted, to refresh the memory of those who have been in love and educate those who have not. For no one has ever escaped Love altogether, and no one ever will." Aided by the straightforward language, which retains its beauty even in translation, the story of Daphnis and Chloë continues to appeal to modern readers by its focus on that most universal and ageless of themes, the triumph of love.

Lucan (Marcus Annaeus Lucanus)

(39–65) poet

Lucan was one of the most influential writers of the *Pax Romana*, or Roman Peace. A nephew of the writer and philosopher SENECA, Lucan was born in Córdoba, Spain, and educated in Athens, where he became interested in the philosophy of Stoicism. He later moved to Rome to serve in the government of Emperor Nero. When accused of plotting against Nero, he committed suicide in A.D. 65.

During his brief life, Lucan produced many poems and became a very popular writer. He was greatly influenced by earlier Roman writers, especially LIVY and VIRGIL, and much of his poetry was written in praise of the Emperor Nero.

Lucan's most famous and only extant work is the *Pharsalia*, also called the *Civil War*, which poetically describes the civil war between CAESAR and Pompey. The 10 books of the *Pharsalia* begin with Caesar's crossing of the Rubicon and end with his exploits in Egypt. More dramatic than historical, the work is about 8,000 lines long and was left unfinished at Lucan's death. He possibly planned more books narrating the events leading to Caesar's assassination in 46 B.C.

A primary theme of the *Pharsalia* is the idea that a republican form of government is better than a monarchy. The poem portrays Caesar as an ambitious villain who seeks only personal power. The hero of the poem is the republican figure Cato, who is portrayed as fighting for Rome's freedom. Other themes of the work are horror at the idea of family members fighting against one another, dismay at the failure of the Roman Republic to live up to its potential, and despair at the collapse of cosmic order.

Though notably inaccurate in its historical details, the *Pharsalia's* dramatic appeal led readers of the MIDDLE AGES and Renaissance to place Lucian in the ranks of the classic writers he so admired, including Virgil, HOMER, and OVID.

Lucian (ca. 115–ca. 180) poet, satirist

Long after the Greek city-states had lost their independence to the might of the Roman Empire, Greek cultural and literary life continued unabated. The stability provided by Roman military and political power, along with the respect many Romans held for Greek culture, allowed Greek writers and thinkers the freedom to explore new subjects and themes. One of the men who took advantage of this was the poet Lucian.

Lucian was born in the city of Samosata in Syria, then part of the Roman Empire. He was not of a distinguished family and worked as a stonemason. Wanting more out of life, he educated himself in the areas of rhetoric and philosophy, and soon began working as a lawyer and lecturer. He also developed great interest and knowledge in the important philosophical and political issues of his time. He apparently traveled across the Roman Empire, serving as a public speaker, and finally settled in Athens.

Lucian was a satirist, always seeking to use humor to express his feelings on various subjects. He was particularly adept in his development of satiric dialogue. Like future satirists, such as Voltaire and Jonathan Swift, Lucian's writings ridicule superstitious and false philosophy. For example, in *True History* he parodies the facts of the world as expressed by early historians and poets. This fantastical tale of journeys to the moon and within a monster's belly influenced the French

satirists François Rabelais' *Pantagruel* and Cyrano de Bergerac's *Voyages to the Sun and Moon* as well as Swift's *Gulliver's Travels*.

Among the best known of Lucian's works are the *Dialogues of the Gods*. In these short pieces, Lucian uses conversations among the Olympian gods to demonstrate human folly and gullibility, with the gods themselves playing the part of the humans Lucian was trying to deride.

One of the main targets of Lucian's ridicule was organized religion. He believed that religion was merely a tool used by many to take advantage of gullible people, and he had nothing but contempt for people possessed of false religious convictions. He did not target any particular faith; rather, he criticized the use of religion as a tool to control the masses and lampooned society's inability to pursue enlightenment rather than temporal wealth and luxury. In essence, Lucian was a writer who sought to amuse his audience with his wit while also expressing his skepticism and derision. His skill made him one of the greatest writers of the Silver Age of Greek literature.

Lucretius (Titus Lucretius Carus) (ca. 99–ca. 55 B.C.) *poet*

Biographical information about Lucretius is scant, untrustworthy, and inconsistent. The translator and essayist St. JEROME wrote in the fourth century that a love potion drove Lucretius mad, that he composed his poetry in moments of clarity between bouts of insanity, that his works were improved on by CICERO, and that he committed suicide. Jerome's reportage should be approached with some skepticism, however: As a doctor of the Christian Church and the translator of the Old Testament from Hebrew to Latin and the New Testament into modern Latin, Jerome may have been motivated to discredit a man who rebelled against conventional religion.

It is known that Lucretius lived during the years that saw the demise of the great Roman republic at the hands of Julius CAESAR, accompanied by rampant decadence, corruption, and conspiracy. It is also known that he died when he was in his 40s, at the height of his poetic powers.

Further details of Lucretius's life can be assumed from fashions of the day or from details in his writings. He was very well educated and well read, with a fluency in both Greek and Latin. He may have been well traveled, too; it is suggested he had journeyed throughout Italy and to Greece, Sicily, and other parts of the eastern Mediterranean and southwest Asia. Although it is not known whether Lucretius was of noble birth, he was almost certainly integrated into aristocratic society, as was the tendency for writers of note during that era. Lucretius was familiar with the pageantry, hustle, and glamour of city living, as well as its well-designed public spaces and architectural constructions. He also knew and loved the recreational and sensuous pleasures the countryside had to offer.

Critical Analysis

Scholar Olivia Coolidge states that *De Rerum Natura*, Lucretius's only known work, is "one of the world's great poems, magnificent in its courage, and glorious in its feeling for nature." Translated as

"On the Nature of Things," or sometimes as "The Way Things Are," the poem is based on the beliefs of the Greek philosopher EPICURUS and his followers. The Epicureans believed that the world's matter is made up of atoms, that all knowledge is derived from the senses, which "we trust, first, last, and always" (*De Rerum Natura*, I.423), and that pleasure is the supreme good.

Lucretius's work, which he left unfinished, is written in hexameter verse in six segments, or books. As was the custom among the poets of his day, Lucretius begins by invoking a goddess. This is curious, however, given Lucretius's (and the Epicureans') hostility toward religious tradition. Indeed, we soon find him asserting, "religion has prompted vile and vicious acts" (I.83), giving as an example the commander in chief of the Greek army who, according to legend, sacrificed his daughter on the altar of the goddess Diana on the eve of the Trojan War. (This tale is dramatized in EURIPIDES' tragedy *Iphigenia at Aulis*.)

Most of Book I of *De Rerum Natura* concerns the theories of atoms, which Lucretius precedes with an entreaty to his readers to keep an open mind:

*Now turn attentive ears and thoughtful
mind,
by trouble undistraught, to truth and
reason;
my gifts displayed for you in loyal love
you must not scorn before you grasp their
meaning.
For I shall tell you of the highest law
of heaven and god, and show you basic
substance,
whence nature creates all things and gives
them growth,
and whither again dissolves them at their
death.
"Matter," I call it, and "creative bodies,"
and "seeds of things" . . . for with them
everything
begins.*

(I.50–61)

Being is created out of matter, Lucretius states, as a consequence of natural law, not by miracles or divine intervention. The atoms that constitute everything cannot be destroyed, only changed. Although objects seem solid to us, they are actually made up of widely dispersed, always moving atoms. Differences in atomic density account for differences in weight. Wherever atoms are absent, there is void; these are the only two forms of matter.

Book II explains that not only is pleasure, or mind-body harmony, the only true criterion of the good, but also that nature wants it for us: “[N]ature demands no favor but that pain / be sundered from the flesh, that in the mind be a sense of joy, unmixed with care and fear!” (II.17–19) Wealth, status, and power cannot benefit the soul unless they eliminate the fear of death, and they do not; only human reason can do that. Book II also discusses at greater length the ways in which atoms travel and mutate and how different shapes produce different physical sensations when we perceive them through our senses.

The fear of death is the source of almost all human ills, according to Book III, which undertakes to dispel this fear. The soul is corporeal, made of atoms like any limb or organ. The idea that the immortal (soul) and mortal (physical body) can coexist is nonsense. When the soul’s vessel, the human body, dies, the soul ceases to exist. If the soul dies, it cannot possibly suffer; so fear of death is foolish. There is no afterlife, according to Lucretius, and “Hell is right here [on earth], the work of foolish men!” (III.1023) Therefore, superstitions are a waste of time and prayers are a waste of breath.

In Book IV, Lucretius explores the mechanics of the senses and thought vis-à-vis atomic theory. For instance, we are able to see because the images release atoms that strike our eyes; sounds and speech are matter and also cause hearing via physical impact. Sounds must be matter, Lucretius argues, because it is well known that “he who speaks at length loses some weight”! (IV.541) Contrary to popular belief, echoes are not caused by supernat-

ural beings, but rather occur when sound-matter strikes a surface and is thrown back to the speaker. The atoms that cause odors are languid—they do not travel as far as sound and sight—and large, as they do not readily penetrate walls. Lucretius goes on to say that mistakes in sense perception occur because the mind has reached an erroneous conclusion, not because the organs of sense perception are faulty.

Lucretius discusses astronomical and cosmological matters in Book V. Earth came about due to the forces inherent in natural law and had nothing to do with the activities of any deities or divine beings. The celestial bodies, the sea, and the land are not made of godlike stuff, eternal and fixed; rather, the earth as we know it is a combination of atoms and void. In other words, matter cannot exist indefinitely and will one day perish.

Lucretius then provides an anthropological account of the increasing refinement of the human race, concluding:

*Navigation, agriculture, cities, laws
war, travel, clothing, and all such things else,
money, and life’s delights, from top to bottom,
poetry, painting, the cunning sculptor’s art,
the search, the trial and error of nimble minds
have taught us, inching forward, step by step.
Thus, step by step, time lays each fact before us,
and reason lifts it to the coasts of light;
for men saw one thing clarify another
till civilization reached its highest peak.*

(VI.1448–1457)

Book VI acts as a summary of sorts in which Lucretius recounts some of his previous insights. His lyricism in this book is characteristic of the work as a whole.

In the introduction to *Lucretius* (Basic Books, 1965), Donald R. Dudley states that Lucretius “is, pre-eminently, the poet of the intelligible world, of the processes which govern it, and of the intellect by which these processes are revealed.” And, according to translator Frank O. Copley, “Lucretius

saw into the hearts of individual men as they faced the immediacies of their lives. But his sympathy and understanding not of man, but of *this* man and *that* man, not of mankind, but of people, was hardly surpassed in antiquity, and perhaps has never been equaled.”

Lysias (459–380 B.C.) orator, speechwriter

Lysias was a *metic*: a resident of Athens, but not a full Athenian citizen. His family was associated with the democratic movement in Athens, and his life was deeply affected by large-scale political changes in the country. During the revolution of 404–403 B.C., for example, the Thirty Tyrants of Athens killed Lysias’s brother and confiscated the shield factory that belonged to his family. Lysias left Athens, returning only when the Thirty Tyrants had been overthrown (403 B.C.).

His brother’s murder became the motivating force for Lysias’s development as an orator. He is

partially known for his writing a defense speech for SOCRATES, when the philosopher was taken to court. Socrates rejected the speech because he wanted to defend himself, but the simple yet eloquent oration by Lysias became famous.

Indeed, it is Lysias’s simplicity, as well as his clarity of thought and purity of language that make his works profound. As an ATTIC ORATOR, he composed speeches covering a wide range of public and private issues, including citizenship, misuse of public funds, the removal of a sacred olive stump, adultery, and slander. One of his best-known speeches is *On the Murder of Eratosthenes*. Written in Lysias’s usual direct style, the speech paints a portrait of a simple-minded, naive peasant who murders Eratosthenes because he could not have acted otherwise when he caught his wife with a lover.

Against Eratosthenes is considered the best of Lysias’s 30 orations, and its success in his lifetime resulted in Lysias becoming one of the best and most highly paid Athenian speechwriters and lawyers. His works are important for the details they provide of ancient Athenian thought and culture.

Ma'arrī Abū al-'Alā', al- (Ahmad ibn 'Abd Allāh al-Ma 'arri) (973–1058) *poet, philosopher*

Al-Ma'arrī, a Syrian poet, is considered one of the key figures in the history of Arabic literature. Blind from childhood, ascetic, and skeptical, he was unwilling to participate in the Arabic poetic traditions of flattery or boasting panegyrics (praises to a patron). He toiled in seclusion for years to produce a body of technically innovative poetry, original narrative prose, and criticism that won him fame and honor both in his lifetime and beyond.

Born in Ma'arra (hence his name), al-Ma'arrī lost his sight to smallpox at age four but compensated for the loss with his phenomenal memory for books. He was educated in his home town and in nearby Aleppo. Thus began a lifelong investigation of Arabic poetics, grammar, and philology that informed many of his poems.

Al-Ma'arrī's prose and poetry reflect the pessimism and misanthropy for which he became famous. Contemptuous of all the heroic, romantic, and nostalgic themes of traditional Arabic poetry, he cultivated a tone that at times approaches despair. Ironically, despite his constant refrain that "My clothing is my shroud, my grave is my home; my life is my fate, and for me death is resurrection"

(*The Constraint of What is Not Compulsory*), he lived to a ripe old age in comfort and prosperity.

Although al-Ma'arrī's philosophic writings were obscure, perhaps to defend against charges of heresy, he appears to have disbelieved in an after-life, favored cremation of the dead, and opposed sex as sinful, even for the purpose of having children. Critics attacked his book of moral and religious admonitions, *Paragraphs and Periods*, a tour de force of rhymed prose, as a parody of and al-Ma'arrī's attempt to imitate the style of the KORAN.

After early successes as a poet and scholar, the writer spent an unsuccessful 18 months during his 30s trying to make his fortune in Baghdad. Unable to assimilate himself into the court life of the Abbasid capital, he retired in 1010 to his hometown, where he remained the rest of his life, supporting himself by teaching poetry.

Though many of al-Ma'arrī's works cited by biographers have not survived, a good deal of poetry, belles lettres, prose, and criticism remains. His most famous prose work is "The Epistle of Forgiveness" (ca. 1033), which takes the form of a letter to his friend Ibn al-Qarih and recounts the tale of al-Qarih's death and his subsequent journeys to Paradise (where he converses with famed poet AL-KHANSĀ') and hell (where he converses with

TARAFAH 'AMR IBN AL-'ABD and other poets). The conversations within the text cover a wide range of topics, including heresy and atheism.

Another unusual work is "Letters of a Horse and Mule" in which a horse, a mule, and other animals discuss philology as well as taxation, warfare, and other topics.

Al-Ma'arrī collected three volumes of his own poems in his lifetime. The first of them, *The Spark from the Fire-stick*, includes a series of his earliest poems. The second collection, *On Coats of Mail*, contains poems about armor. The third collection is his most celebrated, *The Constraint of What Is Not Compulsory*, which includes more than 1,500 poems. Most of these are written in a rhyme scheme far more elaborate than required by the rules of Arabic verse and are replete with plays on words so complex that the poet had to write a commentary on his own work. Al-Ma'arrī's pessimism and cynicism reach full expression in this volume, with lines such as: "If only a child died at its hour of birth and never suckled from its mother in confinement. / Even before it can utter a word, it tells her: Grief and trouble is all you will get from me." Despite the outlook on life portrayed in his works, al-Ma'arrī is remembered not only for the volume of work he produced but also for his imagery and elaborate style.

Mahabharata (ca. 400 B.C.–ca. 400 A.D.)

The *Mahabharata* is one of India's two great literary EPICS; the other is the *RAMAYANA* (see VALMIKI, MAHARSHI). It consists of a series of verses originally composed for oral recitation; most of the verses are couplets containing 32 syllables. As a whole, the *Mahabharata* contains no fewer than 73,000 verses, and some editions contain as many as 100,000, making it eight times longer than HOMER's *Iliad* and *Odyssey* combined.

The *Mahabharata* may be based on actual events from the eighth or ninth century B.C. It seems to have come into existence around the fourth century B.C., the same time as the *Ramayana*. Numerous copyists and reciters added to it and modified it over time until it reached its current form, around or before A.D. 400. It now contains 18 major books, each divided into a number of chapters. The text also breaks down into 100 minor books.

The *Mahabharata* has exercised an extraordinary influence over Indian literature and culture. KALIDASA's plays drew inspiration from it, as did the works of many other writers. Painters and sculptors depicted scenes from it, and a cult grew around its heroine, Draupadi. In the MIDDLE AGES, knowledge of the *Mahabharata* spread as far as Java and Bali. More recently, Indian comic books have retold the epic story.

As scholar Bruce Sullivan has noted, the *Mahabharata* represents the "desire to conserve and preserve for everyone the wisdom enunciated by a dharma-knowing sage." (Dharma involves the way things should be and the way one should behave.) Thus, the epic holds a significant place in the history of Indian thought. Editor and translator J. A. B. van Buitenen points out that the *Mahabharata*

contains a large number of philosophical chapters that are among the oldest documents for more or less systematic "Hindu" thought. Likewise, the history of Indian law cannot be properly understood without the epic, where the law is the single greatest concern.

The *Mahabharata's* importance is demonstrated by the fact that the BHAGAVAD GITA, which has become a key text in Hinduism, is only a small part of the great epic. In the end, however, the highest praise for the *Mahabharata* comes from the epic itself:

Once one has heard this story so worthy of being heard[,] no other story will please him: it will sound harsh as the crow sounds to one after hearing the cuckoo sing. . . . No story is found on earth that does not rest on this epic. . . . Whatever is found here may be found somewhere else, but what is not found here is found nowhere!

Critical Analysis

The *Mahabharata's* plot is complex. In essence, it tells of a bitter and bloody conflict between two sets of cousins, the Pandava brothers and the Dharatarastra brothers. Both wish to rule Kuruksetra, a kingdom in northern India.

The trouble begins when King Vicitravirya dies without heirs. His half brother Krsna Dvaipayana, also called Krsna Vyasa, fathers sons on the king's two widows and a maidservant. The first son, Dhartarastra, is blind. As a result, the second son, Pandu, becomes king. After Pandu has ruled for some time, however, he finds it necessary to retire to the forest. Dhartarastra now rules the kingdom.

Pandu has five sons, while Dhartarastra has 100. The eldest Pandava, Yudhisthira, was born before any of his Dharatarastra cousins and therefore claims the throne. Unfortunately, one of the Dharatarastras, Duryodhana, wants to become king himself. He tries to kill Yudhisthira and the other Pandavas.

After two assassination attempts have failed, and the Pandavas have acquired allies, Duryodhana agrees to divide the kingdom with his cousins. The Pandavas travel to their part of the kingdom and found a new capital city. Seeing them prosper, Duryodhana's jealousy gets the better of him again. He challenges Yudhisthira to a dice game during a ritual intended to consecrate the

latter as king. The game is rigged; Yudhisthira loses his brothers' freedom, his own freedom, and the Pandavas' common wife, Draupadi. He also loses a rematch. The Pandavas agree to spend 12 years in exile and live in disguise for a 13th year.

When the 13 years have passed, the Pandavas and their allies return to the capital to claim the throne for Yudhisthira. Duryodhana refuses to yield. A war ensues that lasts for 18 days and takes in the entire world. Duryodhana and most of the Dharatarastras perish, as do the Pandavas' relatives, allies, and unborn children. The five Pandavas, however, survive, and Yudhisthira takes the throne. Years later, his descendant hears this story, the *Mahabharata*, recited by a disciple of Krsna Vyasa.

Krsna Vyasa, the grandfather of the Pandavas and Dharatarastras, is an important figure in Hindu tradition. According to legend, he composed not only the *PURANA* but also the *Mahabharata*, which he dictated to the god Ganesh. He appears in the *Mahabharata* as a wise and powerful man. Ironically, as Sullivan points out, he is also partly responsible for the bloody war between his grandchildren. He deliberately made his son Dharatarastra blind and thus complicated the line of succession; he supervised the ritual during which Yudhisthira lost everything in a dice game; and he failed in his attempts to pacify his grandchildren and prevent the war.

Yet it seems the war was unavoidable. Indeed, the inevitability of fate is a theme of the *Mahabharata*. Dharatarastra says, "My old age, the destruction of all my relatives, and the death of my friends and allies happened because of fate." Time, says the *Mahabharata*, is merciless and inescapable:

[Time] brought the Pandava and [Dharatarastra] armies together in that place and there destroyed them. . . . Time ripens the creatures. Time rots them. . . . Whatever beings there were in the past will be in the future, whatever are busy now, they are all the creatures of Time—know it, and do not lose your sense.

In keeping with its theme of time, the *Mahabharata* depicts the war between the Dharatarastras and Pandavas as the end of one stage of history and the beginning of another. Characters are described as incarnations of either gods or demons, battling each other in human form. Van Buitenen argues that this mythical imagery is a late addition to the epic and cheapens its story. Sullivan, in contrast, believes that “the conflict between the gods and demons” is a central theme of the epic, just as the conflict between gods and giants is a central theme in Norse mythology (see MYTHOLOGY, NORSE).

Maimonides, Moses (Moses ben Maimon, Rabbi Moses ben Maimon, RaMBaM) (1135–1204) *philosopher, physician, nonfiction writer*

Moses Maimonides, known in Hebrew literature by the acronym RaMBaM, was born in Córdoba,

Spain, to Rabbi Maimon ben Joseph, a judge of the rabbinical court, and a mother (name unknown) who died at his birth. He became a Talmudic scholar and philosopher, studying and writing books as he wandered throughout Andalusia.

In 1160, Maimonides and his family fled Spain to evade the Muslim Almohades, who were invading Spain and persecuting Jewish communities. They traveled to several different countries, going first to Morocco, where they still had to hide their Jewish origins. After an abortive attempt to move to Israel, they settled in Egypt, first in Alexandria and then in Fustat, close to Cairo, where Maimonides started studying medicine. He was eventually able to gain a position as chief physician at the court of Saladin. He also became a respected citizen and served as the leader of the Cairo Jewish community.

Many fantastical myths and legends have grown up around Maimonides over the years, which is ironic since the philosopher himself was very skeptical of all superstition, magic, and myth. He was, philosophically speaking, a religious rationalist. He did not take seriously the ideas, common in his day, of witchcraft, astrology, mysticism and speaking in tongues. Nonetheless, the stories surrounding him include accounts of his miraculous birth and death, tales of mysterious circumstances surrounding his travels and burial, and tales of his raising people from the dead.

Despite his obligations as chief physician and leader of the Cairo Jewish community, Maimonides continued with his scholarship and produced a large body of written work on the TALMUD, Jewish law, medicine, and philosophy. He was the first person ever to codify Jewish law systematically, the product of which is the *Mishnah Torah* (1180). In one section of this work, Maimonides defines repentance: “Repentance involves forsaking sins and removing such thoughts from one’s way of thinking and resolving firmly never to do it again. . . .” Another of his works, *The Guide to the Perplexed*, is regarded as one of the great philosophical works on Judaism. Maimonides based his interpretation of Jewish law on ARISTOTLE’S

philosophy, and his work influenced such later writers as Benedict Spinoza and Saint Thomas Aquinas.

In his time, Maimonides was a hero throughout the Jewish world. Upon his death, Egyptian Jews mourned for three days. The credo of Judaism that he formulated, expressed in 13 articles of faith, was reworked into the *Yigdal* prayer, which is included in most Jewish prayer books. Today Maimonides is regarded as one of the foremost Jewish philosophers of all time, and his work is still widely read and respected.

Marcus Aurelius Antoninus (Marcus Aelius Aurelius Antoninus) (121–180) *philosopher, Roman emperor*

Marcus Antoninus Aurelius was born in Rome. When he was young, he lost his father, and from his earliest years enjoyed the friendship and patronage of Emperor Hadrian, who provided him with special educational privileges. Thus, at age eight Aurelius became a member of the Salian priesthood. He was adopted by Hadrian's successor, Antoninus Pius (his uncle by marriage), whose daughter he later married.

Aurelius is known as one of the greatest emperors in Roman history (reigned 161–180). In times of plague and famine, he sold many of his own possessions to help the poor. This and other similar acts made him one of the "Five Good Emperors" (an ironic title, given that he also persecuted the Christians as a threat to Roman rule). As a military and civic leader, he won several important wars and successfully dealt with serious internal disasters. His personal life, however, was not as successful. His wife was unfaithful, and his heir (an adopted nephew whom some scholars believe was responsible for Aurelius's death) was disappointing. In addition, Aurelius was plagued by self-doubts regarding his adequacy as an emperor, for although he was a sound military leader, he was troubled by the nature of war. These doubts and contemplations were perhaps what led him to write *Meditations* (first published in 1555). Originally written in Greek, the work exists in 12 volumes. It is Aurelius's interpretation of and "meditations" on Stoic philosophy, specifically those elements of it that extolled reason, virtue, freedom, and morality.

In light of the personal conflicts and military matters that Aurelius dealt with, it is not surprising that he turned to Stoicism to find the moral stamina to deal with adversity. Some critics have gone so far as to suggest that Aurelius's commitment to Stoicism interfered with his ability to be an effective emperor. His successful campaigns against the Parthians (166) and the Germans (167) as well as

his commitment to the welfare of his people suggest otherwise. Aurelius died from the plague on March 17 in what is now Vienna.

Aurelius's *Meditations* provide an in-depth look at the man, the emperor, and the philosopher. One of the central ideas of *Meditations*, and Stoicism, is unity. Stoics believed that all "parts" were part of a "whole," that all things—even thoughts and emotions—were entwined and could not be logically viewed as separate. In *Meditations*, Aurelius writes:

All things are implicated with one another, and the bond is holy; and there is hardly anything unconnected with any other things. . . . For there is one universe made up of all things, and one god who pervades all things, and one substance, and one law, and one reason.

(7.9)

According to this theory, Aurelius reasons that people, as a natural part of the universe, must abide by "natural" laws:

We are made for cooperation, like feet, like hands, like eyelids, like the rows of the upper and lower teeth. To act against one another then is contrary to nature.

(2.1)

To Aurelius, harmony is a natural state of being. He believed that happiness can be achieved by anyone, and that external circumstances should not prevent one from finding harmony. This is somewhat characteristic of the Roman ideal of success—to work toward a goal without allowing the possibility of failure to alter action. In *Meditations*, he says:

[I]f you work at that which is before you, following right reason seriously, vigorously, calmly without allowing anything else to distract you, but keeping your divine part pure . . . you will be happy.

(4.7)

Meditations is not only an invaluable sample of early introspective writing, illuminating the devel-

opment of Aurelius's thoughts and ideas; it is also an extensive explanation of Stoic philosophy. The work influenced such later writers as Petrarch, Michel de Montaigne, George Chapman, Matthew Arnold, and others.

Marie de France (ca. 1150–ca. 1200) poet, translator

All that is known of Marie de France, one of the first women writers in French literature, comes from her texts. At the end of one her tales, she writes, "My name is Marie and I come from France." Most of her work was written between 1175 and 1190.

Marie wrote *lais*, short narrative poems, and translated some of AEsop's fables and a saint's life of Saint Patrick. In her work, she demonstrates familiarity with classical literature and contemporary

Latin and Anglo-Norman literature. Most scholars believe that she either lived or spent time in the courts of Henry II and Richard I of England; the English and French kings were related, and the two courts strongly influenced each other. Marie wrote her poetry in Anglo-Norman French, which was a widely used and easily understood dialect.

Marie's poetry has survived because of its sophisticated narrative voice and condensed structure. "Chevrefoil" ("Honeysuckle"), her most famous *lai*, focuses on an episode from *TRISTAN AND ISEULT*, the most famous love story of the MIDDLE AGES. In this poem, Tristan has been banished from court, but he sends Queen Iseult a secret message carved on a hazel branch. It compares their love to the honeysuckle that entwines the hazel tree; neither of them can live without the other. Marie's use of a specific object integral to the plot as a metaphor for the story's theme occurs in several of her other *lais*, and it shows the elegant economy and sophistication of her style.

Martial (Marcus Valerius Martialis)

(ca. 40–ca. 104) *poet*

Marcus Valerius Martialis, later called Martial, was born at Bilbilis, a town in northeast Spain, to parents named Fronto and Flacilla. Then a province of the Roman Empire, Spain was also the birthplace of the first-century writers SENECA, LUCAN, and QUINTILIAN. In 64, during the reign of Nero, Martial went to Rome. He received a thorough education in grammar and rhetoric, which was standard

for the time, but declined to pursue a profession. Because he wanted to write poetry, he sought the favor of wealthy patrons who would compensate him for his work in return for flattery. He never married but still enjoyed the social benefits reserved for those who had parented three children. Emperor Titus made him a tribune, which raised him to the equestrian class.

Though he spent most of his working life in one of the multilevel flats that housed the bulk of the common population of Rome, Martial also had a small country estate, where he took up residence in 94. Four years later, he returned to his birthplace, aided by his friend PLINY THE YOUNGER. His patroness there, a generous lady named Marcella, made life so agreeable that Martial wrote to his friend JUVENAL expressing his delight with country life. Though he missed the city, he never returned to Rome.

Martial scorned the artificial style of EPIC writers like Statius and instead adopted the straightforward, personable style he admired in the poet Gaius Valerius CATULLUS, which his audience appreciated. His earliest surviving work is *The Book of Spectacles*, written to celebrate the opening of the Colosseum in 80. He wrote *The Xenia* in 83 and *The Apophoreta* in 85 to celebrate the Roman feast of the Saturnalia. *Xenia* was a word used to describe the leftovers of the feast as gifts, and *apophoreta* referred to traditional gifts. These early epigrams were so popular that Martial thereafter began to write whole books of them, collected in the 12 books of *Epigrams* that appeared between 85 and 102.

The epigram emerged originally in Greece as a verse form used in inscriptions on monuments or artworks, or to accompany gifts. Concise out of necessity, the poem could be simply descriptive or commemorate a person or event. After CALLIMACHUS, other poets employed the form for a wide variety of subjects, but it remained extremely simple and stylistically pure. After Martial, the epigram was irrevocably linked with satire. In the words of scholar Peter Howell, Martial brought this short but powerful form to "a pitch of technical perfection never afterwards rivalled."

Later generations found the *Epigrams* somewhat obscene, but Martial's frankness is familiar to the modern eye. The satire in most of the poems is comparatively gentle, since a man of his position could scarcely afford to alienate the wealthy and influential. It required shrewdness and ingenuity to live the life of a perpetual hanger-on; therefore, when Martial pokes fun at his fellows, it seems in good spirit, as can be seen in James Michie's translation of the third poem of Book I:

... *Nobody sneers as loud
As a Roman: old or young, even newly-
born,
He turns his nose up like a rhino horn.*

As a whole, the *Epigrams* offer a vivid picture of life in Rome near the end of the first century. The poems reveal practices of city life as well as common attitudes, for instance in the complaint that appears in the ninth poem of Book V:

*I was unwell. You hurried round,
surrounded
By ninety students, Doctor. Ninety chill,
North-wind-chapped hands then pawed
and probed and pounded.
I was unwell: now I'm extremely ill.*

In all the 12 books of the *Epigrams*, the voice of the poet mocks the foolishness and vanity of human nature but never seems to hold himself apart or superior. As Howell says of Martial, "mankind is his concern. It is his acute perception of human nature, and boundless interest in the life around him, that makes him so permanently interesting." Martial's influence spread through the late Roman poets to the medieval writers, and Renaissance and Baroque authors revived the epigram as a way of making a concise and cutting statement. Eighteenth-century poets and writers in the European tradition, with their relish for caricature, considered Martial the master, and even poets of the 19th century, such as Lord Byron, found that even

if one did not appreciate Martial, it was still necessary to read him.

Menander (ca. 342–292 B.C.) playwright

At the height of Greek cultural importance, the city-state of Athens was the home of many distinguished literary figures. Before the rule of Alexander the Great, Athens had been dominant in both a political and a cultural sense. Later, in the Hellenistic Age, Athens was no longer an important political or military power, but it remained a center of Greek culture. One of the most distinguished literary figures that Athens produced during this time was the playwright Menander.

The nephew of another playwright, Menander came from a wealthy and respected family. He began writing early in his life, producing plays as early as his mid-20s, and continued writing throughout his life. One of his teachers was the philosopher and writer THEOPHRASTUS, who had been a student of ARISTOTLE. Menander was highly regarded by his fellow Athenians and included the philosopher EPICURUS among his friends. He regularly participated in the drama contests of which the Athenians were so fond, winning eight prizes over the course of his life. Despite invitations from King Ptolemy I of Egypt to come to Alexandria, then in the process of eclips-

ing Athens as the center of Greek culture, Menander loved his home too much to move away from it. He was around 50 when he drowned while swimming in Piraeus harbor.

It is thought that Menander wrote more than 100 plays over the course of his life, most of them comedies. Scholars have recovered some fragments of Menander's works, but the only complete surviving play is titled *Dyskolos* (The Misanthrope, or The Bad-Tempered Man). The main plot deals with a man who intensely dislikes everyone else, particularly the man his daughter wishes to marry. Later on, his daughter's fiancé saves his life, forcing him to allow the wedding.

This play, like so many others Menander wrote, is one reason scholars view the playwright as being the greatest representative of a form of Greek drama called the New Comedy (as opposed to the Old Comedy of a century earlier, adhered to by such playwrights as ARISTOPHANES). Unlike the works of Old Comedy dramatists, Menander's works do not dwell on pressing social or political issues. Rather, they are concerned with commonplace situations to which any human being, of any time period, can easily relate. Similarly, they feature ordinary men and women instead of characters from Greek mythology.

Other Menander plays that have partially survived include *The Arbitrators*, *The Woman of Samos*, *The Ogre*, and *The Man from Sicyon*. As with *Dyskolos*, these works seem to share many of the same themes and styles. One common theme is that of a young man trying to win the love of a young woman but facing unexpected and often absurd obstacles in his quest for love. Also common are stories of separated twins causing confusion and of parents having difficulty dealing with ridiculously disobedient children. These themes allowed Menander to create wonderful and successful comedy and also became a means through which he expressed important truths about human nature and personal relationships.

Although not as well known as many other Greek playwrights, Menander had a great influence on the development of dramatic comedy. His plots, though familiar today, were unique during

his own time, and his literary style and wit were such that later writers, such as PLAUTUS and TERENCE, adapted and imitated his works.

Middle Ages (ca. 450–ca. 1450) era

The Middle Ages is a label traditionally used to describe a 1,000-year period in western Europe spanning the Early Middle Ages (450–900), the High Middle Ages (900–1200), and the Late Middle Ages (1200–1450).

Historians traditionally describe medieval society as being made up of three classes or estates: the class that fights, the class that prays, and the class that tills the land. This model distinguishes among the clerics, or those who belong to the

Church; the kings and nobles, who own the land; and the peasants, who comprise the bulk of the population.

Medieval European society was governed by feudalism, a system of mutual oaths and loyalties that bound the peasants who lived on the land (and provided the means of survival for all classes by producing food, clothing, and other necessities) to the nobles and knights who owned the land. Knighthood, attained after a long and arduous apprenticeship as a squire, came to be synonymous with the French concept of *chevalerie*, or CHIVALRY, which was basically a military code governing conduct both on and off the battlefield. While originally a martial concept requiring loyalty, bravery, physical strength, and battle prowess, in the 12th century the concept of chivalry became identified with the practice of courtly love. The concept of courtly love, originated and spread by the French TROUBADOURS, came to be an important part of the social and literary culture of the Middle Ages.

Historians estimate that 80 percent of the people living on feudal estates were peasants. About half were freemen, who could leave when they chose, and the other half were serfs, legally bound to the land. While Early Middle Ages systems of production were essentially agrarian or based on farming, the increasing settlement of cities and the development of commercial exchange led, in the Late Middle Ages, to a thriving city culture characterized by a growing middle class and the antecedents of modern industry. Where those bound to the land were at the mercy of their overlord, and often caught up against their will in the disputes of the upper class, the growing cities were self-governing, and their residents answered only to the king. This led to the eventual decline of feudalism and the rise of parliamentary structures.

The church of the Middle Ages was the Roman Catholic Church, which governed the lives of those of all estates. Christianity, the official religion of the Roman Empire in its last years, retained its center of power at Rome in the form of the pope, who sent missionaries to the “barbarians” until, by the High Middle Ages, all the lands of western Europe

were Christian. The Church used Latin as its official language, though the native or vernacular languages continued to be spoken among the laypeople or those not under religious vows. Monastic orders or cloisters formed where the truly devoted could dedicate their lives to contemplation. Some monasteries (for men) and convents or nunneries (for women) developed into powerful centers of culture and learning.

The Church also inspired art, including music and painting, but was primarily responsible for education. Priests and those in religious orders were the most highly educated members of society. Lay literacy evolved and spread slowly. The BIBLE, translated by Saint JEROME, was in Latin. Philosophical works, such as those composed by AUGUSTINE, BOETHIUS, and FRANCIS OF ASSISI, were written in Latin. Histories, such as BEDE’s *Ecclesiastical History of the English People*, or pseudo-histories, such as GEOFFREY OF MONMOUTH’s *History of the Kings of Britain*, were composed in Latin. Members of religious orders communicated to each other in Latin, as did ABÉLARD AND HÉLOÏSE in their letters, and clerics recording individual experiences, like Julian of Norwich and HILDEGARD VON BINGEN, did so in Latin. The Christian Church and the classics of ancient Rome, the poetry of authors like VIRGIL and OVID, were the primary authorities for medieval literature.

Despite the romantic light cast by chivalry and courtly love, the Middle Ages were a time of almost continual warfare and disease, beginning with the fall of Rome in 476. After the Germanic Franks and Anglo-Saxons settled France and England in the fifth and sixth centuries, in the eighth through 10th century the Vikings harried European shores. In 800, Pope Leo III crowned Charlemagne emperor of the Holy Roman Empire. In 1066, at the Battle of Hastings, King Harold of England was defeated by Duke William of Normandy, thus introducing French culture into England. In 1076, Pope Gregory VII excommunicated Henry IV, the German emperor. In 1095, the CRUSADES launched a planned counterattack against Islam as articulated by MUHAMMAD. In 1215, the barons of England wrote

the *Magna Carta*, and in 1295, Edward I of England formed a model parliament. Between 1338 and 1471, France and England were constantly at war.

While attacks of the plague occurred frequently, the Black Death, which first reached Italy from the Middle East in 1347, proved the worst medical disaster of the Middle Ages, reducing the population of Europe by a third. Still, as trade routes opened and western Europe came in contact with the civilizations and technologies of the East through the travels of explorers like Marco POLO, information concerning new civilizations, technologies, and products revitalized medieval culture.

In 1453, the Ottoman Turks conquered Constantinople, bringing an end to the Byzantine Empire, the last center of Roman civilization. Those witnessing the rebirth of learning that characterized the European Renaissance viewed the thousand-year period after the fall of Rome as a lapse, a “Dark Age.” DANTE ALIGHIERI, on the cusp of the new humanism movement born in Italy in the 13th century, not only coined the term *Middle Ages* but also proved that great literature could be written in the vernacular.

Critical Analysis

Early medieval literature is largely EPIC in nature. The BARDIC POETRY of Celtic-speaking peoples, the OLD ENGLISH POETRY of the Anglo-Saxons, the Scandinavian EDDA, and the Germanic SAGAS largely focus on great events. Many of the heroes they describe, such as King Arthur, Finn, *BEOWULF*, or the actors in the *NIBELUNGENLIED*, are historical figures cloaked in the glamour of fantastical myth.

Along with the invention of Western romantic love, the French are credited with the invention of MEDIEVAL ROMANCE in the form of the *chansons de geste*, or songs of adventure. The *SONG OF ROLAND*, the Arthurian romances of CHRÉTIEN DE TROYES, the legends of *TRISTAN AND ISEULT* and the HOLY GRAIL, the *ROMANCE OF THE ROSE*, and the Spanish *El CID*—all capture the essential qualities of romantic literature. Women like MARIE DE FRANCE and Christine de Pisan proved that literature was not entirely a

male domain. The French historiographers Geoffroi de VILLEHARDOUIN and Jean Froissart gave their chronicles a romantic cast. However, Dante’s *New Life* and *Divine Comedy* became the models for literature that all later authors aspired to use.

Some of the most important information about daily life in the Middle Ages comes from literature like Giovanni Boccaccio’s *The Decameron* (1352), Geoffrey Chaucer’s *The Canterbury Tales* (1390s), and François Villon’s *Ballade*, or *The Testament* (1461). As do Fabliaux and the *ROMAN DE RENART* of French literature, these works provide vivid portraits of a cross section of the traditional medieval estates, as well as satiric glimpses of courtly culture.

Other works of literature demonstrate the prevailing ethos of the Middle Ages. Tales like *Sir Gawain and the Green Knight* explore the demands of the courtly code, while poems like William Langland’s *Piers Plowman* examine the philosophical foundations of medieval society. In addition, theatrical works like the MYSTERY, morality, and miracle plays used allegorical characters and biblical stories to dramatize current issues and events.

The discovery of the printing press ultimately revolutionized medieval literature. Thanks to Johannes Gutenberg’s invention of movable type in 1458, not only did the Bible become available to a broader audience, but publishers could circulate works of secular literature as well, as William Caxton did with Thomas Malory’s *Le Morte D’Arthur* (1485). This, along with the growth of Italian humanism and the decline of feudalism, paved the way for the Renaissance in Europe.

Mother of Fujiwara Michitsuna

(Fujiwara Michitsuna no haha)

(936–995) *diarist*

The Mother of Fujiwara Michitsuna, a high court official, lived during the middle of the Heian period, a time when Japanese literary traditions were at its peak. She was a member of the middle-ranking aristocracy and was 19 when she married Fujiwara no Kaneie, from a distant but more powerful branch of the family. The main source of information on her life is her influential work, the *Kagero Diary*, which details not only her thoughts but also the crises and events that occurred during her life. It is believed that she began writing her diary around 971 as a way to preserve her life experiences for posterity. The *Kagero Diary* stands as one of the earliest and best examples of women's autobiography and it greatly encouraged the realistic mode of writing adopted during the height of Japanese literary development.

Several themes are represented in Fujiwara Michitsuna's mother's writing. The foremost is the theme of romance. Her portrayal of herself in the diary reflects the Japanese ideal of a romantic heroine whose expectation of romance in her marriage falls sadly short of her ideal. In the initial exchange of love letters between her would-be husband and herself, she saw him as "a tall tree among oak trees." This image dissipated after their marriage, when her husband began to neglect her. Her diary records her despair:

Just as I thought would happen, I have ended up going to bed and waking up alone. So far as the world at large is concerned, there is nothing

unsuitable about us as a couple; it's just that his heart is not as I would have it; it is not only me who is being neglected, I hear he has stopped visiting the place he has been familiar with for years.

Language also plays an important part in Fujiwara's mother's work. The themes of self-creation and self-consciousness develop throughout the text. On one level, Fujiwara's mother's decision to record her personal experiences and let them be made known to the world suggests a certain degree of self-awareness and self-recognition. On another level, the theme of self-consciousness is effectively reflected in her use of the first-person point of view. Her voyage in writing poetry, interspersed throughout the diary, can be seen metaphorically as a voyage of self-discovery in which she realizes her independence and identity.

A unique blend of Buddhism and Shintoism entwines throughout the *Kagero Diary*. The Buddhist premise that life is suffering pervades the work. The author's awareness of the transitory nature of human life enables her to cope with various difficult events in her life, including separations from her husband and sister and the deaths of those close to her. At the same time, this level of awareness allows her to maintain a certain distance and detachment from the suffering caused by those events. The diary suggests the author found no contradiction in visiting both Buddhist and Shinto shrines.

The *Kagero Diary* is divided into three parts. The first part covers the first 14 years of the author's married life and conveys an ambivalent mood of wistful reminiscing and lamentation as she relives the romantic high points of her marriage. The second part of the diary spans the three years of discontentment and unhappiness following her discovery that her husband has taken another lover. In this part, the author slowly takes on a more philosophical view of her life, using her mastery of prose to regain a symbolic control over her life.

The final section of the book, covering another three years of the author's life, lacks the emotional fervor that marks the first two parts. Gradually she transcends the emotional intensity of her problems to examine events from a more detached point of view.

On the whole, the *Kagero Diary* remains an important document about the interior life of a woman, transcribed by her own hand and recorded in her own voice. It provides valuable information about the life of women in the Heian dynasty, but aside from that, it remains a touching account of one woman's struggles to come to terms with her own circumstances and make peace with herself.

Muhammad (Mohammed, Muhammad ibn 'Abd Allāh ibn 'Abd al-Muttalib ibn Hāshim, Abu al-Qāsim) (ca. 570–632) *prophet*

Muhammad (also known as Mohammed) was the founder of Islam, the first leader of the Muslim community, and the author or transmitter of the KORAN, the sacred scripture of the Muslim religion. Nearly everything that is known about Muhammad, whom his followers called "the Prophet," comes from Muslim tradition. The main sources are the Koran, Islam's holiest book; and the *hadith*, oral stories about Muhammad that were written in early Muslim times.

Muhammad was born in Mecca, a trading city in the Hijaz region of the Arabian Peninsula and the site of a pagan shrine, the Ka'bah. His family was prominent, but he became an orphan at an early age with no inheritance. He was raised by his uncle Abu Talib, a prominent merchant and head of the noble Hashem clan, part of the Quraysh tribe that dominated Mecca.

Around 595, Muhammad married Khadija, who remained his sole wife until her death in 619. Celebrated in the Koran, she bore four daughters; all of their husbands eventually played prominent roles in the early Muslim community. Khadija's wealth gave Muhammad both trading capital and the independence to pursue his religious ideas and political ambitions.

Muhammad was said to have frequented a cave near Mecca to think in solitude. There, one day in 610, he had a frightening vision of an angelic being, whom he believed to be God, who told him, "You are the messenger of God." This was followed by many further revelations, often delivered while the prophet was in a trance. Because Muhammad could not read or write, he related the revelations to his followers, at first a small band. According to some traditions, he had many of the verses recorded by scribes. The stories were eventually collected and edited into the Koran about 20 years after the prophet's death.

Research has revealed that Muhammad supplemented the actual revelations with his own comments and explanations. In this way, he eventually learned, and conveyed to his followers, all the basic precepts of what became Islam. He also laid the groundwork for the legal and social practices that later became the basis of Muslim law. Many Muslims insist that every word of the Koran is divine and immutable; thus, Muhammad became one of the most influential figures in the Islamic world, and the Koran one of the most influential works of world literature.

Muhammad began preaching publicly around 613. He attracted supporters among the younger members of the chief merchant families and also among the poor, who were attracted by his criticism of the wealthy for not helping the "weak." His supporters came to be called Muslims, or those who had submitted to God.

Muhammad's fame soon extended beyond Mecca, but he still faced opposition from the powerful leaders of the city. After negotiating with tribal leaders and Muslims in Medina, a city to the north, the prophet and about 70 supporters left Mecca for Medina. This event, known as the *hijra* (hegira), took place in the year 622, which thus became year one of the Muslim calendar.

At Medina, Muhammad gradually reduced intertribal warfare and sent his followers off on raids against Meccan caravans. In the 620s, he had a falling-out with the Jewish clans, who were prominent in both agriculture and trade in Medina. Refusing to recognize his claims to being God's prophet, they were all eventually expelled or killed. Previously, Muslims had prayed toward Jerusalem; thereafter, they prayed toward Mecca and its Ka'bah shrine. Following Muhammad's victory in 624 in a battle with a Meccan force at Badr, most Arabs of Medina rallied to his cause. By 629, further military losses to Muhammad's supporters convinced the Meccans to accept his rule. Many soon became Muslims as well, as did many pagan tribes.

Among Muhammad's last campaigns was a large raid near Syria in 630, in which the Muslims confronted several Christian Arab tribes. This completed the break of Islam with the previous monotheistic religions.

Muhammad died in 632. Although his failure to appoint a successor led to future conflicts among the faithful, he left Arabia united for the first time in history. The new, highly motivated confederation of Arabic tribes soon launched a series of campaigns that succeeded in spreading Arab rule, and the Muslim religion, to a large part of the civilized world.

mummers' plays (ca. 1200s–present) *term*
The term *mummers* describes a set of actors reenacting a type of folk drama that has been performed for centuries in the British Isles, beginning perhaps as early as the 13th century and continuing today. The term has been variously traced to words in German, Danish, and French that indicate the use of disguise. Mummers' plays are short, seasonal performances that address the theme of death and resurrection and frequently involve foolery and nonsense language. The actors' dis-

guises include anything from blacking the face to assuming a mask or dressing a man as a woman.

The existing texts of mummers' plays reveal that the most common plots are those of the hero-combat (involving folk heroes like St. George or Robin Hood, or a doctor and a fool), the sword dance, the plough play (so called because it makes reference to an offstage plough), and a wooing (also offstage). The plays are very short, involve only a handful of characters, and are staged with minimal props. In the past, these plays were often performed in a small area in the middle of the street, usually at Christmas, Easter, and other festival days. Many mummers' plays, however, show a remarkable absence of Christian influence or doctrine. Instead, generic characters such as Father Christmas and Beezlebug appear.

Like morality, miracle, and MYSTERY plays, mummers' plays were originally aimed at a broad public. The setting is historically generic; Oliver Cromwell might be on the stage with Saladin, Napoleon chatting with Charlemagne. The themes of death and resurrection and their seasonal characteristics suggest the mummers' plays capture a folk memory of ancient pagan rituals associated with planting and harvesting, an agricultural death and renewal. Controversy among scholars concerning the pagan roots of mummers' plays is ongoing.

Texts of existing mummers' plays, while they follow the same broad outlines, show many local variations; in fact, each of the hundreds of extant texts is unique. Efforts to document the plays began in the 17th century, but the mummers have been performing for centuries and continue to this day, a testament to the power of theatrical tradition.

Murasaki Shikibu (ca. 978–ca. 1016)

novelist, diarist, poet

The true name of the writer known as Murasaki Shikibu is not known. Murasaki is the name of a central character in her novel *The Tale of Genji*, and Shikibu is the name of a position held by the writer's father. Upper-class women in the Japan of Murasaki's time lived secluded lives, their charm intensified by the mystery that surrounded them, and that mystery surrounds the writer still.

It is known that Murasaki was born into a minor branch of the Fujiwara family, the clan that held most of the power in Japan of the Heian period (794–1185); her father was a provincial governor. Murasaki had a brother and was able to eavesdrop on the lessons in Chinese that, as a young nobleman, he was obliged to master. In her diary she records her father's reaction when he realized that she was quicker than her brother at understanding difficult passages: "‘Just my luck!’ he would say. ‘What a pity she was not born a man!’" The diary goes on to relate how she gave up reading Chinese because she was criticized for using a skill that was considered inappropriate for women.

In 998 Murasaki was married to Fujiwara no Nobutaka, an older man who already had more than one wife. Her daughter, Katako, was born in 999, and her husband died two years later. It was as a widow that she began to write her great novel. In 1005 or 1006, she entered the service of the emperor's powerful right-hand man, Fujiwara Michinaga (966–1027), as a companion to his daughter, who was to become the Empress Shoshi (988–1074). Shoshi loved learning, and she and Murasaki took to secretly reading Chinese classics together. Murasaki says in her diary, "we carefully chose a time when other women would not be

present.” Although they had to be discreet about their study of Chinese, composing poetry in Japanese—especially improvising a poem in response to the immediate situation—was a highly valued skill in the ritualized world of the court, and Murasaki excelled at it. Some of her poems are preserved in her diary. There are also 795 poems included within the text of *The Tale of Genji*.

Murasaki kept her diary for about two years during her time at court. It records intricate details of court life—its etiquette, its ceremonies, and the complex rivalries among the women. It also reveals Murasaki’s struggles with loneliness and with the sense of helplessness that accompanied being a woman without a male protector in a male-dominated world, as well as her efforts to attain the sense of detachment from worldly passions that is the Buddhist ideal. Of her own personality, she says:

Pretty and coy, shrinking from sight, unsociable, fond of old tales, conceited, so wrapped up in poetry that other people hardly exist, spitefully looking down on the whole world—such is the unpleasant opinion that people have of me. Yet when they come to know me they say that I am strangely gentle, quite unlike what they had been led to believe. I know that people look down on me like some old outcast, but I have become accustomed to all this, and tell myself, “My nature is as it is.”

Empress Shoshi was widowed in 1011 and moved to a mansion outside the court; it is likely that Murasaki moved with her. There are suggestions in Murasaki’s writings that she may have retired to a Buddhist convent.

Critical Analysis

The Tale of Genji centers on the character of the fictitious Prince Genji, “the shining prince,” a man of devastating charm who loves and is loved by many women. But its action, divided into 54 books or chapters, covers four generations and nearly 100 years, and there are more than 400 characters.

In the very first sentences, aspects of Murasaki’s approach can be discerned. The book begins:

In a certain reign there was a lady not of the first rank whom the emperor loved more than any of the others. The grand ladies with high ambitions thought her a presumptuous upstart, and lesser ladies were still more resentful. Everything she did offended someone. Probably aware of what was happening, she fell seriously ill and came to spend more time at home than at court. The emperor’s pity and affection quite passed bounds. No longer caring what his ladies and courtiers might say, he behaved as if intent upon stirring gossip.

The lady whose predicament is so sympathetically described here is a minor character in that she dies on the fourth page, after having given birth to Genji. Her influence is felt throughout, however, because her early death is clearly central to the personality development of Genji, who spends his life seeking someone to take the place of his beautiful mother. The passage introduces themes that run throughout the book: the obsession with rank and its collision with human affection, and the damaging resentments that inevitably arise among women when they are confined and must jostle for the attention of men who are free to come and go as they please.

There are aspects of the supernatural in the plot involving one of Genji’s rejected lovers, the Lady of Rokujo. Consumed by jealousy and resentment, she becomes a malicious spirit who is capable of taking hostile possession of the bodies of Genji’s more valued lovers, even after her own physical death; the deaths of two characters are attributed to her malevolent influence. Lady Rokujo’s pain is presented so vividly that her supernatural power gains psychological conviction.

The story of Genji’s career as a government official—successful in spite of setbacks caused by repercussions from his amorous affairs—and of his loves occupies the first 41 chapters. Genji is presented as artistically talented, sensitive, and capable of love,

yet somehow blind to his own responsibility for the pain suffered by the women he loves or has loved. The remainder of the book focuses on Kaoru, the son of Genji's second principal wife, Princess Nyosan, who learns as an adult that he is not in fact Genji's son. Kaoru's friendship with his cousin, Prince Niou, dissolves in an amorous rivalry that has tragic consequences for all involved. The action of this section takes place in a small town, away from the luxury and glamour of the court, and the tone is much darker.

The Tale of Genji is not only widely recognized as the finest of all Japanese novels; it is the first work of prose fiction anywhere in the world to present rounded characters with psychological depth.

Mutanabbī, al- (nickname of Abū at-Tayyib Ahmad ibn Husayn al-Mutanabbī) (ca. 915–965) poet

Al-Mutanabbī (meaning "the would-be prophet") was born in the city of Kufa to a Yemenite father. Most of his poems were flattering panegyrics, distinguished by their complex style and imagery and written for a succession of powerful patrons. The poems were extremely popular in al-Mutanabbī's time.

The poet was educated in a Shi'ite Muslim school and may have had some Greek education as well. As a young man in the 930s, he passed several years among the Bedauin in Syria, promoting a revolutionary new religion. The miracles he claimed to perform led to his nickname, al-Mutanabbī, which remained with him all his life. Freed in 937 after a four-year jail term for banditry, he decided to confine his career to poetry and began a lifelong struggle to find patrons who would support him. His greatest success was a nine-year stay at the court of the Hamdanid ruler Sayf al-Dawla in Aleppo, starting around 948. His panegyrics to Sayf were noted for their vivid battle scenes as well as for his tendency to address the ruler as a beloved, as he does in the poem "To Sayf al-Dawla on His Recovery from an Illness."

Like other poets at the court, al-Mutanabbī would accompany Sayf al-Dawla on many of his *jihad* (holy war) campaigns against the Christian Byzantine empire and record their events in verse. One poem, "A Congratulatory Ode on the Occasion of the Feast of Sacrifices," proclaims:

Every man has a habit to which he dedicates his time, and the habit of Sayf al-Dawla is thrusting at the enemy

. . .

Many an arrogant man, who knew not God for a moment, has seen his sword in his hand and promptly professed the faith.

After falling from Sayf's grace, al-Mutanabbī traveled to Cairo, where he managed to antago-

nize the famous regent Kafur by brutally satirizing the former slave in poems that destroyed the ruler's historical reputation. He was more successful in Persia, until he was ambushed by relatives of one of his satirical victims. Reminded of his celebrated lines: "I am known to night and horses and the desert, to sword and lance, to parchment and pen," the poet unsheathed his sword and was promptly killed.

Al-Mutanabbī's fame spread to Andalusia in Spain and to Persia, where he is said to have influenced the new school of Persian poetry, especially its greatest master, RUMI. In Arabic literary criticism he is considered a champion of ethnic Arabs in the Muslim world, and he remains a favorite among modern Arabic nationalists.

mystery plays (13th–16th centuries) *drama*

Mystery plays were a type of drama that flourished in the later MIDDLE AGES in England. Cycles of plays drew together a series of shorter scripts dramatizing stories from the Christian Bible, spanning the Creation to the Last Judgment. Cycles are frequently referred to by the name of the town in which they are recorded as having been staged. Full cycles survive from four towns: York (48 plays); Wakefield (32 plays, also called the Townley cycle); Chester (24 plays); and N-Town (42 plays, formerly referred to as the Coventry Cycle). Single plays in English survive from at least four other towns, and one cycle exists written in the Cornish language. A great number of English towns of all

sizes, including Canterbury and London, document the staging of mystery plays as early as the mid-1200s, though the manuscripts for these plays may be lost. Records suggest that the cycles began evolving in the 13th century, though existing manuscripts are of later dates.

Plays were staged within a particular town in connection with a celebrated event, perhaps a feast day, which is the case of the plays associated with Corpus Christi. Performances took place outdoors, sometimes on a pageant wagon that was pulled through the town. The term *mystery* refers to the guild or craft organizations that sponsored the events (the term comes from the secret rites or mysteries of their trades, which the guilds protected fiercely). The actors, in most cases, belonged to the guild. Productions were often elaborate; the Chester cycle took three days to perform. Often the guilds selected episodes that could best illustrate the nature of their craft; for instance, the shipwrights of York commonly presented the story of Noah and the Flood.

The authors of mystery plays were most likely clerics. As the plays evolved, several different hands made revisions and changes to the existing scripts. Certain playwrights showed more skill than others, and some made greater contributions, as is the case with the "York Realist" and the "Wakefield Master."

Naturally, certain stories of the Bible lent themselves well to dramatization, blending high tragedy with low comedy. Favorite scenes from the Old Testament included the rebellion of Lucifer, the creation and fall, the story of Cain and Abel, Abraham and Isaac, and the exodus from Egypt. The central images of the cycles are the life, death, and resurrection of Christ. Characteristics shared among the plays of different towns point to the development of popular stereotypes, such as the depiction of Noah's wife as a scold who had to be forced to board the ark, and the portrayal of Joseph as a somewhat feeble and gullible old man. The dialogue and action of the plays show biblical characters speaking and behaving exactly like contemporary English citizens, which suggests the plays gave voice not only

to the religious tradition but also to contemporary social concerns. For the audience, the battle between good and evil was not an abstract concept but a real issue that had bearing on their individual lives as they daily faced death, disease, poverty, and political unrest.

The mystery plays, like the miracle plays, evolved from the Latin tradition of religious drama. The morality plays, which developed slightly later, had a different subject and purpose. Performances of mystery plays provided a way to join the community in entertainment and in worship. In the 16th century, opposition to mystery plays based on religious controversy and concerns for public order led to their suppression. Plays surviving from the Elizabethan and Jacobean periods were written and produced for court patrons, no longer a common audience. These plays had their roots in the lively and complex tradition of the mystery, miracle, and morality plays. Modern companies have revived the mystery plays, and productions of the indigenous cycles take place with regular frequency in Chester and York.

myth of Manco Capac (ca. 1200–ca. 1544) fiction

Manco Capac is the legendary founder of the Incan empire that flourished in the Andean mountains of South America and had its capital in what is now Cuzco in modern-day Peru. Existing versions of legends, which first were recorded in the 1200s, differ slightly in the details of Manco Capac's parentage. In some accounts, he is the son of Mama Huaco, one of the Ayar siblings who, with her four brothers and three sisters, came forth from a cave called Pacautambo in search of fertile lands to settle and farm. Mama Huaco possessed two golden shafts that she threw north, and where one shaft sank into the ground, Manco Capac led a group of people there to settle.

In other versions, Manco Capac was a son of the sun, the Life-Giver and the chief deity in the pantheon of Incan divinities, who sent Manco forth to bring the gifts of civilization and culture into the world. Along with his sister-wife, Mama Ocllo, Manco Capac set forth from their dwelling in Lake Titicaca and headed north in search of a place to settle. Where Manco Capac's golden divining rod sank into the earth indicated that they had reached a favorable place, and so the city of Cuzco was founded. Manco Capac taught the settlers there the art of agriculture, and Mama Ocllo taught them how to weave and spin, laying the foundations for Incan civilization and history.

In truth, Andean civilizations had existed for centuries, and the Inca were no more than one of several tribes flourishing in the region around 1200. The Inca, however, showed a talent for conquest, and as they began to expand, they brought neighboring tribes under their rule. At the peak of expansion, achieved in the mid-15th century, the Inca governed what they called Tahuantinsuyu, the "Land of the Four Quarters," with its center at Cuzco, which they regarded as the center of the earth. Calling themselves by a Quechua word meaning "People of the Sun," the Inca treated their ruler or emperor (also called the Inca) as the human embodiment of the sun on earth. Incan

government, represented by a well-organized system of administration, penetrated every level of society in a way meant to represent the breadth of the sun's rays. In this way, even as the Incan system of worship evolved to regard the figure of Viracocha as the ultimate creator, Manco Capac was referred to as the Son of the Sun and acknowledged as a divine figure. In their practice of sun worship, the Inca were said to decorate lavishly with gold, which is one reason the Spanish were eager to appropriate their wealth.

During the reign of the Inca, Quechua was not a written language, and history was communicated in the form of verse narratives, paintings, and a method of accounting involving knotted strands of multicolored rope called *quipu*. The verse narratives recording oral history might be revised by the royal poet-historian to avoid offending the current ruler, and therefore the accounts of Inca history recorded by Spanish chroniclers are often confusing and sometimes contradictory. The conquistador Francisco Pizarro and his band of less than 200 men found the Incan Empire in a state of civil war in 1532 and quickly exerted control. After imprisoning, holding for ransom, and then executing the reigning king, Pizarro made another Manco ruler of the Inca in 1534. He was largely acknowledged to be a puppet ruler and did not survive past 1544.

In this way, Manco Capac can be called the first and last ruler of the Incan Empire. The Spanish chroniclers, writing largely between 1533 and 1608, capture his story in conflicting versions. In *Commentary on the Inca* (1609), Garcilaso de la Vega (El Inca) gives the account of the origin in Lake Titicaca and the aid of the golden divining rod. Pedro Sarmiento de Gamboa in *History of the Incas* (1572) records Manco Capac, Mama Huaco, Sinchi Roca, and Mango Sapaca as the four founders of Cuzco, while other chroniclers such as Cristóbal de Molina, in *Myths and Rites of the Inca* (1575), give slightly differing accounts. The myth of Manco Capac most likely preserves the memory of an early migration of the Inca in search of lands favorable for farming, and its later ornamen-

tation is as elaborate and fantastic as Incan civilization itself.

mythology, Celtic

Celtic mythology refers to a series of myths and legends from the British Isles and northwestern Europe. These myths represent part of the oral tradition of Ireland, England, and Wales. Prior to and throughout the MIDDLE AGES, the myths were retold by bards, most notably Taliesin, the chief bard of Britain and a Celtic shaman who lived during the late sixth century. The tales were later written down by monks and have since influenced literature around the world.

Many of the richest myths originated in Ireland and Wales. The ancient Celtic myths are divided into four cycles of stories: the Mythological Cycle, the Ulster Cycle, the Fenian (or Ossianic) Cycle, and the Cycle of Kings (or the Historic Cycle). These stories concerned heroic events in Celtic history, the underworld, great warriors, and magical events. The Celts also had a strong connection with nature, and many tales featured animal transfor-

mations. In some tales, natural elements, such as trees or streams, had human characteristics.

The Mythological Cycle provides the best information available about pagan Ireland. These stories center on the Tuatha Dé Danann (or People of Dana) who make up the Celtic pantheon. The Tuatha Dé Danann arrived in Ireland from northern Greece, where they developed their skills in magic and druidism, so it was told, to such an extent that they became known as gods. Their arrival in Ireland is recorded in the *Lebor Gabala* (The Book of Invasions), which gives a complete account of the pantheon of early Celtic gods. According to this book, the Tuatha Dé Danann were involved in several major battles against other early Irish people, the Fir Bolg, who had also emigrated from Greece, and the Fomorians, a race of brutal giants. The Tuatha Dé Danann defeated the Fir Bolg at the First Battle of Moytura and forced them to flee to islands off the coast of Ireland. Later, the Tuatha Dé Danann conquered the Fomorians at the Second Battle of Moytura, where Lugh the Long Arm led the Tuatha Dé Danann to victory against the giant King Balor.

The arrival of the Milesians from Spain marked the beginning of Gaelic rule in Ireland. Emer, Donn, and Eremon were the sons of Míl of Spain, and they came to Ireland to establish a new kingdom. According to legend, they fought fiercely with the Tuatha Dé Danann and were able to overcome the gods' powers. The two groups agreed to a truce that allowed the Tuatha Dé Danann to rule over all the territory in the Irish underworld and the Milesians to rule over all the territory aboveground. The Tuatha Dé Danann then lived in *sídh* (or fairy mounds) belowground and were only able to return to the surface of the earth on Samain (or Halloween). Other famous stories from the Mythological Cycle concerning the Tuatha Dé Danann include those about the Children of Lir, the Children of Tuirenn, and the Wooing of Étaín.

The Ulster Cycle concerns the heroic feats of the greatest of the Knights of the Red Branch, Cu Chulainn, who lived during the first century B.C. This

was during the time of Conchobar Mac Nessa's and Medb's reigns. Mac Nessa was the King of Ulster, whose castle was called Red Branch, and Medb was the Queen of Connacht. Cu Chulainn was thought to be the son, or reincarnation, of Lugh the Long Arm, one of the Tuatha Dé Danann leaders. The most famous tale in the Ulster Cycle is the *Tain Bo Cuailnge*, or *The Cattle Raid of Cooley*. The story tells of Queen Medb's desire to steal the Black Bull of Cooley from Ulster. Medb amasses a large army to go to Ulster to steal the bull, which is renowned for its fertility. Because of a curse on Ulster, all the soldiers except Cu Chulainn are rendered unable to fight when the Connacht army approaches. Cu Chulainn single-handedly holds off the army's advance and defeats the Connacht troops. Despite Cu Chulainn's heroics, the Black Bull is stolen and taken to Connacht, where he is placed in battle with that town's White Bull of Ailill. The Black Bull defeats the White Bull, after which the two kingdoms end their fighting.

Another Ulster Cycle tale, *Bricriu's Feast*, concerns a feast held by a wealthy Celt named Bricriu. In the story, three heroes of Ulster, including Cu Chulainn, compete for a prize of wine, a boar, a cow, and wheat cakes. A giant named Bachlach must find out who is the bravest of the warriors by means of a wager that allows a hero to cut off Bachlach's head one night if the hero promises to allow Bachlach to cut off the hero's head the next. The first hero cuts off Bachlach's head, which the giant then finds and places back on his shoulders. However, the first hero fails to return the next night to complete his part of the wager. Only Cu Chulainn returns the second night to keep his covenant. Bachlach is so impressed by Cu Chulainn's honor that he pronounces him the bravest of the Ulster warriors and awards him the prize Bricriu had promised. This story served as a model for the later medieval tale *Sir Gawain and the Green Knight*.

The Fenian (or Ossianic) Cycle consists of tales about Finn Mac Cumhail and the Fenians, who lived in County Kildare in eastern Ireland around

the third century. Many of the tales of the Fenian Cycle are recorded in *The Book of the Dun Cow* (ca. 1100). Unlike the myths of the other cycles, these stories do not focus on tribes but on families of heroic hunters. These tales concern the quarrel between the family of Cumhaill and the family of Morna. The greatest rivalry was between Finn Mac Cumhaill and Goll Mac Morna, who had brutally killed Finn's father in battle.

One tale in this cycle is that of Diarmuid and Grainne, one of the greatest Irish love stories. It recalls the legend of the maiden Grainne, who is to be married against her will to the much-older Finn Mac Cumhaill. But Grainne is a strong-willed woman who wants to marry only someone she loves. She meets Diarmuid during a great feast and asks him to take her away and be her husband. Their flight leads the Fenians to hunt all over Ireland for the couple. The story ends tragically with Diarmuid's death at the hands of Finn, who regretfully decides not to administer a healing potion to his mortally wounded foe. The Fenian Cycle remains a popular series of myths in Irish folklore and the public imagination. James Joyce's final work, *Finnegan's Wake*, contains many references to the events of the cycle.

The Cycle of Kings stories are a mixture of myth and historical events. These stories include the tales of King Arthur and his Round Table, which were first written down by GEOFFREY OF MONMOUTH. The French medieval court poet CHRÉTIEN DE TROYES also preserved many of the chivalric tales first told by bards throughout the British Isles and northern France.

In addition to the four cycles, Welsh tales form an important part of Celtic mythology. *The Mabinogian* is a collection of 11 tales from Wales. The title roughly translates to stories concerning the conception, birth, and life of a particular hero. The most famous of these tales are "The Four Branches of the Mabinogian," stories of magic and chivalry, which comprise "Pwyll, Lord of Dyfed"; "Branwen, Daughter of Llyr"; "Manwydan, Son of Llyr"; and "Math, Son of Mathonwy." Other Welsh

tales were collected in the Middle Ages in the *White Book of Rhydderch* and *Red Book of Hergest*.

Celtic mythology continues to inspire writers and readers today. The Irish poet W. B. Yeats was heavily influenced by Celtic literature. Many elements of Celtic myth can also be seen in works such as Morgan Llywelyn's *The Red Branch*, Edward Rutherford's *The Princes of Ireland*, and J. R. R. Tolkien's *Lord of the Rings* trilogy. In her book *Gods and Heroes of the Celts*, Marie-Louise Sjoestedt says, "Some people, such as the Romans, think of their myths historically, the Irish think of their history mythologically." Perhaps it is this portrayal of history as myth that has made and continues to make Celtic mythology so compelling.

mythology, Greek and Roman

Mythology comes from a Greek word that means simply “stories,” but the term is now used to refer to ancient tales, especially those from Greece and Rome, that attempt to account for such mysteries as the origins of the world and the vagaries of human behavior within the context of the religious beliefs of the time. If the story was satisfying enough, no one required proof of its veracity. In true storytelling fashion, the oft-told tales, the characters that populated them, and the events they related grew more incredible with time.

Nearly every region of the ancient world has its own body of mythology. The stories evolved and expanded as different cultures mixed—due to military invasions, for instance, or commercial trade—and became aware of one another’s traditional narratives. “Goddess-worshipping native cultures were conquered by foreign patriarchies; Asian cosmology was imported along with metals and spices; monsters from abroad crossed paths with local champions,” writes Michael Macrone, author of *By Jove! Brush Up Your Mythology*. “The result was a common pantheon of capricious, anthropomorphic gods who camped on [their dwelling place] Mount Olympus and pursued their separate interests on earth.”

Initially, the births, exploits, and scandalous carryings-on of the divine Olympians were committed to memory. In the eighth century B.C., the Greeks HOMER and HESIOD compiled these stories and gave them narrative structure in their poems the *Iliad*, the *Odyssey*, and *Theogony*. These works recount, respectively, an episode during the Trojan War that involves gods behaving badly; the adventures of a Greek warrior returning home from the Trojan War who is waylaid by a succession of mythical creatures; and the origins of the universe and the genealogy of the deities. Each of the Greek gods exhibited a distinct personality and displayed

passions and weaknesses that humans readily recognized. They also possessed the supernatural powers they needed to satisfy their desires, punish their adversaries, and wreak havoc.

The Roman pantheon, on the other hand, was originally occupied by incorporeal agents who instigated events but were not exactly “beings” and did not mingle with one another. Eventually, through interactions with Greece, the Romans adopted the Greek stock of deities, renaming them appropriately; for instance, “Zeus” became “Jupiter.” The Romans also incorporated tales and legends that arrived from Egypt and Asia into their own mythologies. The Roman poets VIRGIL and OVID elaborated on these myths to render their own works, the *Aeneid* and the *Metamorphoses*, respectively, more powerful artistically and politically.

According to Greek and Roman myth, the first gods on earth were the Titans, including Atlas, Prometheus, and the leader Cronus (Latin name: Saturn), who fathered the first six Olympian gods. Cronus was told that one of his children would dethrone him, so he swallowed his offspring at birth. But when his sister-queen, Rhea, delivered Zeus (Jupiter), she hid him and gave Cronus a rock to swallow in his place. Accordingly, Zeus later overthrew his father, became ruling power among the deities, and punished the conquered Titans. Atlas was compelled to bear the cruel weight of the sky and the earth upon his shoulders. His brother, Prometheus, who gave men fire, was shackled to rocks in Tartarus, the depths of the underworld.

Twelve gods followed the Titans. Besides Zeus, there were Hera (Juno in Latin), his long-suffering wife and protector of marriage; Poseidon (Neptune), god of the sea; Hades (Pluto), god of the underworld; and Athena (Minerva), the goddess of war and of wisdom, who sprang from Zeus’s head fully formed and outfitted for battle. Apollo is the god of poetry and healing. His twin sister, Artemis (Diana), is a patroness of the forest and goddess of the moon. Aphrodite (Venus) is the goddess of love and beauty and, as such, causes more than her share of discord. Hermes (Mercury) is a messenger god. Ares (Mars), the war god, was more revered by

the Romans than the Greeks. Hephaestus (Vulcan), god of the forge, is a patron of craftsmen; and Hestia (Vesta) is the virgin goddess of the hearth.

One of the best-known myths features Demeter (Ceres), the daughter of Cronus and Rhea. The goddess of grain, wheat, and the harvest, she is one of the oldest divinities. Demeter had a daughter, Persephone, sired by Zeus. When the girl lived on earth, it was always springtime. But Hades stole Persephone away to be queen of the underworld. The bereft Demeter searched for her beloved daughter, during which time the earth and its flora began to wither. Without the fond attentions of its patroness, the world was thrust into a permanent state of winter. Zeus at last dispatched Hermes to liberate Persephone. Before she left the land of the dead, she was tricked into eating a pomegranate seed. Demeter knew this would kill her, so she and Hades struck a deal in which Persephone would spend part of the year with the dead and the other part with the living. When Persephone is with Hades and Demeter is forlorn, the crops die, darkness descends, and cold comes. When Persephone is on earth, springtime returns. This myth accounts for the seasons of the year.

The myth of Epimetheus explains how evil was introduced into the world. The foolish Epimetheus (“afterthought”) was the brother of the cunning Prometheus (“forethought”). They were charged with the tasks of creating animals and man, respectively. Epimetheus gave the animals formidable qualities such as strength and speed, leaving none left over for humans. Prometheus retaliated by making man in the image of the gods and stealing fire from Mount Olympus for use by the creatures. An angry Zeus sent Pandora, the first woman, to Epimetheus, armed with a box that they were told must forever remain shut. Overwhelmed by curiosity, however, Pandora lifted the lid and unleashed misery and affliction to plague mankind forevermore. But the vessel also contained hope, which helps humans endure inevitable suffering.

Contemporary language reflects the enduring influence of these and other classical myths. “Such ancient Greek and Roman tales have enlivened

English speech for centuries,” according to author Michael Macrone. “In fact, you probably invoke at least one god a day.” Chaos, a disorganized mass, was the first power in the universe, according to Hesiod’s *Theogony*; “aphrodisiac” is derived from the name of the love goddess Aphrodite; “cereal” comes from Ceres; Flora and Faunus were gods of nature; and the Amazons were bellicose superwomen living along the Black Sea.

The works influenced by classical mythology are endless. In DANTE ALIGHIERI’S *Divine Comedy*, the narrator takes Virgil as his guide and names Homer and Ovid among the great writers. Other works include William Shakespeare’s *Venus and Adonis*, Christopher Marlowe’s *Doctor Faustus*, and Edmund Spenser’s *Faerie Queen*. Even John Milton’s *Paradise Lost* uses mythological imagery, despite its Christian subject matter.

European poets and dramatists who relied on myth include Pierre Corneille, Jean Racine, Gotthold Lessing, Friedrich Schiller, Johann Wolfgang von Goethe, as well as England’s Romantic poets. In the 20th century, the playwright Eugene O’Neill used myth as the basis for *Desire Under the Elms*.

Artists from Rubens in the baroque period to Matisse during the 20th century have used mythological subjects, and operas from George Frideric Handel, Wolfgang Amadeus Mozart, Ludwig von Beethoven, Richard Wagner, and Benjamin Britten all exhibit the influence of the classics. The George Bernard Shaw play *Pygmalion* and the musical *My Fair Lady* by Frederick Loewe and Alan Jay Lerner, to name just a couple of contemporary theatrical examples, are derived from the myth of a king who sculpted a statue so beautiful he fell in love with it.

“Every age has reinvented old myths in line with its new sensibilities turning them into romances or satires, demonic histories or heavenly allegories,” writes Michael Macrone. Psychoanalyst Sigmund Freud used the story of Oedipus, dramatized by SOPHOCLES, to identify psychological phases and disorders and also saw a relationship between myths and dreams. Carl Jung demonstrated that myths feature archetypal characters that serve as

models of behavior and project the “collective unconscious” of a society or community. And finally, the sociologist Claude Lévi-Strauss considered myths a form of communication within a culture.

mythology, Norse

Norse mythology consists of stories that pre-Christian Scandinavians told about supernatural beings, superhuman heroes, and the world around them. Norse myths share stories and themes with Germanic and with Celtic MYTHOLOGY. They have provided inspiration for countless writers, including William Shakespeare, who took *Hamlet’s* plot

from myth; and J. R. R. Tolkien, who drew heavily on Celtic and Norse mythological ideas and language for his *Lord of the Rings* trilogy.

Norse myths began as ORAL LITERATURE. Few were written down before Iceland’s conversion to Christianity in A.D. 1000. Sources for these myths include rune-covered objects, rock carvings, and articles found in graves. In addition, some Scandinavian places have names derived from myth. The scholar, E. O. G. Turville-Petre notes that these place-names “show how eminent were some of the gods and goddesses, such as Ull (Ullinn) [and] Hörn . . . who, for us, are only shadowy figures.” Descriptions written by foreign observers, including TACITUS, have also provided information.

Written sources native to Scandinavia have preserved myths in greater detail. Although these sources exhibit a Christian influence, some of the stories they contain are clearly centuries older than the manuscripts in which they appear. They include a history written by Saxo Grammaticus (born ca. 1150), SAGAS, and poetry. Scaldic poetry, which usually focuses on contemporary events, is full of kennings, riddling descriptions that often involve mythology. For instance, a poet might mention “the blood of Ymir,” alluding to the story that Ymir’s blood created the sea. Finally, the *Poetic EDDA* and SNORRI STURLUSON’s *Prose Edda* are Norse mythology’s greatest literary monuments.

According to Norse myth, an ash tree, Yggdrasill, forms and surrounds the entire cosmos. The *Poetic Edda* describes the early cosmos in the following words:

*Nothing was there when time began,
neither sands nor seas nor cooling waves.
Earth was not yet, nor the high heavens,
but a gaping emptiness nowhere green.*

Eventually, drops from melting icicles formed a frost giant, Ymir, the progenitor of all giants. Other water drops became a cow, who licked ice until it formed a man, Buri. Buri’s grandchildren were the gods Odin, Vili, and Ve. They killed Ymir and built the Earth from his body. In a scene with parallels in

Oceanic MYTHOLOGY, they then created man and woman from “two feeble trees, Ash and Embla.”

Norse gods include Odin, god of poetry and battle, who gave up an eye in exchange for wisdom; Thor, who uses his dwarf-forged hammer to kill giants and protect the world; Freyja, a fertility goddess who weeps golden tears; Baldr the Beautiful, who is destined to be killed by a sprig of mistletoe; and Loki. Like the Hopi’s Coyote (*see* COYOTE TALES) and Oceanic mythology’s Maui, Loki is a trickster. Unlike Coyote and Maui, he has an evil side and brings about Baldr’s death. His children include Hel, goddess of death; the wolf Fenrir; and the serpent that surrounds Midgard (“middle earth,” humanity’s home).

Loki and his children will fight against the gods in the final battle between gods and giants. In preparation for this battle, known as Ragnarok, Odin sends winged female beings called valkyries to battlefields. They bring fallen warriors to Odin’s palace, Valhalla, where the warriors drink, eat, and await the coming of Ragnarok.

Norse myths also celebrate human heroes. In the words of translator Patricia Terry, such heroes receive praise for their “courage, strength, and loyalty,” while “ordinary men are praised for prudence.” The *Lay of Volund* describes how Swedish royals capture Volund, a Finnish prince, while he is waiting for his valkyrie wife to return from war. Volund eventually takes a horrible revenge. Other poems tell of the warrior Helgi and the valkyrie Sigrun. Most famous of all is Sigurd, whose story is a Norse version of the German *NIBELUNGENLIED* and is also related to the English *BEOWULF*.

Norse heroes struggle to reconcile their duties to kinsmen, spouses, lords, lovers, and friends. Sigrun, for instance, laments when she learns that Helgi has won her as his bride by killing most of her family.

Although female goddesses receive less attention than their male counterparts, Norse mythology is full of women like Sigrun, strong yet suffering. “For the most part women and warriors are praised for identical qualities,” notes Terry. “The poets seem to have been particularly inter-

ested in the heroines, perhaps because they may be . . . both convincing victims and daughters of Odin.”

mythology, Oceanic

Oceania encompasses a large number of Pacific islands, including Polynesia, Micronesia, Melanesia, Australia, and New Zealand, and sometimes the Malay Archipelago. Its inhabitants have developed a vast number of myths. Some appear to be from only one or two islands, while others exist in dozens of versions across much of Oceania.

Oceania’s myths took on written form beginning with the visits of European missionaries and explorers in the 18th and 19th centuries. Before that, they had existed for centuries as ORAL LITERATURE. They held and continue to hold fundamental roles in Oceanic cultures. They explain how the

world in general, and humanity in particular, came to be; describe the lives and activities of gods and human (or superhuman) heroes; and, finally, serve to display individual composers' artistry and entertain listeners.

Polynesian islanders have developed two types of creation myths. In one, the world gradually grows out of darkness into its present state. The Hawaiian *Kumulipo* is one myth of this type. Another is the Maori creation chant *Te Po*, which in James Irwin's translation begins:

*The recital of the great dark
The great unknown
The deep unknown . . .
The unknown that is being revealed.*

From the darkness come forth Father Sky, Ranginui, and Mother Earth, Papatuanuku. They have children, who are trapped between the two parents. Finally, the children, led by Tane, push their mother and father apart, thus separating sky from earth. Their parents grieve over this forced separation and produce rain and mists.

On other islands, the primeval father Rangi appears as Atea Rangi or Atea. Mother Papa occasionally appears under a name related to coral and coral growth. The Manganian islanders tell how the world is contained inside a coconut shell named Avaiki, whose first inhabitant Vari (mud) pulled Father Sky from her side.

In the second kind of creation myth, a preexisting, all-powerful creator brings forth the world. Inhabitants of Samoa, Tonga, and the Ellice Islands tell how Tangaloa created everything from the "Il-limitable Void."

Micronesian myths place less emphasis on world creation than do Polynesian myths, but the Micronesians do have origin myths. In some stories, just as in Norse mythology (see MYTHOLOGY, NORSE), a primeval being's body parts make up the world. In the Marshall Island myths, islands appear when the god Lowa says, "mmmm." In other Oceanic myths, Ancient Spider creates the world, and the eel Riiki separates earth and sky.

Many Australian myths postulate a primeval Dreamtime during which spirit beings walk on the earth. Australian myths also emphasize the separation of earth and sky, which was accomplished by eucalyptus trees, mountains, or even a magpie using a stick. In contrast, Melanesian myths, while they can involve raising the sky, tend to emphasize the creation and release of the sea.

Ancient Oceanic peoples had many gods about which they told stories. Australian myths have the powerful Rainbow Snake as well as Bat, Eaglehawk, and Sun. Easter Island myths include the creator god Makemake, and Hawaiian myths have Pele, the volcano goddess. Gods widespread throughout Polynesian myths include Tane (Kane in Hawaii), god of forests and animals; Tangaroa, the ocean god; Rongo (also known as Ono or Lono), the god of sound and cultivated food; and Tu, god of war, whom the Hawaiians called "Ku-of-the-deep-forest," "Ku-the-snatcher-of-lands," and "Ku-with-the-maggot-dropping-mouth." Also popular is the goddess Hina-of-the-moon.

Some myths explain humanity's origins. Various Australian aboriginal tribes tell of a goddess who emerged from the sea to create life; Bunjil, who made men from clay, while Bat made women from water; and the Numbakulla brothers, who cut humans out of unformed, sightless beings. According to other Oceanic myths, a god makes men out of maggots, sand, or wood; humans grow out of trees or develop from stones, blood clots, maggots in a dead wallaby. The Maori believed that Tane not only made a woman from red earth but also brought humanity baskets of knowledge.

Oceanic myths also tell of heroes. In their equivalent of VIRGIL'S *Aeneid*, the inhabitants of Ma'uake (one of the Cook Islands) explain how 'Uke, son of the god Tangaroa, left the mythical homeland Avaiki to settle on their island. The Maoris' Hutu and the Marquesan Kena resemble Greek mythology's (see MYTHOLOGY, GREEK) Orpheus in that they visit the underworld to retrieve a dead loved one. In the Bismarck Archipelago, the brothers To Kabinana and To Karvuvu create women, release the sea, and fish up land. The incompetent To Karvuvu

also creates sharks and brings about death. The Polynesian hero Tawhaki, who seeks to avenge his father's death, also has a less-competent brother. Their adventures are part of a lengthy myth cycle that includes the story of Tawhaki's grandson Rata. Meanwhile, the Melanesians tell of Qat and his 11 brothers.

The most popular and widely known hero of Oceanic mythology is Maui. Like the Hopi's Coyote (see COYOTE TALES), Maui is almost always a trickster, but he also accomplishes great deeds. He fishes up land, steals fire, kills monsters, and snares the sun so that days will be longer. According to the Maori, humans die because Maui's attempt to gain immortality was unsuccessful.

The myths of Oceania reflect innumerable elements in the lives of peoples surrounded by sky and water. As with all myths, there is an element of historical truth concerning the social, cultural, economic, and political developments of a time long past.

Nahuatl poetry, ancient (Aztec poetry)

Nahuatl has for centuries been an indigenous language of the peoples of Mexico. Prior to the arrival of Spanish explorers, it was the language spoken by inhabitants of the México-Tenochtitlán region, who called themselves Mexicas or Tenochcas, but whom the Spanish referred to as Aztecs. It is likely that Nahuatl was also the language of the Toltecs, who predated Aztec civilization and whose culture was absorbed into the Aztecs' in many ways. Nahuatl was spoken as well as a written language. Priests, rulers, and their counselors preserved their knowledge and written history in a form of ORAL LITERATURE aided by pictographic accounts recorded in paintings and books they called *cuicamatl*, or “papers of songs.” The recitation of Nahuatl verse was, in fact, a reading of pictures, to which the language of the poetry often makes reference.

Some of the Nahuatl poetry records history, from the beginnings of Toltec civilization in the first century A.D. to the Spanish conquest in 1521. The poetry was meant to be sung, and some records involve musical notation or directions on intonation. The meter of the poetry is varied and complex, and poems frequently pair images and lines to convey a single idea. For instance, the words *xochitl* (flower) and *cuicatl* (song) are frequently

used together, and a “flower-song” might represent art, poetry, or the idea of symbolism itself.

Genres of poems range from songs celebrating war, rulers, women, and ancient wisdom to songs about nature, including the seasons and certain favorite images such as doves, fish, flowers, birds, and eagles. A number of the surviving songs are anonymous, while others are attributed to rulers and sages referred to as *cuicahuicque*, “composers of songs.” Many poems glorify Aztec conquests in war and explain their religion, a system of sacrifice built on the premise that it was human responsibility to ensure the continuation of sun, moon, earth, and stars in what they counted the fifth incarnation of the universe. Other poems celebrate love and friendship. Many of the poems addressed to nature contain a theme of lament on the transitional nature of life.

The most famous of the ancient Nahuatl poets, and the most-praised in his own time, is Nezahualcoyotl (1402–72), ruler of Tezcoaco, an architect, legislator, and sage as well as a poet. His poetry shows a profound depth of thought and an artful blend of two distinct traditions—that of the ancient Chichimecs of the north and that of the Toltecs, who attribute their arts, crafts, philosophy, and wisdom to the divine figure and culture

hero Quetzacoatl. His poetry also reflects the somber meditation that all on earth must pass away, as in these lines translated by Miguel León-Portillo in *Fifteen Poets of the Aztec World*. Observing that nothing lasts forever, the poet says sadly:

*Though it be jade it falls apart,
though it be gold it wears away,
though it be quetzal plumage it is torn
asunder.*

Mortality, Nezahualcoyotl writes, means eventual loss and departure: “Like a painting / we will be erased.” But if there is an afterlife, he speculates, then nothing ever really disappears.

While untold numbers of artifacts, manuscripts, and other records of Aztec culture were systematically destroyed by the Spanish, some early missionaries took an interest in the native language and literature. Many of them attempted to preserve customs, histories, and poems by transcribing them in either Nahuatl or Spanish. Most of the existing works of ancient Nahuatl poetry survive in three collections: the “Romances of New Spain,” collected and recorded by Juan Bautista Pomar as part of his history *Geographical Relation of Tezcoco* (1582); the anonymous *Cantares Mexicanos* (Mexican Songs) compiled between 1565 and 1597; and the songs recorded by Bernardino de Sahagún in the Florentine Codex (1560). In addition to these, native speakers like Alva Ixtlilxóchitl adopted the Spanish alphabet for their own language and made a similar effort to preserve their heritage before it was entirely lost. These collections show very little influence of European thought or religion, preserving the native beauty and spirit of Nahuatl poetry.

Navajo Nightway Ceremony songs

Music plays a major role in the traditional ceremonies of the Navajo people. Their songs, such as “Song from the Mountain Chant” and “Song of the Earth,” are deeply bound to ceremonies performed for a variety of reasons, such as to evoke cures for the ill or to celebrate and honor the gifts bestowed by nature.

The Nightway Ceremony is a nine-day Navajo healing ceremony undertaken to relieve stricken people and in a larger sense to reharmonize and reorder the natural world. The songs that comprise the ceremony number into the 400s. The ceremony is carefully constructed as a means of rebalancing relationships with the Navajo universe and between people, especially along lines of gender, authority,

and age. In general, the goal of the activity is to reestablish beauty and remove ugliness from the universe.

Well-trained medicine men, prepared by decades of study in arcane details of the Navajo healing arts, run the ceremonies. Many, including current public-health officials of the Navajo, contend that the Nightway Ceremony is effective in healing the sick and ordering social relations among the participants.

Navajo history has it that the Holy People gave the Nightway to the Navajo after the earth was rid of monsters. At that time, Holy People became invisible and began to live in caves, mountaintops, and sacred sites from where they could watch over mortals below. This change in the status of the Navajo Holy People can be set shortly after the year 1000, a date fairly late in the Navajo cosmic history.

Songs are probably the most significant element of the Nightway Ceremony. A varied litany of songs and chants, accompanied by instruments such as the gourd rattle and the basket drum, are meant to instruct, evoke, and exalt. There are unfortunately few systematic records of the songs, partly because Western ears have not been sensitive to the differences among the various chants, and partly because the medicine men have been reluctant to have their ceremonies taped. Therefore the songs have had to be re-created outside the actual Nightway, a method that often creates a slightly artificial reproduction. Nonetheless, full records of the various song sets used in the ceremonies have been enumerated, bearing such names as *Songs of the Highest Mountains*, *Songs of the Navajo Canyon*, *Songs of the Sand Painting*, *Songs of the Killer Enemies*, and *Songs of the Fringed Mouth Gods*.

Nezāmī (Nizāmī, Elyās Yūsuf Nezami Ganjavī, Nizāmī Ganjavī, Abu Muhammad Ilyas ibn Yūsuf ibn Zaki Mu'ayyad) (ca. 1141–ca. 1203) *poet*

Nezāmī was born in Ganja, the capital of Arran, an area of Transcaucasian Azerbaijan. His father was from Qom in Iran and might have been a civil servant, while his mother is believed to have been the daughter of a Kurdish chieftain. Nezāmī was orphaned early, brought up by his uncle, and married three times. In Nezāmī's day, Ganja was a center of literary activity, and poets there enjoyed the patronage of provincial governors, receiving upkeep and distribution of their poetry. Persian poets of that time, Nezāmī in particular, were well versed in many subjects such as languages, mathematics, astrology, astronomy, Muslim law, philosophy, and history.

Nezāmī was a classical Persian poet who wrote on the themes of women, love, and science. His style of poetry is lyrical and sensuous, made especially alive by intense imagery and complicated symbolism. He is best known for five long lyrical works: *Khamse*, or *The Five Treasures* (1173, also known as *The Quintuplet*), a collection of five long poems in which he expresses his views on a number of cultural and aesthetic issues; *Khosrow and Shīrīn* (1181), a collection of lyric poems about the pure love shared by the title characters; *Layli and Majnun* (1188), a romance about the extremes of passion and forbidden love; *Haft Paykar*, or *Seven Beauties* (1197), a romance told by the character Bahram V Gur, modeled after the ruler who led the Sassanian Empire from 421 to 439; and *Iskandar-Nama* (1201), a poem about Alexander the Great.

The themes in Nezāmī's writing involve problems of self-knowledge, the problem of identity, and the difficulty of the protagonist's interpretation of his role as a lover. Nezāmī stresses the ro-

mantic atmosphere, exploiting the pathos of his stories. He expresses his ideas of love from the standpoint of a society that tried to strictly control the effects of love and marriage. For example, in the nearly 4,000 stanzas of his most famous poem, *Layli and Majnun*, Nezāmī vividly portrays both love’s destructive force and one lover’s willingness to become victim to love’s excesses. He thus creates a love story and an allegory.

The two main characters of *Layli and Majnun* are cousins who fall madly in love, Majnun to the point of obsession. When Majnun makes a public display of his sentiment, he damages Layli’s honor and incurs her father’s disfavor. Layli’s father forbids the marriage, and Majnun responds with a public display of grief, ripping his clothes and crying Layli’s name. Majnun’s father takes him to Mecca in an attempt to heal him, but Majnun’s madness is simply confirmed when he proclaims, “A love as steadfast as this, let it increase a hundred fold.”

Majnun becomes alienated from society, starts wandering naked in the desert, and finally, in a last show of madness, rejects Layli, who has been faithfully waiting for him. She does not match the image of her that Majnun had been carrying in his head and heart, so he cannot love the real Layli. She dies of grief as a result of his rejection.

Layli and Majnun and Nezāmī’s other works reflect his intellectual background. He used literature as a means through which he could challenge current societal conventions, and he beautifully depicts his ethical viewpoints of love, science, and women in poems that reveal his prodigious creative talent.

Nibelungenlied (12th century) *epic poem*

The *Nibelungenlied* (Song of the Kings of Burgundy) is a verse narrative written in 12th-century Germany by an author whose identity remains unknown. The *Nibelungenlied* inherits from both the EPIC or heroic poetry of the Germanic peoples (of which *BEOWULF* is a classic example) and the tradition of ORAL LITERATURE in Scandinavian cultures. It builds on the stories of Norse mythology (see MYTHOLOGY, NORSE), stories collected in the *EDDA*, and other SAGAS. Most English translations of the *Nibelungenlied* are based on what is commonly referred to as the B text, compiled ca. 1205 by a cleric serving the bishop of Passau.

The text of the *Nibelungenlied* exists in 34 manuscripts compiled and circulated in southern Germany between the 13th and 16th centuries. Together the manuscripts present various versions of the basic story, with fairly subtle differences. Presenters giving an oral performance of the poem would have added their own interpretations of specific events or characters, thus giving the text an evolution of sorts through the ages.

As editor Francis Gentry observes in *German Epic Poetry*, “Few works have exercised such a hold on later generations as this epic narrative of the deeds of bold warriors and lovely ladies, of high-spirited festivals and solemn ceremonies, of great battles, and, foremost, of revenge.” Part of the *Ni-*

belungenlied's appeal is that it blends the heroic themes of loyalty, murder, and vengeance with a courtly setting drawn from MEDIEVAL ROMANCES. Its main characters are kings and queens, its warriors follow the code of CHIVALRY, and interspersed with the moments of mass violence are poetic descriptions of courtly ceremonies and behaviors.

Divided into two main parts, this long poem (there are 2,379 stanzas) organizes its episodes into chapters or "adventures." When pronounced aloud, the four-line stanzas, separated by a *caesura* or line break, create a rhythmic, thunderous quality suitable to the unfolding events. Most of the action centers on the courts of Worms in southwestern Germany and Xanten in present-day Holland.

The hero Siegfried is depicted as a knightly prototype, daring and chivalrous but also demanding. To win the heart of Kriemhild, Siegfried offers his services to the court of Burgundy and is eventually granted her hand in marriage by King Gunther. Ten years after this marriage, Kriemhild argues with Queen Brünhild, Gunther's wife, over which man is the better champion. In the resulting struggle, Brünhild has Hagan murder Siegfried, and Kriemhild is left friendless and defeated. Kriemhild seeks revenge in the second part of the work, killing Hagan and King Gunther before losing her own life at a banquet hosted by Attila the Hun, where fighting ensues between the Huns and the Burgundians.

Part of the artistry of the *Nibelungenlied* is due to the personalities of its characters, who are portrayed as dimensional figures neither purely heroic nor purely villainous; all have strengths and weaknesses, and all possess tendencies toward good and evil. Siegfried is initially described as a man possessing skill at arms and physical beauty, whose accomplishments have won him wide renown, but through the course of the narrative he displays arrogance, ruthlessness, and callousness along with a sort of carefree ignorance. Hagen, Gunther's chief counselor, is a complex figure whose desire for power leads him from the most exemplary loyalty to the most profound betrayal. Far from being passive heroines, the women of the *Nibelungenlied*

are forceful, determined, and fully responsible for their actions, including their failures.

The *Nibelungenlied* is a tragic epic, and its theme is perhaps best personified by the character of Kriemhild, the Burgundian queen who opens and closes the tale and whose career demonstrates that joy is ever blended with sorrow. Introduced as "a royal child in Burgundy— / In all the world none lovelier than she," she is murdered by Hildebrand in the closing stanzas, proving that "ever pleasure turns to pain when all is done."

The *Nibelungenlied* has held an enduring fascination for readers, inspiring plays, poems, novels, music, and Richard Wagner's opera, *Ring of the Nibelung*. The discovery of the C text in 1755 at a castle in Austria revived interest in the epic and led to new editions, translations, and imitations. As Germany became a unified nation in the 19th century, the *Nibelungenlied* was cited as proof of the common mythology, literature, and history of German peoples. Today the text can still be appreciated for its dramatic quality, as well as its poetic beauty and sophistication.

Njal's Saga (ca. 1280) *prose narrative*

Written by an unknown author, *Njal's Saga* is widely considered among the finest of all classical Icelandic

SAGAS. The original manuscript for *Njal's Saga* has been lost; the earliest extant vellum manuscript is from ca. 1300. In its time the saga enjoyed great popularity, which is perhaps why many of its manuscripts have survived.

Broadly based on historical events that took place some 300 years earlier, *Njal's Saga* tells the story of ordinary people in medieval Iceland became caught in a complex web of revenge and murder. Honor and familial obligation play a large part in the events that unfold, as any insult, whether real or imagined, must be revenged.

In straightforward, economical prose, the story centers on Njal Thorgeirsson, an influential lawyer and sage who becomes embroiled in a 50-year feud that ultimately leads to his doom. Njal and his family are drawn irrevocably into conflict through his friendship with Gunnarr, who is portrayed as a brave and honest man. The beginning of the conflict is Gunnarr's marriage to Hallgerd (a match that meets with Njal's disapproval). Hallgerd, who is portrayed as very beautiful yet morally corrupt, then sets in motion a bitter set of feuds, beginning with her rivalry with Njal's wife, Bergthora. The following passage shows their initial exchange of insults (characteristic of most family sagas):

Hallgerd seized hold of her hand and said, "There's not much to choose between you and Njal; you have turtle-back nails on every finger, and Njal is beardless." "That is true", said Bergthora . . . "But your husband Thorvald wasn't beardless, yet that didn't stop you from having him killed."

A killing match ensues, and seven men die before the feud is stopped. Meanwhile, however, Gunnarr's mortal enemy, Mord, succeeds in bringing about Gunnarr's downfall, and the violence continues. Eventually Njal and his family are burned to death in their own home as a result of Mord's further machinations.

As a form of literary art, *Njal's Saga* ranks among the best of Icelandic sagas. Its characters are highly developed and represent a broad range of

human characteristics—all of which play a role in the development of a complex story riddled with conflict. It is the saga's human elements that make it appealing even to modern readers and that have given it a place in world literature.

Norse mythology

See MYTHOLOGY, NORSE.

Nukada, Princess (Nukata Okimi)

(fl. seventh century) *poet*

Princess Nukada, also known as Nukata Okimi, is considered Japan's first lyric poet. Like other members of the Japanese cultural elite at this time, she may have been of Korean origin. She was first the consort of Emperor Kobun, to whom she bore Prince Katsuragi; after the emperor's death, she married Emperor Temmu, to whom she bore Princess Toichi. She also had a relationship with Emperor Tenchi; in one poem she describes herself as waiting for him, using an image of nature to express her restlessness and longing:

*Swaying the bamboo blinds of my house,
The autumn wind blew.*

Emperor Tenchi, a great patron of the arts, encouraged Nukada's compositions. Princess Nukada's favored medium of poetic expression was the TANKA, a traditional poetic form consisting of five lines and 31 syllables. Her tanka were known for

their graceful symmetry and forceful rhythms. The Princess's poetry focused as frequently on political issues as on her personal life. Indeed, her position at court demanded that her life be political. But she is at her best in evoking metaphors of nature to portray a state of mind, as in one poem where she compares picking flowers in spring to flowers in autumn, and concludes simply: *Akiyama ware wa* — “But the autumn hills are for me.”

Several of Princess Nukada's poems were collected in the *Manyōshū*, *The Ten Thousand Leaves* (called by some *The Ten Thousand Ages*), a collection of Japanese literature compiled by the poet OTOMO YAKAMOCHI. This collection, like the folk poems of the *KOJIKI* (compiled in 712), provides a valuable record of life in Japan during the Heian era.

Ojibway myths and legends

The Ojibway Indians, also known as the Chippewa or the Anishinaubaek (pronounced nish-NAH-bek, meaning “the good people”) people, inhabited the Great Lakes region of North America in the late 17th century. For most of the year, the Ojibway spent their time farming and hunting for food and pelts for the fur trade. However, because the winters in the Great Lakes region are so bitterly cold and snowy, the Ojibway people spent these months gathered around fires indoors. It was around their fires that the Ojibway oral tradition developed. In fact, their myths were told only during the winter months.

One of the central characters in many Ojibway myths is Wenebajo, also known as Manabozho. Wenebajo was a mythical figure, not quite human and not quite animal. He was alternately portrayed as a trickster (a common character in Native American mythology), a kind of superhero, and the creator of the Ojibway people. He fought many monsters and protected humans against danger and disease.

Other Ojibway myths and legends include “A Gust of Wind,” which tells the story of how the first males were born; “The Foolish Girls,” which tells the story of how two girls learn not to be foolish; “The Father of Indian Corn,” which tells the story of a boy named Wunz who asks the Chief of Sky Spirits to help him find a way to feed his people; “How Dog Came to the Indians,” a tale about a giant who gives his pet dog to a pair of men so they can find their way home; and stories of supernatural spirits called the Manitous.

The Ojibway myths and creation stories were among the first such Native American tales to be collected by white American settlers. Henry Rowe Schoolcraft from Michigan published two books of Ojibway tales in the early 19th century. These books also served as source material for the poet Henry Wadsworth Longfellow’s epic poem *The Song of Hiawatha*.

Oklahoma Cherokee folktales

The Cherokee nation originally inhabited the Appalachian region of the United States, but a relocation effort begun by the U.S. government in 1838 removed huge numbers of Cherokee to Oklahoma via a route called the “Trail of Tears.” Currently, the Cherokee Nation of Oklahoma comprises a little over half the total Cherokee living in the United States. The folktales of the Oklahoma Cherokee preserve the beliefs, customs, and spiritual resiliency of a culture that has managed to survive enormous obstacles while maintaining its native dignity and strength.

The tales of the Oklahoma Cherokee are inherited, in many ways, from older myths of shared ancestry with the Eastern Band Cherokee. One example is the story of Selu, the corn goddess, and her husband Kana’ti. These two, who were among the first humans on earth, established the division of labor that would subsequently be practiced in the Cherokee tribe. Kana’ti (whose name means “hunter” in Cherokee) established that men would be responsible for bringing home animals to provide meat, while Selu (whose name means “corn”) was able to produce corn by shaking it out of her body and established that women would take care of planting, harvesting, and food preparation.

Other folktales describe the origin of natural phenomenon. For instance, “How the Deer Got His Horns” explains how Deer competed in a race with Rabbit in which a pair of antlers was the prize. As James Mooney tells the story in *Myths of the Cherokee*, the judges discovered that Rabbit had cheated by gnawing a shortcut through the bushes. Therefore:

They agreed that such a trickster had no right to enter the race at all, so they gave the horns to

the Deer, who was admitted to be the best runner, and he has worn them ever since. They told the Rabbit that as he was so fond of cutting down bushes he might do that for a living hereafter, and so he does to this day.

Some of the Oklahoma Cherokee folktales are what Mooney calls “wonder tales,” stories of magic and enchantment that might include spirits, giants, personified elements like Thunder, or similar supernatural events. Other folktales serve as records of historical traditions, preserving accounts of trade, interaction with other tribes, wars, and the first contacts with Europeans. Some tales provide a simple moral lesson.

Though they may simply appear to be entertaining stories, these Cherokee folktales act as valuable cultural records, preserving and communicating Cherokee ways of life and modes of thought. Aside from offering information about diet, economics, social structures, and tribal etiquette, the folktales preserve sacred religious teachings and offer myths that explain how the Cherokee understood and interpreted the world. Many of the folktales incorporate the foundational Cherokee understanding of the nature of the world as a union of the Upper World, and Lower World, and the earth world (called in the creation tales the “Ball of Mud”), which must be kept in a state of balance.

Moreover, despite their age and the fact that they have survived a centuries-long oral tradition (see ORAL LITERATURE/TRADITION), these tales offer a perspective on the world that can benefit present-day readers. In Marilou Awiakta’s *Selu: Seeking the Corn-Mother’s Wisdom*, Wilma Mankiller, the principal chief of the Cherokee Nation of Oklahoma, reminds readers that these old folktales teach lessons that still have currency in contemporary life. She writes:

We human beings are sometimes so oriented toward scientific explanations for everything that we seldom are able to suspend that analytical state of mind. . . . We have never really understood that we are one small part of a very

large family that includes the plant world, the animal world and our other living relations.

In addition to being entertaining stories that audiences of all ages and backgrounds can enjoy and appreciate, the folktales of the Oklahoma Cherokee remind readers of the subtle balance that must be maintained in all things as well as the connection to the larger world for which each individual is responsible.

Old English poetry (ca. 650–ca. 1050)

Old English was the vernacular language spoken by the Angles, Saxons, Jutes, Frisians, and other Germanic tribes that began to migrate to Britain in the fifth and sixth centuries. British resistance to the Germanic invaders gave rise to the legends of Arthur, who would reach great fame in the MIDDLE AGES. The Germanic tribes brought with them a non-Christian religion, deriving from Norse MYTHOLOGY and accounted for in the early SAGAS. New efforts to convert the Angles and Saxons began in 597 with the missions of Augustine. The

Church taught and wrote in Latin, as did the ruling class. Yet the Anglo-Saxon culture, which flourished from the first settlements until the time of the Norman Conquest in 1066, included a vernacular poetry of a range, depth, and complexity quite unrivaled by any other medieval European literature. The Old English poetry that survives shows a blending of the newer Christian beliefs with the ancient heroic code adhered to by the Germanic tribes, who were historically governed by a warrior elite and bound by ties of kinship and loyalty.

The greater part of Old English poetry is contained in four surviving manuscripts. The *BEOWULF* manuscript contains, among other fragments, the famed EPIC poem of that name. *Beowulf* is the best example of Germanic heroic poetry and the crown jewel of the Old English poetic corpus. The Junius manuscript contains various poems retelling stories from the Christian Bible, including an intriguing dialogue, *Christ and Satan*. The Exeter Book contains the largest number of poems, which range from religious verses and allegorical poems to charms, riddles, and gnomic verses which offer priceless insights into Anglo-Saxon folk wisdom. The Vercelli Book, discovered in Italy, includes the innovative poem thought to be the most beautiful of Anglo-Saxon religious verse, *The Dream of the Rood*.

Due to the near-constant warfare of the Anglo-Saxon period, first between neighboring tribes and then against Danish invaders or Vikings who raided the coast, the poems in the manuscripts are often damaged and in many cases reduced to fragments. Almost all the poems are anonymous. Old English poetry was an ORAL LITERATURE, developed and maintained by *scops*, or poet-singers, who functioned like the bards of the celtic BARDIC POETRY. The *scops* served as the living memory of the tribe, recording their history, genealogy, and social codes, all in rhymed verse. Evidence exists to suggest that women served as *scops*, though they too remain unnamed. The only Anglo-Saxon poet who personally signed his works was the cleric Cynewulf, writing in the late eighth century, who added his autograph so that readers might pray for him.

Critical Analysis

Most Old English poetry employed a poetic line with a four-beat meter, consisting of two half-lines of two stresses each. The half-lines were typically linked by alliteration, the use of similar-sounding consonants, which gave the words an aural music complemented by the accompaniment of a stringed instrument, probably a harp. A distinct feature of Anglo-Saxon verse is the use of the kenning, a compound descriptor that employs a striking image or metaphor to convey the qualities of the thing it describes. Old English vocabulary included a striking range of words to describe a single thing (dozens of different words existed, for example, as synonyms for “warrior,” “battle,” and “sword,” suggesting that these items were featured often in the poetry), and the use of varied adjectives or kennings along with the strict alliterative meter required no small skill of the poet. A brief poem by CAEDMON encapsulates all of these features in its opening lines on the creation:

*Now must we praise heaven-kingdom's
Guardian,
the might of the Measurer and his mind-
thoughts,
the Glory-Father's work, since he . . . made
the beginning.*

Caedmon's achievement is remarkable because he was supposedly an illiterate shepherd who, some time between 658 and 680, spontaneously began devising poetry after an angel visited him one night in a dream. “Caedmon's Hymn,” commonly accepted as the oldest Anglo-Saxon poem on record, is preserved in BEDE's *Ecclesiastical History of the English People*.

Anglo-Saxon poetry after Caedmon can be discussed according to type. Excepting *Beowulf*, the best example of heroic poetry is the *Battle of Maldon*, composed to record the defeat of the famed warrior and Essex ealdorman Byrhtnoth in a battle against Danish invaders which took place at Maldon in 991. *Maldon* aptly and lyrically expresses

the basic tenets of the warrior code: to fight bravely no matter the odds, never abandon kin to the enemy, and avenge fallen chiefs or fellow warriors. Byrhtnoth dies gloriously, due to a fatal move in which he allowed the Danish armies to compensate for a territorial disadvantage. The dramatic tension of the poem lies precisely in this tragic defeat, and the vividness with which the clash of battle is evoked marks the anonymous poet's skill:

*Thus the brave men stood firm in battle,
each sought eagerly to be first in
with his spear, winning the life and
weapons
of a doomed warrior; the dead sank to the
earth.*

A similar example of heroic poetry is preserved in the ANGLO-SAXON CHRONICLE entry for 937, describing the Battle of Brunanburh. The Anglo-Saxon corpus also preserves a unique set of heroic poems about women: *Judith*, *Juliana*, and *Elene*, who are collectively referred to as the “fighting saints.” Though they are about Christian warriors, these poems preserve traces of the sacred role of women in early Germanic society as advice-givers, equal rulers, and weavers of peace.

A second well-represented type of Old English poetry is the elegy. Much of the Anglo-Saxon corpus touches on themes of separation and grief, but the so-called elegies deal specifically and lyrically with loss: loss of a spouse, loss of a beloved chief, loss of hearth and family. *The Seafarer* evokes the exile of a warrior who has left his home and is in search of another lord who will take him on as a retainer. The poet uses the natural imagery of his current surroundings, the icy seas and the freezing winds, to contrast the warm companionship of the mead-hall:

*The cry of the gannet was all my gladness,
the call of the curlew, not the laughter of
men,
the mewing gull, not the sweetness of mead.*

The poet in *The Wanderer* sings a similar lament as he searches for a new lord. This poem contains a classic expression of the *ubi sunt* motif, which mournfully asks, “Where?” The warrior laments:

*Where has the horse gone? Where the man?
Where the giver of gold?
Where is the feasting-place? And where the
pleasures of the hall?*

Two other elegies portray sadness from a woman’s point of view. The wife in *The Wife’s Lament* mourns her separation from her husband, and the female narrator of *Wulf and Eadwacer* sorrows that she was forcefully separated from her lover.

The religious poetry of the Anglo-Saxons is distinctly compelling in the way it blends Christian beliefs with the heroic inheritance of their Germanic forebears. For instance, the *Genesis* poem offers, in part B, a unique account of the biblical book. Dealing with a culture in which women were valued as counselors and it was reasonable for a man to listen to the advice of his wife, the *Genesis B* poet complicates the ancient story and distributes the guilt equally.

The Anglo-Saxons were also hugely fond of riddles, which survive in the Exeter Book, though without solutions. The accompanying charms, remedies, and bits of gnomic wisdom preserved in verse offer a glimpse into a day-to-day life in which ancient pagan beliefs and Christian doctrine existed side by side.

The latest example of Anglo-Saxon poetry is probably Layamon’s *Brut*, which is a translation of Wace’s French version of GEOFFREY OF MONMOUTH’S *History of the Kings of Britain*. After the Battle of Hastings in 1066, the introduction of French language and culture turned the Anglo-Saxon world into the Anglo-Norman world, and the language evolved into Middle English. Some examples of Middle English poetry attempt to preserve the older alliterative verse forms; *Sir Gawain and the Green Knight*, *Pearl*, and William Langland’s *Piers Plowman* are examples. The English Renaissance witnessed a fantastic rediscovery of and renewed

appreciation for the poetry that had formed so essential a part of the native culture and literature.

Omar Khayyám (Abū ol-fath ‘Omar, Gheyās od-Dīn Abū ol-fath ‘Omar ebn Ebrahīm ol-Khayyāmī) (ca. 1048–1131)
scientist, mathematician, poet

Omar Khayyám was born in Nishapur, Persia, in what is now Iran. Since the literal translation of his birth name, al-Khayyāmi, means “tent-maker,” it is possible to assume that his father made tents for a living. Although Omar received an education in philosophy, he was highly gifted in many areas. Before he turned 25, he wrote a book on music, a book on algebra, and his famous *Problems of Arithmetic*. In 1070, he moved to Samarkand in Uzbekistan, where he devoted himself to algebra and astronomy. A talented scientist and mathematician, he calculated the length of the year with precision; created the Jalali Calendar, which is more accurate than the Julian; created a geometric solution of cubic equations; and created accurate astronomical tables. He achieved all of these accomplishments while performing as a court astronomer for the king of Malekshah. During his 40s, he traveled to

Baghdad, Mecca, and other areas of the Middle East, returning to Nishapur to spend his remaining years teaching.

During Omar's lifetime, the political situation in Persia was unstable: rulers competed for power, and radical groups tried to establish a state based on orthodox Islam. At one point, Omar became the subject of the radicals' attacks because they felt that his questioning mind did not conform to conservative faith. He was targeted especially by the Sufis, whose practices he ridiculed.

In addition to conducting scientific and mathematical research, Omar also wrote poetry. Perhaps because he was too honest or logically-minded, though, he never developed his poetry in a mystical fashion, as did some of the Sufi poets such as Hafiz.

Omar Khayyám's most famous work is the *Rubáiyát*, a collection of about 1,000 poems, each written in an epigrammatic style and consisting of quatrains, four line groups. About 600 of the poems were translated by Edward Fitzgerald (1809–83) in 1859. The translation was well received and maintains the spirit of Omar's original reflections on humanity, nature, life, and mortality.

Critical Analysis

Scholars have taken two opposing views of Omar Khayyám's *Rubáiyát*. Some claim that the poet was highly influenced by Islamic mysticism and that his references to wine and lovers are allegorical expressions of the mystical wine and divine love. Others argue that Omar understood his mortality, had a pessimistic view of the spiritual nature of life, and celebrated only sensual, temporal pleasures. These scholars view references to wine and lovers in the *Rubáiyát* as literal. The truth of Omar's message perhaps lies between these two schools of thought. As a scientist, he had a trained mind and a natural inclination to view the world and himself through "clinical" eyes, but as a man, he also felt passion, love, hatred, sadness, and joy.

The *Rubáiyát* reveals the soul of a romantic disillusioned by hypocrisy and futility and, at the same time, aware of beauty and spirituality. In some quatrains of the *Rubáiyát*, the poet realizes

that his love for truth and sincerity will not win him the sympathy of the world, and he understands that all he possesses—his scientific talent, his intellect—are useful to society only as long as he conforms to those upon whom he is dependent for survival, or as long as society needs him. At times, the truth of the poet's situation reveals his bitterness:

*The good and evil that are in man's heart,
The joy and sorrow that are our fortune
and destiny,
Do not impute them to the wheel of heaven
because, in the light of reason,
The wheel is a thousand times more help-
less than you.*

(Stanza 34)

Yet the disillusioned man can, at other times, find peace and comfort in simple pleasures:

*I need a jug of wine and a book of poetry,
Half a loaf for a bite to eat,
Then you and I, seated in a deserted spot,
Will have more wealth than a Sultan's
realm.*

(Stanza 98)

Themes of merrymaking and enjoying wine, the company of good friends, and beautiful women constitute a significant part of the *Rubáiyát*, but the man Omar seemed to find it difficult to reconcile the critical and scientific with the sensual and spiritual. At times, this lack of reconciliation comes across in the poet's CARPE DIEM outlook on life:

*Khayyám, if you are drunk on wine,
enjoy it,
If you are with the tulip-cheeked, enjoy her:
Since the world's business ends in nothing,
Think that you are not and, while you are,
enjoy it.*

(Stanza 140)

The momentary, transient nature of human life is another prevalent theme of the *Rubáiyát*. Realistically, Omar perceived mortality as inevitable, so much so, however, that it prevented him from finding peace in religion, faith, or spirituality:

*Oh what a long time we shall not be and
the world will endure,
Neither name nor sign of us will exist;
Before this we were not and there was no
deficiency,
After this, when we are not it will be the
same as before.*

(Stanza 51)

It is perhaps this duality of humanity that Omar portrays with aching clarity that makes the *Rubáiyát* one of the most treasured works in world literature. It has been translated into most major languages, and Omar Khayyám's sharp wit, polished form, and depth of meaning remain highly relevant for readers of all epochs and cultures.

Ono no Komachi (fl. ca. 850) poet, playwright

Many fantastic legends have grown up about the life of Ono no Komachi, since few facts are known. She lived in the early period of Heian Japan (794–1185) and was a lady-in-waiting in the imperial court around 850. She was said to be the daughter of Yoshisada, the lord of Dewa. A later poem supposedly written by “Komachi’s grandchild” suggests she had at least one child.

The legends held that Ono no Komachi was adored at court for her poetic skill and was considered the most beautiful Japanese woman who had ever lived. She had many passionate affairs but spent the last years of her life in solitude and abject poverty. Tales were told about her skull, which survived in a field where it complained in verse about the grasses growing up around it.

Several Noh plays written in the mid- to late-Heian period perpetuate the figure of Ono as being a beautiful and manipulative courtesan who ends up abandoned and rejected. The legends may draw partially on the themes within the surviving TANKA poems attributed to her. Eighteen of her poems were collected in the *Kokinshu* anthology (905) compiled by KI NO TSURAYUKI. Fujiwara no Kinto named her the sole woman among the ranks of the *Rokkasen*, the Six Poetic Geniuses. The collection of poems ostensibly written by Ono no Komachi, the *Komachishu*, was compiled between 1004 and 1110. Of the 100 poems it contains, only about 45 are thought to actually be Ono's, while the rest are poems written by others, some addressed to her.

Ono no Komachi was one of the first female Japanese poets to write about her love and longing with great passion. Many of her poems speak eloquently of unrequited love, and one much-anthologized poem compares a man's heart to a blossom

“whose colors, unseen / yet change.” Other poems show the influence of Buddhism, and contain thoughtful meditations on the nature of reality, observing that one cannot know if love is real or a dream

*when both reality and dreams
exist without truly existing.*

Stylistically, Ono’s poems are clever and graceful, often making use of the *kakekotoba*, or pivot-word, which contains two different meanings that simultaneously reflect the imagery and subject matter of a poem. In one poem she uses the word *tsuki*, which means both “way” and “moon.” In this poem, she is waiting for a man who does not come, and the moonless night, leaving her without a way to see her lover, symbolically represents her fears about the future of their relationship.

Desolation is a frequent topic of Ono’s poetry, and one she describes with painful grace. In the earlier poems her grief is frequently due to neglect or abandonment by lovers. In one poem she pictures herself in “a sad floating boat,” and says,

*there is not a single day
that I am not drenched by the waves.*

Other poems show a growing sense of isolation and a feeling of disconnectedness. In one haunting poem, Ono compares her body to “floating sad grasses / severed from their roots,” and says, “if there were waters that beckoned / I should go, I think.” Her later poems express grief over the loss of beauty and a melancholy view of old age:

*—how sad this is!
—to think that my body
has become useless.*

Some critics tend to describe Ono’s poetry as “weak,” since so much of it deals with love, loss, and longing. Yet, as scholar and translator Terry Kawashima observes, “tropes of fleetingness and sadness over the changing state of things are com-

mon in *waka* poetry,” the tradition within which Ono was writing. In addition, several of her dream poems show, as Kawashima puts it, “a strong-willed woman who goes against custom, even if only in a dream.” Later Japanese writers, such as IZUMI SHIKIBU, were inspired by Ono’s passionate imagery and insight into human emotion. Her biography continues to be the subject of plays and studies, and her lyric poetry intrigues and fascinates lovers of poetry around the world.

O’othham Hoho’ok A’agitha Papago and Pima Indian folklore

The *O’othham Hoho’ok A’agitha* are a collection of legends and myths of the Papago and Pima Indians, collectively known as the O’othham, who are native to southern Arizona and northern Mexico. The Hohokam (which means “finished ones” in Pima) settled in the American southwest from Mexico between 750 and 900; around 1400, they disappeared either through migration or warfare.

The Pima and Papagos peoples, who lived in the former Hohokam territory, retained their ORAL LITERATURE and communicated the stories for centuries, using them as educational tools that taught traditional values and customs. For the Pima and Papago, these tales were their history, not fiction.

Because of their remoteness from Spanish and Mexican power, the Pima and Papago did not fall under European rule and were not introduced to Christianity until 1694. The native man-god described in the Hohokam chronicles, who was murdered and then departed from the world, bears some parallels to but is not patterned after the Christian Jesus. The tale of creation describes how God created the world so he might live on it. Called the Earth-Doctor, he makes the world out of shavings of his own skin, and then creates the sun, moon, stars, and the first humans. Together, the sun, moon, earth, and sky then make Siuuhu the Drinker and the Coyote.

Other stories tell of the origin of wine and of irrigation. In them, wind, clouds, rains, and seeds are gathered from the corners of the universe and used to plant and water the fields. The ritual involving saguaros, or cactus wine, is used to invite rain. A later story tells of the death and resurrection of Siuuhu.

Thanks to careful collaborations between scholars and native speakers in the last century, the O'othham tales have been preserved and are an important source of information about the elements of Native American mythologies prior to their discovery by Europeans.

oral literature/tradition

The literature of every culture from every corner of the world shares one thing in common: It originates in the spoken word. Long before and after a culture develops written systems of communication, the oral exchange of stories forms an essential part of a people's emotional and spiritual life. In daily life, stories serve as a means of connection and a way of establishing a shared humanity. Every society uses stories to retain and transmit its shared history, accumulated wisdom, cultural values, and beliefs.

Oral literature, as scholars define it, can include any fictive utterance, from folklore and mythology to jokes and nursery rhymes. Scholarly discussions of oral tradition often focus on oral poetry in the form of historical narratives or wisdom tales. As a culture evolves, it commemorates its history and ancestors in narratives that are passed on in the form of a heroic story or EPIC. The Sumerian *GILGAMESH*, the long poems of HOMER, and compositions like the Finnish *KALEVALA* or the Persian *SHAHNAMEH* all originated as oral poems relating events that a culture considered part of its history. The Mande *EPIC OF SON-JARA* or the Incan MYTH OF MANCO CAPAC, though they belong to different continents, both retell foundation myths of how a civilization came to be. In many cultures, the earliest written literature preserves stories that had already been told for centuries. In fact most of the sacred literature of the world, including the Hebrew BIBLE, is thought to have its roots in oral tradition.

Narratives of mythology develop as humans attempt to explain their own existence and understand the world around them. Creation stories like the Native American CREATION MYTHS or the Hawaiian *Kumulipo* describe how a culture accounts for the order of the world and its creatures. From the beginning, these and other stories communicated through oral exchange offered a way to instruct listeners and celebrate shared beliefs. Cultures develop

an oral tradition as a way to remember and ritually convey stories for the benefit of succeeding generations.

Oral traditions may be communicated in the form of prose, but most cultures develop a poetic tradition to remember and relate their stories. Historians of oral tradition have learned that rhythm and rhyme function as mnemonic devices to enhance the memories of performers as well as audiences. In oral poetry, meter serves as a way to structure the poem and to organize information. Once the meter is established, the poet draws on certain ready-made compositional devices. This is seen in oral traditions of all ages and cultures, from the Vedas or *PURANA* of India to the BARDIC POETRY of the Celts. Longer tales require more compositional devices, such as typical details, formulaic lines or diction, and recurrent situations. The WHITE MOUNTAIN APACHE MYTHS AND TALES, for example, end each line or phrase with “they say” to emphasize the fact that the tale has been handed down by others.

Oral literature is meant to be performed. In performance, poetry differs little from song, and most oral performances involve musical or visual accompaniment. Interaction with the audience opens and sustains the performance, making the story or poem uniquely different each time it is recited.

Despite the advantages of print culture in preserving and disseminating knowledge, it would be false to say that cultures no longer have or depend on oral traditions. Folklore exists today in the form of urban legends; elders tell us about their history and experience, friends share stories about their day. Human experience is defined by, understood through, and shared in story, and the oral tradition of a culture preserves its origins, its foundations, and its essential character in a way that written literature can perpetuate but never duplicate.

Ostromir Gospel (ca. 1057) *liturgical text*

Composed between 1056 and 1057 by a cleric known as Deacon Gregor, the *Ostromir Gospel* is the oldest extant Russian manuscript and thus the first text of Russian literature. Almost nothing is known about Deacon Gregor’s life. From the text itself it is clear that he possessed exceptional learning and artistic skill. Though he belonged to no specific religious order, as a clergyman and scribe he would have obtained the education and skills necessary for the work. It is believed Deacon Gregor was active in Novgorod, but he must have been born or spent considerable time in Kiev, as traces of his native Russian dialect show in the language of his work.

The *Ostromir Gospel* was commissioned by Ostromir, the *posadnik*, or city governor, for the Cathedral of St. Sophia in Novgorod. It follows the model of the Aproz Gospel used in Greek manuscripts in that it is divided into two sections. The first and largest section contains the gospel texts, drawn from the Acts and Epistles of the Apostles in the New Testament of the Christian Bible. Since the gospel readings began at Easter and were normally concluded by Pentecost, the *Ostromir Gospel* recommends Scripture to read for the remaining Saturday and Sunday services of the year. The second section provides a calendar of readings and notes which saints are to be commemorated on which days. The text is richly decorated throughout, with elaborate lettering and miniature portraits of the apostles that show the influence of the Old Byzantine style.

The *Ostromir Gospel* is invaluable to linguists because it is written in Old Church Slavonic, a medieval language in which very few manuscripts survive. Christianity reached Slavic-speaking lands between 865 and 883 through the missionary efforts of Cyril and Methodius, and it continued to spread as rulers converted and their subjects followed suit. Under the reign of Jaroslav of Kiev, called “the Wise” (1019–54), a considerable number of churches and monasteries were built. The services at these churches, such as masses and other celebrations, were conducted in the native language rather than the Greek used earlier in the Orthodox Church. Thus the spread of Slavonic rites fostered the need for Slavonic books. As a substantial body of Christian literature already existed in eastern Bulgaria, the *Ostromir Gospel* and its companion works are thought to be translated from manuscripts obtained from Balkan lands through either plunder from war or peaceful trading contacts. Throughout the medieval period, Church Slavonic was used by the Russian Orthodox Church for both ecclesiastical and literary purposes, much the same way that Latin was used by the Roman Catholic Church. The vernacular Slavic dialects were used for everyday purposes.

Four other manuscripts in Old Church Slavonic contain material from the Gospels, and three other manuscripts contain parts of prayerbooks, hymns, and saints’ lives. Until the secularization of Russian society that took place under Soviet influence, the Orthodox Church was not simply the official religion but the most prominent cultural institution. For this reason, the *Ostromir Gospel*, preserved in the National Library of Russia, remains one of the cultural treasures of the Russian people. The history of Russian literature begins with this document. A key artifact in the evolution of the Russian language, it is a valuable resource that speaks to the development of Christian religion and culture in Eastern Europe, as well as a beautifully crafted piece of art.

Otomo Yakamochi (Otomo no Yakamochi) (718–785) poet

The detailed information on Otomo Yakamochi’s life comes from his poetic journal and his contributions to the poetry anthology *Man’yōshū* (The collection for ten thousand leaves [pages], compiled from 686 to 784). Otomo grew up in Dazaifu, a city home to some of the most important Japanese poets of the time. His father Tabito’s high place in government and the tutoring of his aunt, Otomo Sakanoue, prepared Otomo for a life as an imperial official and a poet in his own right.

In 741 Otomo was made an attendant to the emperor, and from 745 until his death he was promoted continuously. In 777 he was made *Daisi* (“Great teacher”) and became a chief imperial counselor. Late in life he was implicated in a murder trial but was pardoned.

Otomo lived at a time when Japanese culture was greatly influenced by the Tang Chinese, and his poetry reflects his efforts to reconcile tensions between the older Japanese form of society, governed by a warrior elite, and the modern forms of political administration. As a young courtier he experimented with the fashionable court styles, writing occasional poetry to be recited at official occasions or banquets and love poetry addressed to a series of women.

In his mid-20s and 30s, Otomo produced most of his mature verse and began editing the *Man'yōshū*. This work, in its final form, spans 20 volumes and contains 4496 *uta* (song poems), from elegies to poems on love, the seasons, travel, and royal events. In 746, Otomo became the governor of Etchū, where he wrote the majority of his poems. His varied and original verses cover a wide range of subjects, blending artful observations of nature with a poignant undertone of melancholy and yearning, as expressed in this poem, number 3967 in the *Man'yōshū*:

*If I could show you but a glimpse
Of the cherries blooming
In the mountain gorges.*

Translator Paula Doe notes that Otomo was “in large part responsible for the preservation of the ancient poetic tradition” and adds that “he laid the foundation for Japanese poetry for centuries to come.”

Ouyang Xiu (Ou-yang Hsiu) (1007–1072) *poet, historian*

Ouyang Xiu was born in Mianyang (Mien-yang), in the Sichuan (Szechuan) province of China. After his father died, he and his mother moved to Hubei (Hupei) to live with his uncle. Legend has it that Ouyang lived in such poverty that he learned to write with a stick in the sand. At age 23, he became a judge in Loyang, and during his three years there, he spent much time developing his literary talents.

During his life, Ouyang Xiu held a number of government positions and wrote many essays, poems, and songs. Although his public-service career was plagued by a series of exiles, he remained dedicated to his literary pursuits. In his mid-20s, he composed *New History of the Five Dynasties*, a documentation of China's political history during the 10th century. In his 30s, he served as governor of Chuzhou (Ch'u-chou), where he built the “Old Drunkard's Pavilion,” about which he wrote a famous essay. In his 40s, he hosted legendary parties for literary friends in which his famous *ci* (*tz'u*) (songs) were performed, and he began work on the *New History of the Tang Dynasty* (completed in 1060). He retired from public service in 1071.

Many of Ouyang's works continued the classical style of writing initiated by HAN YU, and he became one of the leading literary figures of the Sung dynasty. His essays focus on Confucian philosophy, history, and politics, but he is best remembered for the poetry and songs in which he uses images of nature to explore the human spirit. In his poem “Autumn,” for example, he compares images of the dying landscape to the decay of the human soul:

*... The trees will fall
In their due season. Sorrow cannot keep
The plants from fading. Stay! there yet is
man—
Man, the divinest of all things, whose heart
Hath known the shipwreck of a thousand
hopes,
... whose soul*

*Strange cares have lined and interlined,
until
Beneath the burden of life his inmost self
Bows down. And swifter still he seeks decay
When groping for the unattainable
Or grieving over continents unknown.*

As translator L. Cranmer-Byng says in *A Lute of Jade*, “Autumn,” like many of Ouyang Xiu’s poems, is worthy of praise: “With its daring imagery, grave magnificence of language and solemn thought, it is nothing less than Elizabethan, and only the masters of that age could have done it justice in the rendering.”

Ovid (Publius Ovidius Naso) (43 B.C.– ca. A.D. 18) poet

Ovid was born into a well-to-do and socially prominent family living in Sulmo (modern Sulmona), some 90 miles east of Rome. His father, a member of the wealthy Equestrian class, provided him and his older brother with the Roman education in rhetoric and law, as well as a grand tour of Greece and Asia Minor.

The young Ovid was a gifted student of rhetoric (the art of using language effectively and persuasively), and he habitually added lyrical touches to his academic exercises and assignments. However, he had no taste for the law and no skill in politics. His father tried repeatedly to dissuade him from his chosen path, admonishing him that even HOMER died broke. Ovid reportedly penned a promise to stop writing poetry—in dactylic hexameter.

Ovid’s work was an immediate success among fashionable society, as it reflected their disillusionment with the breakdown of the classical republican ideals of Rome at the time. Many scholars have contrasted the positive light of Ovid’s work to the “darker” works of his older counterparts, the Augustans, for his work resembles neither that of the patriotic satirist HORACE nor that of the melancholy and moralistic VIRGIL. His inventive, refined, and metrically brilliant poetry seems effortlessly composed and depicts a cosmopolitan, secular sensibility that derived from both his inherent skill and the peace and prosperity of AUGUSTUS’s reign. His spirited, graceful elegies and epistles reveal the soul of a true romantic.

Ovid was prolific as well as popular; more than 35,000 lines of his verses survive. His first published poems were a collection of playful and lighthearted love poems, *Amores* (Loves), first published 20–16 B.C. in five books and later, in 2 B.C., reduced to three.

Around the same time as the *Amores*, Ovid composed the *Heroides* (Heroines), a collection of imaginary love letters between 15 mythological women and their lovers or husbands. In these letters he takes minor characters appearing in other works and gives them psychological depth and complexity by using the first person to reveal the personalities of these famous and doomed women. The characters typically seen as pure evil, such as Medea, Ovid humanizes by explaining their motives or casting them in a light of pitiful ignorance, as he does with Helen of Troy. Those women customarily seen as noble and guiltless, like the abandoned Dido or the bereft Hero, Ovid complicates by revealing their sinister thoughts and occasional selfishness. Altogether, the *Heroides* so captured the imagination of readers that subsequent authors added six more letters to Ovid’s collection.

Ovid also wrote a tragedy called *Medea* (no longer extant), most likely to take advantage of the boom in theater construction during 13–11 B.C. *Ars amatoria* (*The Art of Love*) appeared in 1 B.C., offering, in three books of mock didactic verse, a satirical

instructional manual on the art of seduction. This was followed shortly by *Remedia Amoris* (Remedies for Love), an even more mocking sequel.

Between A.D. 1 and 8, Ovid worked on *Metamorphoses* concurrently with *Fasti* (*Religious Holidays*), a calendar of Roman feast days that he never completed. The six books of *Fasti* cover the first six months of the Roman year and are now a valuable source of information about Roman religious practice. In addition, they include lively episodes of Greek MYTHOLOGY, Roman history, and astronomical observations.

Augustus's banishment of Ovid around A.D. 8 is generally attributed to an "unknown indiscretion," but it was probably brought about by a number of factors: The eroticism and immorality of Ovid's works were not in keeping with the emperor's efforts at moral reform; the poet may have witnessed scandalous behavior in the imperial family; and he was decidedly unpatriotic and indifferent to religion and politics. Although the emperor supported the arts, he sent Ovid to live the rest of his days at the furthest edge of the Roman Empire, far from the center of literary arts and cultural entertainments upon which the poet thrived. During his exile, Ovid wrote the *Tristia* (*Songs of Sorrow*) and *Epistulae ex Ponto* (*Letters from the Black Sea*). In these works, he unsuccessfully asks to be pardoned and allowed to return to Rome.

Critical Analysis

The work that secured Ovid's fame to future generations and his acknowledged place among the master artists of world literature is the 15-book *Metamorphoses*. In this project, Ovid underwent a change of his own, turning from elegy and its meter to EPIC and the nobler and more appropriate hexameter. He declares his purpose in the first four lines of the poem:

*My intention is to tell of bodies changed
To different forms; the gods, who made the
changes,*

*Will help me—or I hope so—with a poem
That runs from the world's beginning to
our own days.*

The theme of *Metamorphoses* is the transforming power of love, and the brief, fanciful tales that make up the work relate numerous metamorphoses: men turn into birds, boys become trees, a magic spell makes a woman a spider, and an ivory statue comes to life. For a work of such disparate elements, the narrative's continuity is striking.

The poem begins with the creation of the world and ostensibly covers the course of history up to the deification of Julius CAESAR. Ovid concludes the work with a suggestion that Augustus will be similarly venerated:

*Later than our own era, when Augustus
Shall leave the world he rules, ascend to
Heaven,
And there, beyond our presence, hear our
prayers!*

If this was an attempt to curry favor, it did not succeed in recalling the poet from exile.

Many of the stories in *Metamorphoses* are implicit or explicit statements about power dynamics, examining (and subtly criticizing) power imbalances between gods and humans, rulers and subjects, women and men. The stories are by turns gay and tragic; Ovid turns his pen to charming subjects such as courtship with the same ease he uses to describe horrifying violence, like the battle of the Centaurs or the rape of Philomela. Love and betrayal are constant themes throughout the books, and doomed lovers scatter Ovid's landscape as thickly as trees. In the first four books, infidelities of the gods intertwine with the story of Cadmus and the founding of Thebes. Books 5 through 8 describe the adventures of the ancient heroes Perseus, Jason, and Theseus. Book 9 introduces Hercules, and Book 10 narrates a series of famous love affairs: Or-

pheus, Ganymede, Pygmalion, and Venus and Adonis.

After the story of Midas in Book 11, the focus turns in Book 12 to the fall of Troy, and, in 13 and 14, the voyage of Aeneas, the hero of Virgil's epic. Book 14 then progresses to the legendary early history of Rome, reaching at last the event which in Ovid's time marked the end of the Roman Republic: the ascent of Caesar. Altogether, Ovid's vivid and elaborate tapestry of narratives contains within it, in the form of story, all the changes that brought forth the world he knew.

In his introduction to *Metamorphoses*, translator Rolfe Humphries writes, "The enormous influence of *The Metamorphoses* on pre-nineteenth century Europe cannot be disputed: it is all but omnipresent, in prose as well as in poetry, in painting as well as sculpture." He adds that the work "was, more than any other work, the medium by which classical mythology was known and understood." According to translator Horace Gregory, *Metamorphoses* is continually being rediscovered: "Something of its original importance is beginning to be understood. Its collection of myths . . . has taken on fresh color and richness . . . and contemporary anthropologists are finding new meaning in Ovid's 'fables' and miracles."

Throughout the European MIDDLE AGES, Ovid and Virgil were considered the unparalleled exemplars of the Latin tradition. Ovid's treatment of love influenced the development of courtly love (see CHIVALRY AND COURTLY LOVE) and gave a language of passion to such famous lovers as ABÉLARD AND HÉLOÏSE. Stories from *Metamorphoses* reappeared in

the poetry of DANTE, Petrarch, Chaucer, and Gower, and influenced the Renaissance playwrights and poets Christopher Marlowe, Edmund Spenser, and William Shakespeare.

P

Panchatantra (ca. second century B.C.) *collection of stories*

The *Panchatantra* belongs to the rich tradition of ORAL LITERATURE in India. It is a collection of tales populated mainly with animal characters acting as heroes and villains and executed with a moralistic content and a clearly instructional tone. The Preamble to the *Panchatantra* offers the information that the tales were composed (or perhaps compiled) by the 80-year-old sage Visnu Sarma as part of his efforts to both entertain and educate the three sons of King Amara-sakti.

The *Panchatantra* is a complex group of tales, interwoven into a series of frame stories, which operate on several allegorical levels. The characters are given names suggestive of the qualities they represent, and their animal personas transparently reveal the human personalities beneath. Throughout the *Panchatantra*, the natural world functions as a metaphor for the human world; it is, in effect, a treatise on moral philosophy disguised as a set of fabulous narratives.

Dating the *Panchatantra* is difficult. Scholars have suggested dates as early as the second century B.C., though no records of a manuscript exist prior to A.D. 570. Analogues exist in other cultures, such as the fables of AEsOP and PHAEDRUS, and certain

tales of the *Panchatantra* parallel stories from the *JATAKA* and *Tipitaka*. This is hardly surprising, since oral literature passes through many hands, possibly being reworked and embellished each time, which also makes ascertaining authorship difficult. The existence of Visnu Sarma has been questioned, since no evidence for him occurs outside the *Panchatantra* itself. He was possibly the *kavi*, or court poet, for the king of “the southern lands” mentioned in the same stanza. He may also be a fictional character created as part of a literary device of the narrative.

Nevertheless, an authorial hand of no little genius is evidently at work. The content and tone of the stories suggest that the author knew the ways of royal courtiers and was a sharp-witted observer of the behavior and morals of all levels of Indian society. His overall purpose is to edify, for the Preamble states that the work is a *nitisastra*, a set of instructions on wise conduct, set forth for the purpose of “awakening young minds.” The dramatic and elegant style of his prose and verse convey a deep understanding of philosophical issues and also of human nature. Visnu Sarma’s ability to interweave humor and wit into his narratives also gives his tales a satiric edge that supports the often poignant tone.

Critical Analysis

The *Panchatantra* is written in both prose and verse forms, a characteristic of the genre of Sanskrit literature referred to as *champu*. Dialogue and narrative are offered in prose, while verse is employed to articulate concepts, provide moral instruction, and describe emotional behavior and sentiment. Verse usually appears in the beginning and end of the text to emphasize the moral of the tale, while the prose form is used primarily to recount the story's developments.

The *Panchatantra* is structured as a series of tales within tales, with the Preamble functioning as the highest level or frame. The five books that follow each offer another frame story, within which more stories are nested. This nesting technique appears in other Sanskrit literature, notably in the Indian EPIC the *MAHABHARATA* and to some extent in Vedic literature. Within the *Panchatantra*, Book 1, "The Estrangement of Friends," contains the most subsidiary tales. Each successive book addresses a different theme: Book 2 examines the "Winning of Friends," Book 3 speaks "Of Crows and Owls," Book 4 discusses "Loss of Gains," and Book 5 provides examples of "Rash Deeds."

The philosophical structure that runs through the narrative structure carries out the author's intention to provide a *nitisastra*. In Hindu belief, the path to living wisely and well required the equal and balanced pursuit of three aims: *dharma*, described as duty, compliance with the law, or right conduct; *artha*, wealth or material possessions, since money was considered a requirement for gracious living; and *kama*, which includes love and sensual fulfillment. These concepts are dealt with separately in other Sanskrit texts, including the *Dharmasastra*, the *Arthasastra*, and the *KAMA SUTRA*, but the *Panchatantra* incorporates instructions on all three areas into a single context.

Books 2 and 5, for example, speak to the concept of *artha*, or the acquisition of material resources, when the characters describe the evils of poverty. A verse from Book 5 vividly captures the correlation between wealth and acquisition of

knowledge, suggesting one can only successfully meditate and acquire wisdom if one has a full stomach:

*Wit, kindness and modesty,
Sweetness of speech and youthful beauty,
Liveliness too and vitality;
Freedom from sorrow, and joviality;
Uprightness, knowledge of sacred texts;
The wisdom of the Preceptor of the
Immortals;
Purity as well of mind and body;
Respect too for rules of right conduct:
All these fine attributes arise in people,
Once their belly-pot is full.*

Part of *dharma* means fulfilling the duties required of one's station in life, which Cloud Hue, the King of Crows, encounters in Book 3 when he must defend his kingdom and subjects from a cruel enemy. *Dharma* dictates the behavior of all beings, including the snake in Book 1, who informs the priest that he bites not to hurt anyone, but only does so in self-defense.

The third element of *kama* is reflected in the theme of friendship that pervades all five books. This verse from Book 2 meditates on how to achieve happiness:

*Those who enjoy happy times,
Friends with dear friends,
Lovers with their beloved,
Joyful with the joyous. . .*

True friendship, where beings are connected like flesh and claw, is illustrated in Book 2's story of Goldy, a mole; Lightwing, a crow; and Slowcoach, a tortoise. Goldy and Lightwing, as his friends, successfully extricate Slowcoach from his neurotic obsession and restore him to serenity and happiness.

The consequence of a balanced approach to *dharma*, *artha*, and *kama* is a harmonious order within society, which the *Panchatantra*, in the Preamble, sets out to illuminate. Prominent signposts

in various parts of the narrative constantly remind the reader that these stories are parables about human society and human virtues, vices, and frailty. A good example is “The Singing Donkey” of Book V, a pretentious soul who claims to know everything about music except how to sing.

In the *Panchatantra*, the natural world and the human world mirror each other. Two main devices achieve this effect. The narrative uses analogy to portray similarities in social and political hierarchy and organization between the two worlds. For example, the king of the human world parallels the characteristics of the animal king of the forest. The second literary device, the use of allegory, anthropomorphizes or projects human characteristics onto the animal characters in the stories. Just like the three princes in the Preamble who desire to learn moral conduct, most of the good characters in the stories strive to attain the highest level of education. Animal characters such as Lively the bull and Goldy the mole represent the perfect model citizens with their judicious blend of good learning and sound practical sense.

As Franklin Edgerton observes in the *Panchatantra Reconstructed*: “No other work of Hindu literature has played so important a part in the literature of the world. . . . Indeed, the statement has been made that no book except the BIBLE has enjoyed such an extensive circulation in the world as a whole.” The influence of the *Panchatantra* in both its structural format and its dual purposes of entertainment and enlightenment can be traced in works as diverse as the *THOUSAND AND ONE NIGHTS*, Giovanni Boccaccio’s *Decameron*, Geoffrey Chaucer’s *Canterbury Tales*, and Jean de La Fontaine’s *Fables*. Its canny characters and lively plots surface in the fairy tales of the Grimm Brothers and the Br’er Rabbit stories of the American south. The sheer number of translations of the *Panchatantra* provide proof of its popularity. No other work of Indian literature, and perhaps no other work of world literature, has had such an ageless and universal appeal.

Pausanias (115–180) *historian, travel writer*

Born in Greece, next to Mount Sipylos, Pausanias was a Greek traveler who lived during the height of Rome’s rule in Greece. His writing—the only source of information about his life—reveals that he lived a long life, witnessed many important historical events, and traveled extensively throughout Greece and the Greco-Roman world. His major work is *Hellados Periegesis* (Description of Greece), which exists in 10 books; the first was completed after 143, the last before ca. 176.

As a whole, *Description of Greece* serves as a type of guidebook for the places Pausanias visited. As he reached each city, he first recorded the location’s history. He then visited sacred sites or monuments within or near the city, describing them and other important religious, artistic, and architectural achievements. He also reflects on the customs, peculiarities, and daily lives of the local population of each region, including descriptions of folklore, local legends, and ceremonial rituals. Based on surviving structures and artworks, as well as archaeological evidence, Pausanias’s descriptions are remarkably accurate.

Description of Greece provides modern readers with a unique opportunity to journey through an-

cient Greece with an educated and curious companion, one whose knowledge of history and culture also provides a wealth of information that continues to aid in research of the ancient world.

A Work about Pausanias

Alcock, Susan E., John F. Cherry, and Jajs Elsner, eds. *Pausanias: Travel and Memory in Roman Greece.* Edited by Lysiaccum. Oxford: Oxford University Press, 2001.

Petronius (Gaius Petronius) (27–66) *poet* Petronius lived during the time of the Roman Empire and served as Emperor Nero's adviser in matters of luxury and extravagance. His sophistication in sensual pleasure even earned him the title *arbiter elegantiae*; TACITUS in his *Annals* refers to Petronius as a sensualist "who made luxury a fine art." Petronius managed to combine his official duties with a chaotic lifestyle, sleeping during the day and living during the night, but his life ended tragically when he was betrayed by a rival and dismissed by Nero. As a result, he committed suicide, which Tacitus described as the ultimate act of refined self-control.

For contemporary readers, Petronius is famous for his *Satyricon*, a brilliant satire of excesses in Nero's Rome. Although only fragments of this work survive, enough of the text remains to provide evidence of Petronius's satirical talent and in-depth knowledge of Roman society at the height of the empire's prosperity. He demonstrates a thorough knowledge of the language and sociology not only of the Roman elite but also of the lower classes.

The *Satyricon* also is the best existing evidence of the prominence of homosexuality in the Roman Empire, which Petronius describes in a vivid, lively manner. The main character of the work is Encolpius, a student whose name, according to some translators, means "crotch." Encolpius offends the god Priapus, and as a result he is forced to undergo a sequence of painful but generally comic misadventures, mostly of a sexual nature. The world of the *Satyricon* resembles a sexual carnival, where gender and orientation are easily interchangeable. This work unambiguously articulates a very specific philosophy, which was, according to the author, widespread among the Roman Empire's elite. According to this philosophy, the only real sin consists in denying one's sexual appetites. To do so is considered blatant hypocrisy and is punished, generally through comic ridicule. This view on morality is explicitly expressed in the paired tales of the Widow of Ephesus and of the Boy of Pergamon.

Written in A.D. 61 and first printed in 1664, the *Satyricon* has since become a prototype for a number of novels about homosexuality. The first English translation was published in Paris in 1902 and attributed to Sebastian Melmoth, a well-known pseudonym of Oscar Wilde. Contemporary works using the legacy of the *Satyricon* include John Rechy's *City of Night* (1963), Daniel Curzon's *The Misadventures of Tim McPick* (1975), and Luis Zapata's *Adonis Garcia* (1979). In these novels, as in the *Satyricon*, travel is portrayed as a license or venue for sexual experimentation and indulgence. The film version of Petronius's masterpiece was produced by Federico Fellini in 1968. Though the film succeeds in capturing *Satyricon's* grotesquerie and powerful homoeroticism, it loses most of Petronius's humor.

Petronius is remembered as much for the content of his *Satyricon* as for his elegant prose and verse, including even the colloquialisms and common language of some of its characters. The *Satyricon* is the earliest example of the picaresque novel in European literature.

Phaedrus (first century) poet

Most of what is known about Phaedrus has been deduced or inferred from his work *Fabulae Aesopiae*, a collection of writings commonly referred to as the *Fables*. He was originally a slave of the first Roman emperor, AUGUSTUS, but was later freed. He claimed to have been born in Thrace, in the region of the Pierian Mount on the southeast coast of Macedonia. This reference has been questioned, since the legendary AESOP was thought by some to be from Thrace. (Elsewhere Phaedrus says that Aesop came from Phrygia.) Likewise, the Mount of Pieria was the mythical birthplace of the Muses, so attributing his birth to the Muses' domain may have been Phaedrus's attempt to legitimize his claims to literary fame and inspiration. One remark in the *Fables* that scholars often take seriously is his hint that he was at some point persecuted by Sejanus, the ambitious general under Emperor Tiberius whom Tiberius executed for treason in 31. Other references in the *Fables* suggest that Phaedrus lived through the stormy rule of Caligula and into the time of Claudius.

Critical Analysis

The first portions of Phaedrus's five books of *Fables* borrow from Aesop, the slave who lived in the sixth century B.C. The Greek tales attributed to Aesop were originally written in prose. Phaedrus, in the beginning of the first century A.D., and Babrius, who lived in the second half of the century, were the first to put these fables into verse. As

prose they functioned as collections of myth, providing stories that could be used to reinforce a rhetorical point or lesson. As verse, however, the fables could be considered literature, and Phaedrus seems to be consciously maneuvering for a place in the literary tradition, despite his background as a slave. (HORACE was himself the son of a freedman, and it was not unknown for slaves to be educated.)

For his source on Aesop, Phaedrus used the manuscript of Demetrius of Phalerum, compiled around 300 B.C. The first two books he published feature a series of brief tales, their animal characters familiar to readers of Aesop. The author's point of view is frequently dark and cynical as he looks upon a world where injustice exists and the whims of the mighty prevail, sometimes not for the good of all. The fables ridicule vanity, conceit, and arrogance and consider ignorance the cardinal sin. Though a pessimistic mood seems to pervade the stories as the author repeatedly showcases objectionable behavior, the fables clearly intend to educate readers on the simple morals required to live in the world. "Be unkind to no man," Phaedrus declares in the fable of "The Fox and the Stork," for, he goes on to explain, "mean behavior is liable to rebound." In a society where those in power cannot always be counted on to behave with respect and mercy, the best option, Phaedrus seems to say, is to remain humble, keep quiet, and simply try to blend in.

As the books progress, the author moves away from predominantly beast fables to material of his own making. Though he cannily continues to attribute his work to Aesop and often uses Athens as a setting for his fables, Phaedrus clearly depicts the daily life and political situations of first-century Rome. Some disguise and circumspection were no doubt necessary to avoid angering certain civic authorities. In the preface to Book 3, Phaedrus claims: "My purpose is not to pillory any person, / But to illustrate life and the ways of the world." His frequently biting and often unflattering portraits of those in power, however, obviously led some authority figures to identify themselves with the wolves, lions, and other pred-

ators of Phaedrus's fables and to take issue with him, as Sejanus apparently did. For the common person, the best defense is sometimes silence, as Phaedrus suggests in the epilogue to Book 3 in which he refers to the maxim he learned as a youth: "For a man of humble birth / It is not proper to protest in public." Phaedrus speculates that the first fables were invented because the first slaves, "exposed to incessant hazards, / Unable openly to express what [they] wanted," found they could safely express their personal opinions by masking them in the form of fictional fables. In writing his books, Phaedrus wrote that he had merely taken that route and "enlarged it to a highway," so to speak, by adding to the themes bequeathed him by Aesop.

Certain stories in Book 3 show how Phaedrus expands on his material and brings in morals from his own experience. In "On Believing and Not Believing," the author recommends that readers "find out the truth, before faulty thinking / Leads to a stupid and tragic outcome." He offers what he says is a story from his own experience, in which a man, on the treacherous advice of his secretary, ends up killing his son and then himself, leaving his innocent wife to be accused of double murder. The terrible story turns into an episode praising the justice and wisdom of Augustus, who sorts out the messy details of the case, and Phaedrus returns to his moral with the announcement "[T]rust no one you don't know." Then, in a tag at the end, he ironically adds that he told this story at length because "a few friends have informed me / That they find my fables somewhat too short." Using the premise of a fable to explain a tragedy of which he knows, Phaedrus manages to praise his patron and also insert his own somewhat discouraging but perhaps hard-learned advice. He also uses Book 3 to talk back to his critics—for instance, in the fable of "The Cock and the Pearl," which tells the story of a rooster finding a pearl as he digs for food. Although he recognizes the value of the pearl, he declares that it is no use to him in his hunger. This fable is directed, Phaedrus concludes, at "people who fail to appreciate my work."

The five books of *Fables* were apparently composed over the course of Phaedrus's life. In the last fable of Book 5, "The Old Dog and the Hunter," he depicts himself as the old dog scolded by his master because he can no longer perform the same services he could in his youth. "It's strength, not spirit, that's deserted me," the dog says in his defense and implores his master to "give me credit for what I was." Some later collections contain appendices of additional fables attributed to Phaedrus, such as the 15th-century translation of Nicholas Perotti, but these are often thought to be later, anonymous additions.

The later Roman fabulists Avianus and Pilpay borrowed from Phaedrus, and he was read frequently in the MIDDLE AGES. The genre of the beast fable influenced medieval poems like the *ROMAN DE RENART* and authors such as DANTE. The French writers MARIE DE FRANCE and Jean de La Fontaine are known for their collections of fables. Christopher Smart composed a rhyming translation of Phaedrus in 1765 as a text meant for instruction of young readers. Phaedrus's work was often a teaching text in English schools during the 18th century, when he was classified as one of the great classical authors along with Horace, VIRGIL, and OVID. He is much less familiar to modern readers, who tend to confuse Phaedrus the fabulist with Phaedrus the Greek philosopher of the fifth century B.C.

Despite the dark view of the animal world in the *Fables*, scholar Anne Becher notes that Phaedrus is important because he "speaks for the oppressed and is concerned about the abuse of power and the exploitation of the poor and weak." He can be legitimately remembered as the first proletarian poet and satirist. In choosing the fable as his genre, Phaedrus chose to transmit and contribute to source material that was already ancient by the time of Aesop but continued to be relevant across cultures. Certain subjects and themes of the original Greek fables have analogues in the Arabic "Fables of Bidpai," translated by Symeon Seth in 1080, and in the fables of the Indian *PANCHATANTRA* and the Buddhist *JATAKA*.

Pindar (ca. 522–ca. 438 B.C.) lyric poet

The man considered the greatest of the Greek lyric poets was a native of Cynoscephalae, a town just outside of Thebes in the region of Boeotia. Pindar was born into an aristocratic family at a time when the noble class in Greece was waning; his parents were Daïphantus and Cleodicê. He considered himself Theban and took pride in the land of his birth and the aristocratic ideal. His uncle Scopelinus taught Pindar how to play the flute, an instrument that was a vital element in the worship of Apollo, the god of poetry, music, and the sun.

Pindar studied lyrical composition in Athens, where he may have met the tragedian AESCHYLUS. When he returned to Thebes, he embarked upon his career, counting among his patrons a number of prominent Greek families and political leaders who commissioned him to write odes. His earliest works flouted literary tradition by failing to make use of myths. The noted Boeotian poetess Corinna reportedly called attention to this deficiency. Pindar's next offering teemed with mythological references, whereupon Corinna is said to have admonished him, "One must sow with the hand and not with the whole sack."

Of Pindar's 17 existing works, only the odes composed to celebrate a victory at one of the Panhellenic festivals (the precursor to the modern-day Olympic Games) survive in substantially complete

form. These are the Olympian, Pythian, Nemean, and Isthmian Odes, and collectively they are known as the Epinician (or Victory) Odes. These choral poems solemnly compare the victor of the athletic contest to the legendary and mythic figures from the glorious days of yore. The competition itself becomes a device for providing metaphors and similes for achievement and valor. The odes laud the champion's family, ancestors, and homeland, and recount legends originating in his place of birth.

The longest of all of Pindar's odes is *Pythian IV*, which was commissioned by an aristocrat by the name of Dâmophilus, who had been banished to Thebes from the kingdom of Battus IV of Cyrene, in modern Libya. The king's son, Arcesilas, prevailed in the chariot races in the Pythian games of 462 B.C., and Dâmophilus sought to appease Battus with an extravagant lyric tribute penned by Pindar and performed in the palace at Cyrene:

*Thou must stand, my Muse! to-day in the
presence of . . .
the king of Cyrene with its noble steeds, that
so,
beside Arcesilas, while he celebrateth his
triumph,
thou mayest swell the gale of song. . . .*

To suggest the idea of reconciliation between Dâmophilus and the king of Cyrene, Pindar quotes HOMER: "A good messenger bringeth highest honor to every business." The song praises Dâmophilus's "righteous heart" and his exemplary life; the exile wants nothing more than to play his harp once again by Apollo's fountain at Cyrene. An attempt to flatter the king is made when the poet compares him with the sovereign among gods: Even Zeus forgave the Titans.

Characteristic features and themes of Pindar's works include the use of myth, heroic legends, reverence for deities, the repetition of important words, and a recurring format: prelude, beginning, transition, midpoint (during which the ancient myth is narrated), transition, and conclusion. His framework, now called a Pindaric ode, includes

three parts: a strophe (the part of an ancient Greek choral ode sung by the chorus when moving from right to left); an antistrophe (the part of the choral ode in which the chorus sings its answer to the strophe while moving from left to right); and the epode (the part of the choral ode that follows, as a rule, the strophe and antistrophe). This framework was admired by the Roman HORACE and the English John Dryden, Alexander Pope, and Thomas Gray.

The architectural perfection of Pindar's odes and his bold use of metaphors led PAUSANIAS, a Greek traveler and geographer of the second century, to comment:

. . . [B]ees flew to him, and placed honey on his lips. Such was the beginning of his career of song. When his fame was spread abroad from one end of Greece to the other, the Pythian priestess . . . bade the Delphians give to Pindar an equal share of all the first-fruits they offered to Apollo.

Plato (ca. 428–ca. 348 B.C.) philosopher

Plato's family was aristocratic and claimed great distinction. His paternal ancestry reportedly goes back to the old Athenian kings, and his mother counted among her forbears Solon, an influential statesman who is considered the father of Athenian democracy.

The future philosopher was born during the age of Pericles, a political leader and champion of Athenian democracy. Under Pericles, the world's first great democratic system flourished, and potentially contentious subjects like religion, philosophy, morality, and affairs of state were discussed freely. Early on, Plato aspired to the legislative and social pursuits in which a young man of his class was expected to engage.

Plato may have become acquainted with SOCRATES in his childhood, for the great philosopher was friendly with some members of the youngster's extended family. What is certain is that during his late teens and early 20s, Plato was among Socrates' ardent pupils, and his experiences during this time would become the subject matter of Plato's future writings.

Athens was defeated by Sparta in the Peloponnesian War in the early 400s B.C., and Plato was repelled by the tyranny and injustice that followed. After Socrates' conviction for impiety and execution in 399 B.C., Plato became embittered and left his homeland. The works he wrote soon after are, like nearly all of his writings, written in dialogue and feature Socrates as the consummate seeker of truth.

The so-called Socratic Method employed in Plato's dialogues has the great thinker and teacher feigning ignorance of critical ethical and social issues, such as the nature of justice, whether virtue can be taught, and the best form of government. Although Socrates resembles the historical personage, he is primarily a vehicle by which Plato expresses his own intellectual interests and processes. As such, Socrates asks a group of listeners a series of pointed questions. After listening to their answers, Socrates demonstrates their illogical thinking and erroneous conclusions. As the conversations persist, the players begin to contradict themselves, and

they become hesitant. By the end of these discourses, the value of independent thinking and the unrelenting pursuit of truth have been brought to light.

In other discourses, the dialogues often end inconclusively since, according to Plato, the purpose of reason—a faculty that only humans possess—is to strive toward definition with disciplined thinking and to illuminate the natural world, not to limit its possibilities. This philosophy can be seen in some of the works Plato produced during his years of self-imposed exile and travel: *Lysis*, which asks, “What is friendship?”; *Euthyphro* (“What is piety?”); *Charmides* (“What is temperance?”); and *Theatetus* (“What is knowledge?”).

In the 380s B.C., Plato returned to Athens to establish the school that would become known as the Academy, which emphasized pure research and discourse on the topics of mathematics, astronomical disciplines, government, natural sciences, and rhetoric. Plato spent two decades of his life as an educator and director of the Academy. It was most likely during this time that he produced the bulk of his 29 treatises. Among these were *The Symposium*, which takes place at a banquet whose guests, including Plato’s friend ARISTOPHANES, attempt to define love; *The Republic*, Plato’s magnum opus; and *Phaedo*, purportedly an account of the exchange between Socrates and his followers and friends on the eve of his execution. (In reality, due to illness, Plato was not among Socrates’ visitors.) During the exchange, Socrates explains that the philosopher should not fear death, as he does not, because only without the burden of corporeal form can the eternal soul come to know the pure truth and splendor that mortal beings seek during their existence on earth.

In the late 360s B.C., Plato twice visited Dionysius II, the “tyrant of Syracuse,” to put to the test his theories regarding the education of philosopher-kings as described in *The Republic*, and to persuade the ruler to implement a platonic government. Plato’s ambitions were not realized, and he returned to the Academy, where he remained until his death.

Critical Analysis

Contained in 10 books, *The Republic* is Plato’s longest finished work; Professor Allan Bloom’s seminal translation runs 300 pages long. Appearing initially to be an inquiry into the nature of justice, the discourse soon turns toward an attempt to define and describe a “just man” and a “just city.” Ultimately, the soul of the just man is shown to be a microcosm of the operations of a just state.

Early in the dialog, Socrates and his interlocutors deduce how a city comes about:

[It] comes into being because each of us isn’t self-sufficient but is in need of much. . . . So, then, when one man takes on another for one need and another for another need, and, since many things are needed, many men gather in one settlement as partners and helpers, to this common settlement we give the name city, don’t we?

(II.369b–c)

In essence, Plato is saying that no one can provide entirely for himself; a city needs farmers, house builders, weavers, shoemakers, carpenters, herdsmen, merchants, and laborers. But life would be bleak without luxuries such as olives, furniture, perfumes, embroidery, and ivory. Therefore many more people are needed, including poets, servants, beauticians, and chefs.

The dramatis personae agree with Socrates that “each of us is naturally not quite like anyone else, but rather differs in his nature; different men are apt for the accomplishment of different jobs” (II.370a–b). They also agree that it is appropriate for one person to practice one art rather than many arts.

The philosophical discussion of *The Republic* then leads the characters to deduce that the existence of valuables in the city will lead to crime, which in turn creates a need for military forces. The “origin of war,” says Socrates, lies “in those things whose presence in cities most of all produces evils both private and public” (II.373e). The characters’ final conclusion regarding the forma-

tion of a just city is that there should be three classes: the merchants or money-makers, the armed forces or auxiliary, and the ruling class.

The discussion then turns to the question of who should rule. Ultimately, they determine that thinkers should become the rulers-philosopher-kings because they themselves are governed by reason and harmony. Furthermore, precisely because the true philosopher has no worldly ambitions—in fact, he “despises political offices” (VII.521b)—he cannot be corrupted or made to impose his rule on a reluctant populace. “Unless,” Socrates asserts, “philosophers rule as kings or those now called kings and chiefs genuinely and adequately philosophize, and political power and philosophy coincide in the same place . . . there is no rest from ills for the cities . . . nor I think for human kind, nor will the regime we have now described in speech ever come forth from nature, insofar as possible, and see the light of the sun” (V.473c–d).

Plato employs sunshine as a symbol of enlightenment in another important part of *The Republic*, when Socrates presents the famous “Allegory of the Cave” (Book VII). The benighted, Socrates says, are shackled in cavernous hollows of ignorance and believe the shadows cast on the cave walls represent reality, when they are, in fact, merely illusions. The light of day represents a cosmos of perfect being, where the universal ideals—the Forms—exist. Here, there are ideals not only for concrete items, like “chair,” but also abstractions like “circle” and “good.”

Most individuals do not “see the light,” nor do they realize that there is an alternative to their shadowy netherworld or that what they perceive as reality is a mere approximation of the ideal (or Platonic) Form. These representations merely refer to the Form; they do not duplicate it.

The Republic, wrote critic David Denby, is

the single most widely read work of philosophy in the West, and for immediately obvious reasons. Plato, an entrancing writer, had perfected the form of a dialogue, with its gracefully sinuous plait of questions and answers, its antici-

pation of the readers’ objections, its courtesies that are really a form of sly mockery.

Within a framework of spirited debate, Plato addresses the most profound questions of human existence that remain relevant to this day. His influence on Western thought over thousands of years is immeasurable and cannot be overstated. As the English philosopher Alfred North Whitehead says, “all philosophy is a set of footnotes to Plato.”

Plautus, Titus Maccius (254–184 B.C.)

playwright

From the beginning of his life in the tiny mountain village of Sarsina, Titus Maccius Plautus was called

just Plautus, which means “flatfoot.” Because he was not a Roman citizen, Plautus was not entitled to a full name. Driven by his love for theater and adventure, as a boy he left his native village by joining a traveling theatrical troupe. He later tried various other jobs, at one point becoming a soldier for the Roman Empire.

During his military service, Plautus was introduced to the concept of Greek theater, specifically Greek New Comedy and the plays of MENANDER. After leaving the service, he supported himself by working around the Roman stages as a carpenter or mechanic; opening his own business, which failed; and becoming a miller, cruising the streets with his hand-mill.

Fascinated by the theater, Plautus soon tried his own hand at writing. He wrote his earliest plays, *Addictus* and *Saturio*, while working as a miller, and it was not long before his work made him the Roman Empire’s best-known playwright. He won instant popularity partly because his plays appealed to the tastes of the uneducated public, which cared only for the entertainment and not for the contemplation of serious political issues. Knowing that he had to keep his audience interested—an audience that was accustomed to bear baiting and gladiator fighting—Plautus purposely engaged the common public’s appreciation for the vulgar and ignored the manners and language of the aristocracy. His works are therefore a valuable documentation of the live, vivacious, conversational vernacular Latin of the third and second centuries B.C.

Despite the crudity of words and idiomatic expressions that populate Plautus’s plays, his plots, characters, and settings reveal the markings of great literature. He generously employs puns, alliterations, and plays on words, most of which cannot be effectively reproduced in translation. On the other hand, translations of his rich metaphors (some taken from military operations), descriptions of business transactions, and portrayals of the trades of artisans reveal the clarity of a well-rounded literary and social thinker.

Plautus composed approximately 130 pieces, 21 of which survive to this day. The play considered his

masterpiece is *Captives*. The German playwright and critic Gotthold Lessing once described it as “the best constructed drama in existence.” Other significant works include *Menaechmi* (The Twin Brothers), his first comedy to be translated into English; and *Miles Gloriosus* (The Braggart Soldier), another comedy in which Plautus created the archetype of a swaggering soldier, which, in turn, became very popular in Renaissance literature.

Due to his outstanding achievements, Plautus was eventually granted citizenship and given permission to assume a full name. Among the names he chose for himself was Maccius, which means “clown,” revealing his penchant for humor.

What is perhaps most remarkable about Plautus’s works is that they represent a clear exception to the didactic and moral characteristics of most Roman literature of his time. Between the uniqueness of his comedy and the clarity of the elements of his drama, it is no wonder that Plautus’s plays influenced a number of later writers. Molière and Dryden imitated his *Amphitryo*. From *Aulularia*, Molière borrowed the subject for his own *Miser*, and Shakespeare’s *The Comedy of Errors* is adapted from Plautus’s *Menaechmi*. Today his plays are studied by students and critics alike and performed on stages across the globe, attesting to a timeless appreciation for Plautus’s work, and especially his comedies.

Pliny the Elder (Gaius Plinius Secundus)
(23–79) *historian, nonfiction writer*

Gaius Plinius Secundus, known in English as Pliny the Elder, was born in Como, Italy, to parents of the equestrian class, which meant wealth and position in the world of ancient Rome. As a youth he studied rhetoric, the art of speaking in public, and also traveled. At age 23 he joined the military and was made tribune, a common entry point for sons of the equestrian or senatorial classes. He worked his way up to a cavalry unit and was stationed in present-day Germany.

During his years of service on the Rhine, Pliny wrote a short treatise, now lost, on spear-throwing from horseback, based on his observations of the Germanic tribes. He followed this work with a biography of his teacher and military commander, Publius Pomponius Secundus. After a brief visit to Rome in 52, he returned to Germany and began his 20-volume *History of the Germanic Wars*. This work, also lost, had an immense impact on his fellow historians; TACITUS and Suetonius quote Pliny a great deal.

Returning again to Rome in 59, Pliny withdrew from the military to practice law and turn his attention to writing. His next works were not considered particularly original or inspiring. *The Scholar*, for example, was a training manual for orators and rhetoricians, and its advice would be surpassed in both substance and style by QUINTILIAN. The eight-volume *Problems in Grammar* was perhaps the only subject Pliny could find to write about that would not incur the wrath of the capricious Emperor Nero. His *Continuation of the History of Aufidius Bassas* updated events at Rome from the late 40s to his own time. None of these works, unfortunately, have survived to the present time.

In 69, after a succession of emperors, Pliny returned to favor under Vespasian, with whom he was previously acquainted. He served as procurator in a series of provinces and was then made prefect

of the Roman navy stationed at Misenum, in the Bay of Naples. He was killed while attempting to evacuate people from Pompeii when Vesuvius erupted on August 24, 79. His nephew, PLINY THE YOUNGER, wrote in one of his letters:

The fortunate man, in my opinion, is he to whom the gods have granted the power either to do something which is worth recording or to write what is worth reading, and most fortunate of all is he who can do both. Such a man was my uncle.

By the time of his death, Pliny had published 75 books and left behind 160 volumes of unpublished work. His crowning literary achievement, the only one that survives, was the encyclopedic *Historia naturalis*, or *Natural History*, consisting of 37 books, published in 77. In these volumes, Pliny deals with the entirety of creation, from cosmology to anthropology, geography to biology, as well as horticulture and agriculture, medicine, magic, and the properties of metal and stone. In fact the work covers all things natural and in addition contains frequent accounts of human inventions and institutions. The work reflects Pliny's systematic mind, his immense curiosity, and his tireless working habits. The younger Pliny said of him: "He had a keen attention, incredible devotion to study, and a remarkable capacity for dispensing with sleep." It was said that he even dictated notes to his secretary while in the bath.

The *Natural History* freely mixes fact with fiction, since the author, though a Stoic like most educated men of his day, possessed a great love of the curious. The *Natural History* was frequently read and relied on during the MIDDLE AGES, when some of its more peculiar notations were taken as literal fact—for instance, when Pliny describes certain peoples of the East as having ears that they can tie around their heads or heads set directly upon shoulders, with no neck at all. To the modern reader the work may often appear simply quaint, as, for example, when Pliny speculates that people in Ethiopia grow tall due to their country's climate,

because “the juice is called away into the upper portions of the body by the nature of heat.” In other places he flatly contradicts current knowledge—for instance, when he declares that the earth is clearly the center of the universe.

The *Natural History* is still valuable as an anthropological document reflecting the world of the first century as Pliny knew it, and his process of direct observation remains a foundational method for conducting scientific research.

Pliny the Younger (Gaius Plinius Caecilius Secundus) (ca. 61–ca. 112)

lawyer, orator, letter writer, poet

By the first century, after hundreds of years of bitter warfare, Rome had established uncontested dominance through the entire Mediterranean region. All independent powers had bowed to the might of the Roman legions, and no sovereign state remained to challenge Rome’s supremacy. At the same time, after a series of civil wars, the republican form of government had been overthrown, and Rome had become an empire. Though the imperial government was autocratic, it brought political and social stability to the Mediterranean region for centuries. This period is now known as the *Pax Romana*, or “Roman Peace,” the stability of which allowed literature and art to flourish. One of the best-known and most influential literary figures of this time was Pliny the Younger.

Born in the Roman city of Novum Comum, Pliny was the nephew and adopted son of the fa-

mous Roman writer, soldier, and statesman, PLINY THE ELDER. His uncle moved him to Rome to ensure that he received an excellent education and the opportunity to enter the legal profession, which Roman society considered very honorable.

In 79, Pliny the Younger witnessed the famous eruption of Mount Vesuvius and the destruction of the cities of Pompeii and Herculaneum, having gone there with his uncle, the commander of the fleet that was sent to help the citizens evacuate. Pliny the Elder was killed during the evacuation, and Pliny the Younger wrote an account of the entire event in a letter to the Roman historian TACITUS. The letter has been preserved and provides the best firsthand information concerning what happened at Mount Vesuvius.

Pliny eventually became a lawyer in Rome, arguing his first case when he was only 19. He made excellent connections with important people in Roman society and before long embarked on a prosperous career within the imperial administration. He served three different emperors—Domitian, Nerva, and Trajan—working in military, judicial, and administrative capacities, as well as sitting as a member of the Senate. He was clearly efficient as a civil servant, and his contributions were highly valued, as evidenced by the numerous letters that he exchanged with Emperor Trajan.

In the year 100, Trajan made Pliny a consul, the highest position in the Roman government besides emperor. To express his thanks, Pliny made a famous speech on the floor of the Senate to thank Trajan for the honor bestowed upon him, an oration that has become known as the *Panegyricus Trajani*. In this speech, Pliny praises Trajan’s qualities and compares him favorably to other emperors. Although it was an unabashed eulogy of Trajan, the content of this speech provides historians with important information about the early events of Trajan’s reign. As an orator, Pliny was greatly influenced by CICERO, an earlier Roman orator whom he greatly admired and tried to emulate.

In 114, not long after assuming a position in the Roman province of Bithynia, Pliny the Younger

died. His public career had been uneventful, but he was universally respected for the sobriety of his private life and his compassion as a magistrate.

Critical Analysis

Pliny the Younger's fame rests on his correspondence. Despite the demands of his duties in the imperial government, he found time to devote himself to a life of literature and letters. Although much of what he wrote has been lost, including most of his poetry, 247 of his letters survive in a collection known simply as *Letters*. This work is accessible to modern readers and provides a priceless account of what life was like among the upper classes during the time of the *Pax Romana*.

During Pliny's time, letter writing was a crucially important skill. Not only personal matters but also affairs of state and government had to be communicated entirely by letter. This was particularly true of the Romans, who had the burdens of communicating across a vast empire and dealing with a variety of administrative and military matters.

In addition to official administrative matters, the subjects covered in Pliny's letter are numerous. He discusses everything from Roman literary life and his own intellectual interests to the weather conditions in the place from which he is writing. The letters also provide a fascinating glimpse into the personality of Pliny himself, revealing a man of both kindness and vanity.

Scholars have organized the *Letters* into 10 different books, although each was likely intended as an entirely independent piece. In addition to simple communications between friends, Pliny clearly intended his letters to be presented for publication, which he states in the first letter of the first book.

Two letters in particular have become famous. The first is the one addressed to Tacitus in which Pliny describes the eruption of Mount Vesuvius and the death of his uncle. The second letter, addressed to Emperor Trajan, was written when Pliny was governor of the province of Bithynia and concerns the persecution of the Christians.

This second letter is significant because it sheds considerable light on the Romans' general attitude toward Christians during the early days of Christianity. In it, Pliny writes to Trajan requesting guidance on how he should deal with Christians brought to him for trial, pointing out that he has never presided over such a trial before. He states that he executes those who admit to being Christians and refuse to recant, but he lets go those Christians who do recant their faith. He also states that he has received anonymous accusations against a number of people, charging them with being Christians, but most of these prove to be harmless. This letter to Trajan is interesting to historians for its firsthand account of the persecutions of Christians.

Other letters deal with mundane matters. In one letter to Tacitus, he describes his own surprise at killing three boars while on a hunt, even though his personal preference is to study rather than hunt. In another letter to his friend Sura, he describes ghost stories he has heard. Such letters offer a fascinating record of Roman life at the time, making them invaluable historical documents.

Plotinus (205–270) *philosopher*

All that is known of Plotinus comes from the *Life of Plotinus* composed by his student PORPHYRY, who published the biography as a preface to his collected treatises about 30 years after the philosopher's death. His arrangement of Plotinus's writing into six sets of nine tracts each, ordered by subject and named the *Enneads* (which means 'nines' in Greek), remains the sole means by which the ideas of Plotinus have survived.

Plotinus was born in Lycopolis in Upper Egypt, and at age 28 he began to study philosophy at Alexandria under Ammonius Saccas. Wishing to study Persian and Indian philosophy, he joined the military expedition of Emperor Gordian III to the East in 243. After Gordian was murdered in Mesopotamia, Plotinus fled to Antioch and, in 244, made his way to Rome, where he began to teach. Ten years later, at 50, he began to write.

Plotinus's pupils included doctors, politicians, literary men, and women. His method of teaching consisted of conversation; sessions would begin with a reading of a commentary on PLATO or ARISTOTLE and proceed to a debate of certain points of philosophy. Though he had no political aspirations of his own and believed philosophers should not be involved in reform of the state, Plotinus did ask permission from his friends, the Emperor Gallienus and Empress Salonina, to establish a city called Platonopolis. He envisioned a community founded entirely on the ideals of Plato. However, too many people opposed the plan for it to become feasible. In 269 an illness, probably leprosy, forced him to retire to the country estate of one of his pupils, where he died the next year.

The scholar Dominic O'Meara correctly notes that "many paths lead back to Plotinus." Plotinus and his successors, known as the Neoplatonists, continued their teachings during late antiquity in the great schools of philosophy in Syria, Athens, and Alexandria, which in their turn shaped the philosophical foundations underlying the Islamic, Byzantine, and Western worlds of the MIDDLE AGES, Renaissance, and Enlightenment.

Plotinus's main achievement was a systematized worldview in which he ordered and defined important metaphysical concepts. For him, philosophy was a religion, a way for the mind to ascend from the material to God. Building on the ideas of Plato, Aristotle, and the Stoics, he conceived of reality as a hierarchy of spiritual powers that all had their source in an infinite and transcendent entity he called the First Principle or the One. The One, he believed, contained and was the source for all being. The next state of being he called the *Nous*, a Greek word roughly meaning Divine Intellect. This was the force that ordered the world, a finite entity comprised of the sum of all living things.

The third state Plotinus called the Soul of the World, and he described it in two parts, the first consisting of intelligence and reason, and the second consisting of material being or nature. For Plotinus, evil and imperfection existed only in the state of matter, and the material could be transcended through contemplation. Contemplation, which turned away from the material or external and focused on the inner soul or true self, was the way an individual could unite with the Universal Soul and, from there, the *Nous*. The purpose of existence was to strive for moral and intellectual perfection, which would ultimately bring the soul closer to the First Principle or the One, the source of all life. Evil and suffering, though a necessary part of the plan, were caused by a selfish attachment to the body and could be conquered through moral goodness, discipline, and wisdom.

Plotinus revived and popularized the ideas of Plato and Aristotle in the Latin world and became the chief exponent of Neoplatonism. He influenced the Byzantine scholar Michael Psellus, and Arabic translations of the *Enneads*, particularly the "Theology of Aristotle," circulated in the medieval Islamic world. He also influenced Christian theologians, such as Gregory of Nyssa, AMBROSE, and AUGUSTINE, and the medieval philosophers BOETHIUS and Macrobius. Translator H. A. Armstrong calls him "metaphysician and mystic, a hard and honest thinker who enjoyed intense spiritual

experience and could describe it in the language of a great poet.” His ideas have contributed to philosophy, art, literature, and religious thought.

Plutarch (ca. 50–ca. 125) *biographer, essayist, philosopher*

Plutarch was born in the city of Chaeronea, in the ancient Greek district of Boeotia, where his family had long been established. He studied in Athens under Ammonius, traveled to Rome, and became equally at home in both cultures. He was extraordinarily erudite and particularly knowledgeable in the areas of literature, contemporary history, and PLATO’s philosophy. Plutarch married, fathered five children, and spent much of his life in Chaeronea, where he involved himself in community activities and served in public office.

Plutarch’s range of experience and scholarship allowed him to pursue a variety of careers: as Delphic priest, lecturer, archon, and influential leader in the literary and intellectual circles of the court of the Roman emperor Trajan. During Trajan’s reign (98–117), Plutarch produced his masterpiece, *Parallel Lives*. This set of biographies of famous Greeks and Romans reflects the sensibilities of his age, putting Roman traditions and achievements on a level with Greece’s glory-filled history. It was the belief at the time that studying the individual accomplishments and mistakes of histori-

cal persons was a character-building pursuit. Plutarch, a moralist and ethicist after the fashion of ARISTOTLE, wrote to improve the moral fiber of his audience.

Parallel Lives reveals Plutarch’s pride in the heritage of Greek thought and classic ideals, his profound admiration for Roman civilization, and his attempt to reconcile the two. The treatise offers 23 pairs of biographies. The portrait of a Greek statesman or military leader is presented first, and the life story of his Roman counterpart follows for purposes of comparison. Plutarch creates both inner and spoken dialogue, stages dramatic scenes, and narrates anecdotes to depict his subjects as men of honor, principle, and integrity. His protagonists are at turns dutiful and self-important, outraged and triumphant, generous and petty, autocratic and heroic, and censured and rewarded.

One of the finest and most appropriate pairings within *Parallel Lives* is that of DEMOSTHENES, the Greek orator, and CICERO, the Roman orator. Demosthenes’ oration shows “thoughtfulness, austerity, and grave earnestness” displayed by his morose countenance and anxious aspect. On the other hand, Cicero is “disposed to mirth and pleasantry,” and his “love of mockery often [runs] him into scurrility; and in his love of laughing away serious arguments in judicial cases by jests and facetious remarks . . . he [pays] too little regard to what [is] decent.”

Another of Plutarch’s important works is the series of essays on moral philosophy called the *Moralia*. The topics of these more-than-70 essays range from education, religion, and literary criticism to psychology, politics, and matters of etiquette. Jacques Amyot’s French translations of the *Lives* (1559) and *Moral Essays* (1572) made Plutarch available to such thinkers and artists as Rabelais, Montaigne, Racine, and Molière.

Translated into English by Philemon Holland in 1603, the *Lives* provided fertile ground for English playwrights, including Ben Jonson and William Shakespeare. Shakespeare, in particular, borrowed from Plutarch’s writings and used the Greeks’ analysis of human behavior to embellish the action

and characters of his history plays, including *Julius CAESAR*. Later, John Dryden was inspired to write *Life of Plutarch* (1683), in which he analyzes the structure and style of *Parallel Lives*. The *Moral Essays* influenced English poets and thinkers like John Lyly, George Chapman, Jeremy Taylor, and John Milton.

Plutarch's reputation has varied over the ages, since his historical approach was somewhat unreliable and his facts often inaccurate. However, his purpose was edification and instruction, and his works reflect a vigorous mind. His *Lives* in particular provided models for biographers to follow. As a moralist, he addresses questions of enduring concern, and as literature his works provide an enduring fascination.

Polo, Marco (1254–1324) traveler, writer

Marco Polo's account of his experiences in Asia shaped the western European vision of the East. He was born to a merchant family in Venice, and his uncle and father owned a trading house in Soldaia, a Crimean port on the Black Sea.

According to Polo, during their travels to the East, his father and uncle had met the Great Khan and promised to return to his court with Christian missionaries. After returning to Venice in 1271, the pair reunited with the 17-year-old Marco and then, with him, headed back to China. They traveled from Acre through Jerusalem, overland through Armenia and Persia (now Iran) to Central Asia, across the Pamir mountains, along the Takla Makan Desert in Western China, through the Gobi Desert and finally reached the summer court of Kubla Khan in Shangdu, which was about 200 miles north of modern Beijing. They arrived in 1275 and stayed there for the next 17 years.

During this period, Polo claims that Kubla Khan was so impressed with his intelligence and diligence that he appointed him to diplomatic missions that took him to southern China and northern Burma (now Myanmar). Polo also claims that he was governor of Yangzhou, a large commercial city, but this has not been confirmed by scholars.

The Polo family finally had an opportunity to return home when they were appointed to escort a Mongol princess en route to Persia to get married. This time they went by sea, setting off from the southern Chinese port city of Quanzhou in 1292 and traveling to Sumatra, Ceylon (now Sri Lanka), southern India, and through the Persian Gulf. After leaving the princess in Persia, the Polos traveled on land through Turkey, where they sailed from Constantinople (now Istanbul) to Venice in 1295.

After being captured in a sea battle in 1296, Marco Polo was imprisoned in Genoa. There he met a Pisan romance writer named Rustichello, who collaborated with him on his only book, *Il milione* (called variously *The Description of the World*; *The Book of Marvels*; *The Book of Marco Polo*; and, most commonly, *The Travels of Marco Polo*).

Polo was released from prison in 1298 and returned to Venice in 1299, where he married and ran several businesses. He became famous in Venice for telling stories of his travels, despite the fact that some people questioned the validity of his tales. When he lay dying on January 8, his friends and relatives begged him to recant his stories, but he insisted that he had not told half of what he had seen. Marco Polo was buried in the church of San Lorenzo in Venice.

Critical Analysis

The Travels of Marco Polo poses several interesting questions for readers and critics. One is the issue of classification: Is the book a travelogue, a merchant's handbook, an autobiography, or even a fantasy? As a person, Marco Polo does not come alive on the page; the reader cannot define his likes, dislikes, or reactions to his experiences, so his work is generally not considered an autobiography.

Unlike earlier travelogues, Polo does not emphasize the dangers or strangeness of what he encounters. Instead, with minimal comment, he catalogues the religions, appearances, and customs of the people he encounters and focuses more on the general and objective in his descriptions of cities and regions. His emphasis on the varieties of goods and spices found in the various ports throughout his travels have led some scholars to conclude that the book is no more than a guide for the medieval Venetian merchants who dominated trade with the East. However, as John Lerner points out in *Marco Polo and the Discovery of the World*, existing merchant guidebooks do not include the interest in the Mongol Empire's government and court, as well as the spectacular buildings and statues that Polo describes.

Finally, since the 17th century, when enduring contact with China was established by Jesuit missionaries, many readers, critics, and scholars have questioned whether Polo went to China at all. Several scholars, most notably Leonardo Olschki, have pointed out how Polo does not mention any of the same Chinese phenomena that other travelers of

the time mention in their books: no Great Wall, no tea, no chopsticks or footbinding. Polo's supporters argue that Polo seems to have spent his years in China as part of the Mongol emperor's court and that his knowledge of customs is based on what he observed there, rather than on native Chinese practices. If, as Lerner theorizes, Marco Polo spent his time in the East as a minor civil servant of the Mongol Empire, then he would have had little contact or interest in native Chinese customs. On the other hand, he is knowledgeable and enthusiastic about the Great Khan's court, describing in detail the protocol for holidays and banquets. For example, the servers who bring the Khan food and drink "are all obliged to cover their noses and mouths with handsome veils or cloths of worked silk, in order that his victuals or his wine may not be affected by their breath."

Some may say that Marco Polo was a precursor of things to come, for behind Christopher Columbus's voyage and his unexpected discovery of the New World lay the marvelous East. While Polo does describe some implausible events, such as the use of eagles in gathering diamonds, his work relies little on stories of mythical beasts and human monsters, as did earlier travelogues and even imitation travelogues, such as the travels of Sir John Mandeville. Polo recorded the flora, fauna, and especially riches of the places he visited and thus helped shape the Far East's image as a fabulous place of bizarre customs and unimaginable wealth. His book also inspired 14th-century cartographers to change their maps and record the geography and cities he had visited. The spices and riches he describes only heightened the curiosity and longing of Europeans to trade with the East.

The Travels of Marco Polo has been translated into many languages from its original Italian. Columbus owned a copy of the work, which has been preserved. The first English translation, by John Frampton, appeared in 1579, followed by a more accurate English version by W. Marsden in the early 19th century and another English version with notes by Sir Henry Yule in 1871. Polo is

remembered for his grand tales of adventure as well as the information his work provides on the Mongol culture and customs of the 13th century.

Porphyry (Porphyrius, Malchus) (ca.

232–ca. 303) *philosopher, biographer, editor*

By the third century, Greek philosophy was beginning to lose the creativity and vitality that had nourished it for so long. The rise of Christianity and the country's long subjugation by Rome had eroded Greek intellectual activity. Among the last of the great philosophers was Porphyry, who was a great exponent of the philosophy known as *Neoplatonism*.

Little is known about Porphyry's life. He was from the city of Tyre, on the Mediterranean coast of what is now Lebanon. During his life, the social order of the Roman Empire was beginning to collapse, and barbarian invasions were penetrating the imperial frontiers. In the midst of all this, the Christian Church was growing rapidly, altering both society and intellectual and philosophical thought.

Porphyry came into contact with many of the great intellectuals and philosophers of his day, and was a disciple of PLOTINUS, who largely developed Neoplatonism. It is unknown precisely when the two philosophers met, but they remained companions until 268. Porphyry not only edited Plotinus's works, creating his *Enneads* (ca. 301), but also wrote a biography of his teacher. Another of Porphyry's teachers was the philosopher LONGINUS, and he was also acquainted with the great Christian thinker, Origen.

Based on these influences and his own studies, Porphyry authored many philosophical works, most of which have been lost. Perhaps his most famous work is *Against the Christians* (ca. 270), in which he attempts to show that the ideas of pagan Greek philosophers, such as PLATO and ARISTOTLE, were superior to the new ideas of the Christian Church. Porphyry also wrote *Life of Pythagoras*, a biography of the great philosopher and mathematician; and numerous commentaries on Aristotle's works, including *Eisagoge* (an introduction to Aristotle's *Categories*), which would greatly influence medieval philosophy.

Porphyry was not nearly as important to the development of Neoplatonism as was his teacher, Plotinus, but his contributions were nevertheless significant. Further, it was because of Porphyry that much of the philosophical thinking of Plotinus, PYTHAGORAS, and Aristotle has been preserved.

Proclus (ca. 410–485) *philosopher*

By the fifth century, Greek philosophy was in decline. The rise of Christianity and the steady collapse of political institutions contributed to this deterioration, and Greece was no longer producing thinkers such as PLATO and ARISTOTLE. The last major movement within pagan Greek philosophy, which took place during this time, was known as Neoplatonism, which had been expounded by the philosophers PLOTINUS and PORPHYRY. Among those who promoted Neoplatonism was Proclus, who was born in Constantinople (now Istanbul) sometime in the early fifth century. Little is known of his life. He lived and worked in the city of Athens, which remained an intellectual center despite the fact that its political and economic importance had long since faded.

Proclus, who became head of the Platonic Academy in Athens, was the author of several works concerning Neoplatonism, including *On Platonic Theology*, *Elements of Platonic Theology*, and *Commentary on the Timaeus*. In these works, he describes the most important aspect of Neoplatonism as the separation of the body and the mind, through which Proclus and most Neoplatonists believed that people could transcend physical limitations to reach a mystical union with the “One.” Christian thinkers later adopted this and other aspects of Neoplatonic philosophy in developing their theology. One such person was the theologian Dionysius the Areopagite (ca. 500), whose *The Celestial Hierarchy* and *The Divine Names* (treatises of mystical and speculative theology) greatly affected the intellectual development of medieval Europe.

Proclus was not as influential as other Greek philosophers. His major achievement was to develop and extend the Neoplatonic theories articulated by Porphyry. Through his work on spreading the philosophy of Neoplatonism through the Greek-speaking world, Proclus contributed to the development of Christian theology.

Propertius, Sextus (ca. 50–ca. 15 B.C.) *poet*

Sextus Propertius was born in Italy near Assisi, later home to Saint FRANCIS OF ASSISI. His parents belonged to the wealthy equestrian class, and although his family lost properties in the confiscations of 41 B.C., Propertius never needed to pursue a profession to earn his living, nor did he require a patron, as did his contemporaries VIRGIL and HORACE. He established an enduring friendship with the wealthy statesman Maecenas, who was patron to several other artists and who accepted Propertius into his literary circle. Though the precise dates in which his books appeared are not known, one of his elegies is addressed to a woman who died in 16 B.C. OVID, writing the *Remedy for Love* in A.D. 2, implies that Propertius was dead by this time.

Propertius is known for four books of *Elegies*, a total of 92 poems. The fame of these books earned him a place alongside CATULLUS and Ovid in the tradition of classical love poetry. QUINTILIAN considered him second only to Tibullus as an elegiac poet. The elegiac meter had become the accepted form for poetry as early as Mimnermus (ca. 630 B.C.). Though it was also used for martial verse, dirges, and lamentations, it was most widely used for love poems.

Traditionally, the love poets professed enslavement to one woman, an attachment that the 12th-

century TROUBADOURS of southern France would imitate and that DANTE would continue in his poems addressed to Beatrice and Petrarch in his sonnets to Laura. Catullus addressed his mistress as Lesbia, Cornelius Gallus wrote to Cytheris, and Tibullus professed devotion to Delia. Propertius's love was a Roman lady whom he named Cynthia.

The first book is completely dominated by Propertius's experience of falling in love with Cynthia; as he declares in the very first poem: "No girl but Cynthia ever caught my eye / or stormed by my heart or felled my passionate pride." These initial poems portray love as an external force that has thoroughly overcome the poet, and, in keeping with tradition, he grows ill with unrequited love. Passionate descriptions of Cynthia's worth and beauty alternate with declarations of despair over her coldness and neglect. The second book also addresses Cynthia. Propertius opens this book by declaring that even if he were gifted enough to write of gods, heroes, and epic battles, he would still write of Cynthia because, he says,

*To die for love is glory; glory also
to love one only; I would have that joy.*

His Cynthia is more constant than Helen, more enchanting than Circe, more beautiful than any of the goddesses.

By his third book, Propertius has widened the scope of his art. The poet's voice here seems more often disenchanted with love and concerned for the things that do last. Mournfully he remarks in the second poem of the third book, "from remembered genius, fame shall flower. / It is only wit that death does not devour."

The fourth book contains only the rare reference to Cynthia, and the poet turns his attention to the legendary past of Rome, occasional poems, letters, and an elegy. More than any of the others, this book demonstrates Propertius's professed identification with the aesthetics of the Alexandrian poet CALLIMACHUS. The fourth book shows the true breadth of Propertius's talent, and together the *Ele-*

gies chart the maturation of a poet, his struggle to learn from his experiences, and his quest to discover and define his own personality.

Translator Constance Carrier calls Propertius a "daring, difficult, experimental writer." Scholar Margaret Hubbard concludes that Propertius has no characteristic or distinguishable style, but rather draws on a variety of influences and is highly inventive, especially in his use of imagery and metaphor. Though not as often read in later centuries as the EPIC poets, whose ranks he declined to join, Propertius is nonetheless remembered in the *Roman Elegies* (1788) by Goethe and in *Homage to Sextus Propertius* (1917) by Ezra Pound.

purana (first–15th centuries) *Hindu* *scriptural genre*

The Sanskrit word *purana* means "ancient" and refers to a genre of sacred Hindu scripture describing the mythological history of India. There are 18 *mahapurana*, or major *puranas*, and 18 *upapurana*, or minor *puranas*. Each *purana* celebrates a different aspect of the Hindu trinity, or Trimurti: Brahma, Vishnu, or Shiva. Devotees of Sakti, the Divine Mother, sometimes include the *Devi Bhagavata* as a major *purana*.

According to tradition, all the *purana* were composed by the sage Vyasa, to whom is attributed the epic of Indian literature, the *MAHABHARATA*. The *puranas* were compiled and recited over centuries, perhaps from as early as the first century to as late as 1400. Each *purana* is essentially a long poem composed in two-line stanzas called *slokas*. In content, they use short stories and dialogue between gurus and students to explain concepts contained in the Vedas, the oldest and most sacred Hindu scriptures. Strictly speaking, a *purana* should address five subjects: the first stage of the creation of the universe (*sarga*), the second stage of creation (*pratisarga*, or *visarga*), genealogies of kings and gods (*vamsa*), the reigns of the Manus (*manvantaras*), and the histories of the solar and lunar dynasties.

In practice, each *purana* is structurally unique and the content varies widely, covering a breathtaking scope of theology and philosophy. None are brief, though the lengths also vary. The *Vishnu Purana*, sometimes thought to be the oldest of the *puranas*, is called the *Puranatna*, or Gem of the Puranas, as it most conforms to the specified subjects. It contains 23,000 verses or *slokas*. The *Bhagavata*

Purana, sometimes called the *Srimad Bhagavatam*, contains perhaps the most widely translated and the most-quoted writings on Hindu spirituality. Also dedicated to Vishnu, this *purana* most likely took shape between the first half of the sixth century and the second half of the eighth. It contains 18,000 verses.

Like the BHAGAVAD GITA, the *purana* are concerned with devotion to God but, due to their narrative style and poetic beauty, are accessible to laypeople. Together they form a substantial contribution to the development of Hindu thought.

Qu Elegies (Ch'u Elegies, Chu Ci, Ch'u Tz'u, Songs of Ch'u, Elegies of Ch'u, Songs of the South) (fourth century B.C.)
collection of verses

The *Qu Elegies* is a great collection of Chinese poems second only to the renowned *BOOK OF SONGS*. This collection of verses records the legends, myths, religious philosophy, and social commentaries of the tumultuous Warring States period (403–221 B.C.), when imperial power broke down and rival feudal states fought among one another almost constantly.

The most important of these songs was attributed to QU YUAN, who is generally regarded as the father of Chinese poetry. He composed the *Lisao* (translated in English variously as *The Lament*, *Encountering Sorrow*, or *A Song on the Sorrows of Departure*), which in 375 lines relates the poetic account of a man's spiritual journey from birth to death. The poem's somber mood and melancholy reflect the poet's disillusionment and the rejection he felt after his master, the emperor, betrayed him.

Several major themes are represented in the collection of songs, the foremost being the theme of quest. A number of the elegies are religious texts that relate the story of a shaman who embarks on a spiritual journey to the supernatural realm. For

instance, in *Nine Songs* (*Jiuge* [*Chiu-ko*]), the protagonist is a religious figure who goes in search of gods and goddesses who may or may not show themselves. A similar theme is explored in another song, *The Far-off Journey* (*Yuanyu*), in which the main character encounters and interacts with many deities along his circular pilgrimage, which culminates in his achieving his goal in the center of the cosmos.

Lisao also contains strong imagery of the poet's quest for virtue or for a virtuous person to guide him on his path. His quest proves fruitless, ending in his eventual decision to seek solace in death by drowning himself in the river. This image combines the poet's quest with another significant theme of the poem: Nature's reflection of the human condition, especially the subjection of humans to the forces of fate, or predestination. As the writer Richard Strassberg points out in his introduction to *Inscribed Landscapes*, Qu Yuan "in the end, was unable to view Nature as a mirror of personal virtue, a scene of transformation, or a soothing refuge. The environments he visited prove to be merely extensions of his anguished sorrow and feelings of misunderstanding."

The literary styles of the elegies continue to explore the relevance of nature. The general feature of the elegies or "parallel prose" (*bianwen* or *pianwen*)

is the pervasive use of couplets of four or six characters that maintain metrical symmetry. The key rhetorical device used is the prevalent imagery of polarities or binary opposites, such as the mountain and water (or landscape) (*shansui*) imagery, heaven and earth, and yin and yang (the dual, or opposing nature of things). An example of this is the asymmetry of beauty and pestilence represented in the reference to flowers and weeds in the *Lisao*. The poet, Qu Yuan, laments, “I grieve that fragrant flowers grow amidst patches of weeds.”

Another important poem in the *Qu Elegies* is the *Tian Wen* (Tien Wen) or *Heavenly Questions*. This poem is comprised of rhymed riddles and questions regarding the creation of the universe and China’s early history. Most of the questions remain unanswered except for a few, which allude to answers derived from earlier oral traditions. Although *Tian Wen* may appear to be a rather bewildering work, it contains important information on the myths and early beliefs of Chinese society in the Warring States and earlier periods.

The *Qu Elegies*’s expansion of the more restrictive four-syllabic verse form of the *Book of Songs* greatly influenced the development of later forms of writing in China. It is deemed to have had considerable impact, for example, on the prose form of *fu* poetry and the five-syllabic verse form of the *shih* poetry of the Han dynasty (206 B.C.–A.D. 220). In addition to the *Book of Songs*, the *Qu Elegies* serves as one of the best collections of vernacular literature in China and has served as a model of poetry and inspiration for many authors writing both inside and outside of the Chinese tradition.

Quintilian (Marcus Fabius Quintilianus)

(ca. 40–ca. 96) *rhetorician, nonfiction writer*
 Quintilian was born in Calagurris in Spain, a Roman province that was then a center of culture and the birthplace to other notables, including the elder and younger SENECA and the poet MARTIAL. By the year 57, Quintilian had traveled to Rome to study rhetoric under Domitius Afer. Following Afer’s death, he returned to Spain to teach and practice law, but in 68 he came once more to Rome in the company of Galba, who briefly became emperor in 69. In 71–72 he received a subsidy from the emperor Vespasian, who supported education in hopes of forming an educated citizenry. During this time, from 68 to 88, he taught oratory in Rome and became head of the first public school there in 88. He retired two years later.

In 89 Quintilian published *On the Causes of Corrupted Eloquence*, a work now lost. He began writing his major work, *On the Education of the Orator*, around 92 and published it in 94 or 95. In this work, Quintilian synthesizes a lifetime of experience in speaking and writing and blends it into a work that is at once a treatise on education, a manual of rhetoric, a recommended reading list, and a handbook of moral duties. For Quintilian, excellence in oration could not be separated from excellence of mind. Thus, his teaching emphasized the development of moral principles as well as artistic skill. In his own words, oratory is “the good man speaking well.” (At this time girls could receive a basic education in grammar, but only young men were allowed to study rhetoric, or the uses of language and literature.)

Through its 12 books, *On the Education of the Orator* charts a progression through the steps of

education. Quintilian's recommended teaching techniques include imitation, memorization, translation, recitation, the study of history, and literary criticism, among others. The first two books provide the foundation of the work by defining rhetoric and outlining the purposes and uses of education. For Quintilian, education was a lifelong pursuit that required turning every life experience to instructional advantage. The product of his educational system was a student schooled in both eloquence and ethical conduct, equipped to act justly in public affairs.

Most innovative, and most appealing to the modern reader, is the attention Quintilian pays to the development of the small child. From the moment of birth, he maintains, care should be taken to expose the child only to constructive influences and moral teachers, even in the appointment of the child's nurse. Education can begin with music, such as the lullabies sung to babies, since music helps develop taste and a sense of aesthetic distinction. He recommends giving exercises such as puzzles and problems of geometry to small children to stimulate their minds and hone their intellect. As the child develops, the relationship between student and teachers should be based on love. Quintilian urges the pupil to love his tutors as much as his studies, and he likewise instructs tutors to hold their pupils in true affection. He further states that if a student proves unequal to certain tasks, the teacher should direct him toward exercises in which he would have a chance of success. Most importantly, the subjects of education should be varied so as to create a well-rounded individual who can excel in both physical and mental tasks, for oration in particular required mastery of every skill. "Eloquence is like a harp," Quintilian wrote, "not perfect unless with all its strings stretched, it be in unison from the highest to the lowest note."

Quintilian's impact on the history of education has been profound. Remarks by his contemporaries JUVENAL and PLINY THE YOUNGER reveal the esteem in which he was held in his own time. The *Dialogue on Orators* by TACITUS borrows from

Quintilian, and so do JEROME's instructions on the education of Christian girls. Quintilian's ideas enjoyed great attention during the period of late antiquity, and he was often quoted in the works of French scholars during the 12th century. The humanist movement looked again to Quintilian, with scholars such as Petrarch, Erasmus, Martin Luther, and Philip Melancthon enlarging on his program. In England, Ben Jonson and Alexander Pope both read and praised Quintilian, and his techniques remained part of the English system of education well into the 19th century. Even in the 20th century, Quintilian is still recognized as a landmark figure in the history of education.

Qu Yuan (Ch'ü Yüan) (332–296 B.C.) poet
Qu Yuan was born in Zhikui (Chih-K'uei), Hubei (Hupeh) province, China, during the chaotic period of the Warring States (403–221 B.C.), when the authority of the Zhou (Chou) dynasty was decentralized among seven rival feudal states. Qu was a descendant of the royal family of Qu and later became the Left Counselor of King Huai of Qu. He belonged to the anti-Qin (Ch'in) party in the court,

which unfortunately went against his favor. Qu Yuan was sent into exile twice by two different Qu kings because he advised them not to continue diplomatic relations with the court of the rival state of Qin. For many years, he roamed from place and place before finally drowning himself after learning that the Qu dynasty had fallen to the Qin armies.

During his exile, Qu Yuan vented his grievances through his poems, such as the *Lisao*, the most famous of his works. The longest of Qu Yuan's lyrical poems, the *Lisao* reveals his devotion to and love of his country and his unyielding desire and determination to persuade his erring kings to avoid committing the gravest mistake by cultivating friendly relations with the treacherous Qin state. *Lisao* is divided into three sections. The first describes the ancestors, biographical details, and poet's desire to serve his king. A female character, probably the poet's sister, dominates the second section, in which she tries to persuade the poet of his foolhardiness. The final section contains a vivid description of Qu Yuan's imaginary pursuit of hope and truth. The poem ends on a despondent note as the poet laments:

*Alas! All is over.
My fellow countrymen know me not
Why should I pine for my native land?
Since there is none to govern well with me.
I shall join Beng Xian's abode.*

It is this keenness of expression which makes the *Lisao* a valuable document in the tradition of important Chinese literature, both as a poetic biography and as a model of poetic style and sentiment.

Rig-Veda (ca. 1500–600 B.C.) *sacred text, poem*

The oldest of the Vedas, the four books that make up the Hindu scriptures, is the Rig-Veda. Along with the Sama-Veda, the Yajur-Veda, and the Atharva-Veda, the Rig-Veda sets out the creation stories, the religious rituals, and the early prayers of the Hindu religion.

The Vedas were created as part of the Brahmanical tradition of the ancient Aryans, nomadic people who settled in the Indus River valley between 3000 B.C. and 2000 B.C. Their religion was based on the use of fire during sacrifices and the consumption of an intoxicating drink called soma, made from a plant that may be related to the mushroom known as “fly-agaric.” The Aryan Brahmanical tradition also placed a heavy emphasis on social order and served as a precursor to the later Hindu caste system.

The Rig-Veda contains 1,028 hymns, the earliest of which were probably composed around 1500 B.C. The hymns, or *mantras*, were recited by priests and preserved through an oral tradition (see ORAL LITERATURE/TRADITION) for hundreds of years. After 1000

B.C., the Rig-Veda was written down in Sanskrit, making it the oldest work in the Indian tradition and one of the oldest works of any kind in the Indo-European language system. The Sanskrit word *veda* means “knowledge.” Thus, the Rig-Veda concerns knowledge through hymns to the gods.

The central figures of the Rig-Veda are Indra, the god of thunder and battle; Agni, the god of fire; Varuna, the god of truth and order; and soma, the powerful intoxicating plant. Two other gods, Vishnu and Shiva, although of lesser importance in the Rig-Veda, later became two of the three most important gods in the Hindu religion.

More than 200 of the Rig-Veda’s verses are devoted to Indra. He was the most popular god in the Indo-Aryan pantheon and a devoted user of the plant soma. His heroic exploits helped to create the Indo-Aryan civilization. One of the most famous sets of hymns tells of his destruction of the serpent Vrtra, who had encompassed all the universe’s elements, including Water, the Sun, the Moon, the heavens, and the earth, within his coils. By destroying Vrtra, Indra released the elements that allowed life to flourish.

The importance of Agni in the Rig-Veda lies in his connection with fire and sacrifice. The early Indo-Aryan religion was a fire cult, and as the god

of fire, Agni was worthy of many hymns of praise. Agni served as a messenger between people and gods. Through the use of fire sacrifice, the Indo-Aryans were able to communicate with the gods and ensure their health and protection.

Soma was an essential part of the Indo-Aryan religion. The plant is mentioned nearly 1,000 times in the Rig-Veda, and the entire ninth book is devoted to hymns praising it. The plant's juice produced an effect on its users that allowed them to achieve superhuman tasks. Indra's use of soma, for example, allowed him to defeat Vrtra and other monsters throughout the text. Soma was also praised in the works of the Zoroastrian religion in Iran around the same time that the Rig-Veda was written.

Varuna played the god of order and Truth (or Rta), an extremely important role in the Indo-Aryan religion. Varuna's presence regulated the universe and kept all things from falling into chaos. He has often been portrayed as a moon god, though his role is more accurately described as god of the heavens, as well as of Truth. Though he held a position of great importance in the early religion, he was later eclipsed by Vishnu and Shiva in the Hindu pantheon.

The Rig-Veda's dual role as a sacred scripture of the early Indo-Aryan fire cults and of the Hindu religion have given it a place of the utmost importance in the history of religion and literature.

romance, medieval (12th–14th centuries) *literary genre*

In 12th-century France, the term *romanz* referred to a work written in the vernacular literature rather than in Latin, which was the language used by scholars, lawmakers, the religious, and the ruling class. First used to indicate a poem that related historical facts, the term *romance* soon came to designate a new literary genre. This genre did not come about spontaneously; rather, it found its beginnings in ancient Greek, Arabic, and Celtic literatures. For example, medieval society was familiar with the triumph of love in CALLIMACHUS's works as well as Celtic stories, such as the romance of *TRISTAN AND ISEULT*. Medieval romances were also influenced by Arabic songs, brought into contact with Western culture through the CRUSADES, and by the political history of the province of Aquitaine in present-day France. William of Poitou, Duke of Aquitaine, who fought in the First Crusade, was also the earliest recorded TROUBADOUR. His granddaughter, Eleanor of Aquitaine, became Queen of France and then Queen of England, carrying to both courts a new tradition of love poetry that evolved into a code of CHIVALRY and COURTLY LOVE.

From 1150 until the end of the 14th century, the romance was the most popular secular genre in the literature of England and France. Scholars later tried to organize the immense proliferation and colorful variety of texts by organizing them into three main areas: the Matter of Britain, which involves the adventures of King Arthur and his knights; the Matter of Charlemagne, which includes the stories of Roland; and the Matter of Rome, which includes tales about Alexander the Great and the fall of Troy. Arthur, Alexander, and Roland all take their place among the favorite heroes of medieval romances. Even those narratives that are not related to these cycles share certain characteristics with the most famous and influential of the romance tales.

The first romance distinguishable as such may be the *SONG OF ROLAND*, which was composed in the latter half of the 11th century. Some scholars

maintain that the *Song of Roland* is still an example of the older heroic poetry similar to the Anglo-Saxon *BEOWULF* or the *EPICS* of ancient Greece and Rome. In addition, the *Romance of Thebes*, *The Romance of Aeneas*, and *The Romance of Troy*, written between 1150 and 1165, all deal with the matter of Rome, retelling the epic stories in romance form. During these same years, Béroutl wrote his *Tristan* and CHRÉTIEN DE TROYES his *Arthurian Romances*, which forever shaped the way these characters were known and continue to be perceived. Later writers also added to the treasury of stories, among them MARIE DE FRANCE and Robert de Boron, whose verse romances develop the story of the HOLY GRAIL and add to the Arthurian romances. Around 1225, GUILLAUME DE LORRIS began an elaborate allegorical poem called *The ROMANCE OF THE ROSE*, which was continued later by JEAN DE MEUN and which left an enduring stamp on the romance genre and the way love was poetically treated in the Western world.

From its roots in France, the romance tradition spread to Italy, England, Germany, the Netherlands, Portugal, Greece, and Spain. Two of the most popular Spanish romances, *The Book of Apollonius* and *The Book of Alexander*, composed between 1220 and 1240, return to the Matter of Rome. In England the most popular romances dealt with the legends of King Arthur, such as *Sir Gawain and the Green Knight* or Sir Thomas Malory's *The Death of Arthur*. In Germany, the romances of WOLFRAM VON ESCHENBACH and GOTTFRIED VON STRASSBURG also contributed to the Matter of Britain, and the most celebrated authors of Italian romances—Boiardo, Ariosto, and Torquato Tasso—all used characters from the Roland tradition.

Critical Analysis

As a genre, the medieval romance is distinct from the chronicle, which purported to relate a true history. The romance is also quite different from epics or the earlier heroic poetry. David Staines, who translated the Arthurian romances of Chrétien de Troyes, puts it thus: "Traditionally, the epic and the chronicle depict a nation; their characters are

the embodiment of a national destiny; their ultimate concern is the nation itself. By contrast, the romance depicts the individual." Scholar Foster Guyer also observes that the romance introduced several innovations into the literature: "important feminine roles, a love element in narrative form, a refined style, and an entirely new kind of plot."

All romances share certain motifs, which scholar John Stevens identifies as the following: the hero's sense of a vocation or quest; the presentation of the heroine as distant, beautiful, and desirable; the essential isolation of the hero and his experience; and the feeling of involvement in a mystery. Romances also frequently feature magic elements or supernatural experiences.

Medieval romances were popular because they focused their attention not on national character but on human character. As Terence McCarthy says, "Romance takes us close to its heroes; we share their thoughts and see into their hearts." The romance genre also explored in a new way the treatment of women in the medieval world. Scholar Rosamund Allen observes that in literature prior to romances, "Women were notoriously excluded from positions of authority in medieval society." For this reason, women in literature frequently appeared "in the archetypal roles of mother, sister, daughter, wife and queen-consort"; in short, female characters were defined by their relationship to men. On the surface, medieval romances seemed to elevate women by putting them in positions of power and worshipping them for their grace and beauty. Upon closer investigation, however, feminist scholars observe that by making them the focus of the male quest, trapping them in towers or prisons, and valuing them for beauty or wealth rather than for personality or achievements, medieval romances simply continued to treat women as powerless objects in stories dominated by men.

Almost as soon as it was established, the romantic tradition began to investigate and even parody itself. Romances frequently use humor to describe situations in which the hero finds himself, and even moments that the author intended to be serious and tragic may appear funny to modern eyes in

their extravagant detail and sensational excess. Certain authors of the later MIDDLE AGES questioned the romance with particular skill. In his *Troilus and Criseyde*, Geoffrey Chaucer examines the clash between the epic and romance genres that inevitably happens when an ancient tale is recast in romance form. Ariosto draws away from the romantic tradition in his *Orlando Furioso*, offering a comic treatment of the repetitive and formulaic nature of romance episodes and devices. And *Don Quixote* (1605), by Miguel de Cervantes, is frequently seen as the last great parody and the final break with romance as a leading medieval literary genre.

Still, romantic conventions persisted in literature. In the English tradition, many of William Shakespeare's plays stage a return to romance, but with remarkably more complex psychological detail. The Renaissance figures Sir Philip Sidney and Edmund Spenser revived elements of the medieval romance in *Arcadia* and *The Faerie Queene*, respectively, but in these works the once-viable characteristics of the romance appear archaic and even quaint. In its farthest reaches, however, the medieval romance is considered the precursor to the modern novel. Even the contemporary definition of *romance* inherits some qualities of its older counterparts. In modern terms, a romance is inevitably a love story and typically involves the quest of a hero or heroine whose experiences and emotions are the main focus of the tale; thus, this most popular genre of secular medieval literature permanently affected the way literature is received in the modern world.

Romance of the Rose (ca. 1225–1277)

allegorical poem

The *Roman de la Rose* (Romance of the Rose) is one of the most famous and influential courtly love poems of the MIDDLE AGES. Written by two French authors, GUILLAUME DE LORRIS and JEAN DE MEUN, *Romance of the Rose* is an allegory in which emotions and abstract ideas such as Reason and Nature are personified by the story's characters.

The story tells how a young man in courtly society (represented in the literal story by a garden) seeks to win a young woman's love (represented by a rose). The man's attempt to seduce the woman is aided by her friendliness (or Fair Welcome), and by her passion (Venus), and repulsed at other moments by her haughtiness (as represented by the character of *Dangier*).

According to author C. S. Lewis, *Romance of the Rose* is "a love story of considerable subtlety and truth" in which the poets create the psychology of their characters by constructing an imaginary world in which the lovers' passions move and impress themselves vividly on the reader's mind.

Guillaume de Lorris, about whom almost nothing is known, composed the first 4,000 lines of the poem. After his death, the work's popularity led more than one writer to try to complete it. A first, very short anonymous conclusion was probably written shortly after the original, but much more

famous is the long continuation and conclusion by Jean de Meun.

Guillaume's major inspiration was the ideology and poetry of CHIVALRY and courtly love in which the lady plays the dominant role, kindly granting her favors or not, and the lover strives to please her in all things and be worthy of her. This type of love was an innovation and in direct contrast with the current idea of marriage in which the husband was expected to have complete control and domination over his wife. Guillaume and Jean de Meun also recognized that the love they were portraying contradicted the medieval ascetic tradition that condemned passion for its ability to destroy a person's reason; hence the appearance of Reason, whose character argues in vain against love.

Jean de Meun's sources included the works of Alan of Lille, a 12th-century poet of the school of Chartres, who wrote philosophical poetry about nature and creation. His other sources included Greek and Roman mythology (see MYTHOLOGY, GREEK AND ROMAN) and the allegorical traditions found in the BIBLE and in the works of ancient poets.

Critical Analysis

Romance of the Rose begins with the narrator dreaming of entering the beautiful Garden of Delight by permission of the gatekeeper Idleness. As he explores the garden, he looks into a well, where he sees two crystal stones and, reflected in them, a Rose growing a little way off. The God of Love shoots him with his arrows, and he falls in love and tries to reach the Rose. But he must first surrender to the God of Love, whom he takes as his lord, saying:

*This heart is yours; it is no longer mine;
For good or ill it does as you command.*

With the help of the lady's initial friendliness (Fair Welcome), the Lover tries to win the Rose's love. He grows too bold and is soon rebuffed by her *Dangier*. At this point, Reason, a beautiful woman, urges him to give up his quest.

Nothing but foolishness is this disease

*called Love; 'twere better if it were folly
named.*

The Lover rebuffs Reason and perseveres. Another character, Friend, who is already experienced in the ways of love, advises him on how to placate *Dangier*. The Lover again makes headway and soon asks if he can kiss the Rose. Fair Welcome at first demurs:

*. . . So help me God, dear friend,
If Chastity did not so frown on me,
I'd not deny you; but I am afraid
Of her and would not act against her will.*

At Venus's (desire's) arrival, however, Fair Welcome capitulates, and the lover kisses the Rose. Malebouche (Evil Mouths or gossip) spreads the news, and Jealousy builds a fortress around the Rose and imprisons Fair Welcome in its tower. The lover laments his defeat. It is at this point that Guillaume de Lorris's story ends and Jean de Meun's begins.

Sarah Kay describes Jean's conclusion, which is more than four times longer than Guillaume's beginning, as "less an expansion than an explosion of the original *Rose*." Around the framework of the simple story of the Lover and the Rose, Jean weaves vast discourses on dozens of subjects, including free will and predestination, the planets, and hypocritical religions. He displays a more critical and cynical attitude toward idealized courtly love and includes a number of satirical passages on women and relations between the sexes. One of the most famous characters, *Vekke*, the old woman who guards Fair Welcome, speaks at length about how women should take many lovers, cheat on them, and get expensive presents from them.

Jean de Meun's conclusion tells how the Lover argues again with Reason, who explains that those who engage in love for pleasure alone, without the desire to procreate, are wrong. The God of Love agrees to help the Lover, calling on his forces to storm the castle where the Rose is kept prisoner. They are defeated and finally call on Venus.

While this is happening, Jean introduces Nature's character, whose beauty the narrator cannot describe:

*For God, whose beauty is quite measureless,
When He this loveliness to Nature gave
Within her fixed a fountain, full and free
From which all beauty flows.*

As she is working in her forge to repair the ravages of death by the birth of new human beings, Nature hears of the Lover's quest. She goes to her confessor Genius (the god of reproduction) and complains of the disobedience of humans who refuse to procreate as God ordains. Genius goes to Love's forces, excommunicates those who refuse Nature's laws, and absolves those who are about to fight. Above all, he exhorts them to live so as to be worthy of the Park of the Lamb of God, for the beauty of the Garden of Delight is only an illusory image of the beauty of heaven. During the storming of the castle, Venus throws her torch and destroys the Rose's prison; at last the Lover enjoys and apparently impregnates his love.

Countless other authors have quoted *Romance of the Rose* and imitated its symbolism and imagery. It has been translated twice into Italian (*Il Fiore* and *Il Detto d'Amore*), numerous times in Middle English (a version often attributed to Geoffrey Chaucer) and Modern English, and in many other languages. Chaucer used the poem as one of his sources when creating the different moods of the heroine Criseyde in his long narrative poem *Troilus and Criseyde* (early 1380s). John Gower also used the poem as a source for his *Confessio Amantis* (The Lover's Confession, 1390s), in which he, too, portrays Genius as a confessor, this time for the lover. Later medieval authors, including Jean de Montreuil and Christine de Pisan, debated the morality of the poem and its treatment of women.

Modern critics disagree about Jean de Meun's ultimate intentions, questioning whether he approved of Guillaume de Lorris's original poem, whether he intended his cynical views to overshadow his religious views, and whether Nature or

Genius represent his true beliefs. Perhaps the answers to such questions lie somewhere in between. According to scholar Maxwell Luria, Jean de Meun's subject can be summed up as "Love itself, man's multifarious and conflicting and sometimes treacherous attraction toward the whole spectrum of created goods and their uncreated Maker." Within this subject there is room for both delight in and cynical realism about human love, as well as yearning for the divine. Scholar R. Allen Shoaf takes a broader look at the poem, viewing it as a form of criticism. In his essay "Rose Oser Sero Eros: Recent Studies of the *Romance of the Rose*," Shoaf writes that *Romance of the Rose* succeeds as a criticism of love "largely because Jean de Meun saw and expressed the inescapable mutual contamination of the languages of love, philosophy, and theology. . . ." Wherever future debates and scholarly criticism of the poem might lead, there seems to be no question that the *Romance of the Rose* will continue to be regarded as a masterpiece of medieval French literature.

Roman de Renart (ca. 1175–1250) *satirical fable*

The *Roman de Renart* (Romance of Reynard) is a series of French tales composed over a span of several years. Altogether the poem covers tens of thousands of lines and has 27 branches, or episodes. The earliest recorded branches emerged in 1170, and additions continued until 1250. About 20 different poets had a hand in writing the stories, and although the names of Pierre de Saint-Cloud, Richard of Lison, and a priest of Croix-en-Brie are linked with certain early branches, most of the writers remain anonymous.

The French tale is stylistically the most sophisticated rendition of the hugely popular tradition of Reynard the Fox, which appears elsewhere in Dutch, German, and English literature. The character of the trickster fox hails back to the fables of AESOP, but fragments of medieval Latin poems contain some source material, including *Ysengrinus*, written at Ghent in 1148. As with many stories from folklore, the precise origins of the Reynard characters are obscure. The names are arguably Germanic; Reynard probably derives from Reginhard, which means “strong in counsel.” The German *Reinhart* manuscript, dated to 1180, and the Flemish variations of the stories likely draw on now-lost French originals that first circulated in the region of Alsace-Lorraine. The 13th-century English poem *Of the Fox and of the Wolf* and the Italian *Rainardo* also used the Reynard material. The *trouvères* (TROUBADOURS) of northern France developed these popular folktales into a work that is at once a fabulous epic BESTIARY and a political allegory, cultural commentary and verse romance, fireside story and literary parody.

Critical Analysis

Though a folk hero and an epic figure, Reynard is a trickster: This is the definitive aspect of his personality. As a fox, he uses trickery to get food, avenge himself, and defend himself against his enemies. Other characters in the story are Noble the Lion, Chanticleer the Rooster, Bruin the Bear, and Isengrin the Wolf. Together these figures represent the

main branches of feudal society: royalty, the nobility, the clergy, and the peasantry, respectively. The laws and morals that govern them strongly resonate with the ruling ideology of 12th-century France.

The story of Reynard begins, as do many MEDIEVAL ROMANCES, with the king—in this case, Noble the Lion—organizing a feast and calling all the animals to attend. The animals comply, and all of them have one complaint or another against Reynard. Curtois the Hound complains that Reynard has stolen food from him; Chanticleer the Rooster claims that Reynard has killed a hen. Corbant the Raven says that Reynard murdered his wife by pretending to be dead; when his wife approached to lay her ear to the fox’s mouth, Reynard snapped her up and ate her so quickly that only a few feathers remained. The king decides that Reynard must come forward to answer the charges.

No one has managed heretofore to convict Reynard of a crime. He is a master of deception, and with a seemingly reasonable explanation he always manages to befuddle his accusers. For instance, Reynard claims that Corbant the Raven’s wife died from eating too many worms. And when danger threatens, Reynard resorts to tricks; for instance, when Bruin is sent to bring him to court, Reynard bribes him with honey and traps the bear in a tree.

In time Reynard is at last brought to court and put on trial for his crimes. Despite his smooth talking, he is condemned to the gallows and only narrowly escapes death. Thereafter Reynard is sent on a pilgrimage as penance, and more adventures ensue, during which it becomes clear that he has not repented at all. When the fox is brought once more to trial, Isengrin determines to get revenge, still humiliated from a famous episode wherein Reynard pretended to teach the wolf how to fish with his tail and then took him to a frigid lake, where Isengrin became trapped when his tail froze in the ice. This battle between Reynard and Isengrin crowns the collection.

Scholars have long debated the literary qualities of *Renart*. Some claim that because he is a fox, all of Reynard’s activities can be explained by his motive to survive. Other critics read the animals

more imaginatively as the human types they were intended to represent in later versions of the stories. Roger Bellon says of Reynard that his “character is fully rounded, with a psychological richness which is the product of his trickery.” Though a fox, he possesses the human capacities of reason and intelligence. He also has the capacity for human affection and piety, as in this touching passage in William Caxton’s version when Reynard takes leave of his wife:

Reynard said to his wife, “Dame Ermelin, I be-
take you my children that you see well to them
and specially to Reynkin, my youngest son. He
belikes me so well, I hope he shall follow my
steps. And there is Rossel, a passing fair thief. I
love him as well as any may love his children.
If God give me grace that I may escape, I shall
when I come again thank you with fair words.”
Thus took Reynard leave of his wife.

Originally the Reynard tales were intended for purposes of entertainment, not instruction. In the earlier tales, the doings of Reynard and his counterparts had a largely comic relevance and helped create a new genre of literature: the beast fable, which blended the conventional fable with the epic. Translator Joseph Jacobs observes, “One of the chief points of interest in the study of the Reynard is this mixture of literature and folklore which thus gave rise to a new form of literature.” This genre proved to have important and innovative uses in attacking and exposing the follies of certain social, political, and religious aspects of medieval society.

As the stories of Reynard’s trickery grew, the beast fables turned into cutting satire. *Renart* contains many layers of tension, not the least being that because Renart’s character is a trickster, he is not the typical romance hero. As an animal, he is motivated by survival instincts, but as a being who can speak and reason, he also has the ability to deceive. He is treated as a comic character, yet his stories are often used to make a moral point. It is not always easy to sympathize with Reynard’s victims; sometimes they deserve

what they get. Later, Reynard became an emblem of hypocrisy among monkish orders. Certain stories show him donning a monk’s garb to outwit his foes or attending confession, being absolved of his sins, and promptly going forth to engage in more immoral behavior. After 1250, no new branches of the *Renart* cycle appeared, but poets such as Philippe de Novare and RUTEBEUF adopted the character of Reynard for moralizing purposes.

Another key characteristic of the Reynard stories, which may account for their popularity, is the fact that they are one of the few medieval genres developed for the enjoyment of the nonaristocratic classes. Like the fabliaux or the poetry of François Villon, the beast fables addressed life in the lower classes and examined the struggles of those who were, by the rules of feudalism, the hardest working and least powerful. In a world ruled by wealth and military might, cunning was often the only recourse against a tyrant, which may explain the enormous amount of sympathy and interest that audiences felt for the crafty fox. For some readers, Reynard symbolizes the resistance of the little man against more powerful foes and echoes other stories like David and Goliath or Jack and the Beanstalk.

Like many other French romances, *Renart* circulated beyond France into England, Germany, and the Low Countries (modern Belgium, Luxembourg, and the Netherlands), where several analogues or similar stories appear. An episode borrowed from the Reynard tradition appears in The Nun’s Priest’s Tale in *The Canterbury Tales* of Geoffrey Chaucer, where the protagonist of the story is Chanticleer the rooster and Russell is the name of the wily fox. William Caxton’s *History of Reynard the Fox*, based on a Dutch version, appeared in 1481. Goethe reworked the material into *Reinecke Fuchs* in 1794, and the English poet John Masefield’s hunting poem *Reynard the Fox* appeared in 1921, attesting to the continuing folkloric memory and comic appeal of this immortal and charismatic trickster.

Ruan Ji (Juan Chi) (210–263) poet

Ruan Ji was born into a traditional Confucianist family of government officials in Wei-shih, China. His father, Ruan Yu, was a minor poet and government official under Cao Cao (Tsa'o Tsa'o), a Wei warlord. Ruan Ji entered government service in 239 and served the Wei dynasty until its overthrow by Sima (Ssu-ma) I in 249. The coup d'état against the Wei dynasty was a turning point in Ruan Ji's life. Although his father and grandfather had served the Wei dynasty, Ruan Ji accepted nonpolitical posts under the new dynasty. One scholar describes Ji's efforts as a form of "passive resistance in which he could 'serve without serving.'"

Ruan Ji's poetry was a groundbreaking extension of his passive resistance. Some of his poems are an expression of his deeply personal thoughts and reflect his familiarity with Taoist philosophy. In this poem, for example, he describes an immortal "tortured" by his isolation and his apparent search for the meaning of life:

*Long ago there was an immortal man
who lived on the slope of Shooting
Mountain . . .
He could be heard, but not seen,*

*sighing sorrows and full emotion
self-tortured he had no companion
grief and heartbreak piled upon him
"Study the familiar to penetrate the
sublime"*

But time is short and what's to be done?

Other poems are filled with biting political satire and commentary and allusions to government figures and events, many of which were so obscure they could not be identified.

Ruan Ji served as a model for later poets who lived during similar years of political chaos, and he remains justly famous for his work.

**Rumi, Jalaloddin (Jalāl ad-Dīn ar Rūmī)
(1207–1283) poet**

Jalaloddin Rumi was born in Balkh, Afghanistan, to a family of learned theologians; his father was known as the "Sultan of Scientists." Escaping a Mongol invasion, Rumi and his family fled Afghanistan, made a pilgrimage to Mecca, and finally settled in Konya, Anatolia (Asia Minor). At age 24, Rumi, already a distinguished scholar, followed in his father's footsteps as a teacher and preacher of religious sciences at the college in Konya.

Rumi lived a wealthy, respectful life. The most distinguished philosophers of the time visited to discuss ideas with him, and his lectures in mosques drew enormous crowds. He became the sultan's consultant on law, and his opinion was considered the highest authority. However, he was dissatisfied and sought ways in which to learn more and impart his knowledge to others. Then, at age 37, he

met a wandering dervish (a Muslim religious order) named Shamsuddin of Tabriz.

Shamsuddin saw that Rumi's creative potential was stifled by the weight of his scholarly knowledge and the burden of authority. Consequently, Rumi spent 90 days in a private retreat with Shamsuddin, from which both men emerged spiritually transformed.

As a result of Shamsuddin's instruction, Rumi gave up everything he had in life and devoted himself exclusively to a prolific outpouring of poetry. He later named his collection the *Diwan-i Shams-i Tabriz-i* (The Works of Shams of Tabriz) in honor of Shamsuddin. The *Diwan* consists of about 40,000 verses, arranged according to rhythm, and was written over a period of 30 years.

Rumi wrote thousands of poems glorifying life and love for God, and he became the spiritual founder of the Mawlawi Sufi order, a leading mystical brotherhood of Islam that practiced "ecstatic whirling" as a form of glorifying life and God. When he died, his grave became a place of pilgrimage for people all over the world. The day of Rumi's death was named "Night of Union," and it is celebrated to this day in honor of his life and works.

Critical Analysis

Among the great variety of themes in Rumi's poetry, love in all its forms is manifest. The poet explores the immortal theme of love as passion in such poems as "Love Is the Master," "After Being in Love, the Next Responsibility," and "The Interest without the Capital." He sees passionate love as a selfless experience that enriches one's life:

*The lover's food is the love of the bread;
no bread need be at hand:
no one who is sincere in his love is a slave to
existence.*

(*Mathnawi* 3, 3020–3024)

Almost all of Rumi's love poems are ambiguous; they can be interpreted as addressing both the

earthly love that exists between two people and the higher love that exists between humans and God:

*A house of love with no limits,
a presence more beautiful than venus or the
moon,
a beauty whose image fills the mirror of the
heart.*

(*The Divani Shamsi Tabriz*, XV)

Other of Rumi's poems, called his "Spiritual couplets," give vivid depictions of the mystical experiences of ecstatic worship. These experiences are based on expressing love for God and life through a combination of poetry, music, and dance:

*This is love: to fly to heaven, every moment
to rend a hundred veils;
At first instance, to break away from
breath—first step, to renounce feet . . .*

(*Mystical Poems of Rumi*)

Beyond Rumi's mystical poems of passionate worship is his major work, the *Mathnawi* (Poem on Hidden Meaning). Compared to Rumi's mystical poems, the *Mathnawi* is relatively sober and reasoned. It comprises six books of poetry in a didactic style intended to convey instruction, information, pleasure, and entertainment. The poems take the form of engaging anecdotes or tales, with numerous digressions. Rumi tells each story to illustrate and discuss a moral, similar to what is done in Aesop's fables, and within this anecdotal structure, he illustrates the idea that it is important to distinguish between *form* (the external appearance of things) and *meaning* (internal, invisible reality):

*Form is a shadow,
Meaning is the Sun.*

(*Mathnawi*, 6, 4747)

Rumi used various sources to derive the material for these tales, including the KORAN and miscellaneous folktales. In spite of the striking variety

of his sources and forms, the *Mathnawi* is a unified work, planned around a central theme and aimed at proving different points, such as those found in Sufi's interpretations of Islamic wisdom.

In the *Mathnawi*, Rumi expresses pity for people who live as he used to—blind to the fact that the surrounding world is just a blanket covering reality. He describes the tangible things in life as dreams or prisons:

*Meaning of the wind makes it rush
about like a mill wheel—an internal
prisoner of a stream.*

(*Mathnawi*, 1, 3333)

For the poet, reality is love, and materialism and tangibility only fog its shining essence. He urges people to shake off the stifling cover of everyday life and to discover the real world:

*Let go of your worries
and be completely clear-hearted,
like the face of a mirror
that contains no images.*

(*The Divani Shamsi Tabriz*, XIII)

Rumi's poetry has influenced not only Islamic literature and civilization but also world literature, philosophy, and culture. Some elements of Hegel's philosophical teachings were inspired by Rumi, whose works have been translated into most world languages. The importance of Jalaloddin Rumi, "Teacher with Glowing Heart," as he is often called, cannot be overrated.

Rutebeuf (fl. 1245–1285) poet, playwright, hagiographer

Very little is known of Rutebeuf's life, except that he lived in Paris, introduced a sense of individualism into medieval French poetry, and produced his works between 1248 and 1272. He apparently died before 1285.

Rutebeuf wrote in a variety of genres: hagiography (biography of saints' lives), drama, and of course, poetry. Rutebeuf mastered the various intricate forms of medieval French poetry, proving to be a virtuoso in rhyme. His poems range from moral polemics to crusade propaganda to political satire and to personal complaints of his poverty and misfortune.

Some of Rutebeuf's personal problems may have stemmed from his involvement in religious and political events of the time. Starting in 1252, the masters of the University of Paris quarreled with the Mendicant friars over authority in parish duties and teaching positions in the theology faculty. Although Pope Alexander IV ruled in favor of the friars in 1255, the secular masters of the university refused to recognize the ruling and continued to stage protests and resist the Mendicants' attempts to take control of parish duties and the theology faculty. The university masters hired Rutebeuf to write poems that explained and popularized their viewpoints while satirizing and attacking the friars' positions.

Rutebeuf also attacked the clergy in a morality play, *Le Miracle de Théophile* (The miracle of Théophile). Théophile is a cleric who makes a deal with the devil to regain his wealth and power,

which he then uses to insult his bishop and other priests. After seven years, Théophile repents to save his soul, and the Virgin Mary fights the devil and reclaims the priest's soul for heaven. Théophile publicly repents and summarizes his sin:

*The devil, who assaults good men,
Made my soul commit a sin
For which I should die;
But Our Lady, who directs her own,
Turned me from the path of wrong
Where I had strayed
And lost my way.*

Rutebeuf used another genre, the fabliau (a short, comic tale), to attack the self-interest and hypocrisy of both church and state in *Renart le Bestourné* (Renart the Hypocrite). This poem uses the characters from the *ROMAN DE RENART* to portray a society ruined by corruption and lies.

While poverty and bad luck were a common poetic trope of medieval poets, Rutebeuf gave it a personal stamp that prefigures the poetry of François

Villon. Many scholars see these complaints as Rutebeuf's greatest contribution to medieval French poetry. As the literary historian David Coward says, it "goes beyond a literary persona and expresses not collective values but a distinctive individual consciousness."

Saadi (Saḍī, Mosharref od-Dīn ibn Mosleh od-Dīn Saʿdī) (ca. 1210–ca. 1290)
poet, writer

Mosharref od-Dīn ibn Mosleh od-Dīn Saʿdī, known simply as Saadi, was born in Shiraz, Persia (present-day Iran). He received traditional Islamic education at the renowned Nezamiyeh College in Baghdad. The unsettled conditions following the Mongol invasion caused Saadi to leave his native land and wander for years through the lands of Syria, Iraq, Egypt, India, and Central Asia. After 30 years of wandering, he returned to Shiraz as an old man. His tomb in Shiraz is a revered shrine.

Saadi was a great master of love poetry and prose, rich with similes and metaphors: “She came forth as morn succeeding a dark night, or as the waters of life issuing from the gloom.” Another distinguishing feature of his writing is its symbolism; for example, when he uses love to represent a spiritual quest for fulfillment or knowledge: “The thirst of my heart cannot be slaked with a drop of water, nor if I should drink rivers would it be lessened.”

In his works, Saadi demonstrates a subtle understanding of human emotions and a great practical wisdom. Many of his quotations have become aphorisms because of their humor and precise phrasing, such as this one from an autobiographical sketch in which an old man tells the tired author,

who has traveled hard and stopped his journey at the foot of the mountain: “It is better to walk and rest, than to run and be oppressed.”

Saadi’s main works are the *Bustan* (The place of sweet scents, 1257) and the *Golestan* (The rose garden, 1258). The *Bustan*, a book of moral anecdotes in verse, is divided into several parts according to various aspects of human thought and behavior, as evidenced by the chapter titles: “On Justice, Wisdom, and Common Sense”; “On Love, Infatuation, and Insanity”; and “On Being Satisfied by the Little,” to name a few.

The *Golestan* is a combination of prose and poetry. It contains tales, personal anecdotes, humorous reflections, and moral advice. These works reveal Saadi’s preference for the freedom of dervishes, who choose their one way in life, over the fate of those who depend on others for their survival or happiness.

Saadi’s subtle humor and wisdom garnered him the title “The Genius of Shiraz,” for he is and continues to be one of the greatest masters of love poetry and philosophical aphorism.

saga (12th–14th centuries) *literary genre*

The saga, as a literary term, generally refers to a cycle of stories composed and written in the medieval Norse, Icelandic, and Germanic worlds. Though other cultures use the form of the saga in their literature (for instance, Celtic cultures retell family sagas in works of BARDIC POETRY), the Norse and Icelandic sagas are important for what they reveal about the history and mythology (see MYTHOLOGY, NORSE) of the Scandinavian cultures sharing a Germanic origin. Largely written in the 13th century, the stories in the sagas were composed and communicated for centuries as a type of ORAL LITERATURE and were recorded only when Christian missionary efforts brought a new type of literacy, and a new literary history, to Scandinavia. While works such as SNORRI STURLUSON's *Prose EDDA* reflect knowledge of the BIBLE as well as the myths of HOMER and VIRGIL, the sagas reveal native customs, beliefs, and social mores associated with Icelandic, Norse, and Germanic cultures.

Most of the sagas are assumed to have taken their final shape by the beginning of the 12th century, when efforts to record them began. Depending on where they were transcribed, most of the existing manuscripts were written in Old Icelandic and Old Norse. The scribes recording them would most likely have been educated through the

Church and would therefore have been Christian. The histories and tales recorded in the sagas, however, date almost entirely to a pre-Christian era when northern Europe was ruled by the Scandinavian tribes collectively known as the Vikings. Vikings are traditionally depicted as adventurers, merchants, and warriors with a strong appreciation for challenge who also celebrated achievement in battle. They migrated widely, and their explorations were broader still, reaching the eastern coast of North America sometime in the 10th century. Viking tales preserve a strong heroic code most aptly shown through fierceness in battle. In the sagas, human figures battle with or against divine creatures, and legends that abound in supernatural elements just as accurately represent the cultural values and religious beliefs of the pre-Christian Icelandic, Norse, and German peoples.

Many of the sagas, in addition to gods, kings, queens, and mighty warriors, feature a *Valkyrie* figure. These were the divine women who served mead in *Valhalla*, the hall where spirits of those killed in battle feasted and fought after their mortal deaths. They were also the choosers of the slain, and they decided who would die on the field of battle.

Although the Icelandic *NJAL'S SAGA* and Norse *Egil's Saga* are frequently read and referenced, the most famous saga has to be the *Volsunga Saga*, or *Song of the Volsungs* (ca. 1270), the Icelandic version of the *NIBELUNGENLIED* (ca. 1205). The Norwegian version, *Saga of Thidrek of Bern* (ca. 1250), replaces the hero with Thidrek (Dietrich to the Germans), but the outlines of the story remain the same. Sigurd, among his many other adventures, slays a dragon, finds the hoard of Nibelung gold, and rescues the warrior maiden Brynhild. He is later forced, through a magic drink, to marry Gudrun, and Brynhild plots revenge. In addition to a portrayal of the Germanic warrior code, the *Volsung* cycle contains echoes of CHIVALRY/COURTLY LOVE that reflect the influence of outside cultures and beliefs during the reign of King Haakon IV.

Other sagas composed in the 13th century include the *Eyrbyggja Saga*, which tells of the feud between the Snorri family and Thorolf Twist-foot.

Viga Glum's Saga, whose eponymous hero was a king who ruled Iceland around 940, portrays the social manners and legislative practices of 10th-century Iceland as well as the religious ideas of the time. The *Laxdaela Saga* (ca. 1245), thought by many to have been composed by a woman, tells the story of Aud the Deep-minded and her descendants. Weland the smith, who has semimagical powers, appears frequently in the Germanic sagas, as well as in the poem *BEOWULF* and certain OLD ENGLISH POETRY, indicating the shared Germanic origins of the peoples of northern Europe.

The color, vitality, violence, and poetry of the sagas continue to inspire retellings, perhaps most famously in the operas of Richard Wagner and *The Lord of the Rings* trilogy by J. R. R. Tolkien.

Sallust (Gaius Sallustius Crispus) (86–35 B.C.) *historian*

Sallust was a Roman historian and political propagandist who lived and worked during a time of great unrest in the Roman world. The old order of the Roman Republic was breaking down, and new demagogic leaders, particularly Julius CAESAR, were coming to power.

Sallust was born in the town of Amiternum. Throughout much of his life, he played an important role in the political events in Rome. As a member of the Senate, he supported Caesar's ambitions and also served as the commander of one of Caesar's legions. For his loyalty, Caesar rewarded Sallust by making him governor of Numidia, a province in North Africa. As a governor, Sallust was more interested in making money for himself than in benefiting the people for whom he was ostensibly responsible. After Caesar's assassination in 44 B.C., Sallust fell out of favor and retired to his estate. No longer directly involved in politics, he turned his thoughts to intellectual pursuits and labored on his scholarly projects until his death.

One of Sallust's most important works is his *History of the Roman Republic*, which was written in five volumes, of which only fragments remain. Despite its title, the work does not cover the history of Rome, only the political unrest which Sallust either participated in or witnessed.

Sallust's best-known work is a monograph titled *The Conspiracy of Catiline*, about the famous events of 63 B.C. The conspiracy was an attempted coup by Catiline, a disaffected Roman politician who had failed to achieve high office through constitutional means. He sought to raise a rebellion against Rome, burn the city, and seize power in the resulting chaos. In his monograph, Sallust details the course of events during Catiline's bid for power and how the plot was defeated.

The style of *Catiline* is largely based on the writings of THUCYDIDES, and it is also clear that much of Sallust's political philosophy comes from PLATO.

The historian emphasizes drama over accuracy and seems to be more interested in telling a good story than in telling a truthful one. Therefore, although his writings are the best source of information on the Catilinian conspiracy, many of its details are questionable.

Furthermore, as Sallust had been deeply involved in politics himself, his own personal feelings clearly interfered with his presentation of historical facts. As he had been allied with Caesar, his depiction of Caesar's opponents is highly negative, aside from the famous statesman Cato, whom Sallust seems to have respected. Sallust's style betrays a feeling of resentment toward those with views different from his own, and much of the material in his monograph seems to be simple moralizing rather than historical reconstruction.

Sallust's other important work, less famous than *Catiline*, is another monograph called *War against Jugurtha*, also known as *History of the Jugurthine War*. Jugurtha was a North African king against whom Rome fought a bitter and difficult war from 111 to 105 B.C., and it is through Sallust's writings that modern historians have a good understanding of this war's events. Nevertheless, as with the *Catiline*, the account and details are biased.

Sallust's writings are important for their historical and literary significance. Despite their inaccuracies, his works provide much valuable information on the Roman world during a highly confusing period. Sallust's literary style, based largely on earlier Greek writers such as Thucydides, greatly influenced later authors. The Roman historian TACITUS, in particular, clearly took much of his stylistic inspiration from Sallust.

Sappho of Lesbos (fl. ca. 610–ca. 580 B.C.) lyric poet

Sappho was born on the prosperous Aegean island of Lesbos, a seat of intellectual and cultural activity, and spent most of her life in Mytilene, its largest city. Her father, Skamandronymos, and her mother, Kleis, were of the aristocracy and also had a son, Charaxos. Sappho married Kerkyllas of Andros, a prosperous businessman with whom she had a daughter named Kleis, after Sappho's mother. Near the end of her life, it is believed she may have been exiled to Sicily.

On Lesbos, the poet established a school to instruct the daughters of well-to-do families in the arts of poetry and music. Sappho, with her pupils—who had little contact with men until they were betrothed—formed a cult devoted to Aphrodite, the goddess of beauty and love. Based on the scant evidence found in her poetry, it appears Sappho taught her young students, not inappropriately, to luxuriate in their loveliness and to look forward to matrimony. In “Song of the Wedding Bed,” for example, she espouses the emotional and carnal pleasures of marriage:

*Bride, warm with rose-
colored love, brightest
ornament of the Paphian,
come to the bedroom now,
enter the bed and play
tenderly with your man.
May the Evening Star
lead you eagerly
to that instant when you*

*will gaze in wonder
before the silver throne
of Hera, queen of marriage.*

Sappho's poems were originally collected in nine books, of which only a few fragments and one complete poem ("Prayer to Aphrodite") still exist. The last of her nine books comprised "Epithalamia," lyric nuptial odes sung at different phases of wedding ceremonies. She wrote in the Lesbian-Aeolian dialect, and her themes were primarily of personal relationships (often with other women) and love.

It is tempting to believe the much-perpetrated legend that the passionate poetess ended her life by flinging herself from a cliff into the sea because her love for a beautiful youth, Phaon, was unrequited. However, this tale probably arose from a misinterpretation or mistranslation of some ancient work, for the facts of Sappho's death simply are not known.

Critical Analysis

Sappho's poetry arose from oral tradition, in which poems were sung or recited, often to the accompaniment of music (see ORAL LITERATURE/TRADITION). Unlike her predecessors, however, Sappho experimented with rhythm, meter, and monody, a technique characterized by a single line of melody. She invented, or at least perfected, the so-called Sapphic strophe, a complex, rigorous, and challenging four-line verse later adapted by Roman poets.

Sappho dedicated many of her poems to her pupils, of whom she clearly had favorites. Her devotion to them and her anguish when they left the school, withdrew their love from her, or transferred their affections to others, is obvious. In "To Atthis," she addresses this torment:

*Love—bittersweet, irrepressible—
loosens my limbs and I tremble.*

*Yet, Atthis, you despise my being.
To chase Andromeda, you leave me.*

And in "To Anaktoria," she expresses her sorrow at a loved one's departure:

*Some say cavalry and others claim
infantry or a fleet of long oars
is the supreme sight on the black earth.
I say it is*

*the one you love. And easily proved.
Didn't Helen—who far surpassed all
mortals in beauty—desert the best
of men, her king,
and sail off to Troy and forget
her daughter and dear kinsmen? Merely
the Kyprian's gaze made her bend and led
her from her path;*

*these things remind me now
of Anaktoria who is far,
and I
for one*

*would rather see her warm supple step
and the sparkle of her face—than watch all
the
dazzling chariots and armored
hoplites of Lydia.*

In "Prayer to Aphrodite," we see Sappho's dedication to and the manner of her dependence on the goddess:

*On your dazzling throne, Aphrodite
sly eternal daughter of Zeus,
I beg you: do not crush me with grief,
but come to me now . . . and free me
from fearful agony.*

In other lines from the poem, we see an external outpouring of Sappho's thoughts and beliefs concerning her loves, losses, and evidence of Aphrodite's aid. ". . . Come to me now," Sappho begs, "as once / you heard my far cry, and yielded." Aphrodite replies, "What does your mad heart desire? / Whom shall I make love you, Sappho, / who is turning her back on you?" And upon agreeing to make Sappho's loved one love her in return,

Aphrodite warns, “She will love you, though unwillingly.”

Sappho has been censured throughout history for her erotic expressions of affection for her pupils, but it is entirely possible that what is translated as “I” was originally written to denote “we.” This means poems that appear to express the exquisite longing of a single individual were actually written to be performed in public by choruses made up of Sappho’s young students. In addition, modern readers must take into account that the affection Sappho reveals in her poetry may have been the norm in her time and culture.

In other poems, such as “Kleis,” we see not only Sappho’s simplicity of style and skillful use of words, but also her love for her daughter:

*I have a small daughter who is beautiful
like a gold flower. I would not trade
my darling Kleis for all Lydia or even
for lovely Lesbos.*

Critic Daniel Mendelsohn writes, “With a directness seemingly unmediated by vast stretches of time, Sappho seems to speak to us quite clearly today . . .” Centuries after Sappho flourished, Plato wrote, “Some say nine Muses—but count again. / Behold the tenth: Sappho of Lesbos.” What comes to us of Sappho’s simple yet evocative and provocative verse—by turns witty, graceful, and fraught with passion—has a radiant vitality that still resonates with modern audiences.

Sei Shōnagon (ca. 965–unknown)

memoirist, poet

Sei Shōnagon was born to a father named Moto-suke, a member of the Kiyō-wara family, who worked as an imperial official and was also a scholar and poet. Some historians believe that Sei Shōnagon was briefly married to a government official named Tachibana no Norimitsu, with whom she had a son. It is known for certain that she served as a lady-in-waiting to Empress Sadako until Sadako’s death in 1000. After her service with the empress ends, nothing more about Sei’s life is known, including the date of her death. Tradition has it that she died lonely and in poverty, but this may be the invention of those who disapproved of her worldly ways.

Her name may be a title obscuring her given name: *Shōnagon* means “minor counselor,” and *Sei* refers to her father’s family. However, her contemporary and fellow court writer MURASAKI SHIKIBU, who wrote *The Tale of Genji*, mentions Sei Shōnagon in the context of “those Chinese writings of hers that she so presumptuously scatters about the place . . . full of imperfections.” Murasaki calls her a “gifted woman, to be sure,” but utterly frivolous. This scorn perhaps reflects a competitive spirit prevalent at a court where Sei’s intelligence, wit, sensitivity to beauty, observation of detail, and occasional intolerance and callousness were perceived as a threat.

What is known about Sei Shōnagon’s life survives in the *Makura no Soshi*, or *Pillow Book*, which she began writing in 994 and continued for more than 10 years. The *Pillow Book* is a miscellany of lists, vignettes, descriptions, thoughts, and poems. None of the 300 selections in the book are longer than a few pages, and they are arranged in no obvious order. During the Heian period in Japan, both upper-class men and women were educated and literate, and many frequently recorded thoughts and informal notes that they kept in their

sleeping quarters, possibly in the drawers of their wooden pillows. Sei's book makes reference to the works of at least a dozen other authors, only one of whose manuscripts survives.

Sei is remembered as a snob for the occasional derision she shows to those of the lower classes; she is equally critical of people with poor grooming habits or unattractive appearances. Nonetheless, the minute detail, rhythmic language, and frank tone of her work provide a varied and engaging look at court life in imperial Japan.

Sei's *Pillow Book* established a tradition of *zuihitsu*, or "random notes," which continues to the present day and represents some of the most valuable works of Japanese literature. Despite Murasaki Shikibu's criticism Sei's language is pure Heian Japanese, with very few Chinese words or inflections. Historians appreciate the wealth of information her work provides about life in Japan over 1,000 years ago.

In her writing, Sei Shōnagon's approach to life is primarily aesthetic. Her frequent use of the words *okashi* (charming) or *medetashi* (splendid) not only serve as descriptive terms but also create a repetitive, incantatory writing style that can prove difficult to translate into modern English. Sei evaluates things by the feelings they provoke and thoughtfully analyzes the qualities of both ugliness and beauty. Among her many lists are those things that give a feeling of heat (such as a very fat, hairy person or a coppersmith at work) and a list of unpleasant things (including people who show off their children, mosquitoes who appear just when one is about to sleep, and having a story interrupted by someone who has just entered the room).

Other sections of the *Pillow Book* recount events at court or offer vignettes of Sei's life and observations, showing her keen awareness of the transient nature of life. Although not sexually explicit, the *Pillow Book* also speaks candidly of Sei's—and others's—love affairs.

The original manuscript of the *Pillow Book* disappeared, and the earliest manuscript that survives was compiled 500 years after the period during

which Sei Shōnagon wrote. The work was popular enough to be recopied many times, but copyists frequently made changes that have led to several different existing versions, many with the sections arranged in varying order. The *Pillow Book* was issued as a printed book in the 17th century and has become a revered classic in Japan.

Seneca (Lucius Annaeus Seneca, "Seneca the Younger") (ca. 4 B.C.–A.D. 65)
philosopher, orator, essayist, dramatist, nonfiction writer

Of Spanish descent, Seneca was born in Cordova into a distinguished family of some means. As a young boy, he went to Rome to pursue an education. His father, Seneca the Elder, was of the wealthy equestrian class and spent a great deal of time in Rome. A renowned orator, Seneca the Elder counted among his intimates the outstanding rhetoricians of the time. In his declining years, at the urging of his three sons, he penned his memoirs, basing them on recollections of his eminent colleagues. He was also an exacting disciplinarian who planned his sons' education to prepare them for prominent political positions in Rome.

Seneca's mother, Helvia, was a woman of exceptional intelligence with a profound interest in philosophy. She might have pursued formal study if her husband, 30 years her senior, had not opposed it. However, she played an influential role in her son Seneca's career.

Seneca was frail and perpetually dogged by ailments, but he overcame his frailty and compensated for his physical limitations by exercising his mind. A self-disciplined and enthusiastic pupil, he received instruction in language, literature, and rhetoric, for which he proved to have a natural flair. His teachers of philosophy included Attalus the Stoic and representatives from the Cynic sect and the Pythagorean school.

Having spent his early adulthood visiting Egypt, Seneca returned to Rome in the year 31 to launch his political career. His aunt, into whose care he had been entrusted in Rome, was married to the governor of Egypt and used her influence to get Seneca elected to the quaestorship (a financial administrative position); later, he became a magistrate of public works. As a lawyer, Seneca's trenchant oratory and pithy observations secured his reputation and earned him a private fortune. Regrettably, these orations, and all his works prior to 41, have been lost.

The emperor Caligula was jealous of Seneca's fame and talent and would have condemned him to death if a courtesan had not persuaded Caligula that Seneca was in poor health and soon to die. Ironically, this brush with mortality prompted Seneca to abandon his profession in favor of writing and philosophical study. During Claudius's reign, though, the milieu of political intrigue nearly undid him once again when the emperor's third wife, Messalina, unjustly charged Seneca with illicit goings-on in the company of the princess. An execution was ordered, but his sentence was later commuted to banishment, and Seneca spent eight years in Corsica.

In *Ad Helviam Matrem de Consolatione* (Consolation to Helvia), Seneca uses his rhetorical eloquence to entreat his mother not to lament his fate, making the Stoic argument that the mind is boundless, infinite, beyond time and place, and incapable of being "exiled." He goes on to explain that while he may be banished physically, he still possesses the knowledge of nature's beauty and his own goodness.

Ad Polybium was also written and published during this period. Addressed to one of the em-

peror's freedmen, it is written in a spirit very different from the philosophy with which Seneca consoled his mother. The exile describes his abject misery and heaps extravagant praise upon the attendant in an effort to have his expulsion retracted. Though these appeals were fruitless, Seneca was eventually recalled from Corsica in 49 by Agrippina, Emperor Claudius's fourth wife, to tutor her son, Nero, in rhetoric and etiquette.

Five years later, Agrippina poisoned Claudius, and Nero acceded to the throne. For the next five years, under the tutelage of Seneca and Burrus, the young emperor's prefect, Nero administered the public affairs in Rome with integrity and benevolence. Seneca recognized Nero's brutal nature, however, and wished to instill in him a sense of mercy and forbearance. Agrippina, on the other hand, scorned moral instruction and, as a result, Seneca retired from public life.

During his retirement, Seneca wrote a multitude of works, but his writing ended when, in the year 65, he was accused of complicity in a conspiracy to assassinate Nero, who subsequently ordered him to commit suicide, an order he obeyed with stoic courage.

Critical Analysis

Although Seneca dabbled in diverse schools of philosophical thought, he was particularly influenced by Stoicism, the creed of the Roman aristocrat, which found its way into even his courtroom discourse. Stoicism held that nature is governed by divine reason, and since humans should strive to coexist in concert with nature, living a life illuminated by reason is the ultimate virtue. Those who conduct themselves in this way have no fear of ill fortune, nor should they be tempted by good fortune, for they are masters of their inner domain. Seneca also believed that when he encountered vice in others, it was his obligation to attempt reform. These tenets must have provided no small comfort to him when he was expelled to Corsica, particularly his self-assurance of his own virtue.

Seneca's *Epistulae morales*, a collection of 124 moral essays, largely reflect and promote Stoic

ethics, morals, and social outlook, with numerous asides providing an insider's glimpse into Roman political life in the mid-first century. They include *De Providentia* (On Fortune), which explores why bad things happen to good people; and *De Ira* (On Anger), which conveys Seneca's aversion to anger and the blood lust and unbridled violence that it engenders. He argues that greatness exists only in tranquillity; that people of character may choose not to act impulsively; and that by cherishing others, people can set aside real and imagined abuses.

De Clementia (On Mercy), another moral essay, was intended as instruction for Nero. Mercy, Seneca says, means refraining from retaliation or punishment when one has the power to inflict it. In one particularly persuasive passage, he reminds Nero of an incident in which the emperor demonstrated leniency. Burrus was about to execute two outlaws and produced paper on which Nero was to seal their fate, but the emperor cried out, "Would that I had not learned to write." Seneca praises Nero lavishly for his response:

What an utterance! All nations should have heard it. . . . What an utterance! It should have been spoken before a gathering of all mankind, that unto it princes and kings might pledge allegiance. What an utterance! Worthy of the universal innocence of mankind. . . .

Seneca also suggests that if Nero continues to behave in such a manner, his greatness will be assured:

That kindness of your heart will be recounted, will be diffused . . . throughout the whole body of the empire, and all things will be molded into your likeness. . . . There will be citizens, there will be allies worthy of this goodness, and uprightness will return to the whole world. . . .

(De Clementia, Book II)

Throughout the centuries, Seneca has inspired thinkers and artists—Romantics, transcendentalists, absurdists, existentialists, and more—who

have been attracted by the Stoic belief in self-reliance, the notion that God is present in both the natural and the rational, the refusal to become embroiled in a civilization gone mad while maintaining a sense of responsibility to society and humankind, and the fascination with the questions of death and suicide. As Anna Lydia Motto writes in her work *Seneca*:

Among the outstanding personalities of imperial Rome there is no one who can more readily arouse our interest and admiration than Lucius Annaeus Seneca. Tutor, guardian, minister, victim of Nero, author of tragedies, scientific treatises, philosophical essays, and moral epistles, he was a man to honor—and to serve—any age. . . .

From Seneca's *Epistulae morales* and other surviving works, it can be deduced that his philosophical and literary training served him well. His *Naturales quaestiones* (Natural Questions) is a seven-book scientific discourse on the natural universe, most notably cosmology. *Apocolocyntosis divi Claudii* (The Pumpkinification of the Divine Claudius) is a satire, and his 10 tragedies—including *Phaedra*, *Agamemnon*, *Oedipus*, *Medea*, *Thyestes*, and *Hercules Enraged*—are adaptations of Greek myths and legends (see MYTHOLOGY, GREEK AND ROMAN). These works, as scholar Kenneth J. Atchity points out, reflect "the hope and despair of a progressively decadent empire" and reveal Seneca's knowledge of "the darkest recesses of the human heart." Perhaps this is why Seneca holds a significant place in the body of world literature, for despite the passage of time, the heart of the matters upon which he expounded remain timeless.

Sextus Empiricus (ca. 150–ca. 225) philosopher

Sextus Empiricus was a Greek physician most likely connected with one of the great schools in Athens, Alexandria, or Rome. The ideas set forth in his *Outlines of Pyrrhonism* form the basis of our understanding of the philosophy of skepticism as founded by Pyrrho (ca. 360–270 B.C.). The philosophies of SOCRATES, PLATO, and ARISTOTLE, though not strictly Pyrrhonian in practice, also rest on the exercise of doubt and inquiry to advance knowledge and discover truth. For Sextus, the practice of skepticism required setting one judgment against another, or contrasting one appearance with another, to successively undermine the validity of any form of knowledge and finally reach a suspension of judgment. Only in this manner could one avoid dogmatism. The ultimate goal of skeptical inquiry was to achieve *ataraxia*, a state of unperturbedness equated with peaceful living and tranquility. Two other contemporary philosophies, those of the Stoics and of EPICURUS, sought the same end but through slightly different means.

In total, 11 books by Sextus survive, in which he applies his trademark skeptical methodology to the fields of logic, physics, natural philosophy, and ethics. *Against the Physicists* (sometimes translated as *Against the Mathematicians*) and *Against the Logicians* (also known as *Against the Dogmatists*, or *Against the Professors*) have been translated and studied by generations of scholars. The rediscovery of Sextus's works in Europe in the 16th century influenced other skeptics such as Michel de Montaigne and René Descartes.

Shahnameh (Shah-nama, Shahname, The Epic of Kings, The Book of Kings) (10th century) Persian epic

The *Shahnameh*, an EPIC poem, is not only a masterpiece of Persian literature but also an important work for Persian national identity. It was written in the 10th century, after three centuries of Arab yoke, when Persian nationalism was slowly reviving.

The *Shahnameh*, was created by Abū ol-Qāsem Mansūr, later known as FIRDAWSĪ, a highly educated Persian intellectual who lived in the late 10th and

early 11th centuries. In the text of the *Shahnameh*, Firdawsī repeatedly emphasizes that his role as author is minor, that all he did was versify the myths and narratives of the ORAL LITERATURE/TRADITION of his people. Yet his accomplishment is profound. The *Shahnameh* contains approximately 50,000 couplets that contain multiple stories and a host of heroes.

The first two-thirds of the *Shahnameh* include ancient myths, legends, and historical figures, such as Alexander the Great, dating back to the sixth century B.C. The last third of the poem contains fictionalized stories about historical people, kingdoms, and events, including the Parthian and Sassanian dynasties, ending around the middle of the A.D. seventh century.

The *Shahnameh*'s themes are as varied as its stories. They include fate, immortality, filicide, and God's preference for Persia (modern-day Iran) above other nations. Indeed, the poem ends when, in 652, Persia's ruler, Shah Yazdegerd III, is killed. The theme that holds all of the stories together concerns the Persian belief in the role of kings; as long as the kings survive, so does Persia.

Many of the characters in the *Shahnameh* are ancient Persian heroes—generals and commanders who defended the country against its enemies. In vivid and eloquent verse, Firdawzi tells of a multitude of battles and other challenges to Persian sovereignty. His central character is Rostam, called Jahan-Pahlavan ("Champion of the World"), the guardian of the divine right of kingship in Persia and a symbol of the king's sovereignty.

Perhaps the most compelling story in the *Shahnameh* is "The Story of Sohrab and Rostam," in which Rostam kills his son Sohrab for assaulting the ruling *shah* (king). The story is fast-paced, with battles, romance, and inherent conflicts. In addition, the tragic scene in which Rostam realizes the wrongness of what he has done is one of the most poignant scenes ever written in verse. When Rostam removes Sohrab's armor and discovers the man he has mortally wounded is his son, he says:

"Oh, brave and noble youth, and praised
among
All men, whom I have slain with my own
hand!"
He wept a bloody stream and tore his hair;
His brow was dark with dust, tears filled his
eyes.
Sohrab then said, "But this is even worse.
You must not fill your eyes with tears. For
now
It does not good to slay yourself with grief.
What's happened here is what was meant
to be."

("The Death of Sohrab," ll. 71–78)

Thus, Sohrab's death underscores the poem's theme of God-chosen rulers. By attacking the shah, Sohrab goes against the "natural order" of the world; in turn, Rostam goes against the same when he kills his own son. Yet none can deny that the king Sohrab attacked continues to live for a reason: It is God's will.

Yet another important aspect of the *Shahnameh* is its language. In the 10th century, when the epic was written, the dominant language of literature and culture was Arabic. Persian was deeply affected by this dominance, and more and more Arabic words were entering the Persian language. In his epic, Firdawzi made a conscious effort to avoid words of Arabic origin, using Middle and Modern Persian instead.

The only complete English translation of the *Shahnameh* was published in 1925 by Arthur George and Edmond Warner, while Reuben Levy wrote a prose translation of select verses in 1967, titled *The Epic of the Kings*. The *Shahnameh*, written in rich, expressive language, is considered to be a great masterpiece of world literature and the embodiment of the Persian national spirit.

Shikishi, Princess (d. 1201) poet

Princess Shikishi was a 12th-century Japanese poet who wrote in the TANKA form. Like many women in the imperial court, little is known about her life. She was the third daughter of Go-Shirakawa, who became Japan's 77th emperor in 1155. Early in her life she was selected to become a high priestess of the Kamo Shrines, but illness required her resignation. Sometime during the 1190s, she became a Buddhist nun and acquired the Buddhist name Shonyoho.

Shikishi was well known for her poetry, much of which centers on her isolation. Fifteen of the 21 imperial anthologies include 155 of her poems, and 399 poems altogether have been recovered. The majority of her work appears in 100-poem sequences called *hyakushu-uta*, which translator Hiroaki Sato described as a "mosaic describing the changing of the seasons, love, and other matters."

In *Go-Kuden*, a treatise on poetics, Emperor Go-Toba (1180–1239) calls Shikishi one of the most outstanding poets of their time. Her seasonal poems show great sensitivity and creativity in addressing traditional *tanka* themes, such as the arrival of spring and the scattering of cherry blossoms:

*Though warblers
have not called,
in the sound of cascades
pouring down rocks
spring is heard.*

Her poems about love, on the other hand, focus more on the psychological impact of love than on the meditation of natural images:

*My sleeves' hue
Is enough to make folk ask—
I care not!
The depth of my love—
If only you would believe in it . . .*

Shikishi's poetry is important in that it provides a rare glimpse of a woman's perspective in 12th-century Japan and because it reflects a spiritual dimension that offers several layers of meaning. In addition, Shikishi shows a clear understanding of the Buddhist way of life, full of compassion and detachment from earthly pursuits. Its role in her poetry rivals the animistic themes and passionate passages.

Translated and edited by Hiroaki Sato. Honolulu: University of Hawaii Press, 1993.

Snorri Sturluson (1179–1241) poet, historian

A descendant of the poet and hero of *Egils Saga*, Egill Skallagrímsson, Snorri Sturluson was born in Iceland and brought up at Oddi in the home of Jon Loptsson, the most powerful chieftain of his time, from whom he gained a deep appreciation of Icelandic tradition. In 1199 Snorri married an heiress and began to acquire land and power, settling in Reykjaholt, where he wrote most of his works, between 1223 and 1235. He also served as

“lawspeaker,” or president, of the Icelandic commonwealth for many years. In 1218, he traveled to Norway as a guest of King Haakon IV. As a result of this visit, he became entangled in various political intrigues that ultimately led to his assassination.

Snorri wrote prolifically on a wide range of topics. He is best known for two works, both vast in their scope. The first is the *Prose Edda* (also known as *Younger Edda*), a handbook of poetics that recounts the various legends of Norse mythology (see MYTHOLOGY, NORSE) and catalogs the variety of poetic meters used in Icelandic verse. He also wrote the *Heimskringla* (ca. 1220–35), a history of Norwegian kings beginning with their legendary descent from Odin, the Norse warrior-god up to 1177.

Much of the information detailed in Snorri’s histories was gathered from ORAL LITERATURE/TRADITION transmitted from the times of the actual events. His genius lay in his ability to utilize his firsthand knowledge of 13th-century politics to illuminate the past. As Magnus Magnusson and Hermann Palsson state in their introduction to Snorri Sturluson’s *King Harald’s Saga*, “It is primarily the vastness of the conception of *Heimskringla*, the sweep and range of its scope, that marks it out from all the many other Icelandic saga-histories. . . . No one, before or after, attempted anything on such a grand scale.”

Socrates (ca. 469–399 B.C.) philosopher, teacher

Socrates was born in an Athenian township, the child of Sophroniscus, who may have been a sculptor or stoneworker, and Phaenarete, a midwife. The family must have had some financial resources but were certainly not wealthy, for Socrates would later serve with the hoplites, heavily armed foot soldiers who defended the Greek city-states. (According to regulations, citizens who could afford the equipment—helmet, shield, armor, weapons—but could not afford horses served as hoplites.) Socrates distinguished himself numerous times during the course of the Peloponnesian War between Athens and Sparta (431–404 B.C.), a monumental conflict that ultimately stripped Athens of its empire.

The arts, sciences, culture, and civilization of ancient Greece were at their zenith in Socrates’ time. The Greek city-states had defeated the mighty Persian Empire in two wars, heroic conflicts that were immortalized as history by HERODOTUS and as drama by AESCHYLUS, SOPHOCLES, EURIPIDES, THUCYDIDES and ARISTOPHANES also flourished during the fifth century B.C.

Socrates was a product of his time, a philosopher who sought to understand the inner self and human behavior, rather than to explain the phenomena of the outside world. Originally, he studied cosmological and natural philosophical theories, but he found them confusing and contradictory. Moreover, he was disappointed that they did not address the issues of selfhood and human morality that had begun to preoccupy him.

There is an often-told—and probably true—tale accounting for Socrates’ transformation into a wry and sardonic interrogator. According to the story, Chaerephon, a friend and follower, asked the Oracle at Delphi whether any living man was

wiser than Socrates. “No” was the answer. Pondering this, Socrates realized how little he really knew and concluded that he must have been proclaimed wisest only because he appreciated how ignorant he was. His mission, then, would be to procure the assistance of other wise men in his quest for that which is invariably and eternally true, particularly regarding the virtues of individuals and societies.

From this is derived the image that most people today have of Socrates (probably an accurate one): a barefoot, robed, bearded individual wandering and pondering throughout the city of Athens. He has also been described as being subject to fits of abstraction, and Aristophanes has depicted him as strutting like a duck and habitually rolling his eyes, until he arrives at some suitably public arena. Here, he buttonholes an ostensibly wise man—a teacher or a politician, for example—and grills him before an audience in a painstaking truth-seeking exercise that ultimately shows the supposed authority to be uninformed at best, foolish at worst, and always a less-than-rigorous thinker.

This process was the so-called Socratic method, exemplified by the philosopher PLATO, Socrates’ most illustrious pupil, in many of his dialogues. Critic David Denby describes the Socratic method like this:

Socrates the great teacher seems to flatter his students and friends, praising them extravagantly. Oh, yes, they’re so wise, so clever, and his own powers are so feeble, so terribly feeble! But he’d just like to ask them some small question: What do they mean by such-and-such a word, such-and-such an idea? And then *wham!* he catches them in some contradiction or confusion, and they’re knocked sprawling.

According to Plato, Socrates himself referred to the process as “midwifery,” believing the answers already existed in the minds of his students and needed merely to be “birthed” by a skilled specialist. It can be assumed that Socrates’ principal goal

was elucidation and not humiliation, but that did not detract from the entertainment value of his methods.

Socrates’ marriage to Xanthippe is another detail of the great philosopher’s life with which most modern readers are familiar. History paints her as a scold, a nag, and a shrew. Another viewpoint depicts her as a devoted and long-suffering woman whose husband did not provide adequately for his family. (Socrates and Xanthippe had at least one son, possibly two or more.) As the scholar I. F. Stone suggests, “Xanthippe had a lifetime of trying to make ends meet and feed the children while [Socrates] went around enjoying himself in philosophical discourse. Socrates’ constant boast that unlike the Sophists he never took a fee from his pupils was a luxury for which his poor wife paid the bill.”

After Sparta’s victory in the Peloponnesian War, Athens was ruled briefly by a brutal right-wing oligarchy known as the Thirty Tyrants. When democracy was restored, Socrates was brought to trial on two charges: “not worshipping the gods whom the State worships, but introducing new and unfamiliar religious practices” and “corrupting the young.” Some critics have suggested that Socrates was really indicted because he had been the teacher of two of the rebels and because he remained in Athens during the terrorist dictatorship without protesting the activities of the regime. In any event, he was found guilty and sentenced to death. Plato’s *Phaedo* claims to recount the last day of Socrates’ life, which ended when he drank hemlock, a poison. (In fact, Plato was absent from that occasion due to travel or illness.)

Critical Analysis

What is known of Socrates’ teachings and beliefs has been construed from his biographers and defenders, namely XENOPHON, ARISTOTLE, Aristophanes, and especially Plato.

Xenophon, a historian, former pupil, and disciple, defended Socrates against his indictment by portraying him as a popular teacher of morality

and ethics, while Aristotle praised Socrates' use of "inductive arguments" and "universal definitions." Xenophon's works about Socrates include his *Memorabilia* and *Symposium*. In *Clouds*, Aristophanes depicts a deceitful farmer who enrolls his son in a school of philosophy known as the Thinkery, hoping he will become crafty enough to figure out how to erase his debts. Socrates is depicted as "traversing the air and contemplating the sun." Plato, in his Dialogues, attributed some beliefs to Socrates that were not his, like the theory of Forms that is so characteristic of Platonism.

Socrates was, first and foremost, concerned with ethics and human excellence, and he looked for generalities or universal definitions through specifics. He classified values as either intrinsic or instrumental, i.e., serving as a means or agent to another end. Knowledge, integrity, and valor have intrinsic value since they are esteemed for themselves, whereas physical beauty, wealth, and power have only instrumental value as they are appreciated only because of what further use they can be, and may be ill-used as well. Only that which has intrinsic value can give an individual excellence and make him happy. Socrates believed that virtue was synonymous with wisdom and that happiness lies in virtue. Therefore, wickedness could only be a consequence of ignorance, for why would someone knowingly choose to be unhappy? In Plato's *Apology*, the character of Socrates describes himself like this:

"And so I go about the world obedient to the god, and search and make inquiry into the wisdom of anyone, whether citizen or stranger, who appears to be wise, and if he is not wise, then in vindication of the oracle I show him that he is not wise; and my own action quite absorbs me, and I have not time to give either to any matter of public interest or to any concern of my own."

In the Prelude to *The Trial of Socrates* (which begins, "No other trial, except that of Jesus, has left

so vivid an impression on the imagination of Western man as that of Socrates"), I. F. Stone discusses the mutual debt of Plato and Socrates:

It is to Plato's literary genius that Socrates owes his preeminent position as a secular saint of Western civilization. And it is Socrates who keeps Plato on the best-seller lists. Plato is the only philosopher who turned metaphysics into drama. Without the enigmatic and engaging Socrates as the principal character of his dialogues, Plato would not be the one philosopher who continues to charm a wide audience in every generation.

Yet it is Socrates who has influenced the whole of Western thought. His teachings on ethics and the way he lived his life—according to his beliefs—have been followed by philosophers ever since. Socrates' impact on modern thought continues to the present day in the way we define such concepts as ethics, morals, ignorance, and wisdom.

Song of Igor, The (1185–1196) *epic poem*

Composed between 1185 and 1196 in southern Russia, *The Song of Igor* is a heroic EPIC recounting the defeat of Prince Igor's forces from the city of Novgorod-Seversk by a Polish army. Apparently composed by a well-educated nobleman whose name is no longer known, it is said to be the most artistically complete work of old Russian epic literature.

Like most traditional epics, *The Song of Igor* was intended to be performed and accompanied by music, and was only later set down in writing. The book is divided into five sections. In the introduction, the author addresses his audience as brothers and explains that, unlike other epics, he has striven not only to create beautiful music but also to recount historical events. He then begins his narration of Igor's adventures. Despite the bad omen of a solar eclipse, Igor, his brother Vsevolod, and their sons prepare themselves for battle against a nomadic Polish force, a battle they will ultimately lose.

To contrast this defeat, which is caused by Igor and his brother's egoistical quest for personal glory, the second chapter recounts the victorious battle of the righteous Grand Duke Svyatoslav in the old Russian capital of Kiev. This is followed by a complaint spoken by Igor's young wife for her absent husband, who has been imprisoned by the Polish enemy. The poem closes with a retelling of Igor's daring escape from prison and return to his wife.

Though the heroic epic enjoyed a golden age in the old Russian capital of Kiev in the 12th century, *The Song of Igor* stands apart for its poetic sophistication and dramatic force. Characters' moral and political predicaments are vividly described, and the action itself is presented with much energy and pathos. These elements allow favorable comparison of the work to other medieval European epics, from the Old English *BEOWULF*, to the Middle High German *NIBELUNGENLIED* to the Old French *SONG OF ROLAND*.

The manuscript of *The Song of Igor*, together with other old Russian texts, was discovered in a monastery library in the late 18th century by

Count Mussin-Puschkin, the Procurator-General of the Holy Synod in St. Petersburg. Copies of the manuscript were published in 1800, and it found a large audience due to the newfound interest in Russia and Europe, in medieval nationalistic epics, and in the high literary quality of the work. The original manuscript was later lost in a fire, but thanks to the 1800 republication, the work has been preserved in its entirety.

Song of Roland (*Chanson de Roland*)

(ca. 1030–1070) *epic poem*

The best-known French EPIC poem of the MIDDLE AGES, the *Song of Roland*, is an exciting story of war and treachery, heroic knights and Christian faith—all set in a medieval world in which loyalties and chivalry collide. One scholar, Bernard Cerquolini, has said, "The reason we are medievalists is to study the *Song of Roland*."

The poem is based on an actual event. In 778, Charlemagne, the king of the Franks, who had been campaigning in Spain, was returning to France through the Pyrenees Mountains when his rearguard was ambushed by Basques at a pass called Roncevaux and killed to the last man. The dead included Roland, Lord of the Breton Marches. The story of this attack was recorded earlier by the Frankish noble Einhard (*Life of Charlemagne*, ca. 829–836). Almost 200 years later, the story of this battle became the focus of an Anglo-Norman French poem called the *Chanson de Roland* (Song of Roland). The poem is now housed in a manuscript in the Bodleian Library in Oxford, England, and its last line reads: "Ci faut la geste ke

Tuoldus declinet,” which means, “Here ends the tale that Tuoldus used for his poem.”

The true source or sources for the poem, however, are not known. The *Song of Roland* makes mention several times of an *ancienne geste* or *geste Francor*, a tale of heroic deeds written by the baron Saint-Gilles, who was supposedly present at the battle of Roncevaux. But this source, which may have been in Latin and was certainly much later than the battle, has not survived.

The poem may have originally been the work of a *jongleur* or minstrel, who sang it to entertain noble audiences. Many later manuscripts of the *Song of Roland* are based on the Bodleian manuscript, though they all differ in many ways from the original.

The date of the French poem indicates that it was influenced by the Christians’ struggle against the Muslims in the first CRUSADE (1095–99). The author turned the original story (where Charlemagne actually fought in alliance with a Muslim prince in Spain) into a fight between the forces of Islam and Christendom.

Critical Analysis

The *Song of Roland* consists of some 4,000, 10-syllable lines, divided into *laissez*, or strophes of varying numbers of lines. The poetic technique is that of assonance, or similar vowel sounds at the ends of lines, and occasional rhymes. There is some repetition and sometimes different versions of the same lines within the poem, perhaps because it was copied incorrectly or because more than one source manuscript was used.

The story begins by telling us that Charlemagne has been fighting the Saracens in Spain for seven years. The Saracen king of Saragossa, Marsile, admits that his army cannot defeat the Christians. After he decides to pretend to convert to Christianity and become Charles’ vassal to get the Christians to leave the country, he sends messengers to Charlemagne’s camp.

Roland, the emperor’s nephew and a favorite and most valiant knight, opposes the plan, warn-

ing that the Saracens have been treacherous in the past, killing the envoys Basan and Basile. Ganelon, Roland’s stepfather, thinks they should accept the offer. When another knight, Naimon, argues persuasively that it is best to show mercy to an enemy who cannot win, the army finally agrees.

Charles decides to send a messenger to Marsile with the news, but when Roland volunteers, Charles refuses to let him go. Roland then suggests that Ganelon should go, and everyone agrees, but Ganelon is angered because he perceives Roland’s suggestion as an insult to his honor, perhaps for not having volunteering himself. Roland does not take Ganelon’s anger seriously and laughs, unwittingly inciting Ganelon’s desire for revenge. As a result, when Ganelon meets with Marsile, they plot together to destroy Charlemagne’s rearguard.

Ganelon returns to the Christian army with hostages that Marsile sends as a false pledge of good faith. As the army is about to cross the Pyrenees, Ganelon convinces Charlemagne that Roland should be left in command of the rearguard. Roland, though he does not know the whole of Ganelon’s treachery, realizes his suggestion is malicious. He denounces Ganelon but accepts the task, swearing that Charlemagne will cross safely over the mountains.

When the main part of the army is over the pass, the Saracens attack the rearguard as Ganelon had planned. Oliver, Roland’s friend, sees them coming and asks Roland to blow his horn to summon Charles and the rest of the army back to help them fight the Saracens. Roland refuses because he feels it is his duty to fight the battle for his lord; anything less, he believes, would be shameful. Roland and Oliver quarrel over this, but Roland will not be moved.

The battle is bloody. Beside Roland and Oliver is Archbishop Turpin, a priest, who does not hesitate to kill Saracens with his own hands. Roland soon realizes, despite some initial success, that the rearguard has no chance of winning the battle. When he finally blows his horn to alert Charlemagne to the ambush, the veins in his temple

burst. Oliver too has been mortally wounded, and as they both lay dying, they make up their quarrel.

Only when he is the last man alive does Roland lie down under a tree and take his final breath:

*He proffered his right glove to God;
Saint Gabriel took it from his hand.
Roland laid his head down over his arm;
With his hands joined, he went to his end.*
(ll. 2389–92)

The Archangel Gabriel and St. Michael are sent from God to bring Roland's soul to heaven.

When he hears the horn, Charlemagne realizes Ganelon's treachery and has him put in chains. He finds the bodies of Roland and the other heroes, then pursues the Saracens and defeats them. In the meantime, the emir Baligant has roused an enormous force of Saracens from the eastern kingdoms, and they arrive in Spain to help Marsile. Charlemagne defeats and kills the emir in single combat.

On their return to Aix-la-Chapelle, Ganelon is put on trial. He defends himself by saying he had the right to avenge his honor, which Roland had impugned. His ally, Pinabel, concurs with this view and says that anyone who wants to convict Ganelon must fight him. The court is ready to acquit Ganelon when Thierry, one of the smallest and slenderest of the knights, agrees to fight Pinabel. Because God is with Thierry, he defeats Pinabel, and Ganelon is executed. Only then does the Archangel Gabriel return to call Charlemagne back to war.

Some critics, including Pierre Le Gentil, see the *Song of Roland* as a tragedy, believing that Roland's pride and anger against Ganelon lead to an unnecessary loss of life at Roncevaux. The poem contains details that skillfully foreshadow the tragedy, as when Ganelon drops the glove that Charlemagne holds out to him as he accepts his mission. Other critics, however, including Robert Cook, believe that Roland is not proud but acts in perfect accord with the rules of CHIVALRY: "He is at Roncevaux to

represent Charles, and his first duty is not to himself. . . . Roland has already committed himself to fight if attacked, and if he calls for help instead he will be breaking his word."

The characters in *Song of Roland* are portrayed as larger than life. Roland is the fiercest knight, Oliver the wisest. Charlemagne is portrayed as a venerable old man with a white beard, though in reality he was only 36 at the time of the Saracen battle. He is a religious leader as well as a warrior for whom God works miracles, making the sun stand still while he fights the Saracens.

The author seems to have known very little about the actual beliefs of Muslims. He represents them as "pagans," worshipping not only MUHAMMAD but also Apollo as idols. Nevertheless, the poet celebrates the bravery of individual Muslims. Of Baligant he says, "Oh God, if he were a Christian, / what a noble baron!" (l. 3164). For Christians, on the other hand, fighting with a pure heart against God's enemies means martyrdom and an assurance of reaching heaven. The poem's ultimate message appears to be that individual destinies and quarrels have no place when the ultimate fate of Christendom is at stake. The times called for heroism from every man.

The *Song of Roland* had an immense influence on the development of medieval epics. Later poets from many lands developed the legend of Roland and Charlemagne's other warriors into a whole series of epics, including Matteo Maria Boiardo's *Orlando Innamorato* (1487) and Lodovico Ariosto's *Orlando Furioso* (1516).

Sophocles (ca. 496 B.C.–ca. 405 B.C.)
playwright

Sophocles, son of the wealthy Sophilus of Colonus, was born near Athens. He was good-looking and a talented dancer and musician who led public victory hymns as a teenager. His lyre instructor was Lamprus, who was a widely celebrated master of traditional Greek music. Sophocles' true love, however, was the theater, and after a few appearances as an actor in his own youthful productions, he devoted himself entirely to the writing of Greek tragedies.

Sophocles was widely admired and his work was a popular success. His first of 24 competitive dramatic victories came in 468 B.C., when he bested the venerable Aeschylus in a theatrical contest. He penned nearly 125 dramas—of which a mere seven survive—and supplanted Aeschylus as the poet of Athens.

Sophocles was also active in public life, serving as treasurer of the Athenian Empire (443–442 B.C.) and as general (441–440 B.C.). During the unsuccessful revolt of Samos around 412 B.C., he was appointed to a board of commissioners in the aftermath of the doomed Sicilian expedition. He was also a lay priest in the cult of Asclepius, a deity of healing, and was associated with other well-known men of letters, including the historian Herodotus; Archelaus, a natural scientist and teacher of Socrates; and the many-talented and prolific Ion of Chios.

Upon the death of his fellow tragedian Euripides in 406 B.C., Sophocles expressed his respect and grief by clothing actors in mourning dress during a rehearsal for a drama competition. He himself died not long after, and his play *Oedipus at Colonus* was produced posthumously by his grandson. Yale professor Eric A. Havelock writes that Sophocles “was remembered and celebrated as an example of the fortunate life, genial, accomplished, and serene.”

Sophoclean tragedy is tense, startling, and disquieting. The cast of characters tends to be comparatively small, and the individuals' personal natures are boiled down to the essentials, so the significance of each action is intensified. Action in

Sophocles' plays is always indicative of character. Causality is a prominent theme, with separate factors often combining to produce to an inevitable result. Sophocles' tragic vision is that life exists only at the price of suffering.

Ajax was produced around 442 B.C. and is thought to be Sophocles' earliest extant play. Its title character is a Trojan warrior whose bitterness over losing the armor of the legendary Achilles to a rival drives him mad, and he slaughters a flock of sheep, believing they are his Greek foes. When Ajax regains his reason, shame drives him to take his own life. His compatriots are persuaded to give him an honorable burial in a typically Sophoclean scene that sees an outcast reconciled with God and society.

The Women of Trachis (ca. 420s B.C.) is one of the few Greek tragedies that features Heracles (Hercules in Latin). Although a stunningly popular mythological figure, Heracles was rarely a theatrical subject. The play takes place during the last of Heracles' famed 12 labors. His wife is duped into giving him a poisoned garment that so scalds his skin he chooses to be burned alive on a pyre.

In *Electra* (ca. 415 B.C.), the playwright tells of the familial curse on the House of Atreus that Aeschylus so thoroughly dramatized. The title character in *Philoctetes* (ca. 409 B.C.) is a Greek hero who has angered the gods by accidentally stumbling onto one of their sacred sites. He suffers divine retribution but is mysteriously rescued from his punishment. Critics, including Aristotle, have censured the play's use of the artificial device of *deus ex machina* to bring the play to a conclusion.

Oedipus the King (ca. 427 B.C.) dramatizes the deeply tragic yet fascinating story of the King of Thebes and how he unwittingly brought pestilence to his realm and ruin to his family and himself. In *Oedipus at Colonus*, the erstwhile sovereign—aged, exiled, blinded, and broken—is sent by the gods to his death, but not before finding redemption. Produced at roughly the same time as *Ajax*, *Antigone* follows one of the daughters of the late king, whose only crime is wishing to see her slain brothers buried properly, and who pays for it with her life.

These three productions are collectively known as the “Theban Plays.”

Critical Analysis

As *Oedipus the King* opens, a group of suppliants stands before the royal palace beseeching their ruler to save Thebes from a deadly blight that has ravaged the city: plants are not bearing fruit, livestock are sick, and women are barren.

A priest reminds Oedipus that he rescued the city once before, directly upon his arrival in Thebes, when he freed the people from the tyranny of the cruel Sphinx by solving the beast’s riddle. (The riddle asks what walks on four legs in the morning, two in midday, and three at night, and the answer is “Man”: as a crawling infant, as an adult, and as an elderly person with a cane.)

Oedipus’s brother-in-law, who has just paid tribute at the temple of Apollo, reports that, according to the god, the land has been defiled by the presence of the slayer of King Laius, who was killed by robbers while in an embassy. Shortly thereafter, Oedipus muses how, having restored order in Thebes, he had won the hand of Laius’s widowed queen, Jocasta.

The murderer must be located and either exiled or executed, according to the report; only then will Thebes be purified and fruitfulness restored. Oedipus promises that anyone who comes forth with knowledge of the homicide will not be harmed, but all Thebans are forbidden to shelter the guilty man. As for the killer himself, Oedipus proclaims:

Upon the murderer I invoke this curse—
whether he is one man and all unknown,
or one of many—may he wear out his life
in misery to miserable doom! If with my
knowledge he lives at my hearth
I pray that I myself may feel my curse.

(ll. 246–251)

Little by little, the awful saga unfolds. Jocasta reveals that, years ago, an oracle had warned Laius

that he would die at the hands of their son; so when a son was born, they left him abandoned on a hillside. Oedipus, with growing dread, recalls that, although he was reared by the king and queen of Corinth and considered them his parents, he was once accused by a drunken dinner guest of being illegitimate. Furthermore, an invocation of Apollo foretold his doom: to murder his father and lie with his mother. With horror, monstrous realization dawns: Oedipus was the abandoned son. He had encountered Laius that fateful day and murdered him in a fit of pique, then married his wife—Oedipus’s mother. A tortured Jocasta hangs herself, while Oedipus puts out his own eyes with her brooches and banishes himself:

I do not know with what eyes I could look
upon my father when I die and go
under the earth, nor yet my wretched
mother—
those two to whom I have done things
deserving
worse punishment than hanging. . . .
And my city,
its towers and sacred places of the Gods,
of these I robbed my miserable self
when I commanded all to drive him out,
the criminal since proved by God impure
and of the race of Laius.

(ll. 1372–1383)

Sophoclean audiences would have been familiar with the tale of Oedipus, so the tragedian’s task was to make the narrative interesting in a new way. He did this by introducing irony into every possible situation to create intense dramatic tension. Oedipus, the famed solver of riddles, is stumped by the circumstances of his own birth, marriage, and kingship. He is symbolically blinded by pride and arrogance when he is literally a seeing man, and after he “sees” the truth, he blinds himself physically. He accuses a blind prophet, a “seer” who grasps that Oedipus killed his father and married his mother, of lying in an effort to seize the throne.

However, like Sophocles' other protagonists, Oedipus is shown ultimately to be a man of some honor, as he refuses to take his own life, but rather accepts the fate that he himself meted out and the gods ordained.

"A full study of the influence of Sophocles on modern literature has yet to be written," according to Harvard professor Ruth Scodel. "The task would be immense, touching on the histories of scholarship, reading and education. . . . While works which use explicitly Sophoclean themes are not hard to find, often those where Sophocles has been used less obviously have used him more profoundly. . . . At once satisfying, disturbing, and frightening, the Sophoclean world seems inexhaustible."

Strabo (ca. 63 B.C.–ca. A.D. 24) *geographer, historian*

With the rise of the Roman Empire, the political influence of the Greeks diminished. However, Greece remained a center of intellectual and literary activ-

ity throughout the era of the Roman Empire. One of the important Greek writers of this time period was Strabo, the first great geographer in history.

As with so many other figures in ancient times, little is known of Strabo's life. He was born in the Greek city of Amasia, in today's northern Turkey. He received an excellent education and was deeply influenced by Stoical philosophy. While he traveled extensively throughout the ancient world, it is believed that he probably lived in Rome. Despite the fact that Strabo was a Greek, he was of the opinion that the Roman Empire was a positive influence on the world. The order and stability it provided allowed people like him to pursue intellectual and literary activities, without being interrupted by war or politics. This attitude is clearly expressed in his writings.

Strabo was the author of 47 books known as the *Historical Sketches* (compiled in 20 B.C.), a history of Rome of which only fragments remain. His greatest work, most of which is extant, is *The Geography*, or *Geographical Sketches*. This work, written in 17 volumes, was a general survey and summary of the geographic world familiar to the Greeks and Romans: Europe, India, Syria, and Asia, among other countries. Strabo describes the various mountains, rivers, and regions that had been explored up to that time. He also discusses important cities, the cultural tradition of various tribes and nations, and the art and architecture of many of the places he visited. *The Geography* is invaluable not only for its historical information, but also for what it reveals about the extent of geographic knowledge possessed by the ancient Greeks and Romans.

Sundiata, an Epic of Old Mali (13th century) *epic poem*

Sundiata, an Epic of Old Mali relates the story of Sundiata (also called Son-Jara), the 13th-century hero-king of Mali, a kingdom in West Africa. The *Sundiata* is a conceptual prose rendition of the original EPIC poem (see EPIC OF SON-JARA), written in the Mande language. D. T. Niane, the compiler, adopted this approach to make the story of Sundiata more accessible to non-Mande speakers. Niane's translation retains the general chronology of events as well as the main themes and ideas contained in the original.

The book begins with the prophecy of the future king's birth and the meeting and marriage between Sogolon Kunde (the Buffalo-woman) and the then-king of Mali. Their union produces the future king, Sundiata, who must go through a series of tests and trials, including exile, before he returns triumphantly as the hero after defeating the evil king Soumaroa Kante.

The epic addresses several important themes, including destiny, bravery, and friendship. The importance of prophecy is emphasized in Sundiata's transformation from a cripple into a powerful and remarkable king. The irreversibility of destiny is

clearly shown in the eventual reclaiming of the Mali kingship by Sundiata, despite the many attempts made by his enemies, among them the wicked Sassouma, to foil his destiny.

Bravery constitutes another important theme of the book. The young and crippled Sundiata shows great courage and fortitude in his determination to overcome his handicap and protect his family from harm. He goes to battle with Soumaroa Kante, the sorcerer king, even when he has not discovered the secrets of the latter's prowess.

Another major theme is friendship, represented in the loving and sacrificial relationship between Sundiata and his half brother Manding Bory. Because of their close friendship, both characters are able to survive their trials and tribulations and remain undaunted as they resist their enemies. Sundiata willingly goes into exile to ensure that Manding Bory remains unharmed.

This tale, originally told by griots, or the West African keepers of oral traditions, gives invaluable information about not only the rich oral traditions of West African society, but also about its history and heroic past.

Sunzi (Sun Tzu, Sun-tzu) (late sixth century B.C.) *military strategist, essayist*

Sunzi was a native of the Qi (Ch'i) state who worked as a military adviser of the kingdom of Wu ruler, He Lu. Not much is known about Sunzi's

early life, as there are few existing works containing only scant biographical information; however, an anecdote of how he came to the Wu king's attention is contained in the work of Sima Qian (Ssu-Ma Ch'ien), the grand chronicler of pre-Han China. As the story goes, Sunzi was asked to demonstrate how he could put his theories of military organization into practice. Sunzi convinced the Wu king of his ability when he was able to transform a cohort of the king's concubines into an organized and disciplined drill unit. Scholars have estimated that this incident probably occurred not long after He Lu came to the throne.

According to Sima Qian and the *Shiji (Shi-chi)*, Sunzi most probably died before his patron's death in 496 B.C. The last time Sunzi was mentioned was in connection with his role in assisting He Lu in his defeat of the Qu (Ch'ü) state in 512 B.C. Sunzi's greatest legacy is his composition on military strategies, titled *Ping-fa (The Art of War)*. In his translation and commentary on Sunzi's work, Lionel Giles praises the author's genius: "They [Sunzi's words] reflect the mind not only of a born strategist, gifted with a rare faculty of generalisation, but also of a practical soldier closely acquainted with the military conditions of his time."

The Art of War represents the work of an experienced warrior. This has led to speculation that Sunzi began to write this work close to the end of his career when He Lu's military adviser. The work contains 13 chapters, each one examining a particular military topic or strategy. *The Art of War* is not merely a collection of sound and effective military plans and strategies; it is also a historical text that describes the events and personalities of Sunzi's lifetime. In two passages, for example, Sunzi refers to the size of the armies of the Wu kingdom and its adversaries, the Yueh.

Sunzi's work attained recognition and status from not only his contemporaries but also later generations of famous generals and warriors. Military leaders, including Han Xin (Han Hsin) and

Yue Fei (Yueh Fei), learned much from *The Art of War* and acknowledged their debt to it. Even purely literary men such as SU SHI's father, Su Xun, paid compliments to the great strategist.

The scholar Zheng Hou (Cheng Hou) also praised Sunzi in this extract contained in *Impartial Judgements in the Garden of Literature*:

Sun Tzu's 13 chapters are not only the staple and base of all military men's training, but also compel the most careful attention of scholars and men of letters. His sayings are terse yet elegant, simple yet profound, perspicuous and eminently practical. Such works as the *Lun Yu*, the *I Ching* and the great Commentary, as well as the writings of Mencius, Hsun Kuang and Yang Chu, all fall below the level of Sun Tzu.

Sunzi's work continues to influence present-day society, in both military and commercial matters. Modern writers have tried to adapt Sunzi's ingenious cunning to the new competitive age of commerce and international business. Examples include Mark McNeilly's work *Sun Tzu and the Art of Business: Six Strategic Principles for Managers* and Check Teck Foo and Peter Grinyer's book *Organizing Strategy: Sun Tzu's Business Warcraft*.

Su Shi (Su Shih, Su Tung-po) (1037–1101)
poet

Su Shi was born in Meishan in the Sichuan (Szechwan) Province of China. He was educated at home by his Buddhist parents and then later at a private school by a Taoist priest. In 1056, he went to the capital, Kaifeng, with his older brother to take the civil service examination. Both brothers passed with distinction. In 1060, after observing the customary three-year mourning period following his mother's death, Su Shi returned to the capital with his father and brother, and all were assigned government posts.

During his first years in the government, Su Shi became an outspoken critic of the reform program, the "New Laws," of the ruling party in Kaifeng. In 1079, he fell out of favor with the leader of the ruling party, Wan Anshi (Wang An-shih), and was tried for slander. The "New Laws" party used Su Shi's own poems as evidence against him, and the poet was banished to Huangzhou (Huangchou), an insignificant town on the banks of the Yangtze River. Su Shi was able to return to the capital the following year, after the "New Laws" party lost power. He was banished a second time, however, when the party returned to favor in 1094. He remained in southern China for the rest of his life and never returned to the capital. Because of Su Shi's political situation, most of his poems were banned during his lifetime, and it was not until after his death that his works were widely distributed and read.

Despite his political failings, Su Shi was one of the great poets of the Sung dynasty, and more than 2,400 of his poems have survived. His poetry was heavily influenced by the Buddhist and Taoist education he received in his youth. During his political

career, he spent a great deal of time visiting Buddhist temples, and many of his poems reflect his ongoing association with the Zen Buddhist school of thought, as can be seen in these lines from "Water Music Prelude" (addressed to his younger brother):

*The moon should have no regrets.
Why is she always at the full when men are
separated?
Men have their woe and joy, parting and
meeting;
The moon has her dimness and brightness,
waxing and waning.
Never from of old has been lasting
perfection.
I only wish that you and I may be ever well
and hale,
That both of us may watch the fair moon,
even a thousand miles apart.*

Su Shi experimented with all styles of poetry: five- or seven-character *shi* (*shih*) poems; *ci* (*tz'u*), or songs; and rhapsodic prose poems called *fu*. Most of his works deal with his personal life and his deep Taoist connection to nature. Perhaps the best example of Su Shi's ability to connect nature with emotion can be found in his poem "Tune: The Charms of Nien-nu," which he wrote 10 years after his wife passed away:

*Last night in a dream I returned home
And at the chamber window
Saw you at your toilet;
We looked at each other in silence and
melted into tears.
I cherish in my memory year by year the
place of heartbreaking,
In the moonlit night
The knoll of short pines.*

Su Shi's brilliance is evident not only in the sheer volume of his poems, but also in his poignant

expression of emotion. As translator Burton Watson remarks, "A great [poet] had to have such complete mastery of the [poetic] tradition that he could at the same time express his own thoughts freely and naturally, and could advance and enrich the tradition in some way, adding new depth and nuance. This [Su Shi] did."

Tacitus, Cornelius (ca. 56–ca. 120)

historian, biographer, essayist

Tacitus was born into a wealthy family in Northern Italy. He received an education appropriate for a Roman from a good family, mastering public speaking skills, oratory, and debate. Throughout his life, he occupied prestigious high-ranking positions in the Roman Empire, beginning his career as a senator, then becoming a consul and, finally, a governor of Anatolia, one of the largest provinces of the empire. Most of what we know about Tacitus's life comes from his works and letters he exchanged with his good friend PLINY THE YOUNGER.

Though Tacitus was very successful politically, it is as a historian and moralist that he is best remembered. As a writer of history, he sought “to distinguish right from wrong, the useful from the dangerous” (*Annales* 4, 33). As a result, much of his writing is focused on denouncing the Roman emperors for their cruelty, attributing the decline of the Roman Empire to this and other imperial vices.

In the year 98, Tacitus wrote his first work, *Agricolae De Vita Iulii*, a biography of his father-in-law, after whom the book is named. In this work, Tacitus expresses his respect and admiration for Agricola as a highly virtuous man. Soon after, he wrote the treatise *Concerning the Origin and Location of the Germans*, commonly called *Germania* (Ger-

many, ca. 98). Although the book contains a detailed description of the customs and geographic locations of Germanic tribes, it is not an objective ethnographic study since the essence of the work is political. It is colored with subtle irony toward some of the German tribes' primitive customs, descriptions that glorify the simple German way of life, and comparisons of these with the corruption and luxurious immorality of the Romans.

Around the year 81, Tacitus composed his *Dialogus de Oratoribus* (Dialogue on Orators), an essay on education, the art of oratory in Rome, and oratory's decline. It is written in the style of CICERO and, as was typical of the declamatory genre, is rich with rhetorical figures and metaphors, illustrating Tacitus's talent as an expressive speaker. He became one of the foremost prosecutors of his day, but after the year 100 he gradually devoted more time to writing until his death in Rome.

Critical Analysis

Tacitus is most famous for his *Annals* (ca. 115–117) and *Histories* (ca. 104–109). In these historical works, the traditional declamatory writing is replaced by a highly individual, polished style that makes use of rich vocabulary and diverse sentence structure and is reminiscent of LONGINUS. Both works contain bitter criticism of imperial

power. Tacitus believed that the emperor had so much power that no one could occupy the throne without being corrupted by that power. Therefore, his history is a tale of a succession of corrupt despots, lust for power, and government scandal.

Histories presents a history of the Roman Empire from the year 69 until the death of Domitian in 96. The original work comprised 14 books, but only the first four books and part of the fifth have survived.

Tacitus's later work, *Annals*, of which 16 books are preserved, is a history of the emperors from Augustus to Nero (37–68). Throughout *Histories* and *Annals*, Tacitus makes good use of sarcasm. The surviving fragments describe the revolt by the northern tribes of Gaul, their defeat at the hands of the Roman army, and the establishment of the Pax Romana (Roman Peace) in the Gallic territories. While he describes some emperors, namely Augustus, with belittling innuendos, he describes others with severe criticism. Emperor Tiberius, for example, is portrayed as sinister and cruel, a man who purges his opponents from the Senate by having them tried for treason and executed. Claudius and Nero are painted in similarly dark colors. The account contains incisive character sketches, ironic passages, and eloquent moral conclusions about how the Roman character was declining due to the lack of character in its rulers. In *Annals*, Tacitus remains faithful to the spirit of passionate criticism of the emperors' cruelty and inhumanity. Thus, he describes the terror that Nero imposed on Christians who deviated from the traditional worship of Greco-Roman gods:

Nero created a diversion and subjected to the most extra-ordinary tortures those hated for their abominations by the common people called Christians. Mockery of every sort was added to their deaths. . . . Covered with the skins of beasts, they were torn by dogs and perished, or were nailed to crosses, or were doomed to the flames. These served to illuminate the night when daylight failed”

(*Annales* 15, 44)

Tacitus's works differ from the usual panegyric writing, which expresses admiration of the deeds of those in power regardless of their actions. By contrast, Tacitus provides a new perspective on the personalities and deeds of these great historical figures, allowing for a better understanding of the events and people who colored his world.

Talmud (ca. 200–ca. 550)

The Talmud is a collection of writings concerning Jewish religious and civil law. It contains scriptural interpretations of the Five Books of Moses (Genesis, Exodus, Leviticus, Deuteronomy, and Numbers) as well as complete guidelines according to the rabbinic authorities for human conduct in daily life. Known as the Oral Torah because it was handed down and built upon by teachers through

the ages, the Talmud is studied together with the Written Torah (the Five Books of Moses, the Prophets, and the Scrolls) and forms the core of Jewish learning. The Talmud is considered the next most important text in the Jewish religion after the BIBLE itself.

The Talmud was born in the wake of the catastrophic destruction of the Second Temple in Jerusalem by the Romans in 586 B.C. The Temple had been the core of the Jewish people who were forced to leave Israel and became scattered throughout Babylon. In an effort to keep the Jewish people unified, exiled leaders who possessed the ancient Jewish teachings in the form of oral and written doctrine from the Temple established study houses. In these houses, which came to be known as synagogues, sacred learning was available to the Jewish masses. This development in Judaism, though spawned by dire necessity, was revolutionary. Until the destruction of the Temple, only the priests had been allowed to read the doctrines. The result of mass learning and prayer in the synagogues instilled in the exiles a love of Jewish scripture, creating the need for a new class of teachers.

The foremost of these teachers was a religious scholar named Ezra, who adapted the ancient doctrines to make them appropriate for a group of people living in exile. He then founded what was called the Great Assembly, a core group of teachers to whom he gave the amended doctrine. He saw this doctrine as a way of instructing people to live a moral and ethical life that would unify them with one another and with God, thus preserving the existence and integrity of the Jewish people. The members of the Great Assembly, in turn, gave this doctrine to the teachers in the synagogues.

The passage of time and the political and social changes that occurred demonstrated the need for the Torah to be a living document that could be adapted to the Jews' changing lives. Thus the teachers, or rabbis, developed the Talmudic method of scriptural interpretation, a systematic way of questioning scripture, finding answers through the use of intellect and reason, to under-

stand what God wants for and from his people. The result of this method of religious study resulted in the development of an exhaustive code of conduct that applied to every aspect of human life, including marriage and bodily hygiene. The rabbis taught this code to the masses in the synagogues, both in Palestine and throughout Babylon. As the Talmud's founding teacher Ezra had held, the rabbis of generations following also believed that the devoted study of the Talmud and practice of its teachings would promote the individual's compassionate treatment of his fellow people and bring the Jews closer to God.

Critical Analysis

Two versions of the Talmud exist. The first is the Palestinian Talmud (also called the Jerusalem Talmud), which was written by Palestinian scholars from the third century to the early fifth century (ca. 408). The second is the Babylonian Talmud, which was written by scholars from the third century to the early sixth century (ca. 500).

There are numerous historical translations of and commentaries on the Talmud. The British rabbi Isidore Epstein was the first scholar to translate the Babylonian Talmud into English, a task that lasted from 1935 to 1952. The Palestinian Talmud was translated into Latin by the Italian historian Blasio Ugolino, who titled the work *Thesaurus Antiquitatum Sacrarum* (1744–69). Before this, Moses MAIMONIDES, a Spanish philosopher and physician, wrote *Mishnah Tora* (Repetition of the Torah, ca. 1180), and French and German rabbis wrote numerous commentaries on the Talmud from the 12th to 14th centuries.

The Talmud is composed of three main parts: the Mishnah, the Gemara, and the Midrash. The Mishnah, completed around 352, contains six sections called Orders, which are each broken down into chapters. The Orders deal with laws concerning agriculture, observance of the Sabbath and other Festivals and Holy Days, women, legal matters, rituals concerning daily life and dietary laws, and cleanliness of body and home. The following example from Dr. Abraham Cohen's English trans-

lation of the Talmud concerns medical treatment and gives an excellent example of the way in which Talmudic rabbis interpreted scripture to promote ethical treatment of human beings:

If the patient says he wants something and the physician says he may not have it, the former is listened to. For what reason? “The heart knoweth its own bitterness.”

(Proverbs 14:10)

The Gemara, as it has been recorded, is actually a series of lively debates between scholars and students who disagreed on the interpretations found in the Mishnah. This form of scholarly debate provides the system of Jewish learning and continues to this day.

The third portion of the Talmud is the Midrash (derived from the Hebrew word *darash*, meaning “to reason or search out”), which was developed during the same period as the Mishnah. A Midrash can best be described as a story the rabbis invented to answer questions that arise from passages in the Bible that seem unclear. The story is then used as a tool for understanding God’s will for mankind. For example, in Genesis 1:27, the Bible says: “So God created man in his own image, in the image of God created he him; male and female created he them.” The story of God’s creation of woman from Adam’s rib does not occur until Chapter 2 in Genesis. The rabbis used midrash to explain this gap by creating the legendary story of Lilith, the first woman, who would not act as a helpmate to Adam. In the midrash, Lilith treats Adam as an enemy rather than as a husband; therefore, she is banished from the Garden of Eden to wander as a demon. The Rabbis used this story to show the importance of a man and woman’s cooperation in life.

The Talmud has proven to be the unifying force its originators intended it to be, and history attests to this cohesive force. With the rise and passing of numerous cultures throughout the centuries, Judaism as a religion and culture has survived and continues to thrive.

tanka *Japanese poetic form*

A tanka poem comprises 31 syllables, ordered into five lines of five, seven, five, seven, and seven syllables, respectively. The form dominated Japanese poetry for more than 1,000 years. Today the haiku has in some ways replaced tanka in popularity, but the tanka form is still quite commonly used. Since it is somewhat longer than haiku, tanka has a more lyrical quality and is highly valued for its concise nature:

*I shall pass away
soon. To keep your memory
in that other world
I so long to see your face
again, for just one last time.*

(Izumi Shikibu)

Tanka poets rely on internal alliteration (the repetition of consonants), assonance (the repetition of vowels), an absence of rhyme, and the use of concrete images to express intense emotional experiences and moods and to describe everyday events.

An English Version of Works by Tanka Poets

Tao Yuanming (T'ao Yüan-ming, Tao Qian [Tao Ch'ien]) (365–427) *poet*

Tao Yuanming was one of the first in the tradition of the Chinese recluse poets; HAN SHAN is another notable example. Tao spent the early part of his life as a government official after the collapse of the Han dynasty. This tumultuous period in Chinese history was marked by intermittent clan wars, weak rulers, and political instability. As a result, the life of many government officials at the time was fraught with danger. Tao's Confucian principles made him loathe to support or serve a government that was not equal to his ideals. These principles conflicted with the only avenue that was available to him for living a life of wealth and privilege. In "The Return," he says, "My instinct is all for freedom, and will not brook discipline or restraint. Hunger and cold may be sharp, but this going against myself really sickens me." Finally, at age 40, Tao's principles rose to the forefront, and he abruptly resigned his government post, retiring with his family to a farm in the Lu Mountains.

Tao Yuanming, whose name translates as "the recluse Tao," found true happiness after his retirement. He wrote many pastoral poems extolling the virtues of the simple life to be found on a farm. While he and his family lived in poverty, Tao found his life in the mountains to be much more rewarding than his former career: "My home remains unsoiled by worldly dust / Within bare rooms I have

my peace of mind." ("Returning to the Farm to Dwell," ll. 17–18).

Tao Yuanming's poems reflect his calmness and the joy he found in moments of idleness. He wrote often about honor, the ills of seeking money, and the pleasures of observing nature and sharing good wine with friends. His lyrics served as models for many great poets, such as WEI ZHUANG, LI BAI, and Tu Fu, who followed.

Tarafah 'Amr ibn al-'Abd (543–ca. 569) *poet*

Tarafah 'Amr ibn al-'Abd is one of the most important poets of the pre-Islamic Arabic world and one of the seven celebrated authors of the *Mu'allaqāt*, (the Golden Odes; see *HANGED POEMS*). Born into the Bakr tribe in the Bahrain region of the Persian Gulf, Tarafah led a life that is a matter of colorful legend. Traditional accounts claim that in his youth he developed dissolute habits as well as a talent for satire, which led to his exile from the tribe. After gaining recognition for his *mu'allaqah*, or ode, he—along with his uncle and fellow poet Mutalammis—was favored by Amr ibn Hind, who became king of al-Hirah in 554.

It was said that Tarafah's sarcastic tongue soon caused trouble because of a verse in which he declared he would rather have a bleating sheep than Amr bin Hind around his tent. Lascivious advances to the king's sister, a reported beauty, earned Tarafah and his uncle a mission to return to Bahrain with a pair of sealed letters for the governor. Mutalammis

opened his and discovered its contents contained a death warrant, which he quickly destroyed. Tarafah, determined to meet his fate, delivered his letter and was thereupon imprisoned and executed. His early and avoidable death (tradition held that he was still in his 20s) earned him the title “the murdered lad.”

Though other fragments of his poetry survive in various collections, Tarafah is best known for his *qasidah* of about 100 lines. The *qasidah* was a popular form of poetry that generally contained two sections: a glimpse of the beloved and then an enforced exile involving a dangerous journey through the desert, where the poet's only companion was his camel. Tarafah's ode contains the traditional description of the beloved, which according to translator A. J. Arberry in *The Seven Odes* translates to a “young gazelle, dark-lipped, fruit-shaking.” It also gives a quite detailed and extensive description of the camel.

Tarafah's ode incorporates themes that probably helped fuel the legends about his rebellious and libertine ways. Historian Reynold Nicholson, in *A Literary History of the Arabs*, calls Tarafah's *mu'al-laqa* “a spirited portrait of himself.” His ode shows his appreciation for and generosity with his *khamr*, or wine, in these reckless lines (translated by Philip Kennedy in *The Wine Song in Classical Arabic Poetry*): “Whenever you come to me in the morning, I give you a cup of wine that quenches your thirst; if you can do without it, then do without it and more!” Elsewhere Tarafah offers his philosophy on life, sagely saying, “A noble man satiates himself in life, for you will know / if we die tomorrow which of us is thirsty.” Kennedy calls this “the clearest and most direct expression of *CARPE DIEM* [seize the day],” which seems to be the poet's personal motto.

Tarafah's ode also incorporates the classic element of *fakhr*, or self-glorification. He portrays himself as important and the center of attention, claiming, “I am not one that skulks fearfully among the hilltops . . . / if you look for me in the circle of the folk you'll find me there.” The *qasidah* frequently ends with a celebration of pleasure and

an image of repatriation into the tribe. The images in Tarafah's homecoming involve all three of his favorite things—wine, boon companions, and a beautiful woman—indicating, as Nicholson says, the poet's “insistence on sensual enjoyment as the sole business of life.”

In the century following Tarafah's death, Arabic poetry changed in significant ways. The first movement of the *qasidah* evolved into the *ghazal*, a highly influential form of love poetry. In the 600s, the birth of the prophet MUHAMMAD brought profound changes to Arabic culture with the introduction of Islam, and the poetry changed in tone.

The *Mu'allaqāt* was compiled in the mid-eighth century by Hammād al-Rāwiyah, who selected seven poets as the exemplars of pre-Islamic poetry. IMRU' AL-QAYS, Zuhayr ibn Abi Sulma, LABID, Antara ibn Shaddad, 'AMR IBN KULTHUM (the very king supposedly responsible for Tarafah's death), and al-Harith join Tarafah in this esteemed group. *Mu'allaqāt* is traditionally interpreted to mean “the suspended ones,” alluding to a practice where the prize-winning works of poetry contests would be written out in letters of gold and suspended, or hung, for viewing in a public place. Later compilers added to or changed the *Mu'allaqāt* as they wished, but Tarafah is customarily included. His appeal endures not only in his fantastic biography of a daring rebel killed in his prime, but also in the evidence of his poetic gifts and his personal resolution to live life to the fullest.

telapnaawe narratives (*telapnanne* narratives) *Zuni tales*

For more than 2,000 years, the Zuni were pueblo dwellers in what is now New Mexico. Today, only about 12,000 Zuni still live in New Mexico, but their culture is rich with tradition, religion, art, music, and dance.

Religion, which is at the center of the Zuni culture, is told through stories and myths. Similar to the Winnebago *WAIKAN* and *WORAK NARRATIVES*, Zuni myths and folktales are divided into two types: creation stories known as *chimiky'ana'kowa* (meaning “the beginning”), based on true events; and *telapnaawe* (or *telapnanne*), entertaining, fictional stories. The creation stories are told only by priests during religious ceremonies. *Telapnaawe* narratives, on the other hand, are relayed by *telaapi*, or storytellers, who tell their tales only during the winter.

Zuni scholar Dennis Tedlock notes that the *telapnaawe* begin with a traditional exchange between storyteller and listener. The listener will ask the *telaapi* to “take up a tale,” to which he will respond, “Now we take it up.” The tales can last from 30 minutes to one hour or longer. The stories’ subjects range from the trickster Coyote (see *COYOTE TALES*) to marriage, family, and hunting.

Some *telapnaawe* tales include “The Boy and the Deer,” a story about a boy who is raised by deer; “The Hopis and the Famine,” a story of a scorned husband who seeks revenge by causing a famine; and “The Girl Who Took Care of the Turkeys,” a story about a girl who abandons the turkeys she cares for to go to a dance.

Frank Hamilton Cushing was the first white American to collect and translate Zuni myths. He lived with the Zuni in the late 19th century and published many books and articles on Zuni culture. In the 20th century, anthropologist Franz Boas and his student Ruth Benedict also studied Zuni culture and published numerous works on the subject. Scholar Dennis Tedlock translated many Zuni tales into English, maintaining the complexity and integrity of the Zuni originals.

Terence (Publius Terentius Afer) (ca. 185–159 B.C.) *playwright*

Terence was born in Carthage to Libyan parents and brought to the Roman Empire as a slave. His family name, Afer, means “African,” which probably reflects his origin. His owner was a Roman senator, Terentius Lucanus, who quickly recognized his slave’s ability and not only emancipated Terence but also provided him with a classical Roman education. Terence became popular among the Roman aristocracy and was also highly respected by such distinguished thinkers as CICERO and HORACE. He died an early, tragic death; before he turned 30, he was lost at sea during his journey to Greece. It is said that Terence translated 108 of MENANDER’s plays, all of which were lost in the same shipwreck.

Terence wrote his first play, *Andria* (The Maid from Andros), when he was only 19. The play is a romantic comedy about a long-lost daughter’s return to her home, a story Terence adapted from one of Menander’s plays.

Like PLAUTUS, Terence adapted Greek plays from the late phases of Attic comedy (farical dramas that evolved from fertility rites mixed with song

and rudimentary dialogue produced in the region known as Attica during the third and fourth centuries B.C.). However, he differed from his predecessor in his choice of style. While Plautus wrote for the Roman public, who were hungry for anything vulgar, Terence delighted in subtle irony and refined yet natural expression. In addition, Terence's plots far surpassed those of Plautus.

A perfectionist, Terence polished his works until they were flawless. He wrote only six plays, all of which survive to this day, and his skill progressed with each completed work. First staged in 160, *The Eunuch*, a tale of the love exploits of two brothers, was met with such success that it was performed twice a day. Other plays include *Adelphi* (The Brothers), in which Terence explores how the upbringing of two brothers (one strict, the other not) affects their behavior as adults; *Hecyra* (The Mother-in-Law), in which a man discovers that he is the one who raped his wife and got her pregnant; and *The Phormio*, which is based on one of APOLLODORUS's plays and tells the story of how a sycophant helps two brothers convince their father to accept their lovers.

Terence's refined comedies remained popular throughout the MIDDLE AGES and the Renaissance. The medieval playwright Hroswitha of Gandersheim claims to have written her plays so that her nuns would spend less time reading Terence. His comedies also influenced the works of a number of later authors. Molière adapted Terence's *Phormio* in one of his earliest plays, *The Trickeries of Scapin* (1671), and Richard Steele adapted Terence's *Andria* in his play *The Conscious Lovers* (1722).

Theophrastus (Tyrtamus) (ca. 372–ca. 287 B.C.) philosopher, rhetorician, scientist, teacher, nonfiction writer

The son of a fuller, or cloth handler, Theophrastus was born in Eresus on the island of Lesbos. Certain biographers suggest he studied at PLATO's Academy in Athens. By age 25 he had formed close ties with Plato's favorite student and successor ARISTOTLE, whom he accompanied to the court of Philip of Macedonia when Aristotle was hired to tutor the young prince Alexander. Upon their joint return to Athens in 334, Aristotle founded the Peripatetic school, where Theophrastus became his most gifted student. After Alexander's death, the Athenian democracy experienced civil disorder as various persons struggled for control of the city. Theophrastus spent a year in exile when a political decree banished all philosophers, but in 306, when the decree was revoked, he returned and took over as head of the Peripatetic. Under his leadership, the school enjoyed the peak of its influence and success, attracting more than 2,000 students. When Theophrastus died, Athenians accompanied his bier on foot as a mark of honor.

Originally named Tyrtamus, Theophrastus, which means "divine speaker," earned the name by which he is known through his impressive command of rhetoric. STRABO said that "Aristotle made

all his students eloquent, but Theophrastus most eloquent.” Like his mentor, Theophrastus’s interests ranged from the natural sciences to logic, metaphysics, rhetoric, poetics, politics, and ethics. His ideas on philosophy and metaphysics built on the ideas of Plato and Aristotle, though during Theophrastus’s tenure at the Peripatetic, Zeno was formulating Stoic philosophy and EPICURUS founded his own Epicurean school at the Garden.

Diogenes Laertius, who wrote an early biography of Theophrastus, called him “a very intelligent and industrious man . . . ever ready to do a kindness and a lover of words.” Laertius attributed 224 works to Theophrastus, everything from 24 books on law to treatises on the winds, types of sweating, tiredness, plagues, fainting, and dizziness. The sheer diversity and breadth of topics shows the extraordinary breadth of his knowledge and the inquisitiveness of his mind. He wrote on abstractions such as flattery and piety and on practical activities such as sleep and dreams, music, and judicial speeches. He analyzed virtually every aspect of the natural world, from fruits and flavors to wine and olive oil. He meditated on emotions, virtue, and the nature of the soul and wrote manuals on kingship, the rearing of children, and the art of rhetoric. Other topics he studied included melancholy, derangement, slander, metals, fire, and old age, to name just a few.

What remains of Theophrastus’s work, aside from scattered fragments and quotations in texts of late antiquity and the MIDDLE AGES, are two treatises on botany and assorted essays on natural sciences, sense perception, and metaphysics. His most-remembered work is what was, perhaps to him, his most unimportant: the *Characters*, which became a paradigm for European literature and contributed to the development of the English essay.

Critical Analysis

The work *Characters* consists of a table of contents, a preface explaining the purpose of the collection, and 30 chapters, each devoted to a different aspect of personality. None of the listed traits are very

pleasant or admirable. Each individual chapter is titled with the trait under attack and commences with a general definition, leading to a description of the characteristic actions of a person of this sort. Some sketches are followed by moralizing epilogues, which scholars suspect are later additions. The true worth of *Characters* lies in the detailed descriptions of each figure, which read like a series of lecture notes or scribbles in a personal sketchbook. The structure of these descriptions is uniformly peculiar and distinctive: Each begins with the formula “X is the sort who . . .” and commences with a series of modifiers listing the behaviors to which this sort of person is prone. The details are vivid and often hilarious. There are no virtues featured in these sketches; the characters are buffoons, braggarts, tricksters, and examples of all sorts of vice.

Theophrastus, along with his students, had a reputation for dressing finely and living well, which may explain why so many of the characters he writes about are parodies of stinginess. He was also known for his elegant manners and sophistication, so several of the bumbling characters lack social graces. The work is clearly not meant to instruct, either on the basis of ethical behavior or as an example of rhetorical style; alone of Theophrastus’s compositions, *Characters* seems designed for sheer entertainment. What moral judgments that exist are thought to be the interpolations of later authors. Theophrastus takes the stance of the natural scientist—studying, classifying, and remarking on distinct traits, without attempting to moralize or rationalize upon them.

The details of the descriptions clearly anchor them in Athens in the last decades of the fourth century B.C., revealing the city’s customs, institutions, practices, and prejudices. The sketches were likely composed over a decade or so, and most of the internal evidence, or references within the work, suggest dates between 325 and 315 B.C. The descriptions abound with fascinating information about everyday life in Athens, as can be seen in this description of the character Obsequiousness:

He gets frequent haircuts and keeps his teeth white, and discards cloaks that are still good, and anoints himself with perfumed oil. In the marketplace he goes frequently to the money-changers; among gymnasia he spends his time at those where the ephebes work out; in the theater, whenever there is a show, he sits next to the generals. He buys nothing for himself, but for foreigners he buys letters of commission for Byzantium, and Laconian dogs for Kyzikos, and Hymettos honey for Rhodes, and as he does so tells everybody in town about it.

Despite the specificity of the detail, however, Theophrastus's characters do not belong only to ancient Greece. When he summarizes the ungenerous person as "the sort who, if he wins the tragedy competition, dedicates to Dionysus a strip of wood with only his own name written on it," even readers unacquainted with this practice can guess readily enough what it means. Many of Theophrastus's characters are universal types.

In his approach to the work, Theophrastus uses a theory of personality predicated on the belief that traits may be isolated and separately studied. He inherited from Aristotle the idea that badness of character resulted from excess or extremes. Excellence of character—what we would call virtue—required moderating or balancing between the extremes. While Theophrastus's characters borrow from Aristotle's *Ethics*, at least in their examples of vice, he also incorporates elements of comedy and satire perfected by the dramatists, for example ARISTOPHANES. MENANDER's style of New Comedy owes much to the philosophy of character contained in Theophrastus. After Theophrastus, character writing was often imitated, most successfully by SENECA and PLUTARCH. The works of HORACE, MARTIAL, JUVENAL, and LUCIAN all demonstrate their knowledge of the *Characters*.

The several existing copies of the manuscript, in various stages of decay, owe their survival to the frequency with which the work was anthologized in manuals of rhetorical instruction. The character

sketch was a rhetorical exercise recommended by CICERO and QUINTILIAN as a way of developing writing skill as well as providing an understanding of human nature. Medieval writers borrowed the technique of a gallery of personality portraits; the most notable examples are the Prologue to *The Canterbury Tales* by Geoffrey Chaucer, the catalog of the Seven Sins in *Piers Plowman* by William Langland, and *Ship of Fools* by Sebastian Brandt. The 1592 edition of *Characters* by Issac Casaubon inspired renewed attention to the character sketch.

Renaissance writers showed a keen interest in the literature and ideals of the ancient Greeks, among them François Rabelais, Miguel de Cervantes, Desiderius Erasmus, Michel de Montaigne, and Ben Jonson. Several writers of the 17th century attempted their own series of characters modeled after Theophrastus, most notably Jean de La Bruyère, who translated Theophrastus and then continued with his own updated character sketches. Though the technique of the literary "portrait" belonged to the 17th and 18th centuries, the art of describing characters through descriptions of manners and behaviors was adapted by 19th-century novelists from Charles Dickens to George Eliot. In many ways, therefore, the technique of characterization used in the modern-day novel can be dated all the way back to the height of ancient Greece and the work of Theophrastus.

Thomas Aquinas, Saint (ca. 1224–1274)
theologian, philosopher

Thomas Aquinas was born at the castle of Roccasecca, near Naples, Italy, to a noble family. He was sent away before he was five to be educated at the Benedictine monastery of Montecassino, where his father's brother was abbot. Later he studied at the University of Naples. In this culturally rich environment Thomas became familiar with the writings of the Muslim thinkers AVICENNA and AVERROËS, whose study of the Greek philosopher ARISTOTLE, the ideas of whom had been almost forgotten following the collapse of the Roman Empire, was beginning to attract the interest of Christian Europe. Thomas Aquinas was among those who studied Aristotle's theories.

In Naples, Aquinas also met members of the new Dominican order of mendicant friars, who led a more austere and self-denying life than that practiced by the older established monastic orders such as the Benedictines. Aquinas was still a teenager when he decided to join the Dominicans. His family opposed this decision and held him captive for more than a year, trying to force him to change his mind. Eventually they had to accept that their efforts were wasted, and he was allowed to take his vows in 1244.

The Dominicans sent young Thomas to Cologne to study with the scholar Albertus Magnus (later known as Saint Albert the Great, ca. 1200–80). Albertus Magnus had made an extensive study of Aristotle, and this shared interest contributed to the close relationship between master and pupil, which lasted for many years. Aquinas moved to Paris when Albertus Magnus took up a teaching position there in 1245. After completing his studies, he remained in Paris as a professor for another three years. He then spent 10 years in Italy, much of the time in attendance on the pope, but

returned to Paris for another three years before taking up a teaching position at the University of Naples. A mystical experience in 1273 that made all his work seem to him "like straw," as he told a friend, led to his ceasing to write, but he continued with his teaching and administrative work. When he was about 50 years old, he was on his way to Lyons on church business when he died, not far from his birthplace.

Critical Analysis

Thomas Aquinas wrote more than 60 works, all in Latin, the language of scholarship in his day. There are sermons, biblical commentaries, polemical tracts (he was often called on by Church leaders to respond to controversies and potential heresies), philosophical expositions, and theological works. His 13 commentaries on the works of Aristotle are still valued by students of philosophy for the help they give in understanding Aristotle's ideas, but as a Christian philosopher, Aquinas probably saw them more as a means to a clear understanding of the unity of God's creation.

The early medieval Catholic Church tended to dismiss classical philosophers like Aristotle, who had lived before the time of Christ, as pagan and therefore irrelevant or even harmful to Christianity. Aquinas demonstrated that Aristotle's ideas were in fact compatible with Christian teaching. Aristotle's confidence in the capacity of human reason to uncover the underlying order in the universe by studying the details of creation was pursued by Aquinas, who identified that underlying order with God. Aristotle's proof of the existence of a prime mover was developed by Aquinas as proof of the existence of God. His modification of Aristotle's approach was to argue that human reason could not discover everything, and God's revelation was needed to discover the fullness of truth.

Aquinas's greatest book, the *Summa Theologica*, which he began around 1265 and was still working on when he stopped writing in 1273, was conceived as an aid to students of theology and metaphysics. The original title, *Summa Totius The-*

ologiae, may be translated as “the summary of all theology,” and the work is indeed ambitious. It has three parts, dealing with the nature of God, ethics, and Christ. In a logical progression of ideas, Aquinas takes a philosophical and theological approach to reconciling the concepts of reason and faith. He includes commentaries by such philosophers, theologians, and scholars as Avicenna, IBN GABIROL, Averroës, AUGUSTINE, and MAIMONIDES.

Aquinas was the most important Christian theologian of the European MIDDLE AGES, providing a new balance between theology and philosophy that held until the age of science began in the 17th century.

Aquinas was officially recognized as a saint by the Church in 1373, and his teachings (collectively known as “Thomism”) have become identified with the doctrine of the Roman Catholic Church. His work is still studied by modern philosophers.

Thousand and One Nights, The (*Alf Layla wa-Layla, Arabian Nights*)

(9th–13th centuries) *Islamic story collection*

The Arabic *Alf Layla wa-Layla* (*The Thousand and One Nights*) is a vibrant and extensive collection of stories brought together in the Islamic world of the ninth–13th centuries. Also known as *The Arabian Nights*, the original tales have Indian, Persian, and Arabic antecedents and were likely told for centuries before being written down.

A cycle of tales with no single author and no single source, *The Thousand and One Nights* is enormously diverse and entertaining. Long regarded as a collection of fairy tales, like the folklore of the Grimm brothers or the fables of Aesop, the tales, as Robert Irwin observes in *The Arabian Nights: A Companion*, include “long heroic epics, wisdom literature, fables, cosmological fantasy, pornography, scatological jokes, mystical devotional tales, chronicles of low life, rhetorical debates and masses of poetry.”

Though compilers can select among hundreds of original stories, the traditional opening remains the same. Long ago, Sultan Shahryar, bitterly disappointed by the infidelity of his wife, vowed never again to trust a woman. He proposed instead to marry a new wife each night and have her killed the next morning. After some time had passed, the beautiful and clever Scheherazade developed a plan to end the tyranny. She persuaded her father to marry her to the sultan, then begged the sultan to allow her sister, Dunyazad, to spend her last night on earth with her. Just before dawn, Dunyazad woke Scheherazade and asked her to tell a story. When dawn broke, the story was unfinished, and the sultan realized he must keep her alive in order to hear the end. By the next morning the tale was still unfinished, and once more the execution was delayed. This cycle continued for more than three years—for a total of 1,001 nights—during which time Scheherazade bore the sultan three healthy sons, and he fell deeply in love with her.

The Thousand and One Nights entered Western consciousness with the French translation by Antoine Galland (1646–1715) of a Syrian manuscript

dating to the 14th or 15th century. His publication, preserved at the National Library in Paris, is now the oldest extant manuscript of the *Nights*. Edward Lane undertook an English translation in 1838–41, with large sections excised to suit the sensitivities of 19th-century Victorians. The 1885 translation by Sir Richard Burton, who traveled widely through the Middle East and India (and also introduced the English-speaking world to the *KAMA SUTRA*), is not entirely faithful to the Arabic versions, mixing in tales by Geoffrey Chaucer and François Rabelais. Since some of Galland's added stories have been translated into Arabic, it is now virtually impossible for any but the most devoted scholar to trace the complex web of influences. Readers can therefore simply relax into the magical world of *The Thousand and One Nights*, losing themselves among its colorful characters: brave travelers and lovely princesses; capricious rulers and trickster magicians; and the demons, witches, and clever genies who constantly test human ingenuity.

Critical Analysis

The narrative technique of using a frame story to link a series of smaller tales is a standard feature of ORAL LITERATURE and also appears in such written works as the *PANCHATANTRA* of India, OVID's *Metamorphoses*, Chaucer's *Canterbury Tales*, and Giovanni Boccaccio's *Decameron*. The multitude of stories in *The Thousand and One Nights* are linked by the irresistible figure of Scheherazade, who, in Burton's translation, is both educated and beautiful:

. . . indeed it was said that she had collected a thousand books of histories relating to antique races and departed rulers. She had perused the works of the poets and knew them by heart; she had studied philosophy and the sciences, arts, and accomplishments; and she was pleasant and polite, wise and witty, well read and well bred.

In addition to the stories told by Scheherazade, the other characters begin to tell their own stories, and the narrative thread can become quite compli-

cated. Readers of *The Thousand and One Nights* find this interweaving of narratives one of its most appealing characteristics. Novelist A. S. Byatt, in the introduction to the Modern Library edition of Burton's translation, celebrates this structure and sees it as supporting a larger theme:

A character in a story invokes a character who tells a story about a character who has a story to tell. . . . Everything proliferates. The *Nights* is a maze, a web, a network, a river with infinite tributaries, a series of boxes within boxes, a bottomless pool. It turns endlessly on itself, a story about storytelling. And yet we feel it has to do with our essential nature, and not just a need for idle entertainment.

For Scheherazade, storytelling is the way to extend her life. The themes of the individual stories continually echo the themes of the larger work: kings and powerful beings like genies constantly demand to hear stories; the weak or oppressed are constantly brought to judgment and must use their wits to protect their lives; wily sages and thieves pop out of corners to trick honest citizens out of their earned wealth; the stouthearted undertake fantastic voyages and return with remarkable tales. Magic elements abound in the stories, but human cleverness predominates.

An example of the nested narrative technique appears in the tale of "The Fisherman and the Genie," where the genie, waiting for the fisherman to return to fulfill a sentence of execution, is approached by an old man and a hind, and so begins the story "The Old Man and the Hind." The narrative thread always finds itself, however; the first story ends with the fisherman tricking the genie into going back into his bottle, and the sly fisherman quickly stoppers it up.

Although certain translators have tended to regard *The Thousand and One Nights* as no more than engaging tall tales, and to collect them as *The Arabian Nights' Entertainments*, these ostensibly diverting stories carry a prickly subtext. Certain tales seem uncannily modern, as in the tale of "The

Ebony Horse,” where a sage creates a flying machine that an enterprising prince learns to operate. Moreover, close readers will observe that the *Nights* offers an intriguing series of lessons on public relations. The tales expose a broad view of all classes and levels of society, creating a stage where kings rub elbows with street thieves. Through frequent praises and invocations, Allah serves as a constant presence and a unifying force that binds the tales; Burton’s translation illuminates this in its opening and closing addresses to MUHAMMAD. Characters of different races and religions populate the *Nights*, offering glimpses into the diverse world of the Middle East. The seemingly riotous tales of crosses and double-crosses include useful advice on how to operate within a society where it is accepted that women occupy subordinate positions, class differences are distinct and insurmountable, and rulers have the power to distribute justice, grant life, and demand death.

The Thousand and One Nights has had a profound impact on all the cultures it has reached. In their childhoods, the English poets Samuel Taylor Coleridge and William Wordsworth and the Victorian novelist Charles Dickens immersed themselves in tales of the Arabian nights; both Marcel Proust and Edgar Allan Poe saw themselves as Scheherazades of sorts. Twentieth-century novelists have composed modern versions of oriental fables—for example, Salman Rushdie in *Haroun and the Sea of Stories* and Naguib Mahfouz in *Arabian Nights and Days*. The *Nights* have sparked the imagination of filmmakers and musicians, and almost any child has heard at some point, and in some version, the tale of Aladdin and his enchanted lamp, the seven voyages of Sinbad the Sailor, and the tale of Ali Baba and the Forty Thieves. Many a child has perhaps wished for a lamp containing a wish-granting genie without realizing the true moral of Aladdin’s story: that genies are tricky creatures and wishes are dangerous things.

Some maintain that *The Thousand and One Tales* is an achievement unparalleled by any work of literature in any other culture. Its sheer volume, diversity, and complexity are unrivaled. It sheds

light on the culture of its creators, and it continues to spark the imagination of new generations with its promise of magic and its lesson that storytelling is the only sure way to achieve immortality.

Thucydides (ca. 460–ca. 400 B.C.) *historian*

Very little is known about the life of Thucydides, particularly his early years. He was born and raised in Athens as an aristocrat, “son of Olorus,” as he described himself, and apparently relished his status.

Athens and Sparta were both military superpowers; the former ruled the seas and the latter boasted the world’s greatest army. After the Greek city-states unexpectedly defeated the powerful Persian Empire in the early fifth century B.C., the alliance between Athens and Sparta disintegrated. The allies became adversaries, each struggling for dominance, leading to the Peloponnesian War.

Thucydides fought for Athens in the war, and by 424 B.C., he had been designated a general. Stationed in the Balkans in a region called Thrace, he

failed to thwart the capture of the strategically positioned port city of Amphipolis. When he described the incident in his only known work, the *History of the Peloponnesian War*, Thucydides defended his good intentions, saying that even though he “sailed in haste with seven ships,” the citizens surrendered before he could reach them. For this mistake, he was exiled from Athenian territory for 20 years, until the end of the war, when Sparta, with the aid of Persia, annihilated the mighty Athenian navy, cut off the food supply until the city surrendered, and installed an oligarchy at Athens.

From adversity arose opportunity. “Because of my exile,” Thucydides wrote, “I was enabled to watch quietly the course of events.” Like his older colleague HERODOTUS, Thucydides became an observer and investigator of both warring factions. He was permitted to return to Athens in 404 B.C., but he must have died within a few years of his return, for he never completed his *History of the Peloponnesian War*.

Critical Analysis

Whatever his feelings about his exile, Thucydides wrote *History* without rancor or prejudice. He gives equal attention to both parties, who perpetrated brutality and bloodshed in an acquisitive and ruthless grasp for power. His *History* is an important treatise on the nature and causes of war, its impact and consequences, and under what circumstances it will continue to disgrace and destroy civilization.

Unlike Herodotus, who often digresses during his history of the Persian War, Thucydides remains focused on recording military events and their implications. He divides *History of the Peloponnesian War* into three military phases. The first covers the conflict between Sparta and Athens, which lasted from 431 to 421 B.C. The second covers the Athenians’ expedition into Sicily and its failure during the years 415 to 413 B.C. The third phase covers the new war between Sparta and Athens, which lasted from 413 to 404 B.C., although Thucydides’s writing ends in 411 B.C.

The historian begins his opus by clarifying his methodology and assuring readers that his conclusions are reliable, based on the “clearest data.” He acknowledges, however, that memories are imperfect, impressions fallible, and eyewitnesses biased. Unlike “the compositions of the chroniclers that are attractive at truth’s expense” (presumably Herodotus), “[t]he absence of romance in my history will . . . be judged useful by those inquirers who desire an exact knowledge of the past as an aid to the interpretation of the future. . . . I have written my work . . . as a possession for all time.”

Thucydides concludes in his introduction, “The real cause” of the Peloponnesian War was “the growth of the power of Athens, and the alarm which this inspired in” Spartan territory, which “made war inevitable.” Important throughout the *History* is his ongoing comparisons of the two antagonists. Athens was a democracy that had only recently gained influence in Greece. Because its power was naval, its economy was a commercial one. Thucydides believed, incorrectly, that Pericles, a statesman and military commander of the time, perfected Athenian democracy; thus, he includes several of Pericles’ speeches in Book II of his *History*.

In Sparta, government was controlled by a handful of powerful men, and the city-state was known for its long-standing power and military prowess. As its forces were land-based, so was its agrarian economy. If Athens was enterprise and innovation, Sparta was fortitude and discipline.

A turning point in the war occurred after the revolt of Mytilene, the chief city on the prosperous island of Lesbos, home of the lyric poet SAPPHO. All of Attica had been ravaged by the Spartans, and Athens had been blockaded. Teeming with refugees who had fled the countryside, the city succumbed to overcrowding, creating abysmal sanitary conditions and a plague that killed Pericles. During the Mytilene uprising, Athens was still reeling from the devastation, but its forces nevertheless laid siege to Mytilene, which finally succumbed when conditions there became intolerable.

The rulers of Athens were in no mood to be magnanimous in dealing with the insurrectionists;

the assembly voted to slaughter the men and sell the women and children. A warship was promptly dispatched, but the assembly soon regretted its decree. Wholesale extermination would eliminate potential friends as well as foes; it might trigger rebellion rather than suppress it; and Mytilene had military and monetary resources that could help Athens defeat Sparta. Even though Cleon, Pericles' successor, insisted that mercy was not in the empire's best interests, cooler heads prevailed, and the two cities eventually became allies.

Throughout the remainder of the *History*, Thucydides characterizes Athens as increasingly bloodthirsty and repressive, and less the idealistic, enlightened force depicted at the beginning. He emphasizes how the Athenians compromised their principles, gave way to revenge, attained a feverish level of ruthlessness, and justified murder for political gain despite their democratic ideals.

Just one example of this overriding desire for power appears in Thucydides' account of the conflict between Athens and Melos. Melos was a colony of Sparta that endeavored to remain neutral during the Peloponnesian War. Athens, affronted, tried to force an alliance with the small island city-state, to no avail. According to Thucydides, during a conference between councils for the two entities, the Athenian representative asserted that the "will to power" is a fundamental human drive and, essentially, that "might makes right":

[We] both alike know that into the discussion of human affairs the question of justice only enters where the pressure of necessity is equal, and that the powerful exact what they can, and the weak grant what they must. . . . For . . . of men we know, that by a law of their nature wherever they can rule they will. This law was not made by us, and we are not the first who have acted upon it; we did but inherit it, and shall bequeath it to all time, and we know that you and all mankind, if you were as strong as we are, would do as we do.

In 416 B.C., the Athenians inflicted on Melos and other Greek city-states what it had spared Mytilene: massacre, slavery, and occupation. As the war persisted, Thucydides portrayed Athenians as becoming weak in body and spirit, fractious and factious; he saw the ideal of Athenian democracy deteriorating as a result. According to Harvard professor John H. Finley, Jr., the end of the *History* expresses "a mood of fear, instability and division" among the Athenians. "As description, the account of the slow death . . . of Athens' strength and hope is Thucydides' masterpiece and one of the masterpieces of all historical writing."

Classics scholar H. C. Baldry writes:

Thucydides' proud claim to immortality has proved correct: his book is still absorbing reading. . . . His swift narrative . . . breathes the spirit of contemporary rationalism yet has an old-fashioned flavor; it is concise and austere, yet forceful and impassioned. [Thucydides is] deeply moved by Athens' folly . . . and its disastrous results; yet he austere surveys the whole story as a clinical example of human behavior under the stresses of imperialism and war.

As such, the *History of the Peloponnesian War* influenced a host of Greek writers, politicians, and historians, including XENOPHON, Cassius Dio (ca. 164–ca. 229), Polybius (ca. 200–ca. 118 B.C.), Thomas Hobbes (1588–1679), and more recently author Lewis Lapham. More importantly, however, Thucydides' *History* has influenced the perception of war—its philosophy and politics—throughout the ages and up to the present day.

Tristan and Iseult (*Tristram and Iseult*) (1100s–1200s)

Tristan and Iseult are a fictional pair of lovers who dominated the Western European medieval imagination. The story of their adulterous love even became part of the King Arthur story cycle.

Tristan (also rendered as Tristram or Tristram) is the favored nephew of King Mark of Cornwall, and he is sent to accompany the king's new bride, the Irish princess Iseult (also rendered as Iseut, Isolt, Isolde, Ysolt, etc.), on her boat ride to her new husband in Cornwall. On the voyage, Tristan and Iseult mistakenly drink a love potion that was intended for her and King Mark; consequently, they fall passionately in love. Once they arrive at court, they continue to conduct their affair in secret. King Mark loves both his nephew and his wife, so when some of his knights and courtiers tell him they suspect Tristan and Iseult, he initially refuses to believe them. Finally, the king finds out about their

affair, and the pair are sent off in exile, where they continue to meet.

In several versions of the story, Tristan marries a princess of Brittany named Iseult of the White Hands; even though he performs the marriage in an attempt to forget his one love, he is still so obsessed with Iseult that he marries the princess only because she has the same name. Tristan is mortally wounded, and he sends word to Queen Iseult to come to him. Iseult sets out to meet her lover and heal him, but she arrives after his death, and she dies of grief. The two are buried side by side.

The origins of the Tristan and Iseult story may be Celtic; the place- and character names derive from Cornish and Welsh, and references to King Mark and Tristan appear in Welsh bards' story collections of the 11th century. But two 12th-century French romances are the earliest surviving sources. One is by a poet called Bérout, and the other is by a man who calls himself Thomas à Angleterre (Thomas of England). Both versions are unfinished, but an Old Norse translation of Thomas's version is complete. A French prose version of the story dates from the mid-13th century, and this is the version that incorporates Tristan into the world of King Arthur and the quest for the HOLY GRAIL. This extremely popular version was translated into Italian, Spanish, and even Russian and Polish, spreading the Arthurian tales into Southern and Eastern Europe.

German medieval literature, however, not only produced the earliest complete version of *Tristan and Iseult* (1170–90), but also one of the great works of medieval literature, the *Tristan* of GOTTFRIED VON STRASSBURG (1200). Gottfried's poem is incomplete, but it is masterful in its exploration of the characters' psychological states. Gottfried uses the fatal love potion as a metaphor for "love at first sight." Even though he focuses on the joy that their love brings them, Gottfried does not neglect the pain and betrayal that the affair causes every character involved. This version of the Tristan and Iseult legend was enormously popular and influential, inspiring Richard Wagner's great 19th-century opera *Tristan und Isolde*.

The Tristan and Iseult story inspired other writers not usually associated with the Arthurian cycle. MARIE DE FRANCE wrote a *lai*, or short song, called “*Chevrefoil*” (“Honeysuckle”) about Tristan and Iseult, arranging one of their rendezvous in the woods. Other short works or fragments from longer ones depict episodes based on the famous lovers. Several surviving short poems in French describe incidents in which Tristan pretends madness or disguises himself as a wandering minstrel or beggar in order to visit Iseult while he is in exile. The story was so popular that it even appeared in the tapestries and textiles that decorated medieval castles.

Part of the appeal of the Tristan and Iseult legend stems from its time period and the culture that produced it; Tristan is the knight as courtly lover, while Iseult combines fidelity to her lover with resourcefulness in meeting him. The overwhelming power of their attraction to each other, as well as the painful consequences of their love, overrides any moral or ethical problem that their affair poses to readers, and their troubled passion has set the tone for literary depictions of romantic love for most of Western world literature.

Critical Analysis

The earliest French versions of the Tristan and Iseult story differ in tone and emphasis. Medievalists have called the Bérout version the “common version” because it takes a commonsensical and action-oriented approach to the narrative. When it focuses on the lovers’ duplicity, it seems to regard their cleverness as admirable rather than despicable. When Iseult pleads her innocence before King Marc and King Arthur, she and Tristan plot for him to disguise himself as a leper and help carry her across a marshy brook. Thus, when she swears that the only men who have been between her thighs are her husband and the leper who carried her over the marsh, she technically tells the truth. Finally, the Bérout version contains earthy moments that are both humorous and disturbing. When King Mark tries to punish Iseult and Tristan the first time, he initially plans to burn them alive. When a leper proposes that a better punish-

ment would be to give Iseult to the leper colony, Bérout spares no detail in describing why this would be worse than death:

*No lady in the world could tolerate
A single day of relations with us!
Our ragged clothes stick to our bodies; . . .
When she sees our squalid hovels
And shares our dishes
And has to sleep with us,
And when, instead of your fine food, sir,
She has only the scraps and crumbs
That are given to us at the gates. . . .*

Marc agrees this is a fate worse than death and hands Iseult to the lepers.

Thomas à Angleterre’s narrative does not focus on the main characters’ trickery and action as much as it does on their psychological states and the effects the adulterous relationship has on other characters. This version, called the “courtly” version, is not simply more refined but more concerned with how the two main characters’ passion has consequences for themselves and others. Tristan chooses to marry Iseult of the White Hands in Brittany because he imagines that marriage will offer him a release from physical frustration since he is separated from Queen Iseult. Yet as Thomas describes his thought process, this is not a simple problem that can be solved by substituting one woman for another:

*When they cannot have their desire
Or what they love most,
They do what is in their power to do;
Out of desperation they will do something
Which often increases their pain twofold,
And, seeking to be free,
They yet cannot break the bond.*

Instead of finding peace within his marriage, Tristan feels little attraction toward his wife and guilt for betraying his true love and causing Iseult of the White Hands to feel rejected and bitter. Iseult, on the other hand, does not enjoy any pleasure with

her husband, Marc, because he is not Tristan. To contradict the old saying, all cats are not gray in the dark, and probably the greatest innovation in the Tristan and Iseult story is the insistence that individuals cannot be commanded to love because of social institutions or codes of loyalty. Love becomes a wild force that threatens the social order: Tristan loses his standing in court and the protection of his closest kinsman, Iseult loses her husband's trust, and King Mark loses respect from his court because of his lenient dealings with the pair. Yet the doomed lovers are portrayed sympathetically in all versions of the story, and their struggle between social obligations and individual desires continues to inspire the Western imagination.

troubadours (12th–13th centuries)

The troubadours were poets and musicians who became common in the south of France during the early 12th century. Like the medieval *jongleur*, or

minstrel, troubadours traveled widely, but unlike the minstrels, troubadours composed and performed their own work. They wrote in a medieval language called Provençal, today called Occitan, and their lyrics resembled modern song lyrics in that they were meant to be sung to musical accompaniment. While most of the poets known to us were male, there were also female troubadours called *trobairitz*. The *trouvères*, the northern French counterparts of the troubadours, borrowed their ideas and techniques from the southern troubadours.

The troubadour style flourished over a span of about 200 years. The early troubadours first appeared in the first half of the 12th century in the province of Poitiers. From 1150 to 1180, they prospered under the patronage of Eleanor of Aquitaine, and in the years 1180–1209, the troubadour fashion reached courts in Italy, Spain, Hungary, and even Malta. With the beginning of the Albigensian CRUSADE (1208), however, the interest in courtly poetry began to decline, especially when troubadours lost their wealthy patrons, and religious fervor began to supplant earthly love as the popular theme for poetry. By the late 13th century, devotional songs addressed the Virgin Mary rather than mortal women, and the troubadours effectively disappeared.

The most important contribution the troubadours and *trobairitz* made to Western literature was their evolution of the concept of courtly love, or *fin' amor* ("fine love"). Courtly love, part of the code of CHIVALRY, concerned the worship of a noble woman by a poet who made himself a servant to love. This concept profoundly affected later MEDIEVAL ROMANCE, as seen in the works of such authors as CHRÉTIEN DE TROYES, MARIE DE FRANCE, and JEAN DE MEUN, as well as in stories about King Arthur and the HOLY GRAIL. While the style of troubadour poetry might be either light and courtly or brooding and reflective, the poems frequently use and reuse certain images, devices, and conventions to describe the poet's experience of love and life.

Many of the troubadour manuscripts contain short sections called *vidas* (from the Latin *vita*

“life”) that serve as a brief biography prefacing the poet’s songs. Troubadours could be of any class, from noble to peasant, and in the 13th century troubadours frequented courts all over western Europe, from Portugal to the Holy Land. Since it is difficult to know whether the poet or another authored the *vidas*, it is virtually impossible to determine how much is factually true and how much was added to create interest. Several of the *vidas* serve as touching narratives that could stand as separate pieces of literature.

Critical Analysis

Troubadour poetry could address a variety of topics or take on any number of forms. The *vers* was often a moralizing poem, and the *sirventes* was a poem of blame or praise, frequently about deeds of war. The *tenso* was a debate poem that staged an argument between two or more parties; the *alba* was a song addressed to the dawn; the *pastorela*, based on the Greek pastoral image, involved the love affairs of shepherds and shepherdesses; and the *planh* was a lament on the death of a king or other important personage.

By far the most prevalent and influential of the genres was the *canço*, the song about love. In their treatments of love, troubadours often drew on biblical sources but also borrowed classical tropes from love poets such as OVID. From this they developed a concept of courtly love with very specific rules. The poet is invariably in love with a noble lady or *domna*, a situation innovated by William IX, Count of Poitiers and Duke of Aquitaine (born 1071), the earliest recorded troubadour. The lady is portrayed as possessing refined manners and speech and surpassing beauty. William writes, “[f]or the sweetness of her welcome, for her beautiful and gentle look . . . a man who wins to the joy of her love will live a hundred years.” To love the lady is the chief joy of the poet’s life. As William says:

“The joy of her can make the sick man well again, her wrath can make a well man die. . . .”

The French troubadour Marcabru (fl. ca. 1130–56), supports this notion that love is the pursuit of the poet’s life, singing: “He whom noble Love singles out lives gay, courtly and wise; and he whom it rejects, it confounds, and commits to total destruction.” And Arnaut Daniel declares that he prefers his lady’s love to any of earth’s highest honors: “I’d not have the empire of Rome, nor be made pope of it, if thereby I might not return to her for whom my heart burns and crackles.”

But the lady whom the poet adores is married, so the lover can only long for her from a distance, which produces an understandable state of distress. Equally distressing to the lover is the lady’s behavior, which according to the rules of courtly love may be gracious or distant by turns. Sometimes she will treat him with warm affection, sometimes with icy disdain, and she may destroy his heart by faithlessly giving herself to another. Additionally, the lover may suffer from competitors’ slanders, all of which add a tone of lament to the poetry. As Peire VIDAL complains, “No more than the fish can live without water, love-service cannot be without slanderers, hence lovers pay dearly for their joy.”

When not complaining of the lady’s coldness or infidelity, the lover in the poem frequently begs for her attention and love, as in these lines by Italian troubadour Sordello (ca. 1200–ca. 1269): “For Pity’s sake I pray you, fair beloved, that with some little crumb of love’s joy you come to my help, swiftly. . . . For otherwise I can have no joy, unless pity and mercy take you.” In any circumstance, the pursuit of his lady causes the poet to suffer. Thus, love is the highest and most astonishing experience of which the human being is capable.

The female *trobairitz*, though addressing male lovers, use the same stylistic techniques and express the same sentiments of courtly love. For example, the Countess of Dia sings of her fidelity to her lover and her joy in love:

. . . my love for him has never strayed,
nor is my heart the straying kind.

*I'm very happy, for the man
whose love I seek's so fine.*

In another verse, she expresses a bitter lament over her lover's coldness and lack of faith:

*. . . I feel your heart turn adamant
toward me, friend: it's not right another
love
take you away from me, no matter what she
says.*

The clear style, pitch of feeling, and complexity of emotion achieved in troubadour lyrics helps explain why, when blended with skillful melodies, these songs pleased audiences for so long and gained the poet noble favor above all other entertainers at court.

Though the early troubadour poetry reveals inventive experimentation with topics and images, later troubadour poetry became rather formulaic in its adherence to certain devices, such as the love triangle, the feeling that there is no joy above that of loving another, and the lover's long suffering marked by periodic bursts of happiness. Though troubadours eventually disappeared, their code of courtly love persisted in medieval literature through the late MIDDLE AGES into the Renaissance and beyond, appearing in such works as Ludovico Ariosto's *Orlando Furioso*, Geoffrey Chaucer's *The Book of the Duchess*, Sir Thomas Malory's *Le Morte d'Arthur*, and Edmund Spenser's *The Faerie Queene*. Writers of later ages and nationalities continued to elaborate on and improve the tradition of lyric love poetry: the Italians DANTE and Petrarch, the French François Villon and Pierre de Ronsard, the Spanish Miguel Cervantes and Luis de Góngora, the German minnesingers, and English poets from William Shakespeare to John Donne, to name only a few. As translator Alan Press says, "the work of the troubadours lies at the origin of a centuries-long tradition of high lyric poetry in western Europe." In effect, the troubadours created and communicated to the rest of Eu-

rope an original way of composing poetry and talking about love whose forms and language have survived in Western culture to the present day.

tuuwutsi narratives *Hopi storytelling*

Tuuwutsi represent the principal narrative genre of Hopi traditional literature. In the custom of Native American storytelling, these oral narratives have a strong aural component. Among the Hopi, *tuuwutsi* are stories that a storyteller has heard secondhand. The context is secular, and the subjects are make-believe things. The Hopi distinguish *tuuwutsi* fantasy stories from *ka'atsa* ("not false") stories, which have preserved events in Hopi history. COYOTE TALES, called *istutuwutsi*, comprise a subgenre of the *tuuwutsi* narratives.

Hopi storytellers typically set off the *tuuwutsi* fictional narratives from normal discourse by using special phrases that provide formulaic beginnings and endings. For example, *Aliksaii* is the Hopi counterpart of "once upon a time," and *paigakpola* translates as "now to where it ends." The audience replies in expected ways at key places as the narratives are told.

Some of the Hopi *tuuwutsi* include “The White Dawn of the Hopi,” a story of how the Hopi came to be; “The Hopi Boy and the Sun,” a tale about a boy who travels with the Sun, his father, learns how to treat people rightly, and then returns to his own people to teach them the same; “Son of Light Kills the Monster,” a story about how the Son of Light retrieves his kidnapped wife by conquering the monster Man-Eagle in a series of contests; “The Revenge of Blue Corn Ear Maiden,” a tale of rivalry between two friends; and “A Journey to the Skeleton House,” a story of a young boy’s learning what became of the dead, his journey to the Otherworld, and how the living and the dead began to work together.

Both the *tuuwutsi* and *ka’atsa* are used by the Hopi, as are stories in other Native American nations, to recount tribal history, continue the ORAL

LITERATURE/TRADITION, explain the creation of the world and its occupants, teach morals or lessons, entertain, and preserve cultural traditions and knowledge.

Valmiki, Maharshi (fl. ca. 550 B.C.) *poet*

Valmiki is the Indian seer, or *rishi*, credited with creating the epic *Ramayana*. Because of his long practice of penance and seclusion in his retreat by the river Tamasa, Valmiki earned the title of Maharshi, “maha” meaning great. He is celebrated as the first poet to compose in Sanskrit, and his *Ramayana* is considered the first real poem of India.

Legend surrounds Valmiki and the creation of his EPIC work. Some stories have it that he started life as a robber but saw the error of his ways and became spiritually devout. According to tradition, Valmiki was walking along the river Tamasa one day and watched a pair of lovebirds nesting together in a tree. When a hunter approached and killed one of the birds, Valmiki was so shocked and distressed that he cried out, cursing the hunter, “Thou shalt never command any respect in society for years to come as you have shot dead one of the innocent birds engrossed in love.” Upon considering his statement, Valmiki realized that, in the Sanskrit tongue, he had spoken four rhythmic lines of eight syllables each, which closely resembled the meter of Vedic literature. He decided to call this poetic meter the *shloka* and use it as the form in which to tell an epic tale of love, devotion, separation, and sacrifice. Inspired by the god Brahma and

the sage Narada, who first told him the story of Rama as a model of humanity and kingship, Valmiki composed the first and most beloved poem of Indian history.

In the tradition of Sanskrit literature, the *Ramayana* is thought to closely follow the Vedas and thus is of an earlier date than the *PURANA* or the *MAHABHARATA*, the longest and most ornate of epics. Like other ancient poems, the *Ramayana* most likely first existed as a collection of stories passed along by storytellers who recited the poem by heart. Valmiki, though considered the poet, may never have put his work into written form. Scholars of Indian literature have debated at length about the date of composition, and no firm consensus has yet been reached. Tradition places the poet at the dawn of history, shortly after the Aryans began to migrate into what is now India. The majority of *Ramayana* scholars believe from various archaeological and other literary evidence that Valmiki, and Rama, lived sometime between the seventh and 11th centuries B.C. A genealogy of kings, which exists in the *Purana*, cites Rama as an actual prince of the Ikshavaku dynasty, but no dates are given.

The poem has been so extensively revised, extended, and transcribed that distinguishing the

original subject matter devised by Valmiki from the later additions becomes simply an argument of style. Scholar C. V. Vaidya believes that sometime in the first century B.C., the poem was rewritten and recompiled into the form in which it exists today. Originally the poem celebrated Rama as a great man and the best of kings. The first-century additions and adaptations reflect the evolving beliefs concerning the avatars, or incarnations, of the god Vishnu. In Hindu tradition, the gods incarnated in human form to provide models for right living and intervene in certain affairs. In the *Mahabharata*, the god Vishnu incarnated as Krishna to help Arjuna win his great battle. After the composition of the *Mahabharata*, it was seen that Rama had been the god Vishnu in a different, previous form that had come to earth expressly to conquer the demonic tyrant Ravana. Scribes embellished the text of the *Ramayana* to reflect that belief.

Most critics accept the attribution of the *Ramayana* to Valmiki because the poet appears in two places in the action of the epic itself. In the first, during their exile in the forest, Rama, his wife Sita, and his brother Lakshmana visit Valmiki in his remote hermitage and converse with him. Later, after Rama has been restored to the throne but has had to banish Sita on suspicion of infidelity, Valmiki brings two young boys, Lava and Kusha, to court. The boys sing the story of Rama, and Valmiki then reveals that these two are the sons of Rama and Sita. Both of these instances, however, create confusion when compared to the rest of the poem. If Sita and Rama visited Valmiki in the woods, then he presumably already knew their story and would not need Narada to explain it to him. Also, the revelation of Rama's sons and Sita's final trial take place in the last portion of the work, which some scholars believe is a later addition or appendix and not the work of Valmiki himself. Similar contradictions and confusions appear throughout the poem, most likely due to its age and the number of people who have contributed to its retelling. As an example of poetic literature, the *Ramayana*

nevertheless stands as a work of great beauty and extraordinary influence.

Critical Analysis

Though the *Ramayana* can be appreciated as simply an epic story, along the lines of the *SHAH-NAMEH* of Persia or the German *NIBELUNGENLIED*, it is, as scholar V. Sitaramiah says, "a great literary and poetical document." More than just the life or adventures (*ayana*) of Rama, the *Ramayana* documents philosophical insights and human truths. Like the *Mahabharata*, the *Ramayana* is concerned with the Hindu concept of dharma, which means not only duty but also right conduct. The conduct of Rama is considered an excellent example of following dharma because Rama embodies all of the virtues of the ideal man: He is modest of nature, physically able, intellectually brilliant, and spiritually aware. He shows compassion and consideration for all beings, is balanced in his emotions, accepts any challenge that will benefit the general good, and demonstrates complete reverence for and obedience to his elders. A fitting companion, his wife Sita, in her turn, embodies all the virtues of the ideal woman. She is described as "proud and peerless," surpassingly beautiful, and steadfastly faithful. Rama wins her in true epic fashion by performing a mighty feat: He breaks a bow that no other suitor had been able to bend, thus showing himself worthy of her hand.

The adventures of Rama and Sita commence with his willing exile into the forest. Rama is the son of King Dasarath and destined to become the next ruler of Kosala and its capital city, Ayodhya. One of the king's wives, Kaikeyi, convinces Dasarath that her son Bharata should rule. Though all are distressed by the king's decision, Rama cheerfully obliges the will of his father and prepares to go into exile. Sita and Lakshmana insist on going with him. For 10 years they live peacefully and idyllically, until the demon Ravana decides to capture Sita. Through a series of de-

ceits, he manages to fly away with her to his island country of Lanka, where he holds her prisoner. Rama is joined in his search by the creatures of the forest. He and his army of forest dwellers attack Ravana, and the poem recounts in detail every blow of the battle that follows. In the end, Rama vanquishes Ravana, and Sita undergoes a trial by fire to prove that she was faithful to her husband throughout her imprisonment. The original portion of the *Ramayana* concludes with Rama and Sita returning to Adodhya and ascending the throne in triumph:

*Fourteen years of woe were ended, Rama
now assumed his own,
And they placed the weary wand'rer on his
father's ancient throne.*

Some modern translations include the last chapter, though it is considered spurious, where Sita is banished once more and bears her children in exile. Valmiki brings them to court, where they sing the epic, and in the dramatic confrontation between Sita and her husband, the earth opens and swallows Sita as the final proof of her innocence. Thereafter, Rama, who remains unmarried, has a golden image of Sita made, which he places beside him on her throne.

The *Ramayana* of India appears in other literatures of Southeast Asia, including the Buddhist *Dasartha* JATAKA and the *Ramakien* of Thailand. The *Raghuvamsa* of KALIDASA and the *Ramcharitmanas* of Tulsidas both draw from the *Ramayana*. Professor Wardiman Djojonegoro of Indonesia concludes that the *Ramayana* manages to cross many borders and many centuries because the essence of the story remains a “universal source of inspiration.” He writes: “The Rama story articulates and projects a set of moral and ethical values, against which we can evaluate our own human existence. . . . It opens vistas that enable us to enrich our own lives.”

Vidal, Peire (Piere Vidal) (ca. 1183– ca. 1204) poet

Vidal, a Provençal TROUBADOUR who combined elegant simplicity with technically demanding metrical forms, was born in Toulouse, France, the son of a furrier. He began his troubadour career in Marseilles and also spent time at the court of King Alfonso II of Aragon. Vidal spent most of his life

traveling between the courts of Marseilles, Aragon, and Toulouse. In 1196, after Alfonso of Aragon died, Vidal visited the court of King Emmerich of Hungary. He may or may not have joined Marquis Boniface of Montferrat on a CRUSADE in 1202, but he was at the Island of Malta in 1204. He probably died in Provence between 1208 and 1210.

The hallmark of Vidal's poetic style is his clarity and simplicity of expression, a characteristic he shares with BERNARD DE VENTADOUR. Unlike ARNAUT DANIEL, who combined technical mastery with obscure vocabulary and metaphor, Vidal strove to make his work melodious and accessible to his audience. He specialized in the *canso-sirventes*, a Provençal poetic form that mingles the ethos of courtly love (see CHIVALRY AND COURTLY LOVE) with contemporary political references. This form gives Vidal's readers a sense of his restless, brilliant personality. He boasts of his prowess in court tourneys and especially with the ladies:

I am such an one that a thousand greetings
come to me every day from Catalonia and from
Lombardy, for every day my value mounts and
increases, wherefore the King nearly dies of
envy, for I have my fun and pleasure with ladies.

Vidal's claims need to be taken with a grain of salt. According to the rather fantastic biography that precedes his poetry in several manuscripts, he traveled to Cyprus and married a Greek woman, whom he claimed was a niece of the emperor in Constantinople. He was also given to extravagant behavior; when one of his patrons, Count Raimon of Toulouse, died, Vidal mourned him by not only donning black clothing but also by cropping and docking his horses' ears and tails and shaving his and his servants' heads. When Vidal loved a woman named Loba (which means "she-wolf" in Provençal), he made the wolf his heraldic emblem and even put on a wolf skin to be the prey of a mock wolf hunt to gain her pity and attention. Surprisingly, this eccentric man's poetry reveals a directness and elegance in language that makes

him one of the era's most accessible and honored troubadours.

Vigne, Pier delle (Pier della Vigna, Pietro della Vigna, Petrus de Vineis) (ca. 1190–1249) poet

Pier delle Vigne was born in the Italian city of Capua. He studied law at Bologna and became a notary at the court of Emperor Frederick II of Swabia (in southwest Germany), who was also king of Sicily. Vigne helped to draw up Swabia's law codes, and in 1220 he became secretary of the imperial chancellery. His rank, wealth, and power only grew exponentially.

It is believed that in 1244, Frederick II sent Vigne to help THOMAS AQUINAS's family forcibly retrieve young Thomas, who had recently become a monk against their wishes. By 1247, Vigne was a key member of the emperor's inner circle. In 1249, however, he fell from power, possibly because he had been falsely accused of treason. Frederick ordered that Vigne be blinded and led before the public in chains. Disgraced, Vigne died shortly thereafter. Some sources say that he died accidentally, others that he deliberately hit his head against a wall. In his *Inferno*, DANTE depicts Vigne as innocent of treason but guilty of committing suicide.

Vigne was a member of the Sicilian school of poetry, which translator Frede Jensen describes as "the first truly national literary movement in Italy." The school, which flourished at Frederick II's court between 1230 and 1250, included at least 25 poets who wrote poems of CHIVALRY and COURTLY LOVE in the Sicilian dialect. Its members drew inspiration from earlier Provençal TROUBADOURS like BERNARD DE VENTADOUR and JAUFRÉ RUDEL. Unlike the hired troubadours, however, the "Sicilians" were civil servants and nobles.

Vigne's surviving works include several letters written in Latin and a few poems, including two love poems. In "'Twas Love, whom I desire as well as trust," the poet assures his love that he "would speak well, and not be shy, / in telling you I have long loved you, more / than Pyramus his Thisbe could adore."

Unlike troubadours' works, Pier delle Vigne's poems are meant to be read rather than sung. They are not lively, but they are elegantly crafted.

Villehardouin, Geoffroi de (ca. 1150– ca. 1212) *historian*

Geoffroi de Villehardouin, considered to be the first French historian who wrote in his native tongue, was born into a noble family in Champagne, France. In 1185, he became Champagne's marshal, an important administrative position in the hierarchy of feudalism. Marshals were responsible for making and overseeing military preparations and also served as deputies to their lords in governing their provinces. Villehardouin must have had excellent organizational and communication skills for such a position. From 1198 to 1207, he was involved in the Fourth Crusade and was also made marshal of Romania (presently Thrace, in Greece) and given a fiefdom there. This firsthand experience made him well suited to write an account of the crusade.

The Fourth Crusade began in 1198, when Pope Innocent III called for a crusade against the Mus-

lims in Egypt. Initially, his call was ignored, but French nobles finally gathered together in Champagne in 1199 to declare and organize the Crusade. After enlisting the help of the Venetians, the crusaders quickly became split by differing political goals. Some decided to go into Syria, but others, led by the Venetians and Philip of Swabia, decided that they first needed to restore the rightful heir, Alexius Angelus, to the Byzantine Empire to the throne of Constantinople. This group, led by Boniface of Montferrat, who was also the patron of the troubadour Peire VIDAL, was the one Villehardouin accompanied to Constantinople. Byzantines did not particularly like or want Alexius Angelus as their emperor, but in 1203, the crusaders conquered Constantinople, and he was made Emperor Alexius IV. The crusaders found themselves to be an unpopular occupying force, putting down pockets of rebellion throughout Constantinople and the neighboring countryside. When Alexius IV died in 1204, the Venetians and French were convinced he had been murdered and once more attacked the city. Constantinople fell, and for four days, the Western forces sacked the city. The Byzantine Empire was divided among the Venetians, the French, and other European rulers, and a Latin Empire was established in the region, with Baldwin of Flanders elected as the new emperor.

Villehardouin's history of the Fourth Crusade, *La Conquête de Constantinople* (The Conquest of Constantinople) is significant as a historical and literary document. A valuable eyewitness account of the important meetings and decisions that motivated the crusaders, it is also the first history written in French. In relating the events of the Fourth Crusade with exactitude and precision, Villehardouin pleads in good faith in favor of the Crusaders' high command and creates a valuable historical and literary document. Villehardouin's style is clear, concise, and well organized, and his account of the Fourth Crusade influenced the style of French historians beyond the Renaissance. Villehardouin disappeared from the political limelight in 1207 and died without ever having returned home.

Virgil (Publius Virgilius Maro, P. Vergilius Maro, Vergil) (70–19 B.C.) poet

Virgil's birthplace was the village of Andes near the northern Italian city of Mantua in the ancient Roman province known as Cisalpine Gaul, on the Roman side of the Alps. His father, who seems to have been a cattle farmer, beekeeper, and manufacturer of earthenware, once worked as a servant for a man whose daughter he married and must have become fairly prosperous, since he could afford to educate his son for an elite career.

Virgil attended schools in several cities. When he was approximately 11 years old, he was sent to Cremona, about 75 miles from Milan, to study grammar and literature. At the time, Julius CAESAR was governor of Cisalpine Gaul and advocated full citizenship and self-government for the Cisalpines. Virgil developed an enduring admiration for Caesar and for AUGUSTUS, his successor, that would last a lifetime. In 55 B.C., Virgil continued his schooling in Milan, then moved to Rome when he was around 18 to put the finishing touches on his education. He was lectured on Latin and Greek prose style, including forms of expression, literary devices and conventions, and rules of composition. Bored with the rigidity of these topics, he studied rhetoric with a popular instructor as preparation for a career in law or politics, but this discipline, too, he found restrictive and technical. In any case, he proved he had no knack for public speaking. He was, however, interested in writing verse, and he cultivated friendships with a group of writers known as the "New Poets," who were experiment-

ing in Latin with classical Greek poetic techniques. While in Rome, he enjoyed the patronage of men of wealth and influence, as he would for virtually his entire career.

LUCRETIUS'S *On the Nature of Things* was an enormous inspiration to Virgil, who copied the poet's use of hexameter and emulated his faith in the wisdom of the Greek philosopher EPICURUS and his followers. The Epicureans blended an interest in nature, including human nature, with scientific analysis and made the pursuit of pleasure a legitimate way of life. "The effect of Lucretius on Virgil was tremendous," writes scholar Olivia Coolidge in *Lives of Famous Romans*. Virgil's "artistry, more subtle than that of Lucretius, is only possible because of the earlier poet's work." Indeed, Virgil spent most of his adult life in an Epicurean colony in Naples. (Despite his inclinations, Virgil was an unsophisticated man, diffident, physically awkward, perhaps embarrassed by his provincial accent, and of a delicate constitution. He never married.)

In 42 B.C., Augustus (then Octavian), seeking to settle 200,000 discharged troops, ruthlessly confiscated entire districts in Cisalpine Gaul, including, probably, Virgil's boyhood home. The family's estate was restored, possibly due to the intervention of a powerful friend, but Virgil was deeply moved by the suffering around the countryside and the misery of those who had been evicted from their homes. Beyond these borders was a collective weariness and disillusionment among a population that had just experienced the wrenching transition from a Roman republic to an empire.

Virgil purportedly wrote in his own epitaph, "I sang of pastures, of cultivated fields, and of rulers." These three subjects correspond chronologically to his works: *Eclogues*, *Georgics*, and the *Aeneid*. The *Eclogues* are pastoral poems patterned as dialogue sung by shepherds. They represent Virgil's response to the misery he witnessed in contrast to the pastoral splendor and time of tranquillity that preceded it. His themes are the death and renewal inherent in nature, and the work suggests past tra-

vails and a redemptive future. They are unique in the way Virgil combines the pastoral genre with contemporary issues. The *Eclogues* were published in 37 B.C., upon which Virgil became a famous man, an enormously successful and highly regarded poet, and the beneficiary of the patronage of Maecenas, a chief adviser to Augustus. Maecenas was also patron to Virgil's good friend and fellow poet HORACE, whom Virgil had introduced to Maecenas.

With Maecenas's encouragement, Virgil went to work on his next composition, the *Georgics*. Again, he presents the cycles of nature central to a farmer's life and shows how those who wrest a living from the land must toil assiduously to bring forth fertility and rebirth. The *Georgics* is didactic in nature, but in this work, as in the *Eclogues*, Virgil transforms the genre in his praise of Roman rural values and in the pathos he shows for the lack of peace in recent years. He views peace as the only condition under which agriculture and animal husbandry can thrive, yet he describes how the land has been desiccated by a century of warfare. Virgil took seven years to write the *Georgics*, completing it in 29 B.C. The finished work comprises four books on farming and cultivating corn, cultivating olives and vines, raising livestock, and beekeeping, respectively.

Virgil spent the rest of his life crafting his EPIC masterpiece, the *Aeneid*. Before completing it, he became ill while traveling with Augustus and never recovered. While he was dying, he pleaded with his executors to destroy the unfinished manuscript, since he feared it did not live up to his exacting standards. Augustus, who had heard excerpts of the work in progress and recognized its value, countermanded the order and had it published after the poet's death.

Critical Analysis

The *Aeneid* recounts in iambic pentameter the epic adventures of Aeneas, a Trojan warrior and the son of a goddess. Aeneas sorrowfully leaves his ruined homeland after it is sacked by the Greeks and

founds the city that is Rome's predecessor. Virgil summarizes the story in the opening lines, rendered here in a prose translation:

I sing of arms and of the man, fated to be an exile, who long since left the land of Troy and came to Italy to the shores of Lavinium; and a great pounding he took by land and sea at the hands of the heavenly gods because of the fierce and unforgetting anger of Juno. Great too were his sufferings in war before he could found his city and carry his gods into Latium. This was the beginning of the Latin race, the Alban fathers and the high walls of Rome.

Juno is queen of the gods and wife of Jupiter (corresponding to the Greek Hera and Zeus). She is Aeneas's persistent adversary throughout the 12 books of the *Aeneid*. Juno maintains a furious grudge against the Trojans, in part because of the mythic "Judgment of Paris." Paris, son of the king of Troy, was commanded to decide which of three goddesses was most beautiful: Hera, Athena, or Aphrodite. He chose the third, incurring the wrath of the other two.

In the *Aeneid*, Juno uses her powers to inflict a succession of disasters upon the hero as he wanders with his band of Trojan War survivors through Sicily and Africa en route to fulfilling his destiny. One of the most well-known incidents takes place when the refugees are shipwrecked on Carthage (now Tunisia), where Aeneas arouses the ardor of Queen Dido. Ultimately he honors his fate and sense of duty and leaves her. Tragically, she throws herself on a funeral pyre.

Aeneas finally reaches Italy, where, after bitter conflict, he establishes his city and founds the new race that will unite Italy with a common language, culture, and sense of nationality and ultimately give rise to the Roman Empire.

As in his earlier works, Virgil's themes in the *Aeneid* are those of peace and order, the devastation of war, and a destructive past giving way to a promising future. The work is also an eloquent

hymn celebrating Rome's glory and its imperial destiny. In subject matter, it is like a blend of HOMER's *Odyssey* and *Iliad*; it is an epic adventure combined with violence and warfare presented in an original, almost novel style of poetry designed to create an epic for Rome as Homer did for Greece.

The *Eclogues* and *Georgics* became classroom texts during Virgil's lifetime, and quotations from the *Aeneid* dating from a few years after its publication have been discovered in bathhouses and streets in Rome and Pompeii. His impact on literature is ongoing, but it was especially influential on the development of medieval and Renaissance epics, such as Ariosto's *Orlando Furioso*, D'Aubigné's *Les Tragiques*, Dante's *Divine Comedy*, Chaucer's *House of Fame*, and Spenser's *The Faerie Queen*. Echoes of his work also can be seen in the works of Edmund Spenser, John Milton, DANTE, William Wordsworth, Lord Tennyson, John Dryden, Alexander Pope, Victor Hugo, William Shakespeare, Jorge Luis Borges, T. S. Eliot, and more.

waikan (waikâ narratives) *Winnebago*
folklore

Waikan narratives are a distinct category of Winnebago prose stories, the other being **WORAK NARRATIVES**. The literal translation of *waika* is “what is old;” *waikan* translates as “what is sacred.” As part of the **ORAL LITERATURE/TRADITION** of the Winnebago, the *waikan* narratives preserve part of the Winnebago history and culture. They are considered the myth-proper literary form of Winnebago mythology. They are set in a primordial past, a time in which animals talked and spirits were commonly encountered on earth.

In Winnebago culture, *waikan* stories are considered private property and are owned by a particular person or family. Myths that are very sacred or long can possess a high monetary value and are often purchased in installments. As a *waikan* passes from one owner to another, the storytellers skilled in relating anecdotes add their own personal styles and interests to the traditional stories. The liberties taken in delivery are secondary, however, to the traditional stories, plots, themes, and characters.

Waikan possess distinct literary characteristics, and traditional *waikan* can be told only during the winter, when snakes no longer dwell above the ground; those who tell *waikan* when snakes are aboveground risk supernatural retribution and the

wrath of their people. The action always takes place in a past mystical era, and characters are always of divine origin. The heroes are either spirits or deities such as the Thunderbird, Waterspirit, and Sun; or animal deities such as the Hare, Turtle, or Bear. *Waikan* cannot end tragically, so heroes are always depicted as immortal; they cannot die or permanently be killed unless they are evil.

Some *waikan* narratives include “The Adventures of Redhorn’s Sons,” a tale about Redhorn’s revenge against murderers; “The Animal Who Would Eat Men,” a tale explaining why elk have no front teeth; and “The Baldness of the Buzzard,” which explains how the Trickster takes revenge on a buzzard for mistreating him.

These sacred stories are of special importance to the Winnebago tribe and to world literature. They are told by elders with high prestige and preserve the rich history of Winnebago culture as it has been passed down through the ages.

Walther von der Vogelweide (ca. 1170–ca. 1230) *poet, songwriter*

Little is known about Walther von der Vogelweide's parentage, childhood, or later life. He was born and grew up in Austria but later left the country to seek patronage in the courts of Germany. Though it is not clear into which social class the poet was born, he was probably of noble birth and thus received a classical education, which in turn served as the basis for his poetry.

After the death of his first patron in Vienna, Walther established himself at the Hohenstaufen court in Germany. From there he traveled around the surrounding countryside as a kind of itinerant musician (called a *Minnesinger*), entertaining aristocratic and royal families with his singing and recitation. Later in life he settled at the court in Würzburg in southeastern Germany, where he ultimately died and was buried.

Probably the most important poet of his era in the German language, Walther was greatly admired by audiences, peers, and patrons. His body of work consists of two crusaders' songs (called *Kreuzlieder*), a choir song (called a *Leich*), as well as more than 100 poems consisting of chivalric love poetry in the *Minnesang* tradition, lyric poetry expressing the respect and homage owed by a knight to his mistress.

Walther von der Vogelweide's most accomplished works are his *Minnelieder*, or love songs, which he brought to an unrivaled level of artistic refinement. His lasting importance as a poet lies perhaps in his visions of love and women. Walther's concept of love was not one of one-sided servile devotion but of mutual affection, and for him feminine beauty consisted as much of inner qualities as of outward appearances.

Walther's collection of lyric poems is usually divided into three groups: his earliest and most conventional poems, reminiscent of court poet Reinmar der Alte; poems in which courtly love and all the trappings therein are cast off and replaced with abandon and spontaneity; and the most mature of his poems, those called *Sprüche* poems to denote the aged poet's responses to personal and political events.

Scholar Günther Schweikle has written of Walther von der Vogelweide, "He is the unparalleled master of medieval German poetry." The influence of Walther's work continues to be felt today, and he is considered the first in a long line of great Austrian poets.

Wang Anshi (Wang An-Shih)

(1021–1086) *poet, essayist*

Wang Anshi was born in Linchuan (Lin-ch'uan), Fu Prefecture (present-day Jiangxi [Jiangsu] Province). His father was a magistrate of the Song (Sung) court, and he spent most of his youth traveling with his family. They finally settled in Jiangning (Chianning; present-day Nanjing [Nanking]). At age 21, Wang became a local assistant district magistrate after earning the "Presented Scholar" degree. He distinguished himself as an administrator and reformer, and in 1067 he was summoned to the capital as a Hanlin academician. The Hanlin Academy was a national academy of scholars within the imperial bureaucracy. In 1070 the emperor promoted Wang to the position of prime minister, but he did not enjoy the ruler's favor for long, and in 1074 he was forced to resign and return to Jiangning. It was during this time that Wang became increasingly interested in literary pursuits and Buddhist philosophy. Twelve years later, he died embittered after

discovering that all his proposed reform policies were dismantled by the regent of the Song court.

Wang wrote more than 1,500 poems, many of which address the social issues and economic ills of Chinese society. He is best known for his essays in which he discusses various contemporary political and social problems, ideas concerning moral behavior, and historical issues. One such essay, “The Mountain Where Huibao [Hui-pao] Meditated” (1054), reveals the influence of thinkers such as WANG WEI and Buddhist philosophical thought. In the essay, Wang emphasizes the achievements of Hui-pao, a Buddhist monk who built a meditation retreat at the base of Mount Paochan. The essay serves as an allegory for Wang’s own political career. His inability to advance far into the dark caves of the mountain represents his limited political advancement.

Despite his failed career, Wang’s works are an important source of information on the political ideology and philosophical ideals of a man and the generation of scholars who influenced and were influenced by him. In *Inscribed Landscapes*, Richard Strassberg calls Wang a “major literary figure and influential poet” and “another of the Eight Masters of T’ang and Sung Prose.”

Wang Shifu (Wang Shih-Fu) (ca. 1250–1337) playwright

Although Wang Shifu was the leading playwright of the Yuan dynasty in China, little is known of his personal life. He wrote in the popular *zaju* (*tsa-*

chü), or comedy, genre and became one of the masters of the form. His work helped to popularize vernacular literature. Scholars have inferred from his plays that he received a good education in the Confucian classics and was also well acquainted with the popular literature of the day. Fourteen plays have been attributed to Wang Shifu, but only three have survived to the present day. One of these is *Xixiangji* (*Hsi-hsiang-chi*; *The Story of the Western Wing*), one of the greatest early Chinese comedy-dramas, which remains popular even today.

Written in the late 13th century, *The Story of the Western Wing* tells the story of star-crossed lovers Zhang Gong (Chang Kung), an intelligent and handsome young student, and Cui Yingying (Ts’ui Ying-ying), or Oriole, a beautiful young girl from a wealthy family. The couple is forced to endure the meddling of Oriole’s overbearing family, who choose another suitor for her to marry. In the end, with the help of Oriole’s clever young servant, Crimson, Zhang Gong and Oriole are able to be married. The play established character types that would appear in China’s vernacular literature for centuries to come: the brilliant student; the beautiful, thoughtful maiden; the forbidding, overprotective parent; and the clever maid.

Wang Shifu based his play on *The Tale of Oriole* by Yuan Zhen (Yuan Chen; 779–831), a Tang dynasty poet, and on *The Story of the Western Wing in All Keys and Modes* by Dong Jieyuan (Tung Chieh-Yuan), which included spoken dialogue and songs. Jieyuan’s version was written in the “tell-and-sing” literary genre of the late 11th century. Wang Shifu continued this tradition, but adapted some of the lyrics and scenes to fit the *zaju* style of writing, a form of drama in which all the songs of a single act in the play were assigned to one role.

The Story of the Western Wing has been made into popular musicals and been rewritten by numerous playwrights. References to the play appear in many novels, including Cao Xueqin’s (Ts’ao Hsueh-Ch’in’s) *Dream of the Red Chamber* (or *Dream of Red Mansions*), a famous 18th-century novel about ill-fated lovers, and the anonymous 16th-century novel, *Chin Ping Mei*. The play was

also a favorite during the Chinese Revolution of 1911, because Zhang and Oriole were seen as champions of freedom.

Wang Shifu's two other surviving plays are *The Hall of Beautiful Spring* and *The Story of the Dilapidated Kiln*. The first involves a political feud between two officials during the reign of Emperor Zhangzong (Chang-tsung) in the late 1100s. The second is a dramatic rendering of a popular story about a young student, Lu Mengzheng (Meng-Cheng), who overcomes a poor upbringing to make the top score on the civil service examination and to marry a beautiful young woman from a wealthy family. These plays, however, are not of the same caliber as *The Story of the Western Wing* and have received little attention over the years. However, all three plays established Wang Shifu's place in literary history for helping to popularize Chinese vernacular literature.

Wang Wei (Mochi, Mo-ch'i) (699–759) poet

Wang Wei lived in China during the Tang (T'ang) period, regarded as the height of Chinese civilization. He was born in Shanxi (Shansi) to a father who was a local official and a mother who came from a family distinguished in literature. At age 16

he moved to the capital with his brother Jin (Chin) and entered the social circle of princely society. After graduating from university, he was awarded a court appointment as assistant secretary of music. He bought an estate on the edge of the Wang River next to the Zhongnan (Chungnan) Mountains and lived there off and on for the rest of his life. After his wife died when he was a little over 30, he never remarried and continued with his official life, leading a long and undistinguished career in public service.

A passionate but reflective man, Wang Wei (known also as Mochi [Mo-ch'i]) poured his energy into poems, paintings, and music and was known in his time for all of these arts. Today, his poetic legacy is the only one that survives. Although in retrospect he is overshadowed by the creative genius of the other two major poets of the Tang dynasty, LI BAI and Du Fu, at the time that they lived, Wang Wei was the most prominent among them, famous for his delicate, detailed, and loving descriptions of natural landscapes. He was a devout, practicing Buddhist, and the quiet and mystical aspects of his religion are portrayed in the landscapes he evokes with words. His poems express tranquillity, purity, serenity, and a sense of control. They also emphasize his love of solitude and the sense that humankind is only part of a larger natural order. In the poem "Deer Park," for example, he writes, "Returning light enters the deep grove, / And again shines on the green moss."

The serene and simple imagery in Wang Wei's poetry was often meant to extend beyond its literal meaning. Four common elements of his poems are an empty mountain, rain, voice, and white clouds, all of which combine to create a feeling of something deeper than just a landscape. His poetry, however, was not formal religious poetry. A line in his poem "Return to Wang River," in a translation by Tony Barnstone, Willis Barnstone and Xu Hixian, illustrates the mystical and lyrical qualities of his imagery: "Far off in the mountains is twilight / Alone I come back to white clouds." The contemplative nature of his writing emphasizes its connection to his Buddhist identity and view of the world.

Wang Wei's combination of a spiritual feeling and sparse imagery appeals to today's readers. He has been translated more often than any other Chinese poet in the 20th century. Western audiences relate to the tension he sometimes depicts between the worldly and mystical sides of himself. In true Buddhist fashion, he kept himself detached from the materialistic world while holding his job in court. Wang Wei seems to have saved his reserves of emotion for his literary and other artistic activities. He expressed his deep spiritual concerns also by converting the house he had bought for his mother into a monastery after her death. The monastery housed seven monks, and although Wang Wei did not himself join them, he visited often and is buried on the grounds beside his mother. Accordingly, a theme of his work is a contrast between public life and seclusion, a topic that attracts modern Western audiences struggling to fulfill the demands of their hectic lives while retaining some sense of inner peace.

Wei Zhuang (Wei Chuang) (ca. 834–910) poet

Wei Zhuang was born in a town outside Chang'an, China, between 834 and 836. He spent much of his

early life in Chang'an, the Tang dynasty capital, where he began to develop his literary ability by writing *ci* (*tz'u*), or lyric poems. Wei was one of the first poets to popularize the *ci* form and probably received much of his inspiration for his lyrics from the booming social life in the Chinese capital.

Wei left the capital in 877 to study under and work for a prefect in the Guozhou (Kuo-chou), Henan (Honan), Province. He returned to Chang'an in 879 to prepare for the *jinshi* (*chin-shih*) civil service examination, which he failed the following year. Scholars have pointed out, however, that Wei's failure may have saved his life, because many government officials were singled out for execution when Chang'an was overrun by rebel bandits in 881.

During the fall of the capital, Wei escaped to the provinces, where he wrote his EPIC poem *The Lament of the Lady of Ch'in*, which brought him immediate fame. This poem describes the horrors of the sack of Chang'an, during which more than 80,000 people were executed. Wei also completed more than 1,000 poems and lyrics, though only about 375 remain.

Most of Wei Zhuang's early poetic and prose writings were destroyed when Chang'an was invaded. What little is known of his early life has been pieced together by scholars through analysis of his later poems.

White Mountain Apache myths and tales Native American folklore

The White Mountain Apache tribe currently occupies a region in east-central Arizona of the United States. Before the White Mountain Apache Reservation was established in 1891, the White Mountain tribe, one of five groups belonging to the Western Apache, was largely nomadic. In the 1920s and 1930s, scholars Pliny Earle Goddard and Grenville Goodwin undertook efforts to record,

translate, and preserve the myths and legends of the White Mountain Apache.

To the White Mountain Apache, as with the ZUNI NARRATIVE POETRY, storytelling is a practice that belongs to the winter months from November to February and should be done only at night, after dusk and before dawn. Telling stories in broad daylight is dangerous, especially in the spring, summer, and fall months, when all sorts of creatures are abroad; if snakes, insects, or even lightning hear stories about them that they do not like, they may seek to punish the narrator. This belief in the power of storytelling is shared among many cultures that preserve and transmit their histories, teachings, and cultural beliefs through an ORAL LITERATURE/TRADITION. To societies that largely depend on a spoken language to communicate, stories preserve memory, genealogy, identity, and understanding about how the world works.

Tales of the White Mountain Apache generally take one of two forms. Holy tales explain the origin of ceremonies and other religious practices; creation tales explain the creation of the earth, the emergence of its creatures, and slaying of monsters, and the foundation of Apache customs. While adventure stories about cultural heroes or fables about the doings of animals may be told for purposes of entertaining children, the holy tales are able to confer particular abilities or powers, and therefore the audience for specific tales was traditionally limited only to people who were ready for instruction. Altogether, the myths and tales contain a great deal of information about the material culture, economic life, social and familial organizations, and religious beliefs governing tribal life.

The White Mountain Apache myths also preserve a cycle of Coyote tales. While the creation tales convey ritual knowledge, the Coyote tales generally use an enjoyable story for a morally instructive purpose. Like the COYOTE TALES of the Hopi, the Coyote of the White Mountain Apache is a prankster, a ludicrous figure who tries to be cunning but who, more often than not, falls victim to his own gullibility. Coyote, however, can have an

occasionally useful function. Big Owl, who has a minor cycle of stories, is usually depicted as slow and rather ignorant, causing only harm and destruction.

In the holy tales, the most important male figure, with the exception of the sun, is the hero Naiyenezgani. He is the benefactor of human beings who taught them important survival skills. The most important female figure is Isdzanadlehe, who taught humans how to plant and harvest crops. She is variously described as Naiyenezgani's mother or grandmother, in keeping with the Apache practice of tracing descent through the mother and organizing families around matriarchal groups. Other holy tales describe the *gan*, a class of beings who lived on earth before the White Mountain Apache and later went away. They are powerful spirits who, if properly invoked, can provide enormous benefits, but can also do great harm if offended.

Like the book of Genesis in the Hebrew BIBLE and also in the Sumerian poem *GILGAMESH*, the White Mountain Apache myths have a story about a flood, which itself contains many origin stories. This story explains why the tip of the turkey's tail is white, why the area where the White Mountain Apache live is sandy and flat rather than mountainous, and how corn was a gift of a turkey that distributed food to those who had survived the flood. As the story goes, the turkey provided gray, red, yellow, and blue corn, simply by shaking his feathers.

An indication that the White Mountain Apache folklore continued to evolve and grow as a tradition is seen in some stories, preserved in modern collections, that show the influence of the Spanish and later Europeans. Stories that include horses, firearms, and written documents all date from the period after the first European interactions. While certain stories preserve the origins and histories of clans or families within the tribe, most of the White Mountain myths are not clan-specific. Together the myths represent a rich and flexible literary tradition and provide a valuable cultural history of the White Mountain Apache tribe.

Wolfram von Eschenbach (ca. 1170–ca. 1225) poet, songwriter

Biographical information about Wolfram von Eschenbach is hazy at best. Though the precise span of his life is not known, he lived at the same time as his fellow poet GOTTFRIED VON STRASSBURG, who makes references to his competitor Wolfram in his works. Wolfram also lived at the same time as another famous German writer, HARTMANN VON AUE. He was probably born in the town of Eschenbach, in Bavaria, and achieved the rank of knighthood at a time when the both the Catholic Church and the German emperor were trying to consolidate their power into more centralized, hierarchical structures. This left a man trained for fighting, like Wolfram, on the fringes of society. He therefore took up writing as a career, and for most of his life the powerful Hermann of Thuringia was his patron and benefactor.

In his writings Wolfram sometimes refers to himself as illiterate, meaning he could not read and write Latin, the language of the clergy. He was, however, fluent in French as well as his native German. Wolfram's poems are clearly meant for oral performance and may have been composed orally as well; he could have hired a scribe to record the words for him. As a relatively impoverished nobleman, he would not have had access to the best education of his day, as he himself testifies. This was in no way a disadvantage in his writing, which shows a narrative talent that takes its strength from

the message he seeks to communicate, not academic knowledge.

Along with his contemporaries, Wolfram lived in a society where politics were governed by the structure of feudalism and social codes were governed by CHIVALRY/COURTLY LOVE, ideals that infused the genre of the MEDIEVAL ROMANCE in which Wolfram was writing. His early verse lyrics show the influence of the TROUBADOURS of southern France, and Wolfram first gained recognition for his love songs (in German, *Minnelieder*). His greatest skill was with the *alba*, or song of dawn, which was highly cultivated by medieval French poets but relatively unknown to the Middle High German audience.

Wolfram's longer verse narratives are difficult to date, but his reference to his poem *Parzifal* (ca. 1210) in the opening to *Willehalm* (ca. 1217) may indicate that *Willehalm*, which tells of the earlier adventures of certain characters who appear in *Parzifal*, was actually written later. Scholars argue over whether *Willehalm* is complete or whether Wolfram intended further books. Upon his death, he left fragments of a work called *Titurel*, which he most likely began composing after *Parzifal* but never finished. His *lieder* (songs) cannot be dated but are most likely early works.

Critical Analysis

Wolfram's *Parzifal* is a complete work, which represents an achievement over the source he was using, *The Knight of the Grail* by the French romancer CHRÉTIEN DE TROYES. Chrétien's tale introduces the early adventures of the hero Percival and his quest for the HOLY GRAIL, but his tale strands the hero far away from his chosen quest and actually ends in the middle of the adventures of another Arthurian knight, Gawain. Wolfram adopts the characters of Parzifal and Gawain but completely reimagines them, turning the original tale of knightly battles into a deeply spiritual quest. Wolfram also draws on the epic tone of German heroic poetry, of which the *NIBELUNGENLIED* is a classic example. Translators Marion Gibbs and Sidney Johnson, in their introduction to *Willehalm*, call *Parzifal*

“one of the great quests of world literature, acted out in the idealized world of the courtly romance.” They add: “It is also a search for man’s proper relationship to God, beginning in ignorance, and passing through disappointment, even antagonism, to the ultimate realization of Divine Love.”

Written in rhyming verse, *Parzival* describes various episodes in the life of its hero, beginning with his birth and his youth as a laborer living in the forest, ignorant that he is truly a knight and destined to become a king. The story follows his chivalrous education and reception at Arthur’s court, then turns to his noble deeds and failings as an Arthurian knight. Despite the numerous digressions and the fact that several chapters are devoted to the life and adventures of Gawain, another knight in King Arthur’s court, at the heart of the novel is the story of Parzival’s quest to find the Holy Grail and heal King Anfortas, who is also his uncle. Parzival initially fails at his quest because, when he witnesses the magnificent Grail procession, he neglects to ask the most important question: Whom does the Grail serve?

To find the answer, he must take up a deeper and even more challenging quest, one that takes him to the very center of knightly ideals and moral conduct. In *Parzival* a reader can clearly see Wolfram’s faith in the ideals of “true” knighthood and his earnest belief that a harmonious world order can only rest on a return to these ideals. The quality that best describes Wolfram’s ideal life is *triuwe*, or loyalty, which must underpin a knight’s relationships with his lord and his fellow knights, his family, wife, and children, and his relationship to God. *Parzival*, then, is less about the quest for the earthly Grail kingdom and more about the personal quest for understanding and devotion to the greater spiritual laws. The depth and artistry with which Wolfram portrays this quest make the 16 books of *Parzival* one of the most astounding landmarks of medieval literature.

In *Parzival* we find the narrative technique that most distinguishes Wolfram’s prose: his direct address to the audience. Throughout the text, the

narrator interjects personal commentaries and opinions into the story, which serve not only to lighten the dramatic tension and provide comic relief but also to give the reader insights into the characters, action, and the author’s world vision. Also appealing is the lively and unpredictable way in which Wolfram relates the story. Ironic and comic passages are juxtaposed with serious discussions on religious and existential themes. Individual adventure scenes are described with great dramatic tension but also with much irony, as if Wolfram could not take the subject matter completely seriously. The following short passage from the fifth book in Edwin H. Zeydel’s translation might be considered characteristic of the work and Wolfram’s style:

*Who fain would hear where he may stray
Whom lust for deeds has lured away,
Great acts of wondrous daring
To them we shall be bearing.*

The originality and mastery of Wolfram’s *Parzival* lies also in its poetic sophistication. Metaphors, similes, and hyperbole all come into play. The work is often humorous, but it is not a comedy, as its core is a harsh vision of the perplexing and horrifying aspects of human existence.

Willehalm is quite different from *Parzival* in both tone and intent. The author retains his style of the direct address, speaking conversationally to his reader or listener. An early passage in the first book of *Willehalm* reveals this characteristic style as well as the author’s ambitions, when after modestly pointing out his success with *Parzival*, he claims:

*I shall tell of love and other grief which in
consequence
of their devotion men and women have
been suffering . . .
No tale in German tongue can easily match
this whole work
which I now have in mind . . .*

*The best Frenchmen are
agreed that no sweeter poem was ever com-
posed in dignity
and truth. . . . They told it there: now listen
to it
here. This story is true, though it may be
amazing.*

Willehalm recounts the struggles of the hero in battle against the invading Muslim forces from the south. In the tale, Wolfram continues with his use of fantastical names and hazy geography meant more to evoke exotic associations than to assume any genuine historicity. Scenes of vivid action, such as the battles of Alischanz, intermingle with scenes of contemplation or tenderness, as when Wolfram describes the love between Willehalm and Giburc. Though a different work than *Parzival*, *Willehalm* is imbued with no less spiritual awareness, Wolfram's contribution not only to his source material but also his lesson to his listeners.

Parzival has an assured place in the canon of the greatest Arthurian literature, next to the romances of Sir Thomas Malory and Alfred, Lord Tennyson. Richard Wagner turned Wolfram's *Parzival* into a famed opera, and the legend of the Holy Grail, with Percival as one of its chief knights, continues to inspire retellings in the forms of present-day novels and films.

worak narratives Winnebago folklore

Worak narratives comprise one of two stylistically distinct forms of Winnebago Native American prose; the other is *WAIKAN NARRATIVES*. They are secular in nature in that their subject matter focuses on the real world and historical events. The *worak* (meaning "what is told or recounted") are treated less seriously than their *waikan* counterparts. Anyone in the tribe is allowed to relate a *worak*, and the stories can be told at any time of year. In addition, characters in the *worak* narratives are always human. Heroes are either human or divine beings who have thrown in their lot with man. The action in *woraks* always takes place within the memory of mankind, and the tales always end tragically.

Some *worak* stories include "The Annihilation of the Hotcâgara" (*Hotcâk* meaning "Winnebago"), a story about how yellow fever wiped out many Winnebago; "The Blessing of a Bear Clansman," a story in which a member of the Bear clan of the Winnebago is blessed by divine spirits to be successful in war; "The Great Fish," which explains why Lake Winnebago is full of sturgeon; and "Vita Springs," an account of a hot springs that the Winnebago believed to have healing powers. Like the *waikan* narratives, these and other *worak* stories have preserved much of the history, culture, and traditions of the Winnebago.

X

Xenophon (ca. 431–ca. 352 B.C.) *soldier, historian, biographer*

Xenophon was born in Athens; his father was a knight in the Athenian army. During his young years, Xenophon was one of SOCRATES' most successful students. He is said to be the first person to start recording his conversations with Socrates and noting down the great philosopher's sayings. These writings were collected in *Memorabilia* (relating Socrates' life story and his teachings) and *Symposium* (written as a dialogue in which Socrates is the main speaker).

The young historian's discipleship with Socrates did not last long, however. In 401, he decided to join Cyrus, the prince of Persia, in his campaign against his brother Artaxerxes II, king of Persia. He joined the prince in Sardis and followed him into Upper Asia, where Cyrus was killed in the decisive battle at Cunaxa. Left without a leader on the wide plains between the Tigris River and the Euphrates the Greek troops elected Xenophon their new general. He had not held an official position in Cyrus's army or ever served as a soldier, yet the soldiers' choice turned out to be a wise one. Xenophon successfully led the remaining 10,000 men on an epic 1,500-mile journey back to Greece.

Xenophon himself, however, did not go back to Athens at once. Instead, he joined the Spartans,

served the Spartan king and general Agesilaus, and fought against Athenians in the Battle of Coronea (394 B.C.). When he returned to Athens a year later, he was banished for having fought against his own countrymen. The Spartans, however, rewarded him by giving him an estate at Scillus near Elis, where he moved with his wife and children.

For the next 24 years, Xenophon lived peacefully, writing, managing his slaves, hunting, and entertaining guests. But when Sparta was defeated in 371 B.C., he was expelled from his estate. Although his banishment had been lifted, he still did not return to Athens but spent his remaining years in Corinth. While there, he wrote some of his best works and spent much time contemplating the reasons for his banishment from Athens. In addition to having fought against his former countrymen, he also disagreed with the Athenian attitude concerning the war.

Xenophon believed that the happiest states are those that have the longest period of unbroken peace, and he considered Athens well suited to peace and happiness. Debating those who believed that war could benefit the city-state, Xenophon argued that the harshness of Athenian rulers would eventually strip it of its prestige and authority. Generosity and fairness, on the contrary, would gain Athens valuable alliances and power. Xenophon

also believed that war would destroy the Athenian economy.

Critical Analysis

The most celebrated of Xenophon's works is *Anabasis*, which tells the story of Cyrus's military campaigns and the Spartans' heroic retreat, which Xenophon had engineered. The title *Anabasis* means "The March Up," although the majority of the work deals with the march away from the site of the disastrous battle at Cunaxa.

Anabasis was the first work that acquainted the Greeks with elements of the Persian Empire; it also revealed the army's weakness. Ironically, Xenophon's account of the Spartans' retreat through hostile lands is said to have influenced Greek pride and eventually resulted in Alexander's conquests in Asia. *Anabasis* also immortalized Xenophon as a gifted military leader and a hero of his people.

In addition to writing historical accounts, Xenophon also wrote biographies, making him a pioneer in the genre. One such work is *Agesilaus*, a panegyric on Agesilaus II, king of Sparta, who was one of Xenophon's close friends. His most famous biographical work, however, is *The Cyropaedia*, which tells the life story of Cyrus, the founder of the Persian monarchy, under whose command young Xenophon began his military adventures.

The title *The Cyropaedia* translates as "The Education of Cyrus," and the first of the eight books that make up the work deals with Cyrus's education, describing his hunting as preparation for fighting. Xenophon goes on to paint a highly romanticized portrait of Cyrus as an outstanding military leader and ruler. He relates Cyrus's talent in warfare, his generosity in forgiving defeated enemies, and his skill at turning former enemies into allies. Because of its romanticized nature, *The Cyropaedia* is considered by some critics to be a political romance rather than a biography.

The work also reveals Xenophon's admiration for Spartan ways, and his accounts of Persian history are mixed with details of Greek customs, with an emphasis on both military service (as influenced by Cyrus) and the importance of learning

justice (as influenced by Socrates). In particular, Xenophon describes how boys in Spartan schools are punished for not returning favors, and how qualities such as self-control are valued and trained.

In general, Xenophon's works, even those structured as historical ones, serve to reflect his views on philosophy, life, adventure, history, economy, and politics. In *The Constitution of the Lacedaemonians*, for example, he expresses his admiration for the Spartans' disciplined life and values. In a later essay, "Ways and Means," he proposes methods to improve Athens's economy. He describes his adventurous life and provides vast historical details of life in ancient Persia and Greece in other essays, such as "On the Cavalry Commander," "On the Art of Horsemanship," and "On Hunting."

Xenophon's *Hellenica* is a historical account of Greece from 411 to 362 B.C. He is valued not only for the detailed information he provides in all his works, but also for the simple and clear way in which he provides it. He is one of the foremost historians of ancient Greece.

Xie Lingyun (Hsieh Ling-yün, Duke of K'ang-Lo) (385–433) *poet*

Xie Lingyun was a member of a prominent aristocratic Chinese family during the Qin (Ch'in) dynasty. He entered the government before he was 20 years old and spent the next 20 years engaged in politics. While the “barbarians” controlled the north, aristocratic factions battled for control over the Eastern Qin dynasty. After engaging in these power struggles for many years, Xie found himself on the losing side of a battle over the successor to the newly reigning Liu-Song dynasty. At age 37 he was exiled to Yung-chia on the southeast coast. During this period, he had time to contemplate his life and the natural world around him. He became reconnected to his long-held Taoist and Buddhist beliefs and began to write poetry.

Even after the exile was lifted, Xie did not return to court life but instead became a recluse at the family estate in the Shihning (Shih-ning) Mountains. In one of his long prose-poems, “Dwelling in the Mountains,” he describes his choice: “I devoted

myself to simplicity and returned to it all, / left that workaday life for this wisdom of wandering, / for this wilderness of rivers-and-mountains clarity.”

For a Chinese aristocrat, however, the life of a recluse was not one of total isolation. Xie continued to live with his family and often entertained friends. In addition, the government ordered him to serve as a local governor at a far outpost. When he refused, he was banished to Nan-hai on the southern coast and later executed.

While Xie was prominent in government and a well-known calligrapher, he was most famous for his wilderness poetry. His poetry, greatly influenced by that of Xie Hun (Hsieh Hun), not only describes nature but also celebrates the mountain wilderness and rivers, revealing Xie's spiritual connection to his surroundings. Though few of his works survive, he is famous as the initiator of the “rivers-and-mountains” (*shan-shui*) tradition. As the Taoist hermit T'ao Hung-ching laments, “Here is the true Paradise of the Region of Earthly Desires. Yet, since the time of [Xie] K'ang-lo, no one has been able to feel at one with these wonders, as he did.”

Yang Wanli (Yang Wan-li) (1127–1206)
poet

Yang Wanli was born in southern China and grew up during a time of political turmoil in which the Jin (Chin) Tartars of northern China conquered the Sung dynasty. Yang lived in poverty in the southern Song (Sung) city of Zhu-sui (Chu-sui), away from the center of the conflict. Consequently, his childhood was relatively normal, and he received a classical education. He passed the civil service examination at age 28.

After three years of service at the Song capital, Hangzhou (Hang-chou), Yang was sent to Lingling in the Hunan Province in 1161. There he met and was mentored by a famous general, Zhang Zhun, who influenced Yang's views on the conflict between the Song and the Jin. Yang soon adopted the general's belief in strong resistance against the Jin and remained committed to that belief throughout his life. In the Confucian tradition, he was critical of the government when he saw corruption or weak policies.

Yang was also influenced by the poet Xiao Dezhao (Hsiao Te-tsau), whom he also met in Lingling. After Xiao advised him on the style of his poetry, in 1162 Yang burned more than 1,000 of his poems because he believed they were poorly written.

Yang's later poetry, such as "Watching a Village Festival" and "Songs of Depression," was influenced by Zen Buddhism and combines the essence of a spiritual life with the events and concerns of everyday life. His collected works feature more than 3,200 poems and hundreds of pages of prose written during his time as a government official. When Yang died, he was considered to be one of the greatest poets of the Song dynasty.

Yaqui deer songs *Native American ritual songs*

The Yaqui deer dancer is called the *saila maso*, "little brother deer." The deer songs, called *maso bwikam*, are traditional songs, usually performed by three men, that accompany the dance of the

saila maso. To the Yaquis, the deer song is the oldest and most respected of their verbal arts. Authors Larry Evers and Felipe Molina describe them this way: “Highly conventionalized in their structure, their diction, their themes, and their mode of performance, deer songs describe a double world, both ‘here’ and ‘over there,’ a world in which all the actions of the deer dancer have a parallel in that mythic, primeval place called by Yaquis *sea ania*, flower world.” The Yaqui deer songs reflect aspects of life practiced for centuries in the Sonoran desert, long before the appearance of Europeans.

Yaqui tribes occupied present-day Arizona and Sonora, northern Mexico. Their first European contact was the Spaniard Diego de Guzmán in 1533 and later the Jesuit missionaries, who arrived in 1617 and brought profound changes in community organization and belief systems. Yaqui folk literature contains mythical histories of the region prior to Spanish influence, describing the spirits thought to inhabit the land and the magic powers sometimes possessed by animals. These myths were part of the cycle of religious ritual and belief practiced by the Yaqui prior to the Jesuit missionaries, which the deer songs record and celebrate.

Aside from their agriculture, the Yaqui depended on deer as a food source. Dancing and songs were performed prior to the hunt to ensure success. The Yaqui deer songs reflect a worldview where all parts of the *huya ania*, the “wilderness world,” live in an integrated community. Birds and insects, plants and animals, even the rocks and springs of the desert are intimately connected. The language of the deer songs, called *bwika noki*, or “song talk,” is the language of this carefully interconnected, beautifully balanced community.

While the deer singers may know as many as 300 songs, at any given performance they will perform only a fraction of these. The first songs set the stage or purify the space in which the dance will be performed. A formal speech and often a procession follow, and then the musicians perform a sequence of songs. Usually the instruments include

a violin, a harp, a flute, and drums, and songs may be repeated several times. The sequences are designed to symbolize the elapse of night and the coming of morning, which parallel the symbolic preparation, hunting, and killing of the deer. These lines from “The Fawn Will Not Make Flowers,” translated by Evers and Molina in *Yaqui Deer Songs*, are part of an *alva bwikam*, a morning service song:

*This flower-covered dawn world rises up
brightly,
here where they divide
the enchanted earth with light.*

The last songs of the cycle typically celebrate the roasting and eating of the deer, whose body is symbolized again with the imagery of flowers, as in these lines:

*My enchanted flower body,
fire, above the fire,
side by side is hung.*

The rhythmic repetition of sounds, lines, and songs, and the images of death paired with the images of dawn and rebirth, give to the performance a mythic quality that parallels the natural cycle in which the Yaqui people lived their lives for centuries.

The Yaqui deer song is a living tradition that continues to this day. While performances of the deer songs are no longer connected to the hunt, they serve as more than a means of entertainment. The context in which the deer song is performed is vital to its enjoyment; the smoke from the fires, the chatter of the audience, the antics of the masked clown, and the noise of the dancers all complement the poetry of the songs. Moreover, the performances offer a way to celebrate, forge community bonds, and preserve an ancient cultural heritage.

Yoshida Kenkō (1283–1352) poet, essayist

Yoshida Kenkō was born into a family of Japanese Shinto priests around the year 1283. He distinguished himself at a young age through his literary abilities and served in the Japanese court under the emperor Go-Uda. While his early poetry is traditional and conservative, he was regarded as a fine poet during his lifetime.

In 1324, Yoshida became a Buddhist priest. His most famous work, *Tsurezuregusa* (Essays in Idleness, 1330), a series of 243 short chapters or essays, reflects the Buddhist view of the world, especially the transience of all things and the cycle of life, growth, death, and rebirth. The essays are unified by Yoshida's belief that the world and everything in it was steadily declining, but this was not a negative view. As Yoshida says in "Essay 7," "If man were never to fade away . . . but lingered on forever in the world, how things would lose their power to move us."

While *Essays in Idleness* was not widely read during Yoshida's lifetime, it has become a standard work in Japanese education. It has also posthumously established Yoshida's reputation as an insightful and gifted essayist.

Yu Xin (Yü Hsin) (513–581) poet

Yu Xin was born in Chiang-ling, China, in 513. His father, Yu Jianwu, worked directly for two sons of the Liang dynasty's Emperor Wu and was able to provide Yu Xin with an excellent education; it is likely that some studies were at the Imperial Library. When he was 14, Yu Xin also attended classes taught by one of Emperor Wu's sons.

After Yu Xin passed the governmental examinations, he began a career in the imperial service. He spent most of his early career working for one of the Wu princes, Xiao Gang, in the Liang dynasty capital, Jiankang (Chien-k'ang; modern-day Nanjing [Nanking]). In 548, after a series of political and military miscalculations by Emperor Wu, Jiankang was attacked and conquered, and Yu Xin was forced to flee the city.

Despite the political turmoil that continued for years, Yu Xin remained affiliated with the Liang dynasty. In 554, he was sent as an ambassador to Chang'an, the capital of the Western Wei dynasty in the North, with the purpose of preventing an invasion of Liang territory. While there, he was held under house arrest for three years and not allowed to return to southern China for the rest of his life. Despite this, Yu Xin was well respected by the Western Wei and had numerous honorary titles bestowed upon him. He was recognized as the greatest poet of his century and treated as a cultural icon.

One of Yu Xin's most famous works is "The Lament for the South," which was written (ca. 578 A.D.) during his time in Chang'an, where he held mostly symbolic posts while devoting his life to writing. He helped compose the Zhou (Chou) ritual hymns and was the author of the congratulatory memorial on their completion. The "Lament for the South," a long rhapsodic poem, or *fu*, provides a historical commentary on the wars and political upheavals of the Liang dynasty. The work also expresses Yu's sorrow in the North and his wish to return to his native region. In relating the events of a decade ending with the fall of the Liang dynasty, Yu's poem is brimming with historical allusions. His own homesickness while in exile in the North, however, permeates the final verses of the lament:

*As an honored guest . . .
I see bells and cauldrons . . .
I hear servings and song . . .
But how can they know that . . .
Among the commoners of Hsien—
Yang, not only the prince
Longs for home.*

Zen parables (Buddha parables)

(ca. 528 B.C.) *fiction*

Zen Buddhism is a Buddhist school of thought that originated in India and came to China during the Tang dynasty (618–906) and Japan in 1191. The nature of Zen Buddhism is purposely illogical, because *satori*, a state of total understanding, cannot be achieved through traditional meditative methods. Understanding requires viewing the world through a “third eye.”

Zen masters helped their students along the path to *satori* through the use of parables and *koan*, short dialogues or statements meant to engage the students’ thinking. In one of the most famous *koan*, the Zen master Hakuin asks his students to hear the sound of one hand clapping. The question is designed to get the students to stop thinking in a traditional logical sense and to start reordering their thoughts based on their inner experiences. Zen parables work in the same fashion.

Parables are allegorical stories that help teach a moral lesson. However, unlike the famous parables of Jesus in the New Testament, Zen parables are often paradoxical, and despite their use as educational tools, they rarely explicitly define a moral; rather, they hint at possible ways of viewing situations. For example, in one parable, a student asks

his teacher, “What is enlightenment?” The teacher replies, “When hungry, eat. When tired, sleep.” Such a response might lead the student to learn or “see” that much of what we do is based on survival, yet there might also be 100 other interpretations of the teacher’s response. In this way, Zen parables lead toward “enlightenment” by allowing students or listeners to interpret the parables as their conscious or subconscious leads them.

Zen Buddhism has influenced such prominent figures as Australian philosopher Ludwig Wittgenstein (1889–1951); German philosopher Martin Heidegger (1889–1976); and the poets Gary Snyder (1930–), Jean-Louis (Jack) Kerouac (1922–69), and Allen Ginsberg (1926–97). The effect of Zen still lingers. Not only have the parables and Zen meditative thought influenced every aspect of ancient and medieval Japanese society, they also continue to influence many aspects of modern world culture around the globe.

Zhang Heng (Chang Heng) (78–139) *poet, scientist, mathematician*

Zhang Heng was born in Henan (Honan), China. He was sent to the capital, Loyang, to receive his education in Confucian philosophy. Zhang Heng showed an early aptitude for literary pursuits and achieved fame for his poetry in his 20s. His work *To Live in Seclusion* is considered a masterpiece of the late Han dynasty, and his poem “Rhapsody on contemplating the Mystery” is a good example of *fu*, rhapsodic poetry.

While most educated young men in China at the time sought to obtain government posts, Zhang Heng spent many years learning mathematics and astronomy instead. His accomplishments in these fields are extremely noteworthy and rival his literary fame. He was able to create an accurate chart of the stars, which assisted in keeping the imperial calendar accurate. He also invented a rudimentary flying machine, which was able to leave the ground, though only for a few moments. In 132, he invented the first seismograph, which traced the direction of earthquakes and their seismic waves. The device could detect shocks from earthquakes across China days before the reports filtered in from the site of the earthquake.

It was only later in his life that Zhang Heng held a series of important government positions in the capital and outlying regions, beginning in 116 and continuing until his death. He is remembered for

his literary talents, his abilities in mathematics, and his strong moral code.

Zuni narrative poetry *Native American folklore*

The Zuni tribe, inhabiting a region of west-central New Mexico before European contact, preserved their religion, history, and cultural practices in a lively and textured tradition of verse narrative. Like other traditions of ORAL LITERATURE, Zuni stories are anonymous in origin and were meant to be performed. They were remembered and retold in Shiwi'ma, the Zuni language. Storytellers frequently acted out the dialogue and other conversations within the story, requiring inventive techniques to represent a range of voices. Changes in volume, pitch, and rhythm were used to give emphasis. The tale-teller might use pauses or silence to punctuate a line; at other times he or she might chant or burst into song.

Zuni tales, because of their twining nature, were associated with snakes. Telling a tale out in the open might attract the “smile of a snake” (snakebite). Therefore, tales were reserved for the cold winter months, after the meeting of the medicine society sent all the snakes, especially the rattlesnakes, into their homes under the ground. Since no one wanted to speed along the brief bit of light available during the winter day, tale-telling took place after dark, to help fill the long evenings. Someone in the audience would address the storyteller with “*telaapi*,” meaning “take out a tale.” The storyteller would respond with “*so'nahchi!*,” something to the

effect of, “so it begins.” Listener responses encouraged the tale-teller to continue, indicating that they were paying close attention, and no one was allowed to fall asleep until the story was over. The storyteller typically ended by reminding listeners that the events in the story happened long ago, in a mythical sort of time where things had different meanings than they do in the present world. This suspension of time allowed animals to talk, spirits to circulate, and magical events to take place side by side with daily living without evoking any sort of suspicion or surprise. In the absence of a written means of communication, the recitation of story and verse carried tribal memories, histories, and instructions on how to behave in the world.

Many of the Zuni narratives are origin tales, explaining the beginnings of religious practices or of a natural state. The story of “Coyote and Junco,” for example, explains why coyotes have bad teeth, while the story of “The Girl and the Little Ahayuuta” explains why the Ahayuuta twins and their grandmother are worshipped at three separate shrines. The stories contain the Zuni’s mythology, such as a description of the creation of the world by the All-Father, Awonawilona, as well as distant memories of tribal founders and migrations in search of favorable places to live. The narratives also portray values and practices in which the Zuni believed. For instance, the story of the boy hunter who never sacrificed the deer he killed carries a moral point, while the story of the boy who was raised by deer shows humans living in harmony with other creatures of the world.

The narratives also describe important religious practices and beliefs, such as the tale “The Sun Priest and the Witch-Woman.” This narrative, which builds dramatic tension around the plans of the witches to kill the sun priest, makes clear the importance of the sun priest as the highest-

ranking of all Zuni priests and the one responsible for greeting the Sun Father every morning with offerings and prayers. It records the practices of the medicine societies, such as the Saniyakya Society; or the Coyote Society, whose members cared for hunters and, at festivals such as Good Night, the winter solstice, held ceremonies wherein they cured, for free, anyone who came to them with an illness or complaint. It also emphasizes the importance of family or clanship and the beliefs that would guide one down the Pollen Way, the path of life.

Like any folktales, the stories recorded in Zuni narrative poetry have a deeper symbolic meaning, and the interactions of the characters convey valuable cultural information about Zuni beliefs, practices, and ways of life.

PREFACE

Increasingly, both in the United States and abroad, secondary and university curricula are becoming more comprehensive. As a result, students of literature and culture are surveying the vast contributions of authors from around the world.

Encyclopedia of World Writers, 14th through 18th Centuries presents the most important writers and anonymous works, predominantly outside of the English-language realm and covering the half-millennium between 1300 and 1800. Entries include discussions of poetry, fiction, religious writings, drama, epic, history, oral tradition, political science, maxims, biography, philosophy, nonfiction, and literary terminology. For authors, entries include a brief biography as well as a description or analysis of one or more of their works. Each entry

is followed by the suggestion of a translation in English of the original work, whenever available, and recent scholarship on the subject.

We wish the readers a pleasant and exciting voyage into the realm of the world's masters and their literature. It is our hope that this volume will stimulate readers to further explore the work of these writers for the essence and exquisiteness that can only be suggested in this book.

Lastly, I wish to thank my daughters, Noëlle and Veronique, and my dear friends Jin and Joanne for all their love and support.

Thierry Boucquey
General Editor

INTRODUCTION

Encyclopedia of World Writers, 14th through 18th Centuries offers a comprehensive yet accessible overview of literature from around the world, covering the period from the beginning of the 14th century to about the year 1800. The survey spans the globe and, to guarantee the broadest possible coverage for entry selection purposes, represents 11 geographic domains: Africa, the Americas, Britain-Ireland, East Asia, Francophone Europe, Germany-Netherlands-Scandinavia, the Middle East, the Iberian Peninsula, Italy, Oceania-Pacific, and Russia-Eastern Europe.

For practical purposes, authors whose works span two periods (*i.e.*, late 1200s to early 1300s, or late 1700s to early 1800s) were placed in this volume because they are considered to be representative of the time periods covered. Early American authors have been included here because they belong to the literature of the “Americas,” which also includes pre-Columbian and Latin American literature.

This volume contains nearly 300 entries that naturally include some giants of the global literary canon, such as Molière, Shakespeare, Cervantes, Wu Cheng-en, and Zeami. Additionally, a particular effort has been made to include a fair number of entries representing language and literature

domains that traditionally are less studied in Western institutions. The volume also includes a significant number of lesser-known but nonetheless notable authors and works—from all domains—that have influenced global literary traditions and generated renewed scholarly research.

Also incorporated into this volume are definitions of important literary movements, genres, and phenomena such as neoclassicism, farce, and Kabuki, as well as literary terminology such as haiku, sonnet, and typology.

Aimed at both high school and college-level students, this encyclopedia endeavors to encourage and motivate the aspiring scholar to explore the literary wealth of world writers and their masterpieces. Tools at the students’ disposal include biographical information, analyses of major works, appropriate cross-references, and the inclusion of titles of translated editions as well as suitable critical texts.

World literature is as varied as it is extensive. During the half-millennium spanning the years 1300 to 1800, many authors, movements, schools, and literatures have shaped national and supranational literary landscapes on all continents. A succinct overview of some of these developments is presented here to help orient the reader.

AFRICA

In addition to the eventual recording of Africa's rich and ancient oral tradition, Olaudah Equiano's gripping autobiographical slave narrative, as well as several Arabic poets such as Muyaka and Sayyid Abdallah (Ali bin Nasir), highlight the continent's literary contribution before 1800.

THE AMERICAS

The literature of the Americas as defined here falls into three categories: pre-Columbian writing, Latin American colonial texts, and early North American literature. The first includes the famous *Popol Vuh*, an epic that records the history of the ancient Quiche Maya from the creation to the 16th century. It miraculously survived and was copied from a Mayan hieroglyphic manuscript hidden from the iconoclast colonizers' view. Latin American colonial writing consists not only of eyewitness accounts of discovery and adventure by colonists such as Columbus or clergy such as De Motolinia but also of anticonqueror sentiment such as that of Gama or Cacamatzín. The literature of America comprises early accounts of the struggles and challenges of colony life, a series of powerful theological writings, and the prose writers of the 18th century. Among these, Benjamin Franklin's pragmatic yet philosophical prose, Thomas Jefferson's political writings, and Thomas Paine's political pamphlets occupy a prominent place.

BRITAIN AND IRELAND

As American readers are presumably more familiar with this literature, it will suffice to say here that only the most prominent or influential authors and works have been retained in this volume for the sake of reference and completeness.

EAST ASIA

Whereas in China the best poetry is to be found in the drama during this period (with notable excep-

tions such as Cao Xuequin or Wu Chengen's novels), Japan witnessed the beginning of new types of dramatic literature, such as Noh, Kabuki, and Bunraku. Authors such as Zeami inspired these genres, while Bashō was the leading force for bringing haiku to new heights. The highlight in Korean writing was King Se-jong's creation in 1438 of a new alphabet, considered by linguists to be the most efficient phonetic transcription to date, save the modern International Phonetic Alphabet.

FRANCOPHONE EUROPE

The late Middle Ages in France produced the outstanding lyric poet Villon, as well as growth of the drama, which includes cycle (mystery and morality) plays and the genre known as popular farce. The founders of the Pléiade movement, Ronsard and du Bellay, personify the spirit of the Renaissance that slowly permeates French culture after 1500, while the vigorous and ingenious work of contemporaries Rabelais and Montaigne laid the foundations of the classical age. Descartes's rationalism imbues the 17th century or *grand siècle*, which becomes the golden age of theater. In Racine's tragedies French verse reaches its height, while Molière's brilliant, satirical, social commentary sets the standard for much of subsequent comedy through the ages. The large volumes of the *Encyclopédie* dominate the Enlightenment or age of the philosophers, among whom Diderot, Rousseau, and especially Voltaire occupy prominent positions.

GERMANY-NETHERLANDS-SCANDINAVIA

Erasmus of Rotterdam personifies the pan-European humanist ideal but has no clear answer to the ideas of the Reformation. Emanating from Germany in the 16th century is Luther, whose translation of the Bible is probably the era's greatest literary achievement. One century apart, two influential philosophers, Leibniz and Kant, set the stage for the age of Aufklärung or Enlightenment

and herald the coming of Germany's classical literary giants Schiller and Goethe. In the Netherlands, the mystic religious writing of Ruusbroec is especially noteworthy.

THE IBERIAN PENINSULA

The fame and scope of Cervantes's *Don Quixote* with its wonderful interpretation of the peasant mentality and satire of chivalry needs little comment. Creating some 2,000 plays, Lope de Vega founds the national Spanish drama, while Tirso de Molina invents the figure of Don Juan. In Portugal, de Camões achieves with *Os Lusíadas* the supreme Renaissance epic.

ITALY

The poet Petrarch is the first one to reconcile the Latin tradition and the new writing in the vernacular with an original style earmarked by refinement and simplicity. His friend and fellow humanist Boccaccio vividly portrays the rich drama of everyday human life in compelling comic tales that continue the medieval storytelling tradition. Machiavelli's famous *Prince* puts forward the idea that in politics one's goal justifies any means. Among nonprofessional writers, the elegant, crystal-clear prose of Galileo, the original poems and vivid letters of Michelangelo, and Leonardo da Vinci's incredible scientific speculations penned in priceless notebooks, stand out.

MIDDLE EAST

Muhammad Háfiz, who expresses a penetrating vision of life in a subtle satirical vein, is probably the finest lyrical poet Persia has ever produced,

while in the 14th Century the historian and philosopher Ibn Khaldūn develops a methodology and ontology of history that rivals modern historiography.

OCEANIA AND PACIFIC

Australia, New Zealand, and the island nations of the South Pacific produced only sparse literature before the 19th century, although a few authors such as Banks or Wentworth merit mention.

RUSSIA AND EASTERN EUROPE

In Russia, Cantemir and Lomonosov are the first to write exclusively in "spoken" Russian. The poetry of Derzhavin paves the way to the golden age of Russian literature. In 1542, Polish astronomer Copernicus establishes the heliocentric theory of the universe.

In conclusion, this volume is a work of reference. As such, it provides a wealth of organized information on authors, works, and literary terms and periods, and responds to the demand for quick and readily accessible information. It is our sincere hope that this volume, in presenting the lives and work of some 300 creative individuals who have contributed to the rich patrimony of humankind's accomplishments, will persuade readers to undertake a journey of their own. We encourage them to discover the inexhaustible treasure of the world's literary legacy and to find solace in the beauty, recreation, and inspiration of a story told.

Thierry Boucquey
Huntington Beach, California

TIMELINE OF AUTHORS AND WORKS

Dates	Author	Dates	Author
n.d.–1558	Quetzalcoatl, myth of	ca. 1325–1408	Gower, John

Watling, Thomas

Abdallah, Sayyid (Ali bin Nasir)

(ca. 1720–1820) *poet*

Little is known of the life of Sayyid Abdallah bin Ali bin Nasir, a poet and Muslim theologian of East African descent who wrote in Swahili. He is the author of two seminal poems of Swahili classical literature, *Al-Inkishafi*, or *The Soul's Awakening*, and the *Takhmisa*, or *Songs of Liongo*. Though these two are his only known poems, it is likely that he wrote several other Swahili poems, as yet not attributed to him.

The Soul's Awakening is a religious song that describes the horrors of hell for those who forsake the counsel of Islam. According to Professor Cora Agatucci, the song tells the story of the fall of Pate, a city-state in Africa, as an example of the “vanity of earthly life” (African Timeline). Nasir wrote the song after 1749, which makes it one of the earliest examples of written Swahili poetry. It remains unfinished but is an excellent early example of Swahili ritual songs by a pioneer in the language.

Académie française (1635–present)

movement/school

The Académie française was founded in 1635 by Cardinal Richelieu, chief minister of King Louis XIII, as a means of regulating the French language and influencing the direction of French literature. The Académie française has acted ever since as France's supreme court of letters, passing judgment on questions of language and literature.

France was experiencing a surge in cultural activity in 1633, when Richelieu learned of a group of men with literary interests who were meeting informally in Paris and who were interested in the purity of the French language. He granted them his protection, and they became the charter members of the Académie française. According to its statutes, its purpose was “to work with possible care and diligence to give certain rules to our language and to render it pure, eloquent and capable of treating the arts and sciences.” The members were given the task of compiling grammatical rules and creating an official dictionary of the French language.

The parliament of Paris initially refused to recognize the Académie's role in cultural and literary matters. Richelieu saw his opportunity to prove the Académie's usefulness in 1637, when controversy

2 Acosta, José de

broke out over Pierre CORNEILLE's immensely popular play *Le Cid*, which several prominent critics condemned for immorality and ignoring the rules of classical drama. Richelieu ordered Corneille to submit his play to the Académie for judgment, and the members agreed with Corneille's critics. Because of its important role in settling the controversy, the Académie was accepted and its authority assured.

The 40 members of the Académie were known as the Forty Immortals. Men were elected to vacant posts by the members with the king's approval. Seventeenth-century members included Jean RACINE, Nicolas BOILEAU-DESPRÉAUX, and Jean de LA FONTAINE, among others. One famous exception was MOLIÈRE, who was not admitted because he was also an actor, which then was regarded as a disreputable profession.

In 1672 Louis XIV took the Académie under his protection, moved it to the Louvre, and gave the members their own library. In addition to publishing the first edition of the French dictionary (1694), the Académie held public readings of new literary works and awarded prizes for prose speeches and poetry.

Members tended to be conservative in questions of language and literature, looking to classical Greece and Rome for models of proper writing. But not all members agreed. In 1687, Perrault read to the Académie his poem, "The Century of Louis the Great," which praised authors of his own day as equals or superiors of classical authors. This gave rise to a dispute among the members, known as the Quarrel of the Ancients and Moderns.

Secret balloting on new members was instituted in 1671, but many members owed their election to court influence or favoritism by women of the literary salons. As a result, many members of the 18th century had little literary expertise. One of the most prominent ENLIGHTENMENT thinkers, VOLTAIRE, ridiculed the Académie. While he was elected as a member in 1746, his efforts to interest other members in new literary projects failed.

The election of another free-thinker, Jean d'ALEMBERT, led to the formation of a strong group

of radical Enlightenment thinkers within the Académie. They urged the consideration of works on more modern subjects in literary competitions, but they, too, had little influence on traditionalist members.

The Académie was abolished along with other royal academies in 1793, during the French Revolution. It became part of the Institut National in 1795. It regained its former name and statutes in 1816, however, and its current members are still responsible for editing the official French dictionary.

The Académie française remains largely conservative, but it provides a forum for literary ideas, stands as a cultural tradition, and influences standard French spelling.

Acosta, José de (1539–1600) *theologian, philosopher, naturalist*

José de Acosta was born in Medina del Campo and entered the Society of Jesus when he was 12. Spain sent him as a Jesuit missionary to Peru and Mexico, where he lived from 1570 to 1587. Although he authored various minor works, three notable titles brought him fame.

In 1589 Acosta published *De natura novi orbis*, a valuable historical and scientific sourcebook that is considered to be his most important work. It joins the author's missionary concerns with his scientific interests by placing Mexico and Peru in harmony with the popular scientific view of reality of the time. Acosta translated *De natura* into Spanish and published it along with *Historia natural y moral de las Indias* into a single work. In *Historia natural* he studies the problems he found in Mexico and Peru and speculates on their origins. He presents a view of the New World as part of the

natural order assigned by God to nature and the course of history.

Another of Acosta's important works is *De procuranda indorum salute*, also published in 1588. In this work, he examines the fundamental problems of evangelization in America in the 16th century. Significantly, the work is the first systematic and complete presentation of early missionary problems with the balancing of rights, obligations, and parochial functions in the New World.

Acosta's works are important because they represent the ideological culmination of the religious, philosophical, and scientific conquest of the New World in terms of the historical and ontological process of incorporating the New World into existing culture.

Alberti, Leon Battista (1404–1472) *architect, writer*

During the 15th and 16th centuries, Europe experienced an explosive growth of culture, philosophy, and science, which has come to be known as the RENAISSANCE. Although the Renaissance affected many countries, it had the greatest impact in Italy, where brilliant artists, writers, and thinkers lived and worked. Among these people was Leon Battista Alberti.

Alberti was born in the Italian port city of Genoa, the illegitimate son of Lorenzo Alberti, a merchant from Florence who had been exiled from his native city. Lorenzo conducted a prosperous business that had interests throughout the Mediterranean world, and he ensured that Leon received an excellent education in the Latin classics and the law.

After his father's death, Alberti took a position with the administration of the Vatican, while at the same time he began to explore writing. He became fascinated with language, history, music, art, and architecture, and his writings on these subjects began to attract an increasingly large number of readers. He wrote in both Latin and the vernacular Italian, so that both the well-educated and the layman could read his works. Soon, many powerful figures in various Italian city-states sought out Alberti for advice on artistic and literary subjects. He also began designing architectural projects of his own, though he had never received an education in architecture and was entirely self-taught in the field.

For the remainder of his life, Alberti continued writing, working on his architecture, and assisting the powerful men of Italy. He moved constantly from court to court and eventually died in Rome.

Alberti was a good architect, although his work would be surpassed by other Renaissance masters. He is better known for his literary work than for his architecture, and his writings had a tremendous influence on art and architecture long after his death.

Alberti's writings are brilliant descriptions of the artistic and cultural world in which he lived, and they provide valuable insight into Renaissance Italy. He composed love poetry, biographies, Ciceronian dialogues, a satirical comedy about court life and philosophy titled *Momus* (ca. 1450), fables, and a 10-book survey of architecture. He also produced writings on family customs in Florence. One such work is his *Della famiglia*, a prose dialogue in four books in which he reveals discussions among three generations of his family regarding their social

4 Alembert, Jean Le Rond d'

values and business ethics. Alberti wrote the piece to defend his family against its critics. His discussions of children's education and marriage in books one and two of *Della famiglia* clearly show that Alberti was influenced by Aristotle and Xenophon. Book three concerns the Alberti family's responsibility to earn, save, invest, and spend money, while book four concerns friendship.

Another classical influence on Alberti was Lucian, whose penchant for satire Alberti adopts in a collection of short dialogues titled *Intercenales*. This work is noteworthy for its having introduced a playful tone into serious Renaissance literature in Italy.

One of Alberti's most crucial works was *On Painting* (1430s), in which he analyzes and explains the technical aspects of painting, paying particular attention to an artist's perspective in creating realistic, three-dimensional images.

The most famous of Alberti's treatises is *On the Art of Building* (1440s), in which he presents his thoughts and ideas concerning architecture. Alberti discusses everything from the architecture of ancient Rome to techniques for contemporary urban planning. Centuries after it was written, *On the Art of Building* remained the single most important reference work in the field of architecture.

Alberti had a tremendous influence on the artists and architects who came after him, including his friend Filippo Brunelleschi, perhaps the most influential architect of the Renaissance, and LEONARDO da Vinci, who apparently studied Alberti's works. His exploration of so many different interests and subjects marked him as a true Renaissance man.

Alembert, Jean Le Rond d' (1717–1783) mathematician, philosopher

Jean d'Alembert was one of the leading minds of the French ENLIGHTENMENT, along with such thinkers as MONTESQUIEU, ROUSSEAU, and VOLTAIRE, and he contributed to the monumental *ENCYCLOPEDIA*, a 28-volume work masterminded by Denis DIDEROT. The illegitimate son of the famed hostess Madame de Tencin, d'Alembert was abandoned as a baby on the steps of the church of St. Jean-Le-Rond and remained loyal to his adopted mother throughout his life. A diligent student of mathematics and physics, d'Alembert became a member of the Academy of Sciences at age 24. After making the acquaintance of Denis Diderot and other French philosophers, d'Alembert found himself agreeing to contribute to the *Encyclopedia*. D'Alembert wrote the memorable preface, the *Preliminary Discourse*, in which he proposes a theory of knowledge based on John Locke's ideas. D'Alembert also authored several tracts on his mathematical discoveries, the arts, and sciences. Both Russia and Prussia tried to lure him into their service, but d'Alembert chose to remain in Paris, where he died at age 66.

In 1743 d'Alembert published his new interpretation of Newton's Third Law, in which he maintains that forces that resist acceleration must be equal and opposite to the forces that produce the acceleration. This came to be known as "d'Alembert's principle." Until 1754 he continued publishing his work on algebra, calculus, and also physical

astronomy, in which he solved the precession of the equinoxes.

Biographers characterize d'Alembert as a man who had little use for wealth or sycophants and instead adored truth and reason. His preface to the *Encyclopedia*, first published in 1751, is the best example of his practical if unpolished style and his adherence to the egalitarian ideals and the spirit of scientific inquiry that characterized the Enlightenment. D'Alembert and the encyclopedists, clinging to their beliefs despite pressure from the conservatives, contributed to the dissolution of the ancient social and political institutions of France, which crumbled at the beginning of the Revolution.

Alfieri, Vittorio (1749–1803) poet, dramatist

Vittorio Alfieri was born in the northern Italian aristocracy of the early 18th century. While he studied at the Military Academy of Turin, one of the best colleges in Europe, the sheltered life of an aristocrat did not suit him. He was eager to see the world, instead, and embarked on a romantic and extensive series of travels across Europe (1776–1777), going as far as Russia and Sweden, some of which he details in his *Vita (Life)*.

Alfieri had a strong sense of Italian nationalism and rebelled against French classical culture, which was so prominent among his class and age. As a

result, he attempted to create plays that would rival French drama.

Alfieri's experiences in Paris during the French Revolution would color much of what he wrote. In his *Ode to America's Independence*, for example, he presents his views on both the French and the American revolutions, which reveals a decided favoritism for the Americans' desire for independence.

Alfieri wrote a total of 19 tragedies, many of them published in the 1780s, as well as political treatises such as *Of Tyranny* (1777), political poems, and an autobiography. Although he was influenced by classicism, much of his work is considered characteristic of the pre-Romantic period of Italian literature. His works are remembered for the national conscience they restored to Italian culture.

allegory

An allegory is a story in which characters represent abstract qualities, and the literal story line is less important than the symbolic truth that the story both conceals and dramatizes. An allegory is similar to both a parable, the kind of story used in the Christian Gospels to illustrate moral truths, and a fable, in which a story dramatizes a practical insight about life. An allegory, however, is more elaborate than either a parable or a fable and is developed in more detail. More complicated allegories reveal a multiplicity of meanings.

In classical literature there are many famous examples of allegory, including the allegory of the cave in Plato's *Republic*, where Plato likens human life to the existence of cave-dwellers who can see reality only in the form of shadows cast on a wall. In addition, several of the stories in Ovid's *Metamorphoses* invite allegorical interpretation.

The allegory received its fullest expression in medieval and RENAISSANCE Europe. Early Christian writers such as Augustine, and medieval religious writers who followed him, extended the parable form to help convey spiritual concepts. As medieval romances grew in popularity, writers defused charges of frivolity leveled against their preoccupation with secular passions by including religious meanings. In *The Divine Comedy*, for example, Dante achieved a complete fusion between romance and religious poetry, and every event and conversation can be understood on several levels.

In some allegories, such as William LANGLAND's *Piers Plowman*, characters bear the names of abstract qualities (Piers meets and talks with deadly sins such as Gluttony and Sloth, and virtues such as Truth and Peace). In other allegories, the characters seem to be real people with whom the reader can identify while at the same time symbolizing moral dilemmas. For example, in the 14th-century English romance *SIR GAWAIN AND THE GREEN KNIGHT*, Sir Gawain, although a good knight and a hero, is also an ordinary, flawed human being; but the Green Knight who challenges him, the host who entertains him, and the host's lady who tempts him all have a symbolic function that is not fully explained and that challenges the reader to search for the best interpretation.

Renaissance examples of allegory include Torquato TASSO's *Gerusalemme Liberata*, Ludovico ARIOSTO's *Orlando Furioso*, and Edmund Spenser's *The Faerie Queene* (1590, 1596). Jonathan SWIFT used allegorical techniques in his *A Tale of a Tub*, and writers and filmmakers to this day use allegory to engage at once the reader's emotions and intellect.

Anchieta, José de (1534–1597) *missionary, teacher, linguist*

Dubbed the "Apostle of Brazil," José de Anchieta is influential for his contributions as a writer to the foundations of Brazilian culture. He is also noted for his concern for the welfare of the Brazilian Indians demonstrated through his efforts to protect the Indians from exploitation under Portuguese colonization. Anchieta helped to establish several Jesuit schools, including colleges at Rio, Bahia, and Pernambuco. He was instrumental in helping to found the cities of São Paulo and Rio de Janeiro.

Anchieta mastered several Indian languages and helped make the Tupi tongue the main language of communication among the Indians. Noted for his linguistic studies, he wrote a grammar of the Tupi language (*Arte de grammatica da lingoa . . . do Brasil*), which was widely used by missionaries. He also compiled a Tupi-Portuguese dictionary. He translated prayers, hymns, and the catechism into Indian languages. To teach religious faith, he wrote catechetical texts, canticles, dialogues, and religious plays in Tupi and in Portuguese.

Anchieta's numerous letters and reports, spanning the years from 1554 to 1594, provide an important historical record of Brazil's development in the 16th century. He wrote poetry, composing verses in Portuguese, Spanish, Latin, and Tupi (*De beata virgine dei matre Maria; Primeiras letras*). He is also noted for writing didactic religious plays

and is credited with authoring the first, short religious plays acted in Bahia.

Andrada e Silva, José Bonifácio de

(1763–1838) *poet, scientist, political figure*

Known as the “Patriarch of Independence,” José Bonifácio de Andrada e Silva was one of the most influential figures in Brazilian history. Extremely well educated, Andrada e Silva received degrees in law and philosophy in 1787 and 1788, respectively, from the University of Coimbra. He also studied other topics, such as mathematics, geology, and astronomy. After graduating, Andrada e Silva joined the Science Academy of Lisbon, where he gained international recognition for his achievements in the sciences. His contributions in this area are many, including his discovery of four previously unknown minerals and eight unknown species.

After a long absence from home while conducting scientific research abroad, Andrada e Silva returned to Brazil in 1819 and immediately became politically active. In October of 1821, he wrote “*Lembranças e Apontamentos do Governo Provisorio de São Paulo*,” said to be the most important document in Brazilian history, for laying the foundation of modern-day Brazil. Andrada e Silva is given credit for the unification of Brazil in 1822, an act that many proudly state contained little bloodshed. Without his efforts, Brazil would have separated into smaller divisions during the disintegration of Portuguese control in the early 1800s. He was named the first minister under the new constitution he had helped establish, but his intense insistence on a liberal constitution led to his banishment from Brazil in 1823–29. He later returned to Brazil and tutored Emperor Pedro II’s sons.

As a writer, Andrada e Silva’s work was fueled by his political vehemence. In “*Poesias Avulsas*,” he explored a “natural pantheism that expressed his intellectual character and scientific curiosity,” a curiosity that sparked the same in others of his time (Rupert). The work was published under a pseudonym and has been republished in numerous volumes since its original publication in 1825.

Aretino, Pietro (1492–1556) *poet, playwright*

Known for his scathing satire, Italian author Pietro Aretino was one of the most notorious writers of his time. His daring ridicule of powerful figures earned him fame throughout Europe.

Born in Arezzo on April 20, Aretino rejected the family name of his father (“Aretino” means “from Arezzo”) and moved first to Perugia and then to Rome in 1517, where he became an enthusiastic participant in, and critic of, aristocratic society. He was shrewd and ruthless, often resorting to blackmail and claims of public influence with popes and nobles. Indeed, he would gain during his lifetime the favor of Pope Leo X and the patronage of Giulio de’ Medici, who became Pope Clement VII. Aretino drew most of his wealth from gifts from nobles, and many of his works are, at their core, satirical weapons Aretino used in his political maneuvers.

Six volumes of Aretino’s letters express a great deal of his satire and cynicism concerning the powerful. Rome and its citizens were frequent targets of his wit, as expressed in his works *Ragionamenti* and *I diloghi*. His 1524 collection of sonnets, *Sonetti lussuriosi* (Lewd sonnets), precipitated his exile (perhaps the source of his animosity) from Rome.

Aretino wrote a number of comedies that are less malicious and add portraits of the lower class. His first and perhaps best-known comedy, *Cortigiana* (*The Courtesan*, 1525), explores the lives of the lower class in papal Rome. Using the plot line of a practical joke played by the duke of Mantua, *Il Marescalco* (1526–27) presents a comedic reprimand of courtly life and is known for its frank exploration of sexuality. Aretino also wrote the tragedy *Orazia* (*The horatii*, 1546), a verse play based on Livy's account of Horatii and Curatii. It provides a fine example of Aretino's versatility as a dramatist and poet.

Reacting to Pietro BEMBO's carefully refined writings, Aretino wrote eloquent prose, verse, and letters, using common, everyday speech and focusing on a greater variety of subjects. He is remembered for leading the way to a more provocative style of writing in 16th-century Italy.

Argensola, Bartolomé Leonardo de

(1562–1631) poet, historian and

Argensola, Lupercio Leonardo de

(1559–1613) poet, playwright, historian

The brothers Argensola came from an aristocratic family and followed very similar literary paths. They were educated at Huesca and Zaragoza, with Bartolomé also studying at Salamanca. Both joined

the Academia Imitatoria (Academy of Imitators), a prestigious literary society that promoted the use of classical writers such as Horace as models. In fact, the brothers were known as the "Spanish Horaces," both excelling at moral and satirical verse.

As leaders of the Aragonese School, they reacted against the complex baroque style of GÓNGORA Y ARGOTE, then in vogue. By contrast, their writing is restrained and intellectual. In their time, however, they epitomized good literary taste with emphasis on balance and formal perfection.

In 1599 Lupercio became chief historian of Aragon. But in 1608, at the invitation of the conde de Lemos, viceroy of Naples, both brothers moved to Naples. There Lupercio served as secretary of state, while both continued their literary activities: Lupercio founded his own literary society, Academia de los Ociosos (Academy of Idlers), and Bartolomé became literary adviser and court poet.

Toward the end of his life, Lupercio assessed his own work rather harshly and had his poems burned. His version of Horace's *Beatus ille* is, however, considered to be among the finest in Spanish. Luckily, his son Gabriel had made copies of most of his poems.

There were, however, some notable differences between the two. Lupercio, who disliked popular theater, wrote three tragedies in the style of the Roman dramatist Seneca: *Filis*, now lost, and *Alejandra* and *Isabella*, both gloomy and violent.

Bartolomé, who also wrote under the name "Luis de Escatrón," was regarded as the more accomplished stylist for his sonnets and didactic verse. Unlike Lupercio, he was ordained into the priesthood, serving as rector of Villahermosa and later canon of the cathedral at Zaragoza. When Lupercio died in Naples, Bartolomé returned to Spain, where he took Lupercio's old job as chief historian of Aragon. In this role, both brothers produced important official historical records.

Contemporary writers such as FÉLIX LOPE DE VEGA and Miguel de CERVANTES held the Argensola brothers in high esteem. Their poems were collected by

Lupercio's son and published posthumously in a single collection called *Rimas*. English versions of works by the Argensola brothers are not in print.

Ariosto, Ludovico (1474–1533) *poet, playwright*

Ludovico Ariosto was born at Reggio, Italy, and was the first of 10 children. When his father died in 1500, Ariosto became the head of the household. In 1503 he entered the service of Cardinal Hippolytus, who employed him as a diplomat and ambassador as well as poet; however, when Ariosto declined to move to Hungary with the cardinal, he was dismissed. He then took service with Duke Alfonso d'Este and, except for a three-year term as governor of one of the outlying provinces, he was allowed to remain in Ferrara to compose, perform, and publish his work. In 1526 he married his life-long love, Alessandra Benucci.

Though today he is remembered for his EPIC poem *Orlando Furioso*, Ariosto also wrote a variety of plays, lyric verse, and satires. His dramatic pieces show the influence of Plautus and Terence; his earliest play, *The Chest of Gold* (1508), was the first of its kind to use modern stage settings. For the *Supposes* (1509), set in Ferrara, Raphael painted the cityscape that served as the backdrop, and *The Necromancer* (1520) introduced a new stock character in the form of the villain Iachelino, a magician and sage. Ariosto wrote *Lena* for a wedding in 1528, and later began *The Students*, which he never finished.

Ariosto's *Satires* are written in three-line rhymed stanzas and contain a great deal of autobiographical material. Like Horace, he treated the satire as a mirror of daily life.

Ariosto's lyric and occasional poems were not published as a collection until 1546. Many of them had been written while he was a student, or in the service of Hippolytus. A number of the sonnets, addressed to Alessandra and composed in the form perfected by PETRARCH, show his style maturing as the artist perfected the tools he would use to craft his masterwork, *Orlando Furioso*.

Ariosto lived during the peak of the Italian RENAISSANCE, and *Orlando Furioso*, which he spent half his life writing and revising, is completely a product of the Renaissance at its height. The character of Orlando evolved from the historical Roland, who served in the army of Charlemagne. In turn, Ariosto's character evolved as the product of previous works about Roland, including *The Song of Roland* (11th century), PULCI's *The Greater Morgante* (1482), and Boiardo's *Orlando Innamorato* (Orlando in love, 1494), which he never finished.

In 1506 Ariosto took up where Boiardo left off. The first edition of *Orlando Furioso* (Orlando the mad) appeared in 1516, the second in 1521, and the third, expanded and revised edition in 1532. The work preserves the grand vision and sprawling scope of the legends in three main storylines that hold the work together. The first is an account of Charlemagne's perpetual war with the Saracens; the second concerns Orlando's passion for Angelica; and the final story involves the love affair of Ruggiero and Rinaldo's sister Bradamante.

Ariosto composed *Orlando* in highly polished eight-line stanzas, or octaves, and he frequently intervenes to comment on the larger themes of love, war, and the fragility of the human mind and soul. He understood the nature of the quest, and all of his characters search for different things: love, glory, victory, paradise, and peace. In addition, he combines classical, medieval, and contemporary material to create a work that blends tragedy, comedy, and epic in an enormously varied and vital style.

The *Five Cantos*, which appeared after Ariosto's death, were thought to be additions to the *Furioso*. John Harington first translated the *Furioso* into English in 1591. Edmund Spenser began *The Faerie Queene* with the intention of surpassing Ariosto's achievement, and Walter Scott learned Italian simply so he could read *Orlando* in the original.

Though critics from the beginning have debated over the quality of Ariosto's style, they can agree to what biographer Griffin calls "the stupendous impact of the *Furioso* on European literature." A work as much about limits as it is about extremes, as much about human failure as it is about human

achievement, the themes of *Orlando Furioso* continue to hold compelling relevance to the writing and study of literature.

Ashanti tales (1400s–1800s) folklore

The Ashanti (or Asante) built an empire in the region of present-day Ghana that flourished for several centuries and reached its peak of influence in the 18th century. The Ashanti kingdom, one of the most powerful in West Africa, interacted with the increasing number of Europeans, and was famous for its wealth in gold, its well-armed military, and its efficient administration. Ashanti royalty had court poets to compose songs commemorating their ancestors and accomplishments, while the folktales circulating at all levels of society provided a method of social cohesion by formulating and communicating cultural values, mores, and customs.

The Ashanti folktales often tell a moral lesson, describe a myth, or answer a question about the natural world. In the tradition of fables from those of Aesop to the *Panchatantra*, most of the Ashanti tales use animal characters to represent human qualities such as jealousy, honesty, greed, and bravery. Ananse, the spider, is a trickster figure who appears in many of the Ashanti tales. As in the Coyote Tales of the Hopi, the stories portray Ananse as clever, successful, funny, lazy, or deceived, and almost end with a moral. One tale that describes how wisdom entered the world begins with the

image of Ananse the spider putting all the wisdom into a large pot and trying to carry it up a tall tree to hide it. Frustrated by failure, he throws the pot to the ground and it breaks, thus freeing the wisdom for use by all peoples.

A recent retelling of an Ashanti story by Tololwa Mollel, illustrated by Andrew Glass, portrays the greedy side of Ananse's nature. Ananse, who had hoarded his food before a large drought, refuses to share with any of the other animals, even when Akye the Turtle comes to visit. Akye gives the gluttonous Ananse a taste of his own medicine by inviting him to a feast where Ananse is unable to eat a bite. In an adaptation by Verna Aardema, with pictures by Bryna Waldman, Anansi, as a human figure, gets tricked at his own game when he goes out looking for a fool. The stories turn on the function of shame and friendship in Ashanti culture and convey the moral that hard work merits reward, while dishonesty creates consequences.

Many Ashanti tales celebrate the cleverness of the small, as does Jessica Souhami's rendering of the traditional tale of Osebo the leopard, who disobeys Nyame the Sky-God by refusing to give him his drum. The small tortoise Achi-cheri, laughed at by the other animals, manages to trick Osebo and deliver the drum to Nyame, who rewards her by giving her a hard outer shell to protect her from the jealousy of others. The theme of social harmony appears frequently in Ashanti tales, reflecting the cultural belief that animals, objects, and even places preserve a life and a spirit of their own. Society in the world of the folktales is ruled by a chief whose office is indicated by his stool, but while chiefs resolve disputes and give judgments, the tales reveal the importance of respect, honesty, and joint action at all levels of the Ashanti community.

Ashanti folktales still circulate as part of the oral literature of present-day Ghana, and the staging of stories provides a means of bringing together people of all ages and social strata. Storytelling is associated with wisdom and knowledge in Ghanaian culture, so the best storytellers are usually older men and women. The audience gathers in a circle around

the narrator, participates in a call-and-response style, and shows appreciation by singing or applauding. A skilled storyteller draws on the audience's body language, facial expressions, and comments for inspiration.

The Ashanti tales have proved popular in English and are often adapted into picture books for young readers, preserving the vital culture, artistic achievements, and imaginative myths of a powerful and influential people.

Aubigné, Agrippa d' (1552–1630) poet, nonfiction writer

Agrippa d'Aubigné lived during one of the most turbulent times in French history—the years of the Wars of Religion (1562–98) between the Catholics and the Protestants. He participated in the Protestant cause throughout the wars and served as equerry and diplomat under Henri di Navarre (later Henry IV).

He was born near Pons, and after his mother's death his father, Jean d'Aubigné, sent him to be

raised by his cousin, Michelle Joly. In his autobiography (*Sa vie à ses enfants*), he claims to have been able to read and translate Latin, Greek, and Hebrew by age 10. In 1565 d'Aubigné studied in Geneva but eventually returned to France, where he completed his education. He wrote many of his early poems from 1571 to 1573, inspired by his love for Diane Salviati, which were published in 1874 under the title *Printemps*. Mostly a collection of sonnets, the poems in *Printemps* were written in the Petrarchan style.

In 1572 he narrowly escaped the St. Bartholomew's Day massacre in Paris, and this tragedy strengthened his Protestant resolve. He joined the court of Henri de Navarre, which he satirized in later writings. D'Aubigné continued to fight for the Protestant cause until 1593, when Henri converted to Catholicism. Starting in 1579, d'Aubigné began work on *Les Tragiques* (1616), a long poetic "denunciation of the evils he sees about him and of the enemies of the Reformation" (Harvey and Heseltine, 35).

At the same time d'Aubigné was writing *Les Tragiques*, he also completed *L'Histoire universelle*, published from 1618 to 1620. This historical narrative focuses on the years from 1550 to 1601. In 1617 he published *Aventures du baron de Fæneste*, a satirical novel about the Catholic faith. In 1620 his *L'Histoire universelle* was condemned to be burned, and d'Aubigné was to stand trial. Instead he fled to Geneva, where he remained until his death. Before that, in 1626, he wrote his autobiography, which was published posthumously. D'Aubigné's strong beliefs and great learning are reflected in his body of work.

Avvakum (Avvakum Petrovich)
(ca. 1621–1682) *nonfiction writer*

Avvakum was born into a peasant family in the Nizhnii Novgorod region of Muscovy. Raised by a devout mother, Avvakum married and entered the church at a young age, and by age 30, he was an archpriest.

Beginning in 1653, Avvakum spent nine years in exile in Siberia because he opposed recent changes to Russian Orthodox church books and services. Upon his return to Moscow, he continued to agitate against the reforms. A 1667 church council condemned opponents of the reforms as heretics, and Avvakum found himself and his family exiled to the far north. There he wrote his autobiography, polemical works attacking the reforms, and letters to followers. These followers deemed him a martyr when he was burned at the stake for his religious views.

Avvakum is best known for his autobiography *Zhitie (Life)*; publication date unknown). It is a multifaceted work that combines simple, vernacular prose with formal religious language. Drawing inspiration from hagiographies (written stories of saint's lives), Avvakum depicts himself as a pious man who suffers for his defense of the true faith.

N. K. Gudzy notes the “boldness” inherent in Avvakum's writing, his “extremely high opinion of himself and his consciousness of enormous spiritual superiority over ordinary people.” Unlike most hagiographies, however, *Life* makes its protagonist seem human. At one point, for example, Avvakum is “lying on the stove, naked, under a covering made from birch bark,” and he has to retrieve his priestly clothing from “mess and dirt.”

Avvakum is remembered for having written one of Russia's earliest autobiographies, and his simple yet graphic portrayal of his life's events, beliefs, and emotions has given him a place in world literature.

Axayacatl of Tenochtitlán (1449?–1481)
poet, ruler

Axayacatl of Tenochtitlán was the son of Prince Tezozomocztin and Huitzilxochitzin, a woman from Tlacopan. While his father did not rule in Tenochtitlán (present-day Mexico City), Axayacatl and two of his brothers became *huey tlatoani* (supreme ruler) of the Aztec Empire. Axayacatl was elected ruler in 1468 at the insistence of Tlaacael, a powerful Mexican counselor, despite being only 19 years old.

Axayacatl showed great bravery in combat as the ruler of Tenochtitlán. He led three great battles against the Tlatexica nation, the Matlatzinca of Toluca, and the Purépecha of Michoacán, though the last of these was a severe defeat for Axayacatl and his men. During this time, Axayacatl also supervised the carving of the Sun Stone, which combined Aztec mythology, religion, and the science of the calendar. Shortly after the unveiling of the Sun Stone, Axayacatl fell ill and never recovered.

The battle with the Purépecha served as the inspiration for one of the two great poems attributed to Axayacatl, “Huehueh Cuicatl,” or “Song of the Elders.” The poem expresses the weariness felt by

the poet after the defeat, and honors the soldiers who died in battle. Axayacatl's other poem, "Ycuic Axayacatzin, Mexico Tlatohuani," or "Song of Axayacatl, Lord of Mexico," recalls his famous ancestors and the glories of the Aztec Empire. Unfortunately, one of Axayacatl's own sons, Montezuma II, would see the end of Aztec glory in 1520. Though Axayacatl's reign lasted only 13 years and his poetic output was limited, he is remembered as one of the great poets and rulers of the Aztec Empire.

B

Bacon, Francis (1561–1626) *nonfiction writer*
Francis Bacon was born in London, the youngest son of Sir Nicholas and Lady Ann Bacon, and educated at Cambridge University. He spent three years as a youth in France as an assistant to the English ambassador but was recalled to England in 1579 by his father's sudden death.

For employment, Bacon turned to the law, qualifying for the bar in 1582. He also became a member of Parliament in 1583, earning a reputation as an eloquent orator, and served every year thereafter until 1621.

Even during his early years in Parliament Bacon was at work on a project inspired by his disillusionment with the dry and derivative education he had received at Cambridge. His *Great Instauration*, or renewal, of learning was a plan, in his words, “to set philosophy into a more fertile path.” The project came to include models of “new learning,” plans for universities, and methods of experimentation and observation.

Education and the law, however, were not Bacon's only interests. He published one of his greatest works, *Essays*, in 1597. To *essay* is to weigh something to determine its value, and an essay is an informal exploration of a topic; the form had been pioneered by Michel de MONTAIGNE in France, but Bacon was the first to attempt it in English. In

each essay in his collection, he treats topics such as friendship, truth, and wealth by alluding to classical and biblical stories, using extended metaphors, and using biting aphorisms (pithy sayings). Bacon added to the work over the years, and the published version (1625) contains 58 essays.

The ascension to the throne of King James I brought good times for Bacon. The new monarch knighted him and appointed him king's counsel, and in 1606 solicitor general. Bacon dedicated his 1605 work *The Advancement of Learning*—the first part of the *Great Instauration*—to James I in the hope that the king would support his educational reforms. In this Bacon was disappointed, but his career continued to flourish.

He became the nation's attorney general in 1613, a member of the king's Privy Council in 1616, and lord chancellor—the highest position for a judge—in 1618. In quiet moments he continued to work on the *Great Instauration*. In the second part of this work, the famous *Novum Organum* (*New Tool*, 1620), he explains his theory of scientific method, particularly the need for subjecting hypotheses to empirical tests.

In 1621 came disgrace: Bacon was charged with having accepted a bribe, and he admitted his guilt. He served a short jail sentence and was stripped of public office. This sudden fall from power could

have crushed Bacon's spirit, but it did not. He seized the opportunity to devote the last years of his life to his studies. By this time, the *Novum Organum* was known in learned communities throughout Europe, and Bacon corresponded with admiring foreign scholars. In addition, he continued to record his observations of natural phenomena, which can be found in the third part of the *Great Instauration*, titled *Sylva Sylvarum* (*The Wood of the Woods*). This collection of observations and records of scientific experiments was published the year after Bacon's death. It includes *The New Atlantis*, a utopian fable about a land called Bensalem, where people work together in service of "the knowledge of causes and secret motions of things; and the enlarging of the bounds of human empire, to the effecting of all things possible." Here, science is not the mental plaything of scholars but the useful tool of practical people who wish to improve the human condition.

Although the last two parts of the *The Great Instauration* were never written, Bacon achieved lasting recognition for his achievements in the philosophy of science. He describes himself in these words:

Being gifted by nature with desire to seek, patience to doubt, fondness to meditate, slowness to assert, readiness to consider, carefulness to dispose and set in order.

It was this combination of gifts that made Bacon, according to his biographer Rosalind Davies, "a major figure in the intellectual tradition of Europe."

Balbuena, Bernardo de (1568–1627)

poet

According to Menéndez y Pelayo, the birth of Spanish-American poetry can be linked to Bernardo de Balbuena. Celebrating both Mexico and Spain in his poems, Balbuena draws on nature to display his overwhelming love for both countries. His greatest poem "El Bernardo" (1624) displays his feelings of the influence of poet Ludovico ARIOSTO and other Latin EPIC poets. Not an autobiography, "El Bernardo" focuses on the adventures of the famous Spanish hero Bernardo del Carpio. The poem also explores the constructions and oppositions that exist between the ideologies of the superior figure and that of the inferior figure (Nicolopulos).

Born in Val de Peñas, Spain, Balbuena moved at an early age with his parents to La Mancha, Mexico, where he spent his childhood and gained an education. As an adult, he served as the chaplain to the Audiencia of New Galicia for six years (until 1592) and, in 1620, was named the bishop of Puerto Rico. He died in Puerto Rico.

He composed most of his writings in the 1590s on frontier lands in the west of Mexico (Nicolopulos), but his "La grandeza mejicana" (1604) is thought by some scholars to mark the beginning of Spanish-American poetry. Another well-known and well-received poem, "Siglo de oro en las selvas de Eriphile" (1608), is "a very learned pastoral romance abounding in beautiful poetic passages" (Knight). All of Balbuena's works reveal the influence of the places he lived, his knowledge of classical poetry, and the inner visions of a master poet.

***Bamana Segu, Epic of* (1700s–1800s)**

African epic

The Bamana empire flourished around the upper Niger River, from the 17th century to the 19th century. Its capital was Segu, near Bamako, the present capital of Mali on northwest Africa. Segu saw the reigns of 19 kings before it was conquered in 1861–62 by the Muslim Tukulor army. The *Epic of Bamana Segu* tells the troubled story of the most memorable of these 19 kings: Mamani Biton Kulubaly (ca. 1712–55), Ngolo Jara (ca. 1766–87), Monzon Jara (ca. 1787–1808), and Faama Da Jara (1808–27). Of these, Kulubaly was the founder of the Segu empire, and most versions of the epic begin with his story and end with the ascension of the Jara dynasty and its demise. The epic is therefore a complex history of dynastic successions, wars, and family stories.

Also called the Segu cycle, the *Epic of Bamana Segu* is viewed by many scholars as a foil for the famous *Epic of Sundiata*. While *Sundiata* is about legitimate authority, the *Epic of Bamana Segu* is just the opposite and shows the darker side of power struggles. It is valued for the glimpse it provides into the history and oral literature of the Bamana empire.

Banks, Joseph (1743–1820) *nonfiction writer*

Joseph Banks was born in 1743 in London, the son of William Banks, a wealthy landowner, and Sarah Banks. He was educated at Harrow and Eton, and in 1760 entered Christ Church, Oxford. The classical curriculum, however, was not to his liking. His true passion lay in the study of botany, so he hired Israel Lyons, a botany instructor, to come to Oxford to educate him in the field. Banks became not only a botanist but also a patron of science.

At age 23, he traveled to Newfoundland and Labrador to collect plants, animals, and rocks. The same year he was elected to the Royal Society of London. His voyages allowed him to engage in what he loved most—discovering and collecting new botanical specimens. Such pursuits led to the start of the Banks Herbarium.

He embarked on his most famous voyage to Tahiti in 1768, aboard the *Endeavour* with the legendary Captain James Cook. Banks and his team collected more than 800 new specimens. He also immersed himself in Tahitian culture, learning the language and even getting a small tattoo. This voyage—and tales of his exploits—earned him much fame back in England.

His next and last voyage was to Iceland in 1772, and in 1778 he was elected president of the Royal Society, an office he held until his death in 1820. He also helped fund the journey of the infamous and mutinous *Bounty*.

Banks is known more for his scientific contributions and discoveries than for his writing, but he kept an extensive journal of his voyage with Cook, which was not published until 1962, when an edited version appeared. In addition to the journals,

Banks kept voluminous notes on his discoveries and pursuits, and engaged in large amounts of correspondence. His correspondents included Lord Nelson and Benjamin FRANKLIN, and his letters shed light on the age in which he lived, “an age in which geographical and scientific discoveries surpassed anything previously dreamt of” (Alexander, 41).

Bartram, William (1739–1823) *naturalist, explorer, historian, illustrator*

Son of the noted botanist John Bartram, William Bartram is best known for his published account of his botanical expedition (1773–78) in the southeastern United States. Published in 1791, *Travels Through North and South Carolina, Georgia, East and West Florida, the Cherokee Country, the Extensive Territories of the Muscogulges, or Creek Confederacy and the County of the Chactaws*, is considered an American classic of language and science. Composed in elaborate prose, it contains comprehensive and entertaining descriptions of the flora and fauna, the geologic formations, and the Native American tribes of the southeastern United States. Many of the subjects illustrated represent the first record of an American plant or animal.

As a trained natural scientist, Bartram traveled through the South, nothing in detailed descriptions and illustrations the characteristics of almost everything he encountered. He portrays nature through personal experience as well as scientific

observation. In addition to natural history subjects, he provides an account of southeastern Native Americans that is considered one of the best of the period.

Other significant writings attributed to Bartram include a manuscript titled *Pharmacopodia*. Three articles appearing in other publications include, “Anecdote of an American Crow,” “Description of an American Species of *Certhia*, or Creeper,” and “Account of the Species, Hybrids, and other Varieties of the Vine of North America.”

In terms of literary influence, *Travels* is noted as a source for Samuel Taylor Coleridge’s *Kubla Khan* and *The Ancient Mariner*. William Wordsworth, Thomas Carlyle, Ralph Waldo Emerson, and François-Auguste-René de Chateaubriand also considered the work with high regard. The book was an immediate success in Europe and was published in many editions and translations throughout the world. It is still considered a valuable record of discoveries in natural history.

Bashō (Matsuo Bashō, Matsuo Kinsakin, Matsuo Munefusa) (1644–1694) *poet*

Matsuo Kinsakin was born near Ueno, Japan, southeast of Kyoto. After changing names periodically during his childhood and young adulthood, as was customary at that time, Kinsakin took the name Bashō.

Bashō's father was a low-ranking samurai in the service of Tōdō Yoshikiyo, the ruling lord of Ueno. Bashō's mother's parents migrated to Iga province from Iyo province. As a boy, Bashō became a page at Ueno Castle and a study companion to young Yoshitada, the Tōdō family heir. Bashō and Yoshitada shared an interest in the Japanese poetry form HAIKU, and together they studied and published poetry. In 1666, Yoshitada died suddenly, leading Bashō to abandon his post at Ueno Castle to wander for several years. It is believed he went either to Kyoto to study literature, philosophy, and calligraphy or to a Kyoto monastery to become a Buddhist monk and study Zen. To support himself, he worked as a poet's scribe and took a number of other odd jobs. He later moved to Edo (now Tokyo) and continued to study, write, and publish haiku. This period of wandering was the first of many journeys and expeditions that he detailed in his writings.

By the time he was in his 30s, Bashō had established himself as an independent master and haiku. He spent the last 10 years of his life on pilgrimage, visiting famous places and meeting with other poets and disciples. He died of a stomach ailment at age 50, by which time he had taught poetry to nearly 2,000 students.

Bashō's haiku is known for its simple, unpretentious style and its honest, sincere treatment of his subject matter. Influenced strongly by Zen Buddhism, Bashō developed haiku from a form that relied largely on puns, slang, parody, and vulgar subjects to one that explored authentic human experience and perception through subtle but familiar images from nature. He is credited with establishing the 5-7-5 syllable pattern used in haiku to this day.

Although Bashō wrote many impersonal and sad haiku, he did not abandon the playful, light-hearted approach of his predecessors that made earlier varieties of haiku popular among the accessible to all classes of Japanese people in the 16th and 17th centuries. Through his command of language, experimentation, and talent, Bashō refined haiku and realized the form's potential. Since his

lifetime, haiku has remained an important form of poetry, and Bashō, a major poet.

Written when he was 42, Bashō's most famous poem exemplifies his mature style and typifies haiku in general:

*The old pond;
A frog jumps in—
The sound of the water.*

In 1689, approximately three years after he wrote "The Old Pond," Bashō embarked on a two-year, 1,500-mile journey around Japan, traveling with friends, disciples, and fellow poets from Edo to Ogaki. His masterpiece, *The Narrow Road to the Deep North* (1977), is based on his experiences during this journey and combines both haiku and haiku-like prose. He opens the travel diary by professing his very personal vision of travel:

The sun and the moon are eternal voyagers; the years that come and go are travelers too. For those whose lives float away on boats, for those who greet old age with hands clasping the lead ropes of horses, travel is life, travel is home. And many are the men of old who have perished as they journeyed.

He continues in the same poetic vein throughout *The Narrow Road*, using words to create soulful images of what lay in his heart. In the following lines, for example, a combination of Bashō's thoughts of ancient battles fought in Japan and his view of the landscape upon which those battles took place causes him to remark:

Sitting on my sedge hat . . . , I wept for a long time.

*A dream of warriors,
and after dreaming is done,
the summer grasses.*

During the three decades that he wrote poetry, Bashō elevated haiku from a game and pastime to a serious literary genre. His influence on writers from Charles–Pierre Baudelaire and Stéphane Mallarmé to Jack Kerouac and Amy Lowell demonstrates his strength as a writer and his universal and lasting impact and appeal.

Beaumarchais, Pierre–Augustin Caron de (1732–1799) dramatist

Born in Paris, the young Pierre was brought up in his father's trade of watchmaking. At age 21, he became watchmaker to the king and, following his marriage to the widow of a court official, he took the name Beaumarchais from one of her properties. He led various careers as a musician, pamphleteer, businessman, and arms dealer to the colonies during the American Revolution. Throughout his life he was in and out of court, jail, and briefly, after the French Revolution, exile. Upon his return to Paris, he found both his fortunes and his health in decline, and died suddenly of a stroke at age 67.

Today Beaumarchais's reputation as a flamboyant character overshadows his reputation as a playwright. His first two plays, *Eugénie* (1767) and *The Two Friends* (1769), showed promise but were only modestly successful. In 1775 his new play *The Barber of Seville* opened to disappointing response and discouraging reviews. A few quick revisions led to a new version of the play running the next night, to a much warmer reception; audiences were delighted with the witty, inventive, scheming Figaro, who in fact somewhat resembled his creator. Difficulties with censors kept the sequel, *The Marriage of Figaro*, from appearing until 1784, but its success reinvigorated French drama and Beaumarchais's fortune. Following difficulties in his personal and professional life, however, his reputation began to suffer. *The Tartar* (1787) was a success, but *The Guilty Mother* (1792), the third in the Figaro series, was not considered up to the original's standards. The *Memoirs* Beaumarchais published of his early escapades exhibit brilliant writing, but after his troubles with the new republican government and later Napoleon, the French public did not find his second set of *Memoirs* as inspiring as the first.

After his death, Beaumarchais's fame was eclipsed when his two most original and intricate plays were turned into stunning operas: Rossini rewrote *The Barber of Seville*, and Mozart adapted *The Marriage of Figaro*. Nonetheless, biographer William Howarth calls Beaumarchais "the supreme all-rounder of his age: a man of action and ideas, of vision and achievement, of ambition and energy on a heroic scale."

Bellay, Joachim du (ca. 1522–1560) *poet, scholar*

Joachim du Bellay was born in Anjou, the son of a gentleman farmer. His parents died when he was nine or 10 years old, and his brother René took care of him. From what he tells us in his poems, he seems to have been an unhappy child, and he was often ill.

As an adult, Bellay had a close friendship with Pierre de RONSARD. They studied together in Paris at the famous College de Coqueret, whose principal, Jean Dorat, inspired in them an enthusiasm for the literature of antiquity.

In 1549 Bellay published two works: *The Defense and Illustration of the French Language*, in which he states the principles of HUMANISM and calls for a renewal of French poetry, arguing that French should be treated as an equal to Latin and other languages; and a collection of poems titled *The Olive*, which presents a series of Petrarchan SONNETS.

In 1553 Bellay journeyed to Rome with his second cousin, Cardinal Jean du Bellay. During his time in Rome, Bellay became disenchanted, both with the cardinal and with Rome itself, which he found shockingly immoral. After returning to Paris in 1558, he began to pour his feelings into his poetry and created some of his best work, including *The Regrets* and *The Antiquities of Rome*. The poems in these collections reveal Bellay's leanings toward the elegiac and the satirical, as well as the influences of Ovid and Horace. His subjects include political machinations, moral and papal decadence, spiritual barrenness, and the hypocrisy of the French court.

Du Bellay is remembered for the high quality of his verse: his perfection of the sonnet form, imagery, rhythm, musical resonance, and his skillful use and knowledge of the power of language.

Bembo, Pietro (1470–1547) *poet*

Italian humanist and scholar Pietro Bembo is celebrated for his contribution to the development and standardization of the Italian language and for his dedication to pursuing the classical ideal. His education was provided primarily by his father Bernardo Bembo, an important political figure in Venice. Like his father, Bembo enjoyed much social, political, and religious notoriety. He was well favored by Lucrezia Borgia and respected by the powerful Medici family and the church. In 1513 he became secretary to Pope Leo X in Rome; in 1529 he was appointed historiographer of Venice; and in 1539 he was named a cardinal by Pope Paul III and so returned to Rome, where he later died.

Bembo was a master stylist of both Latin and Italian and revised his works several times. He modeled his Latin writings on Cicero and wrote the treatise on Italian grammar, *Prose della Volgar Lingua* (Prose in the vernacular, 1525). This treatise contributed to the regularization of the Italian language to that of the Tuscan dialect used by PETRARCH and BOCCACCIO.

Another Italian prose work for which Bembo is celebrated is *Gli Asolani* (1505), a story featuring a wedding feast at Asola, during which a revealing dialogue discussing Platonic love occurs. Bembo also wrote much poetry and edited the poems of Dante and Petrarch, to whom his poems are often compared.

Pietro Bembo's scholarship and his enthusiasm for the Italian language and his country (which was still developing a sense of nationality) signifi-

cantly influenced many great writers and thinkers, including Ludovico ARIOSTO, Baldessare CASTIGLIONE, and Torquato TASSO.

Bergerac, Cyrano de (1619–1655) poet, dramatist

Behind the character of the swashbuckling Cyrano de Bergerac of legend is a real-life, 17th-century Frenchman who was famous in his own time for his unusual nose, literary flair, contrary ideas, and reputation as a brilliant swordsman. Born in Paris as Savinien de Cyrano, the fourth son of Abel de Cyrano and Esperance Bellanger, he was first schooled under a private tutor and later at college in Paris. After joining a company of guards, Cyrano's misfortune in being severely wounded twice within 14 months persuaded him to take up the intellectual life. He returned to Paris and adopted the name de Bergerac after another family estate, which was later sold. He associated with a group of lively intellectuals, including MOLIÈRE, and developed a reputation for being brilliant and scandalous, having fought more than 100 duels. Although his premature death at age 35 was likely due to disease, legend has it that he suffered an accident with a falling wooden beam.

Later scholars accuse de Bergerac of plagiarizing much of his work, but it was the habit of intellectuals at the time to freely borrow from one another. He was thought even during his own lifetime to be somewhat mad; one anonymous contemporary said of his popular *States and Empires of the Sun and Moon*, "I think he had one quarter of the moon in his head." He was known for being a free-thinker, and his opinions often provoked controversy. Upon publication, many of his works were heavily censored, including various letters, his comedy *The Pedant Outwitted* (1645, a satire of teachers and their methods from which Molière later borrowed), and his TRAGEDY *The Death of Agrippina* (1653), which earned him literary acclaim. His tales of voyages to the sun and moon (*Moon* was written in 1648, and *Sun* begun in 1650, but never finished) are satires on existing social problems and contain some of his most clear and vigorous prose. A collection of his works titled *Different Works* was published in 1657, two years after de Bergerac's death, and does not include *The Other World* (written in 1650), perhaps because of his typical, yet original, satirical treatment of social ills. De Bergerac's friend Lebrét published his own revision of *The Other World* in 1657, titling it *Comic History*.

While de Bergerac's works sank into obscurity in the 18th century, his legend remained, and it is the legend that Edmond Rostand (1868–1918) recovered in his memorable play *Cyrano de Bergerac* (1897).

Beverly, Robert (1673–1722) *historian*

Robert Beverly is remembered for his history of the state of Virginia, *The History and Present State of Virginia . . . by a Native of the Place*, first published in 1705. In contrast to the common patronizing tone in reference to the colonies that characterized British writings of the time, the work is distinguished from other early American books by an original style that does not attempt to duplicate an Oxford literary manner. The 1705 edition of *The History* is noted for its humor and acerbic sarcasm, particularly in its criticism of royal governors and lack of enterprise among Virginia planters. The book continues to be important because of Beverly's originality, shrewd observations, and humorous commentaries.

Although the historical material for the early years of the colony largely derives from the earlier published accounts of Captain John Smith and other chroniclers, the sections dealing with the Indians are considered to be of particular importance to history. Beverly links the freedom of the New World with the original Native American inhabitants.

In 1722 Beverly published a second edition of *The History*, considered to be less colorful and critical than the first edition. Along with the second edition, Beverly published *The Abridgement of the Public Laws of Virginia*, a work that he had compiled for his own use as a working magistrate.

The History is considered to be one of the major achievements of early American prose. Popular in its time, the book was translated into French and printed four times by 1718. Beverly's keen insight into contemporary political and social matters provides a valuable contribution to the study of American history.

Boccaccio, Giovanni (1313–1375) *poet*

Boccaccio was born to Boccaccino de Chelino, a Florentine banker, and an unidentified mother. Boccaccio himself spread the fiction that she was a well-born Parisian woman, but more likely she was from Certaldo. His father trained Boccaccio in the family business, and they moved to Naples in 1322, opening an exciting chapter in Boccaccio's life. At the time, Naples was a center of culture as well as business, and his place in his father's bank gave Boccaccio access to aristocratic circles, as well as to the royal library. He enrolled at the University of Naples to study canon law, beginning his training in Latin. In 1341 a change in the family fortunes obliged Boccaccio to return to Florence. The move was initially an unhappy one; Florence at the time was a middle-class city of bankers and as yet had no university, but Boccaccio's association with people from all walks of life gave him a supplementary education, which became as important to his poetry and prose as his formal studies.

In 1350, Boccaccio met PETRARCH, who had an enormous impact on Boccaccio's personal and intellectual life, and with whom Boccaccio shared an enduring friendship. In the late 1350s he took minor orders in the church. Having no patron to support his art, Boccaccio's fortunes were never secure, and he received occasional commissions from the Commune of Florence, which sometimes required him to travel as a city ambassador. Later in life he settled in Certaldo. With Boccaccio died the last of the "three crowns" of Italy—Dante and Petrarch being the others—who had given shape to Italian literature and launched a new humanism that would inform the RENAISSANCE.

As a reader, Boccaccio devoured books, making no distinctions between the classic and the middle-brow. His social interactions brought him into contact with a variety of cultures, from the French romance to the heritage of the Byzantines, through the Greek world with which Naples was in close contact. As a writer, he tried his hand at every genre, in Latin as well as in his native Italian. In the vernacular, his great inspiration was Dante; his

first work in Italian, *Diana's Hunt* (1334), responds to a challenge in Dante's *New Life* and uses the terza rima form that Dante invented for the *Divine Comedy*. His other vernacular works include the *Filostrato* (1335), which means "one overcome by love" in Greek, and is an epic treatment of the love affair between Troilus and Cressida set within the Trojan War; *Filocolo* (1336), which means "weariness of love," and is a Byzantine romance describing the love affair of Florio and Biancifiore; and *Teseida* (1339), the story of the love of Palemone and Arcita for the beautiful Amazon Emilia. Boccaccio began *Teseida* as a martial EPIC, but the story becomes a romantic fiction as the two knights battle for Emilia's love. He also wrote *Comedy of the Florentine Nuns* (1341–42), an amusing, gossipy pastoral ALLEGORY, and *Love Vision* (1342–43), which uses some of the same characters and deals with love as an ennobling, transforming force.

Love was a popular theme that Boccaccio returned to repeatedly. In *Elegy of the Lady Fiammetta* (1343–44), he tells the story of the woman he called the great love of his life. He writes that he first saw Fiammetta in church on Easter Sunday. Historians, who have not been able to identify a real-life Fiammetta, suspect that Boccaccio modeled this experience on Petrarch's sighting of Laura. Other works inspired by Petrarch include *Fate of Illustrious Men* (written between 1355 and 1360) and *Famous Women* (1361).

The Nymphs of Fiesole (1344–46) is a pastoral fable that imaginatively describes the origins of the city of Fiesole, and *Corbaccio* (*Old Crow*, 1354) is a satirical dream vision. Boccaccio also continuously composed poetry between 1340 and 1375, collected in *Rime* (*Rhymes*).

He completed the encyclopedic *Genealogies of the Pagan Gods* and *The Life of Dante* in 1363. Over a span of years he wrote a series of *Eclogues* inspired by Virgil and Petrarch, which he finished in 1372.

The Middle Ages, in which Boccaccio lived, faced many crises within political, commercial, and ecclesiastic institutions. New cultural movements challenged existing thought; new social

classes challenged the well-established hierarchies. Part of this environmental upheaval led to a lifelong feeling of insecurity on the part of the artist about his own fame and impact, but at the same time, it contributed an enormous energy to his work. Boccaccio's artistic gift was his ability to observe and render the detail that is life, and that in turn lends his stories a shimmering vitality.

Critical Analysis

The Decameron (1351) is Boccaccio's greatest work, and its influence spread quickly throughout Italy and across Europe. The story is a portrait of the age, disguised as a lesson in storytelling, disguised as a series of amusing tales. The book, whose title means "ten days" in Greek, collects the stories of 10 young aristocrats who set out on a journey from Florence to a country villa to avoid the Black Death, which infected Italy in 1348. The seven women and three men fill their time by singing songs and telling stories.

Boccaccio dedicates the book to those who are unhappy in love, but the stories' subjects range widely. The tales of the first day have no particular topic, which leads the group to adopt themes. The stories of the second and third day discuss whether humans are victims of fate or can occasionally control their destinies. The fourth and fifth days deal first with love as a destructive force, then as a constructive pursuit. The sixth day addresses the nature of storytelling and the power of language, while days seven and eight witness lively arguments on the subject of relations between men and women, leaving the ninth day open to different, related topics. The 10th day takes up the subject of liberality, rounding out the novel with 100 complete novellas.

One of the most remarkable things about *The Decameron* is the freedom of expression Boccaccio gives to the female characters. Literature previous to Boccaccio traditionally portrayed women as untouchable, practically inhuman models of virtue—witches or mischievous vixens who caused misery and sorrow. Some of Boccaccio's women represent

these stereotypes, but most are independent, intelligent women who think and speak for themselves, as does Lady Filippa in story VI. 7, who challenges the law:

. . . as I am sure you know, the laws should be equal for all and should be passed with the consent of the people they affect. In this case these conditions were not fulfilled . . . furthermore, when this law was put into effect, not a single woman gave her consent, nor was any one of them ever consulted about it; therefore, it may quite rightly be called a bad law.

This is a very forward-thinking argument, considering that Western women would not be given the right to vote until almost 500 years later. Though Boccaccio wrote about clever women in his work, he was known to discourage the women of his household from reading *The Decameron* so they would not be influenced to behave as freely as the female characters in the work.

Humor abounds throughout the book, perhaps as the only recourse for those left in the wake of a plague that destroyed a third of the population. For its variety of character, thrilling narrative style, and the vastness of its fictional world contained within stories of manageable size, scholar Thomas Bergin calls *The Decameron* “the most readable of all recognized masterpieces.” Other scholars have criticized the book because it does not take up any debate about transcendent values, nor does it seek to teach a lesson about anything. But Boccaccio poignantly illustrates the fragility, fallibility, and basic decency of humanity in a world in which changing values brought morals into question and in which destiny was not preordained. Though occasionally accused of being rowdy in nature, *The Decameron* ultimately suggests that wisdom comes through humor and peaceful relations through tolerance.

It would be hard to overestimate the impact of Boccaccio’s creative spirit. Translator Daniel Donno says, “Boccaccio reveals himself as the psychologist of the human heart.” The sheer unbounded energy

in his work, the tragedy and comedy portrayed side by side, make Boccaccio a monument in the history of literature.

Boileau-Despréaux, Nicolas

(1636–1711) poet, satirist, critic

Nicolas Boileau-Despréaux was born into a family of well-off professionals in Paris. He studied at the college of Beauvais, originally for the priesthood, but then began to study law and was admitted to the bar in 1656. He never practiced, however, because his father died, leaving him a small inheritance that allowed him to devote himself full-time to writing poetry. In 1677, along with Jean RACINE,

he was appointed historiographer to Louis XIV, and in 1684 was received as a member of the ACADEMIE FRANÇAISE.

Boileau's first poems were popular satires on contemporary poets and writers. His tight, elegant style and belief that poetry should be both moral and instructive made him a friend of Pierre CORNEILLE and a proponent of NEOCLASSICISM.

Boileau's fame and critical influence increased when he published *The Art of Poetry* in 1674. This poem, written in four cantos, basically restates viewpoints held by classical writers such as Aristotle and Horace. Boileau offers prospective poets pithy advice about choosing subjects for poetry, using language appropriate for the subject, and creating a heightened but true mirror of nature that readers will recognize and respond to emotionally. Boileau also used his poems to mock contemporaries whom he felt ignored the rules of decorum and style; he criticized Madeleine de SCUDÉRY for "making Cato a gallant and Brutus a beau." Boileau admired writers who emulated the ancient EPIC poets and dramatists in their observation of universal human nature and the UNITIES of time, place, and action.

Boileau's *Art of Poetry* was translated into several languages and influenced many European writers of the 17th and 18th centuries. The veneration of classical authors and models, the emphasis on sense and order, the straightforward yet elegant language that we associate with the ENLIGHTENMENT came about in part because of Boileau.

Book of Chilam Balam of Chumayel, The

THE BOOKS OF CHILAM BALAM consist of 14 books, of which portions of only eight remain, that record more than 1,000 years of Maya history and culture. *Chilam* means "prophet" or "interpreter of the Gods." *Balam*, meaning "jaguar," is the name of the *chilam* credited with cowriting *The Book of Chilam Balam of Chumayel*, one of the books included in *The Books of Chilam Balam*. Each book was written by more than one *chilam*, as the purpose of the books was not only to record events, but also to link past ages and events with the present. The stories in the books, therefore, manifested differently as time passed, changing as the storytellers changed, similar to the way in which fables, legends, and myths changed in the oral tradition.

Many towns in the Yucatán kept a record of the histories and prophecies of Balam. Chumayel was one of those towns. *The Book of Chilam Balam of Chumayel* was written in the Maya language, and its existing form was compiled by Don Juan Josef Hoil of Chumayel in 1782. The book records countless events of Maya history, including the Spanish conquest of the Yucatán in the 16th century; Maya mythology and religion; poetry; prophecies of Maya seers; and compositions on astrology and the Maya calendar.

The eight remaining *Books of Chilam Balam* are the most important original records of Maya culture available today for the historical and cultural information they provide.

***Book of Dede Korkut, The* (800s?–1400s?)**

The Book of Dede Korkut is a collection of stories that, together, form an epic story of the nomadic Oghuz people who lived in Central Asia before settling in what is now Turkey. *The Book of Dede Korkut* is composed of a prologue and 12 independent stories sharing characters and imagery. Generally the stories show Oghuz life and events in Central Asia in the ninth and 10th centuries, though some stories reference earlier events. These stories were handed down through the oral tradition by minstrels performing for chiefs, or khans, and the book as it exists today was most likely compiled during the mid-1400s.

The narration of the work is mainly in prose, but the passages of dialogue, which occupy about one-third of the text, are in intricately rhymed verse. The narrator is an unnamed minstrel who frequently addresses his audience as “my khan.” In the prologue he introduces the audience to the sage Dede Korkut (Grandfather Korkut) and his wise sayings.

Korkut is presented as both an eyewitness to the events described and the author of many of the poetic passages. For example, after the dramatic action of the second story, “The Sack of the House of Salur Kazan,” in which Salur Kazan and his allies avenge themselves on the infidels who captured Kazan’s wife and other members of his household, it is Dede Korkut who praises the bittersweet victory:

*Where now are the noble heroes who
thought that the world was theirs? . . .
To whom did the mortal world remain—
The world where men come and go,
The world which is rounded off by death?*

Since 1815 *The Book of Dede Korkut* has been translated into numerous languages. In his article “Whither Dede Korkut?” writer Alireza Asgharzadeh calls the *Dede Korkut* “an invaluable collection of epos and stories, bearing witness to the language, the way of life, religions, traditions and social norms of the peoples inhabiting different portions of Central Asia, Caucasia and the Middle-East centuries before the emergence of Islam.”

Bossuet, Jacques-Bénigne (1627–1704) *orator, historian, clergyman*

Jacques-Bénigne Bossuet was born in Dijon, in a family that had occupied judicial functions for centuries. His father was a judge in the *parlement* of Dijon. Educated by the Jesuits in his youth, Bossuet went to Paris in 1642 to study at the Collège de Navarre. He was ordained a priest and received a doctorate in divinity in 1652.

That same year he was appointed archdeacon of Metz in northern France. Metz had a large Protestant population, and Bossuet engaged in many polemics with Protestant leaders over religious mat-

ters. He also gained a reputation as an outstanding speaker. His sermons were well known throughout the area, and he often delivered sermons to powerful church and state figures in Paris as well.

Bossuet became the bishop of Condom in southwest France in 1669. He continued to have close ties with the French monarchy and Catholic Church leadership. Because of his oratorical abilities, Bossuet was asked to deliver funeral orations for important Catholic figures, such as Henrietta Maria, the widow of Charles I of England.

In 1670 Bossuet was hired by King Louis XIV to tutor his son, the Dauphin. Bossuet wrote books and manuals of politics, philosophy, and history with which to instruct his new pupil.

Bossuet felt that monarchy was the best form of government to advance the views of the church. He wrote several treatises to this end, including *Statecraft Drawn from the Very Words of the Holy Scriptures*, which uses scripture to provide proof of the divine right of kings.

Bossuet is celebrated for his eloquence and the poetic quality of his sermons and orations. His debates with Protestants and his crusading work to try to reintegrate Protestants into the Catholic Church are also key parts of his legacy. He is remembered as a staunch defender of the infallibility of the Catholic Church and the French monarchy, though many of his views are now seen as old-fashioned in light of reforms within the Catholic Church.

Boswell, James (1740–1795) *biographer, journal writer, travel writer*

James Boswell was born in Edinburgh. His father, Alexander Boswell, was an important judge and laird (owner of a landed castle) and his mother, Euphemia Boswell, was descended from a branch of Scottish royalty. His father expected him to enter the legal profession; conflict with his father's expectations exacerbated the psychological depression that Boswell suffered from throughout his life. He died in London of progressive kidney failure on May 19.

Boswell studied at the University of Edinburgh from 1753 to 1759. In 1759 he took up the study of law at Glasgow, but soon ran away to London, where he acquired a lasting taste for both the literary life of the English capital and for its sensual delights.

After returning to Scotland in 1762, Boswell passed his exams in civil law. Rather than beginning his legal practice, he persuaded his father to allow him to return to London to seek a military appointment. It was during this visit that Boswell met Samuel Johnson. He records their meeting in his *Life of Johnson*:

Johnson unexpectedly came into the shop; and Mr. Davies [the book store's owner] having perceived him through the glass-door in the room in which we were sitting, advancing towards us,—he announced his awful approach to me, somewhat in the manner of an actor in the part of Horatio, when he addresses Hamlet on the appearance of his father's ghost, "Look, my Lord, it comes."

The allusion to Hamlet's ghost aptly captures the spirit of the relationship between the two men: Johnson would become a father-figure to Boswell, giving him advice and emotional support. In turn, Boswell became a disciple of Johnson, dedicating

the last years of his life to composing his *Life of Johnson*.

During this same visit Boswell began keeping a personal journal, an activity he continued until his death. Had he written nothing else, he would figure importantly in British literary history for composing this rich and full account of 18th-century life. Boswell recorded all of his foibles and flaws, details of his irrepressible vanity, and his sexual appetite, offering an almost unparalleled access into the labyrinthine complexities of the human personality.

Beginning in 1764, Boswell traveled throughout Europe, striking up friendships with many well-known figures, including ROUSSEAU and VOLTAIRE. After returning from his travels, Boswell published his first important book, *An Account of Corsica* (1768). Johnson wrote of it: "I know not whether I could name any narrative by which curiosity is better excited, or better gratified."

Boswell established a legal practice in Scotland, residing at his ancestral estate at Auchinleck, although he made annual visits to London. In 1773 he and Johnson undertook a tour of the Scottish Highlands and later published very different accounts of the trip. Johnson's *A Journey to the Western Isles* (1775) objectively describes the life and manners of the Scottish country and people, while Boswell's *Journal of a Tour to the Hebrides* (1785) is a highly personal account. Its emphasis on conversation previewed the approach that Boswell would later take in his *Life of Johnson*.

Boswell's later years were clouded by his failure to establish a successful legal practice in England and by his increasing difficulties with alcoholism. After Johnson's death in 1784, Boswell began the massive undertaking of composing his friend's biography, closely assisted and encouraged by Shakespearean scholar Edmond Malone. The first edition of the book was published in 1791, to great acclaim, and was a heroic and successful attempt to preserve Johnson for posterity. Boswell records hundreds of pages of Johnson's conversation, thus offering the reader

immediate access to Johnson's personality and living presence. In part, Boswell was simply fulfilling Johnson's own theory of biography, as set forth in *Rambler* #60, which advocates an impartial "display [of] the minute details of daily life." Nevertheless, in its historical context, Boswell's *Life* was daring and controversial for its frank revelation of Johnson's personal life. Though critics argue the accuracy of many details in the work, its proportionality, and its psychological development (or lack thereof), few contest Boswell's overall accomplishment. As Marshall Waingrow states, "No matter how many new facts are brought to light, Samuel Johnson will always be somebody's hypothesis, . . . [and no other hypothesis] has pleased so many, or is likely to please so long, as Boswell's."

Bradford, William (1590–1657) colonial and religious leader

William Bradford was born in Yorkshire, England. He joined a Separatist church in Scrooby at age 16, and three years later moved to Holland to avoid religious persecution from the Church of England. In Holland, he became a leader of the Scrooby Separatists and encouraged the church to establish a settlement in the Virginia colonies. In 1620 Bradford was among the 102 pilgrims who sailed for the

New World on the *Mayflower*. The ship landed on the shores of New England at Plymouth Rock on December 20, 1620.

Bradford was among the Pilgrims who drafted the Mayflower Compact (1620), a brief document that set out the Pilgrims' rights and duties under God and law, and helped to establish what is considered to be the first democracy in the American Colonies. After the death of the Plymouth colony's first governor, John Carver, in the spring of 1621, Bradford took over the leadership of the colony and remained at the center of government until his death. During this period, he was reelected as governor 30 times.

Though Bradford was essentially a colonial and church leader, not a writer, he produced one of the most important historical works of 17th-century America, *Of Plymouth Plantation*. This history, which he began in 1630 and eventually extended to two volumes, is a detailed account of the voyage of the *Mayflower*, the landing at Plymouth Rock, and the many hardships the Pilgrims faced while trying to establish their colony, including losing more than half of their inhabitants to sickness during the first winter. In its pages, Bradford also describes how the Pilgrims met Squanto, a Pawtuxet Native American interpreter who spoke English. Squanto helped them form an essential alliance with the local Wampanoag people, which played a crucial role in the colony's survival during its first brutal winter in the New World. Because the history was written as a record to be passed on to future inhabitants of the Plymouth Colony and not for wider publication, Bradford wrote in a simple manner, devoid of any unnecessary stylistic flourishes. His account is straightforward, personal, and readable. *Of Plymouth Plantation* remains the most important firsthand account of the early settlement of the American colonies available today.

Bradstreet, Anne Dudley (1612?–1672)

poet

The place of Anne Dudley's birth is unknown, but she grew up in Lincolnshire, England. Her father, Thomas, was steward to the earl of Lincoln. Dudley received an excellent education for a woman of the era; she had private tutors and was allowed to use the earl's large library. In 1628 she married Simon Bradstreet. Two years later, Anne and her husband and parents sailed for New England so they could openly practice their Puritan faith. When Bradstreet first saw New England, she was frightened by its wildness, but she came to believe that God had chosen this life for her.

Bradstreet and her husband had eight children. They moved around to various settlements in Massachusetts, finally settling in North Andover. Simon Bradstreet served twice as royal governor of Massachusetts.

Bradstreet wrote poetry for her own enjoyment and that of her family. She never intended her work to be published, but her brother-in-law, without her permission, published a volume of her poems in England in 1650, under the title *The Tenth Muse Lately Sprung up in America*. Bradstreet's early poems are conventional and give little indication that the author lived in the untamed wilderness of America. She is read today for her later work, which was published after her death. Her later poetry, more deeply felt and less conventional, focuses on Bradstreet's daily life as a settler; her emotions as she faces life's hardships, including the loss of the family home to fire and the dangers of childbirth; her religious beliefs; and nature. Addressing her husband during a pregnancy, Bradstreet writes:

*How soon, my dear, death may my steps attend.
How soon't may be thy lot to lose thy friend.*

Bradstreet was influenced by a number of poets, including Raleigh, Spenser, SIDNEY, and DONNE. Her most famous work is a poem titled “Contemplations” (1678) in which she ponders time’s ability to destroy mortal things but not spiritual ones. In this poem, as in most of her later works—both verse and prose—Bradstreet reveals her wisdom, simplicity, and generosity.

Brandt, Sebastian (1457?–1521) poet

Sebastian Brandt was born in Strasbourg on the cusp of the early German humanist movement. He called himself by the Latin name Titio, meaning “firebrand.” He graduated in 1477 from the University of Basel, then an important center of humanist studies. In 1484 he received his license to teach and practice law, and in 1485 married Elisabeth Burg. In 1489 he earned his doctoral degree and in 1490 published his first books, a series of law texts. In 1501 Brandt moved back to Strasbourg. He served in various administrative positions in the city and as sometime-adviser to Emperor Maximilian. In 1514 he met the influential humanist scholar ERASMUS.

In his lifetime, largely during the period spent at Basel, Brandt wrote several Latin tracts and a collection of poems published as *Various Songs*. He translated many Latin classics into German, thus elevating the respect for literature in the vernacu-

lar. Brandt’s most famous work, *The Ship of Fools* (1494), shows the moral and religious conviction of its author as well as his conservative point of view. The pure, unadorned style reflects Brandt’s learning in both the Greek and Latin tradition and provides a cutting social commentary on human sins and foibles. Each chapter addresses a type of fool, united with the theme of the ship. The moral teachings of the work borrow largely from biblical and classical authorities, but the unique satire and biting humor make for entertaining reading. No one escapes the author’s keen eye, including himself. In chapter 111, the “Apology of the Poet,” he confesses: “Of folly I was never free, / I’ve joined the fool’s fraternity.” But, he adds, he hopes “That I’ll improve in time through wit, / If God will grant such benefit.”

Woodcuts illustrating each type of fool accompanied the text, which perhaps helped account for its popularity. Translator Edwin Zeydel calls *The Ship of Fools* “the most famous book of its time.” Six editions came out in Brandt’s lifetime, and the work was translated into Latin, French, English, Flemish, and Dutch. With this book, Zeydel says, “German literature entered for the first time into the stream of European letters.”

Bredero, Gerbrand (1585–1618) poet

Gerbrand Adriaensz Bredero was born in Amsterdam to a middle-class family. His father, Adriaen Cornelisz, was a shoemaker; his mother, Mary Gerbrand, supervised his education in English, French, and the classics. When he was very young his family lived next door to the meeting place of

the Eglantine, the most prominent literary guild of the city, which attracted him to poetry. Poetry, however, was not a trade on which a Dutchman could subsist in the Netherlands; even Joost van den VONDEL had to support himself with a mercantile business. Bredero trained and worked as a painter. In 1611 he was invited to join the Eglantine but in 1617 left to join the Dutch Academy founded by his friend Simon Coster. Bredero died at age 33.

His first play *Rodderick and Alphonsus* appeared in 1611; *Griane* followed in 1612. His series of FARCES *The Farce of the Miller* (1612), *The Farce of the Cow* (1612), and *The Farce of Simon without Sweetness* (1612–13) show his key strengths, his ability for social satire, his eye for local color, and his ear for dialect. *Lucelle* (1613) was a romance with a traditionally imperiled heroine. His masterpieces were *The Little Moor* (1615) and *The Spanish Brabanter* (1617).

Translator H. David Brumble says *The Spanish Brabanter*, “if not the greatest play ever written in the Netherlands, is perhaps the most beloved.” Brabant, now the northern part of Belgium, was a cultural center of the Dutch-speaking world. The play concerns the escapades of two rascals: Jerolimo, an ambitious but poverty-stricken Brabanter, and his servant Robbeknol. What the play lacks in narrative force it makes up for in character; its people vividly render the color and speech of daily life in early Amsterdam. Aside from its entertaining characters, the quick, lilting style of the writing preserves at least four Dutch dialects, conveying a true appreciation of the cultural diversity of the Amsterdam of Bredero’s time.

Brown, Charles Brockden (1771–1810) novelist

The writer known as the father of American literature was born in Philadelphia to Elijah Brown, a merchant, and Mary Armit. Brown’s parents sent their son to the Friends Latin School, where he gained a basic knowledge of Latin and Greek. Although he was being groomed to become a lawyer, Brown found himself captivated by the writings of Jean-Jacques ROUSSEAU and Samuel RICHARDSON and decided to pursue a literary career.

Brown was one of the first American authors to make a living by writing. After *Alcuin: A Dialogue* (1798) became a success, he composed the Gothic novels *Edgar Huntly* (1799), the two-volume *Arthur Mervyn* (1799–1800), and *Ormond* (1799). He also edited a series of periodicals and pamphlets and planned a work of geography, never completed.

Wieland; or, The Transformation: An American Tale (1798), Brown’s most popular novel, tells the disturbing tale of how the lives of Theodore and Clara Wieland are altered when Carwin, a ventriloquist, appears in their small town. Having been raised to believe in the existence of a divine ruler, Theodore and Clara mistake Carwin’s voices for the voice of God, and Theodore eventually imagines he has been ordered to destroy his entire family.

Brown’s intentions for his novels are just as important as the plots he devised. While some critics dismissed the novel as a genre potboiler about love and seduction, Cathy N. Davidson observes that Brown wanted to demonstrate the “intellectual benefits of novel reading.” In *Wieland*, according to Clark, he dramatizes the “evil effects” that “credulity and superstition” have on the mind and raises but does not resolve basic questions. Michael T. Gilmore notes that we are left wondering, “How do we know something?” and “What constitutes trustworthy evidence?” In addition to offering cutting comments on social ills that provoke outrage and call for reform, the troubling questions of Brown’s works anticipate the psychological realism that developed in American literature in the following century.

Bruno, Giordano (Filippo Bruno, Giordano Nolano) (1548–1600)
philosopher

The son of a soldier, Giovanni Bruno, and Fraulissa Savolino, Bruno was christened Filippo in the town of Nola, Italy. He took the monastic name Giordano in 1565, when he entered the monastery of San Domenico in Naples. There his brilliance and his progressive thought brought him to the attention of the Inquisition, and he was expelled from the monastery. In 1576 Bruno fled Italy, and over the next 16 years he lived in France, England, and Germany, where he wrote, taught, and gave lectures. He returned to Italy in 1591 and was arrested the following year. Two years later, he was convicted of heresy and was later burned at the stake.

Bruno produced a voluminous body of work in both Italian and Latin. The most influential of these are philosophical dialogues written in Italian between 1583 and 1585, while he was living in England: *The Expulsion of the Triumphant Beast*; *The Heroic Frenzies*; *Cause, Principle, and the One*; *The Infinite Universe and Worlds*; *The Ash Wednesday Supper*; and *The Cabal of the Horse Pegasus*.

Bruno's style is infused with his personality and reveals why he was so often forced to escape apparent safe havens. He had absolutely no patience for people with whom he disagreed. Many passages ridiculing his adversaries are sprinkled throughout his prose. In *The Ash Wednesday Supper* (1584), for instance, he refers to Andreas Osiander (who wrote the preface to the first edition of Nicolaus COPERNICUS's famous scientific tract) as "That

idiot, who so mightily feared that one could be driven mad by the teaching of Copernicus!" In contrast, Bruno elevates himself in the preface to *The Ash Wednesday Supper* when he claims his readers "will be astonished that such great things will be completely explained so succinctly." Despite his quarrelsome and arrogant personality, Bruno's philosophical thought was profound and his beliefs revolutionary. His insistence that freedom of thought is necessary to advance human knowledge, his acceptance of the Copernican theory, and his proposal that the universe is infinite were controversial beliefs in his time, and his writings about them eventually led to his death.

Bruno's cosmology or theories of how the universe works were based on the work of Copernicus, but greatly expanded upon them. Bruno was a theoretical philosopher rather than a scientist, and many of his beliefs rest on his ideas about God rather than on an understanding of the physical universe. Bruno's most famous and most dangerous theory was his belief in an infinite universe. It would be blasphemous, Bruno reasoned, to think God, an infinite being, could be confined to a finite universe. His reasoning opened a door to many questions about other traditional foundations and beliefs. The speakers of Bruno's dialogues advocate free-thinking and an ethical standard based on scientific principles, rather than on what Bruno considered as outdated morality. The senses, Bruno taught, were not the limit but rather the starting point of knowledge, and reason must be used to learn things the senses could not comprehend. In accord with this, human virtue rested within human intellect and not as some external state of perfection. In addition, Bruno believed that ethical standards must be based on a process of critical thought, not on fear of punishment by a monitoring, measuring God.

Bruno's beliefs upset church authorities because traditional theology rested on the idea that humans were the center of the universe. In medieval cosmology, the world was a hierarchy, with God as the judge and benefactor of all. Bruno's theories shattered the long-held distinction between celes-

tial and terrestrial, threatening the basis of ethical rules and the very nature of human identity in a way the Inquisition could not condone. Bruno's execution for heresy led many later thinkers to treat his beliefs with skepticism, and only in the last century has a truer understanding of Bruno's philosophy evolved. He was the first staunch defender of Copernicus and the first to depart significantly from the teachings of Ptolemy and Aristotle, important authorities during the Middle Ages and the RENAISSANCE. His cosmology led the way for the work of Galileo and his philosophical beliefs and anticipated the work of SPINOZA and René DESCARTES.

Bunina, Anna (1774–1829) poet

Anna Bunina's childhood and adult life were not carefree. She was the last of six children. Her mother died giving birth to her, and Bunina was sent to live with her mother's sister. For many years afterward, she alternated living with her older sisters and aunts.

No matter the elegance of the home in which she lived, Bunina's education was ignored. When her father died, she remedied her neglected edu-

cation by using her small inheritance to move to St. Petersburg and hire tutors. She describes her first attempts at writing as similar to "imitating the bees in the garden": ". . . I seem this very moment / To see those little bees! / The beauty flies! She seems all gold" (Rosslyn 17).

Bunina's writing is extremely important for its relation to the position and struggles of women and to historical developments involving women's roles in Russia. Her poetry offers "rare insight into the generally-ignored female experience of her culture" before the affects of romanticism had occurred in Russia (Rosslyn xiii).

What is perhaps the greatest surprise about Bunina is that she was one of the first writers (male or female) to financially survive by writing. She was not wealthy, and she often struggled to make ends meet, but she succeeded because she "wrote with originality, put translation and imitation to her own purpose, [and] presented a specifically feminine and individual image of the creative writer" (Rosslyn xiii).

Though unaccepted by literary authorities of the time and little studied until the late 20th century, it is undeniable that Bunina had literary talent. She also perceived the social plight of women long before it became a social debate. Bunina "introduced her biography into her poems. Not all are autobiographical or introspective, but many are presented as the poet's subjective, even confessional, writing" (Rosslyn xiv).

Bunraku (1700s)

Bunraku is a traditional form of Japanese puppet theater. The earliest appearance of puppet theater in Japan occurs in the 12th century, when wandering

performers put on one-person puppet shows. Later puppet theater appeared at Shinto shrines and may have been used for religious purposes. In the 16th century, at a shrine in Nishinomiya, puppeteers performed plays depicting legends of the god Ebisu, and these became so well renowned the puppeteers were invited to the palace to perform for the emperor. Also around the same time, the performances of *jōruri*, traveling troubadour-like narrators who played the *biwa* (Japanese lute), became prevalent. The term *jōruri* comes from a 15th-century legend about a princess of the same name.

In 1684 the chanter Takemoto Gidayu opened a puppet theater in Osaka and became a patron of CHIKAMATSU MONZAEMON, who is known as the greatest *jōruri* playwright. Chikamatsu's influence on *jōruri* marks a shift from performances of historical legends and myth to portrayals closer to the everyday life of his audience. After Chikamatsu's death in 1725 and until about 1780, *jōruri* enjoyed a period of unsurpassed popularity, which waned sharply toward the end of the 18th century. Puppet theater, however, underwent a revival at this time. The term *bunraku* is a product of this revival and was named for Uemura Bunrakuken, a puppeteer from Awaji who began producing puppet plays in Osaka.

At the peak of its popularity, Bunraku puppet plays offered a freshness and creativity that rivaled

KABUKI theater. Chikamatsu Hanji, a playwright and narrator writing in the 1770s, was known for his storylines featuring complicated relationships and wildly improbable happy endings. Several bunraku plays endure as classics and are still performed in Japanese theaters today. In addition, bunraku theater greatly influenced the productions of renowned director Julie Taymor, who directed the Broadway play *The Lion King*.

Cabeza de Vaca, Álvar Núñez

(ca. 1490?–1559?) *explorer*

Cabeza de Vaca was born in Jérez de la Frontera in Spain. Almost nothing is known of his childhood or early adult life. Around age 37, he sailed with Pánfilo de Narváez to Florida, to become one of only four men who survived the expedition. He wandered throughout Florida and Mexico for nine years, from 1527 to 1536, during which time he was taken captive by the Indians. His written account of his experiences is considered to be one of the best accounts of early American exploration. *Nafragios y relación de la jornada que hizo a la Florida con el adelantado Pánfilo de Narváez* was first published in Spain in 1542. Modern translations include C. Covey's 1962 edition, *Adventures in the unknown interior of America*, and the 2003 National Geographic Adventure printing of *The Narrative of Cabeza de Vaca*.

La relación is remarkable for its descriptions of the geography and the indigenous peoples of North America. The descriptions are related through the eyes of a Spaniard who survived by acculturation to the native societies. The work is also important because in it Cabeza de Vaca defends the natives against abuse by Spanish conquistadors, which he witnessed on the northern frontiers

of New Spain. As a narrative of suffering and privation, Cabeza de Vaca's account has no equal in the annals of North American exploration.

Cabeza de Vaca later became governor of Paraguay (1540–45). His experience in Paraguay was filled with conflict due to resentment from enemies who objected to his generous attitude toward the Indians. After he was sent back to Spain in chains in 1545, he wrote a bitter account of the experience, *Los comentarios*, with the help of his secretary Pedro Hernández in 1554. *Los comentarios* was published together with an edited version of *La relación* in Valladolid in 1555.

Cacamatzín of Texcoco (1494–1520)

poet, ruler

Cacamatzín was born into the most famous family in Texcoco (in present-day Mexico). His father, Nezahualpilli, served as a ruler of Texcoco and was also a skilled poet, architect, and observer of stars. Cacamatzín's uncle was Montezuma, the powerful ruler of Tenochtitlán, the center of the Aztec Empire. Cacamatzín attended the *calmecac*, or priestly school, in Texcoco. He was also instructed in the arts of war by his father and other military leaders.

After Nezahualpilli's death in 1515 and after Montezuma intervened on his behalf, Cacamatzín was chosen as the ruler of Texcoco over his half brother, Ixtlilxochitl. This decision caused a split in Texcoco politics. Ixtlilxochitl left the kingdom and gathered an army with which to challenge Cacamatzín's sovereignty. Montezuma again stepped in with his army to help Cacamatzín retain power in Texcoco.

The arrival of the Spanish explorer Hernán CORTÉS in Mexico added to the intrigue that plagued Cacamatzín's brief life as ruler. When Cortés and his men entered Tenochtitlán in late 1519, Cacamatzín was imprisoned with Montezuma and others. His plight worsened when Cortés left and Pedro de Alvarado, a particularly brutal Spanish leader, assumed command of Tenochtitlán. Cacamatzín was bound and tortured with burning coals. He later witnessed the Spanish massacre of nobles, priests, and unarmed warriors at the traditional indigenous feast of Toxcatl. Cacamatzín gave voice to these horrors in his poetry, when he wrote "A mist wraps round the song of the shields, / over the earth falls a rain of darts." The few poems of Cacamatzín that remain in existence were written during the last days of his life. He was either hanged or fatally stabbed when the Spanish left Tenochtitlán in 1520. His poems, "Cacamatzín Icuic," or "Songs by Cacamatzín," are a

record of his brief life as a ruler and poet at the end of the Aztec era.

Calderón de la Barca, Pedro

(1600–1681) *playwright, poet*

Calderón de la Barca was born in Madrid, the third of six children, to a noble family of modest fortune. Destined by his father to become a priest, he attended the prestigious Imperial Jesuit College in Valladolid, where he began studying literature and theology. He completed his studies at the University of Salamanca, but after the death of his parents abandoned his ecclesiastical career and began writing.

Calderón de la Barca began writing plays in 1623, which were performed at the royal court in Madrid. Over the next few years, he wrote numerous other theatrical works, including comedies, tragedies, and religious pieces. Calderón de la Barca quickly developed notoriety if not fame in the Spanish capital not only for his writing, but also for his nonliterary activities. He inspired, for example, the animosity of the illustrious playwright LOPE DE VEGA CARPIO by breaking into the convent where the latter's sister resided in pursuit of a comic actor who had wounded Calderón de la Barca's brother. Moreover, his parodies of clergymen in his plays resulted in the condemnation of his work by prominent religious figures.

Controversies aside, the decade between 1630 and 1640 was the most productive for Calderón de la Barca and probably the most crucial in terms of his development as a playwright. During this time, he produced his best and most representative works, including his masterpiece *La vida es sueño* (*Life Is a Dream*, 1636). The play recounts the story of Segismundo who, after being shut away in a tower by his father, King Basilio, breaks out of his prison and rises to power. In this play many of the themes essential to Calderón de la Barca's work

and the drama of the Spanish Golden Age in general find their most moving expression, including the nature of reality and fantasy, the damaging effects of human pride and honor, and humankind's struggle for freedom against the forces of nature and destiny.

After participating and being wounded in military campaigns, Calderón de la Barca began writing again after 1640 and resumed his religious career. He continued these religious and literary activities until his death four decades later, composing a prolific number of dramas.

For his mastery of various verse forms, moving depiction of human struggles, and original exploration of existential themes, Calderón de la Barca remains one of the most important figures of Spanish literature. His influence has spread beyond the confines of his native country, and he has both directly and indirectly helped shape Western drama and literature over the past four centuries.

Calvin, John (1509–1564) *theologian, religious leader, reformer*

Born in Noyon, France, Jean Cauvin (John Calvin is the anglicized form of his name) was the son of a middle-class Catholic lay administrator. Calvin was educated at the University of Paris with the intent to become a priest. However, after his father had a break with church authorities, Calvin was sent to study law in Orléans from 1528 to 1531. He remained very interested in theological study and, after his return to Paris in 1531, he became part of a radical student movement that called for reform in the Church. Calvin began to study Greek, Hebrew, and Latin in order to make a seri-

ous analysis of the scriptures and classical texts. In 1532, he published his first work, *Commentary on Lucius Anneas Seneca's Two Books on Clemency*.

Calvin gradually began to move toward Protestantism as a result of his association with Nicolas Cop and other reformers at the University of Paris. However, because of his involvement with the reform movement, Calvin was forced to leave Paris. He made his way to Basel, Switzerland, a Protestant city, where he began to systematically study theology. In Basel, he began to write his most influential work, *Institutio Christianae Religionis*, or *Institutes of the Christian Religion*. This work was a commentary on the Bible and a response to critics of Protestantism. The work outlined what would become the fundamentals of Calvinism: the doctrine of predestination, which proposed that people can be saved only by God's grace, not by good works, and that God grants salvation only to the chosen, or elect; the literal truth of the Bible; and the idea of a church community where God is at the head and all other members are equal. Calvin revised and expanded the *Institutes* many times throughout his life. The first edition was published in 1536; Calvin's final edition was published in 1560.

The publication of the *Institutes* gained Calvin fame among Protestant reformers and led to his settlement in Geneva to help establish Protestantism. Calvin quickly became a Protestant leader but was forced into exile in 1638 by Geneva's town council with whom he had clashed over the right of excommunication.

After three years in the city of Strasbourg, Calvin was invited back to Geneva, where the town council had become more amenable to his brand of Protestantism. His religious reforms, known as the *Ecclesiastical Ordinances* (1641), were quickly instituted. These ordinances included compulsory religious education and his ideal of a church community founded on the equality of all members. The city enforced Calvinist morality, which included bans on gambling, dancing, and swearing. The religious zeal of Calvinist Geneva reached a peak in 1553, when the Spanish theologian

Michael Servetus was burned at the stake for preaching unorthodox beliefs.

During this time, Calvin authored extensive commentaries on books of the Bible. He first published a commentary on Romans in 1539, followed by the other letters of St. Paul and the remaining New Testament books, excluding Revelation and most of the Old Testament books. Other works include *The Harmony of the Three (Synoptic) Gospels* (1563) and *Sermons on Job*.

Calvin's legacy remains undiminished to this day. He is generally considered to be the most important Protestant reformer other than Martin LUTHER. His writings on church organization and his commentaries on the books of the Bible are still important theological works that have influenced Protestant churches throughout the world.

Camões, Luíz Vaz de (Camoëns)

(1524?–1580) poet, playwright

The details of Camões's life are not fully clear, though it is known that he was born in Portugal to

a family from Galicia. After studying at Coimbra University, he moved to Lisbon in 1543. He fought abroad as a soldier for some time, losing an eye in Morocco, and eventually enlisted for service in India. He lived in Asia, from India to the China Seas, for 17 years, a number of which were spent at the Indian seaport of Goa.

When he returned to Portugal in 1570, he brought with him the manuscript for *Os Lusíadas* (published 1572), an EPIC poem dedicated to the young king Sebastian of Portugal. The poem, which celebrates the nation of Portugal, earned him royal accolades and a pension too small to support him. He lived his remaining years in poverty and died heartbroken on June 10, when Philip II of Spain invaded Camões's beloved homeland.

Camões's poetry, including odes, satires, SONNETS, epigrams, and elegies, was not substantially published under his name until 1595 in the collection *Rimas*. He was also the author of multiple comedies, including *Amphitriões* (in which he adapts works by Plautus) and *Filodemo*, but his goal was to write a national epic, and to this end the hero of his epic poem is not a man, but a nation. *Os Lusíadas*, written in ottava rima, describes the story of Vasco da Gama's voyage throughout the world, relating many of the adventures he encountered and serving as a record of many main events in Portuguese history. Da Gama, however, is not the hero of the poem but represents the country of Portugal. His exploits are intended to emphasize different aspects of the glory of his homeland. Camões's true love for his country is obvious in the depth of feeling he brings to his writing.

The structure of *Os Lusíadas* is based on Homer's *Aeneid*. The epic is peopled by such characters as Fate, Venus, Mars, Bacchus, Mercury, Neptune, Hindu chiefs, and the Nereids. At the beginning of the story, the gods hold a meeting to discuss the fate of da Gama's voyage. The various godly personages weave in and out of da Gama's extensive journey, appearing throughout the world as he travels. In part two of the first book, Camões begins with a statement about the grand and

sweeping nature of the narrative he is about to tell, writing that “My song shall sow through the world’s every part.”

Over the years, Camões’s work has been very influential on poets of the English-speaking world. He was a major influence on MILTON, Poe, Melville, Wentworth, and Dickinson. VOLTAIRE was known to call him the “Portuguese Virgil.” Camões’s appeal was wide and deep, making his relative obscurity today somewhat surprising—many of his works have not been translated into English, and many translations are out of print. Nevertheless, Camões is remembered for having developed the Portuguese lyric to the highest levels of beauty and style and for his influence on the development of Portuguese drama.

Campanella, Tommaso (1568–1639) philosopher, theologian

Tommaso Campanella is one of the main intellectuals of the Italian RENAISSANCE. Born in the region

of Naples, his real name was Giovan Domenico, and his father was an illiterate cobbler. Campanella entered the Dominican order in 1582, where he adopted the name “Tommaso.”

Campanella was very interested in medicine and philosophy, avidly reading Plato, Galen, and Hippocrates. Among his other major influences are Averroës and St. Thomas Aquinas. The intellectual atmosphere in Naples at the time allowed him to come in contact with a diverse range of topics, such as astrology, magic, and mysticism.

His opposition to Aristotle is at the center of Campanella’s philosophy. In his masterpiece, *The City of the Sun* (1602), he bases his reasoning on Plato and criticizes Aristotle. The poem, published in 1623, takes the form of a dialogue in which Campanella juxtaposes the justice of a utopian city with communist ideals.

In 1599, Campanella led a peasant revolt in Calabria, for which he was arrested and incarcerated. He spent 27 years in prison, during which time he was tortured and after which he was exiled and went to Paris, where he died.

Campanella wrote most of his works while in prison. While his works are complex and often ambiguous, Campanella is remembered for his metaphysical lyrical poetry and his numerous treatises on astronomy, theology, and rhetoric.

Cantemir, Dimitrie (Dmitri Kantemir, Kantemiroglu) (1673–1723) *historian, philosopher*

Dimitrie Cantemir was born in Moldavia at a time when it was under Ottoman control. As a Moldavian noble, he received an excellent education. He lived in Constantinople from 1688 to 1710, initially as a hostage to ensure his family's loyalty to the Ottomans. During this time he married Cassandra Cantacuzino. Their son Antiokh Kantemir (1708–44) would later become famous in Russia for his satirical poetry.

In 1710 Dimitrie became prince (or “hospodar”) of Moldavia and, as ruler, secretly allied himself with Emperor Peter I of Russia. When the Ottomans defeated Peter's army in 1711, Cantemir fled Moldavia with his family and numerous subjects, but Peter I rewarded him with an estate and an annual pension. In 1722 Cantemir traveled with Peter as a key adviser in another campaign against the Ottomans. Cantemir fell ill during the journey, however, and returned to his Ukrainian estate, where he died in August of the following year.

Cantemir's *The Divan or The Wise Man's Parley with the World or The Judgement of the Soul with the Body* (1698) was the first published book written in the Romanian language. His other works, most written in Latin, include *Hieroglyphic History* (1703–05), a satiric fable about Romanian politics; *An Examination of the Nature of Monarchy* (1714), which praises monarchy in general and Peter I in particular; *Concerning the System of the Mohammedan Religion* (1722); and descriptions of Middle Eastern music that musicologists still consider valuable.

Cantemir is most famous for his histories, whose readers included VOLTAIRE and possibly Jonathan SWIFT. *Description of Moldavia* (1716) and *Chronicle of the Romanians, Moldavians, and Vlachs* (begun in 1717) cover the history and culture of his native land. In *The History of the Growth and Decay of the Ottoman Empire* (1716), he turns his attention to the Ottomans' gain of control over outlying territories. He writes that the Ottoman Turks prefer not brute force but more subtle political devices,

which he calls “treacherous mechanica.” He argues that the Ottomans have been in decline since 1672 and that Peter I should attack them.

Orest Subtelny has described Cantemir as “an industrious and self-disciplined individual who had firsthand experience in the areas about which he wrote.” According to Subtelny, Cantemir's works “marked not only a high point in Romanian cultural history but were also major events in European scholarship” and are valued for “providing precious data and rare insights.”

Cao Xuequin (Ts'ao Hsüeh-ch'in) (1715–1764) *poet, novelist*

Cao Xuequin was of Chinese descent but he was born in the Manchu Banner system. A bannerman was a person who owed hereditary military service to the Manchu, who were rulers of China from the 17th to the early 20th centuries. Very little is known about Cao's life except that he was either the grandson or grandnephew of the well-known scholar-gentry Cao Yin (1658–1712), who rose to prominence during the reign of Emperor Kangxi (Kang-hsi). Cao Yin had apparently been Kangxi's companion and playmate in the latter's youth, and

his loyalty to the emperor reaped rewards in the form of a promotion to the post of superintendent of the Imperial Textile Factories at Nanking. Though most facts about the novelist Cao remain undetermined, it is commonly believed that a few years after Cao was born, the Cao family fell upon hard times.

The family enjoyed a brief reprieve from hardship during the reign of Qian Long (Ch'ien-lung); however, they were to suffer greater misfortunes later, including a disastrous fire that destroyed most of their property. The only source of information regarding Cao's life after the fire is a number of poems addressed to him and written by his friends. One poem describes Cao as living in greatly reduced circumstances in the western suburb of Beijing (Peking), while another suggests that Cao's family survived mostly on gruel. Cao died an embittered, heartbroken, and impoverished man in 1764, grieving over his son's untimely death. Cao himself was apparently suffering from a terminal illness.

Cao's main work is the novel *The Dream of the Red Chamber* (also known as *The Story of the Stone* or *Dream of Red Mansions*), of which only 80 chapters exist. It is somewhat of an autobiographical novel reflective of Cao's own life experiences. Scholars believe that several events narrated in the novel, including the fire, are actual incidents that occurred during the novelist's short life. The variant copies and versions of the novel, bearing different dates, may be accounted for by the fact that Cao's 80 chapters were left in more or less unfinished form. The discrepancies and controversies surrounding these variant versions do not reduce the value of *The Dream of the Red Chamber* and its significance in the field of Chinese and world literature. As Chi-Chen Wang states in his introduction to his translation of the work:

It is the first and only autobiographical novel in traditional Chinese literature, the first to give a true picture of the complexities of life in a large family, the first to show that love can be painful and end in tragedy. It reflects a dis-

tinctly personal point of view and has a unity of plot beyond that of mere chronology. Its characters are drawn with subtlety and truth, as its dialogue is faithful to the colloquial idiom.

Cao's work should be examined not only in the temporal context of its composition, but also in terms of the history of Chinese literature and its development. As novels rose from the rank of folk traditions, they were never considered part of the scholarly literary genre. It was not until well into the latter part of the Ming and early Qing (Ch'ing) dynasties that the genre of Chinese novel became more established in Chinese literature. *The Dream of the Red Chamber* also became one of four great Chinese novels, the other three being *The Journey to the West* by WU CHENGEN; *Golden Lotus* from the *JIN PING MEI* by Xiao Xiaosheng (Hsiao-hsiao-sheng); and *The Scholars* by WU JINGZI (Wu Ching-tzu). Cao's work shares many similarities with earlier works influenced by Confucian ideas and ethics, not only in terms of content, but also in the extensive use of formalized literary language intermixed with more colloquial forms of expression, to describe characters.

Critical Analysis

The Dream of the Red Chamber is ultimately a realistic portrayal of family life and relationships, although it is commonly viewed as a love story. The subject of the novel is the Jia family and the tragic tale of their downfall from a position of affluence and power. The word *jia* (*chia*) is a homonym of the Chinese character or word for family; thus, the Jia family represents a generic upper-class family susceptible to the ravages of time.

The book opens with an explanation of how the story came to be and why it is important:

Four thousand six hundred and twenty-three years ago the heavens were out of repair. So the Goddess of Works set to work and prepared 36,501 blocks of precious jade. . . . [She] cast aside the single remaining block upon one of the celestial peaks. . . .

One day a Buddhist and a Taoist priest, who happened to be passing that way . . . noticed the disconsolate stone. . . .

“Indeed, my friend, you are not wanting in spirituality,” said the Buddhist priest to the stone. . . . “But we cannot be certain that you will ever prove to be of any real use; and, moreover, you lack an inscription, without which your destiny must necessarily remain unfulfilled.”

Thereupon he put the stone in his sleeve and rose to proceed on his journey.

“And what, if I may ask,” inquired his companion, “do you intend to do with the stone . . . ?”

“I mean,” replied the other, “to send it down to earth, to play its allotted part in the fortunes of a certain family now anxiously expecting its arrival. You see, when the Goddess of Works rejected this stone, it used to fill up its time by roaming about the heavens, until chance brought it alongside of a lovely crimson flower. Being struck with the great beauty of this flower, the stone remained there for some time, tending its protégée with the most loving care, and daily moistening its roots with the choicest nectar of the sky, until at length, yielding to the influence of disinterested love, the flower changed its form and became a most beautiful girl.

“‘Dear stone,’ cried the girl, in her newfound ecstasy of life, ‘the moisture you have bestowed upon me here I will repay you in our future state with my tears!’”

Ages afterwards, another priest, in search of light, saw this self-same stone lying in its old place . . . and saw that it bore a plain unvarnished tale of Beauty and anguish walking hand in hand—“The downward slope to death,” telling how a woman’s artless love had developed into deep, destroying passion; and how from the thrall of a lost love one soul had been raised to a sublimer, if not a purer conception of man’s mission upon earth. He therefore copied it out from beginning to end.

Thus, *The Dream of the Red Chamber* begins. Using a variety of characters with personality traits ranging from conniving to sensible and weak, Cao was able to weave together a tale of disappointment, intrigue, love, and melancholy. His intricate and detailed descriptions of the moods and mentality of his characters allow readers to simultaneously criticize and empathize with them.

The form of the novel is episodic and may be divided into three parts. The first section comprises episodes representing the Jia family at the height of prosperity. Cao describes ordinary daily actions and events in the Jia mansion, which include illustrations of family quarrels, illnesses, and the expectations and fears of some of the main characters. The story contains a long list of characters, which is a common trait of Chinese novels. The main plot revolves around the key figures Baoyu (Pao-yu), Taiyu (Tai-yu), Baozhai (Pao-chai), and the matriarch of the Jia family. The triangular love story involving the three young people parallels the tragic unfolding of misfortunes, which leads eventually to the Jias’ downfall. The main theme of the first section focuses on the idea of hubris, or overweening pride that comes before a fall. The predominant image is that of an apparently stable household perching precariously on shaky foundations.

The second part of the novel describes the development of recurring incidents that contribute to the downfall of the Jia family. In the last section of the novel, exemplified in the last chapter of the novel, the main theme is the idea of rebuilding the family, which is now in a shambles. The incidents experienced by the Jia family parallel that of Cao’s family.

The structure of *The Dream of the Red Chamber* is representative of the typical Chinese convention whereby chapters are linked to others via the use of repetition. At the end of each chapter in the book, there is always a phrase informing what will happen in the next chapter.

Besides the key themes of stability, instability, and hubris, there are several other important

influences that can be discerned in Cao's writing. One main influence is the importance of supernaturalism, as can be seen in the beginning, as well as throughout the tale. A typical device used in Chinese novels is the use of dreams to foretell or to inform the main characters of their impending misfortune or experience. Dreams can sometimes be utilized to guide the actors' behavior. In the book, dream sequences such as Baoyu's desire for marital consummation not only mark the thin line that separates the supernatural and mundane worlds, but also influence the characters' actions. For example, Baoyu's desire to consummate his union with his cousin, Taiyu, which is foreshadowed in his dream, leads him to hastily seek a substitute in his personal maid.

Another important theme is the influence of three elements of Chinese society: Buddhism, Confucianism, and Daoism (Taoism). The Confucian elements of the novel are exemplified in the characters' rigid attitudes and behavior. Daoist elements are represented both metaphorically and philosophically through the Daoist priest who reappears throughout the story and through the illuminating discussion about origins of the magic stone. Finally Buddhist ideas are encapsulated in the way Baoyu perceives life after he loses his favorite jade, Taiyu dies, and his marriage with Baozhai fails.

As Liu Wuchi points out in the foreword to Knoerle's critical study of *The Dream of the Red Chamber*:

The study of *The Dream of the Red Chamber* (*Hung-loumeng*), which continues to attract critical attention today in China and abroad, has acquired a designation of its own: *Hung-hsueh*, or "Red-ology." No other Chinese novel at any period of China's long literary history has aroused such an immense interest in scholarly communities as this mid-eighteenth century novel by Ts'ao Hsüeh-ch'in, the impoverished scion of a once wealthy official family.

Carrío de la Vandra, Alonso (ca. 1715–after 1778) explorer, travel writer

Little is known of Alonso Carrío de la Vandra's early life, other than that he was born in Gijón. As an adult, he moved to Mexico in 1735, but later moved to Lima, where he spent the majority of his life. He held government positions from 1746 until his death. His writings have been said to encompass 300 years of history, and "by subverting colonial order," to open the door to "new forms of expression" that arose after Peruvian independence (Cevallos-Candau).

His most well known work is *El lazarillo de ciegos caminantes* (*El Lazarillo: A Guide for Inexperienced Travelers*), which served as a guidebook for travelers using the road from Buenos Aires to Lima. He attributed the work to his partner, Calixto Bustamante Carlos Inca, who was known by the nickname of Concolorcorvo, or "crow with color." It was also under this pseudonym that Vandra wrote, creating obvious identity confusion.

El lazarillo was written in 1775, and is now considered by many as the precursor to the Spanish-American novel. Vandra was traveling during a time of insurgent exploration, whether by mule, boat, or foot. "Concolorcorvo inscribed himself

within a tradition that goes back to classical times and at the close of the eighteenth century enjoyed enormous prestige and popularity” (Stolley 250). *El lazarillo* is not only a tour of the 1771 South American postal system, but also a social and political commentary. It is riddled with satirical humor and observations of the native peoples he encountered in his travels, and while Vandera was writing in the genre of the TRAVEL NARRATIVE, his work also contains novel elements such as stories and descriptions of people and settings. For this reason, *El lazarillo* is somewhat of a “hybrid text,” which has made it difficult for scholars to categorize the work on numerous levels. Of course, it is Vandera’s subversion of form and practice that opened the door to “new forms of expression” (Cevallos-Candau). This element of his work, as well as the historical and cultural information Vandera provides make *El lazarillo* worth remembering.

Carver, Jonathan (1710–1780) explorer, travel writer

Jonathan Carver was one of the most famous travelers and travel writers of the 18th century. Between the years of 1766 and 1768, Carver explored the territory beyond the Mississippi, hoping to find a northwest passage between the Atlantic and Pacific Oceans. Starting in Boston, his journey westward took him to what is present-day Minnesota. He followed the Mississippi River nearly to the site of Minneapolis on the Minnesota River. In a second journey, he reached Lake Superior.

The account of his travels, *Travels through the Interior Parts of North America in the Years 1766, 1767, 1768*, is the first description in English of the areas that he explored. A noteworthy feature of the book is a detailed map of the western Great Lakes and upper Mississippi Valley area. Published in 1778, *Travels through the Interior Parts of North America* became one of the most popular early travel accounts in America. It was translated into foreign languages and printed in 30 editions, 16 of which appeared by 1798. Wordsworth, Coleridge, Chateaubriand, and SCHILLER admired it.

Despite the book’s popular success, Carver received little financial reward or acclaim as an author during his lifetime. Unsuccessful in his attempts to recover payment for the expenses of his expedition, he traveled to England to make a case for payment of his services. He worked in England as a cartographer and secured a publisher for his travel journals. The publisher, however, added material from other writers without attribution, damaging Carver’s literary reputation and financial security. Only after the British Museum acquired the original travel journals and publication drafts in the early 20th century was Carver’s reputation as an explorer and author restored.

During 1778 and 1779, Carver authored two additional works, *The New Universal Geography* and *Treatise on the Culture of the Tobacco Plant*. He died destitute in 1780. Today historians and scholars recognize Carver’s contributions to 18th-century travel literature and historical records. However, few of his works remain in print.

Castellanos, Juan de (1522–1607) *poet, historian*

Juan de Castellanos is best known for his rhymed chronicle, *Elegías de varones ilustres de Indias* (*Elegies of Illustrious Men of the Indies*), which describes the discovery and conquest of America. At 150,000 lines, it is the longest poem written in the Spanish language and is one of the longest written poems in world literature.

Written in the tradition of EPIC poetry, *Elegies* is divided into four sections, the first of which deals with the discovery of America and includes material on the conquest of Mexico and Venezuela. The second part continues the history of Venezuela, Cabo de la Vela, and Santa Marta. The third section covers the history of the governorships of Cartagena, Popayán, Atioquia, and Chocó; the fourth part concludes with a history of the new kingdom of Granada.

Since he arrived in America as a youth and spent many years in the New World, Castellanos considered himself an American Spaniard. Starting in America as a soldier and later becoming a priest, Castellanos lived a life rich in experience. He wrote about the highlights of his experiences as an acolyte, a pearl fisherman, a soldier, adventurer, and parish priest living in areas of the New World, ranging from Puerto Rico to Colombia.

His writings appealed to RENAISSANCE preferences for narrative literature. Stylistically his narratives are described as sincere, passionate, and facetious in the use of irony. He also shows close attention to detail in the careful descriptions of the flora and fauna of the American world.

Elegies has been recognized as one of the most remarkable works in world literature. It is a rich source of information for the periods of discovery and conquest, placing Castellanos among the most authoritative of early historians of the New World.

Castiglione, Baldessare (1478–1529) *nonfiction writer*

Castiglione was the quintessential courtier. He served as a military commander, diplomat, adviser, and papal nuncio. His experience and his connections at court provided the raw material for his only known work, *The Courtier* (1528). He spent much of his life revising the work, which he originally began in 1516. When it was finally published, it was a huge success both in Italy and abroad.

The Courtier seeks to describe proper aristocratic behavior and is a dialogue among Castiglione's closest friends. To pass the time, they discuss the characteristics of the ideal courtier. Because the speakers differ, there is disagreement over many issues. However, what emerges is a general image of the ideal RENAISSANCE man: a well-educated, skilled soldier and equestrian. Castiglione describes the perfect courtier's aspect as *sprezzatura*, loosely meaning "nonchalance"; the courtier should "practice in all things a certain sprezzatura . . . and make whatever is done or said appear to be without effort [or] thought. . . ." In addition to describing a courtier's skills and education, Castiglione also describes how court ladies should behave, how courtiers should advise a prince, and the ideals of platonic love.

The Courtier was translated by Thomas Hoby in 1561. It was extremely influential in determining proper courtly behavior; writers such as William SHAKESPEARE and Edmund Spenser drew on it to describe aspects of court life in their own works. *The Courtier* also provides an essential bridge between the chivalric code of the Middle Ages and the more politically charged era of the Renaissance, adapting many concepts of chivalry into modes of conduct appropriate to a Renaissance court. As critics Robert Hanning and David Rosand explain, Castiglione's work serves as "a gauge for so many aspects of Renaissance culture—from language and literature to art and

music, courtiership and politics to humor and feminism, Neoplatonic idealism to the most cynical realism.” Castiglione, they say, “stands as the truest . . . reflection of the . . . High Renaissance.”

Catherine the Great (Empress Catherine II of Russia) (1729–1796) *political philosopher, memoirist, literary dilettante*

Catherine was born in Pomerania as Sophia Augusta Fredericka, princess of Anhalt-Zerbst. She traveled to Russia in 1744, converted to Orthodoxy, took the name Ekaterina (Catherine), and married Peter, who became Peter III in 1761. Less than six months later, Catherine’s supporters staged a coup d’etat that left Peter dead and Catherine on the throne.

During Catherine’s reign, the Russian empire expanded its power and territories through annexations and war. The government also implemented legal, educational, and administrative reforms, and arts and literature flourished. Catherine issued charters granting rights to nobles and townspeople (excluding peasants and serfs), and she weathered a major crisis, the Pugachev Revolt (1773–74). In the last decade of her reign, the French Revolution frightened her into imposing stricter censorship and other controls. Her son Paul succeeded her after she died of a stroke at age 67.

Catherine read Beccaria, MONTESQUIEU, Tacitus, and Plutarch; she also corresponded with VOLTAIRE and DIDEROT. As empress, she planned to put EN-

LIGHTENMENT thought into practice. In *The Anti-dote* (1770), she alludes to her “enlightened” role in Russia’s legislative reform: “The sovereign, carefully gathering from all sides the principles which most enable men to be happy, herself makes a code of them and says to her subjects: here are the principles which in my opinion can make you happy!”

Besides state documents, Catherine composed letters, memoirs, journal articles, short stories, and plays. While her fiction is mediocre, her memoirs and letters are down-to-earth and engaging. As G. A. Gukovskii notes, her works “present a picture of the literary, and even the ideological, battles of the period.”

Çelebi, Evliya (Evliya Efendi, “Siyyah”) (1611–1682) *adventurer, historian*

Evliya was born in Constantinople, the capital of the Ottoman Empire. He attended that city’s college of Hamid Efendi, and while there began to dream of “traveling over the whole earth . . .” His

only major work is a history and travelogue known simply as *The Book of Travels*, which he began near the end of his life but never finished. The four completed volumes present a partial history of the Ottoman Empire and its peoples.

Travels begins with a historical sketch of the Ottoman Empire, including the area's pre-Ottoman history. This is followed by a history of Evliya's own family and childhood. The work includes a vision of the prophet Mohammed that Evliya vividly imagines taking place in the mosque of Akhî-Çelebi. Evliya intends to ask the prophet for his *shifâat* (help) but accidentally utters *siyâhat* (the gift of traveling), which becomes his calling. The mosque in the dream lends Evliya the surname Çelebi, but he likes to call himself "Siyyah," or "The Traveler."

Çelebi moves on to describe his early life as a soldier and the many battles he participated in against the Ottoman Empire's enemies. He also comments on Ottoman administrative structure and the people, languages, and customs of the provinces he visits. He provides lists of notable persons and economic statistics gathered from tax rolls and other records, all of which has been invaluable to modern historians.

Çelebi's style depends on the subject at hand. Writing of sultans, folk customs, or ancient history, he displays wit and poetic talent; for administrative and economic details he uses a brief, matter-of-fact style of reporting; and his descriptions of battles are in lively but mostly unadorned prose.

Çelebi continued to serve the sultan well into old age, venturing throughout the Mediterranean, Western Europe, North Africa, and Central Asia. Although Çelebi often describes himself as "the humble writer," his *Book of Travels* has few equals in terms of style and detail.

Cervantes Saavedra, Miguel de

(1547–1616) *novelist, poet, playwright*

Miguel de Cervantes Saavedra was born in Alcalá, Spain, the fourth child of Rodrigo de Cervantes and Leonor de Cortinas. Little is known for certain about the early life and adolescence of the author of *Don Quixote*, and frequent gaps in his biography have led many later scholars and admirers to attribute the adventures of the book's eponymous hero to his author and creator. Many parallels exist, not the least of them being that the book's hero is a gentleman of La Mancha. Likewise the character Saavedra tells a story in Part I of *Don Quixote* about being held prisoner in a Turkish bagnio in Algiers, an experience shared by the author, who later took the family name Saavedra as his own.

Cervantes's upbringing was marked by the struggles of his father, a surgeon, to keep the family from poverty. After a series of removes to elude creditors, Rodrigo settled his family in Madrid in 1567, and Miguel attempted to catch up on his education. He received attention for a collection of occasional poems he wrote for the family of the Spanish king, Philip II, but shortly thereafter was forced to leave Madrid after wounding a young man in a duel, a deed punishable by 10 years of exile and the loss of his right hand. Cervantes traveled to Italy and entered the service of Cardinal Acquaviva.

The Catholic Spain of Philip II suffered from two chief pressures: the Protestant threat of Reformation thought as advocated by ERASMUS, LUTHER, and adherents of HUMANISM, and the Islamic threat of the Turks of the Ottoman Empire. Answering the second of these, Miguel joined the military in 1570 and was promptly sent into battle. He was wounded at Lepanto in 1571 and lost the use of his left hand. He returned to active duty a few months later and fought in several more battles, distinguishing himself for heroism. He then spent the winter in Naples, Italy, an experience that left a rich imprint on his later writing.

In 1575 en route from Naples to Barcelona with his brother Rodrigo, Miguel's ship was captured by Barbary pirates and all the passengers were captured and taken to Algiers. Highly glowing letters of recommendation, which Miguel carried with him in hope of finding a government post upon his return to Madrid, led his captors to believe him a member of the high nobility and therefore a very valuable captive. Rodrigo gained his freedom relatively early, but Miguel languished in prison for five years, failing at a series of escape attempts. Finally, in 1580, his family paid the enormous ransom, and Cervantes returned to Spain broke, in debt, and permanently injured.

He hoped to make his fortune in the New World, but his requests for a colonial position were not granted. Instead, he was given a job as a tax collector, which required extensive travel and provided more trials. He was briefly jailed twice due to disagreements about his handling of state finances, and after fathering children with two different women, he married young Catalina de Palacios, with whom he had no children. In the next year he published a PASTORAL romance, *Galatea* (1685), a story of shepherds and fair maidens.

For the next 20 years, Cervantes wrote frequently but produced nothing notable. Two plays, *Life in Algiers* and *The Baths of Algiers*, use his own experience to dramatic effect, but Spanish theater was entirely monopolized by the polished and gifted LOPE DE VEGA. Cervantes continued to read extensively in all forms and genres; he knew the lyrics of PETRARCH and the writings of GARCILASO DE LA VEGA, the EPIC romances of Boiardo, ARIOSTO, and TASSO, BOCCACCIO's *Decameron*, and the *Eclogues* of Virgil. He also continued to write poetry, which was considered the literature of the upper classes, but Cervantes was not a particularly remarkable poet. During one of his stays in prison he conceived the idea of writing a novel about a valiant but delusional *hidalgo*, or gentleman, and the character of Don Quixote was born.

Part I of *The History of the Ingenious Gentleman Don Quixote of La Mancha* appeared in 1605, and was an instant success. Readers were delighted and

entertained by the fantastic antics of the idealistic and indiscriminate knight-errant. Yet the work, for all its popularity, was largely considered a boisterous FARCE; "true" literature was either poetry or drama, and *Don Quixote*, with its self-conscious literary techniques, was of a new type altogether.

Cervantes later experimented with other forms, publishing a poetic mock-epic *Voyage to Parnassus* in 1614 and *Eight Comedies and Eight New Interludes* in 1615. His 12 short stories, collected under the title *Exemplary Novels* and published in 1613, are equal to *Don Quixote* in style and execution, but less often read. Critics often divide these short stories into two types, realistic or romantic. In the prologue to the tales, Cervantes represented them as model tales, wholesomely educational, but the bawdy nature of certain stories made some readers and critics doubt the moral value of the fictions.

Don Quixote remained the sole reason for his fame, and when a spurious and anonymous sequel came out in 1614, an outraged Cervantes hurried to publish his own authentic Part II in 1615. He did not have long to enjoy the acclaim or to finish his latest and, in his eyes, greatest ROMANCE, *The Trials of Persiles and Segismunda* (1617). He died in 1616, the same year as the English poet and playwright SHAKESPEARE.

Like Shakespeare, Cervantes stands as a monument in his country's literature. According to biographer Jean Canavaggio, Cervantes is considered not only "the incarnation and epitome of the Golden Age of Spain," but also the inventor of the modern novel.

Critical Analysis

New readers often approach *Don Quixote* knowing only that it is a parody of what Cervantes himself called "impossible fictions" and what French essayist Michel de MONTAIGNE called "wit-besotting trash"—the medieval romances with their themes of chivalry and courtly love. The book's modest and humble hero—who bears many similarities to Cervantes—has a peculiar affliction: He has read so many of these stories that they have addled his wits. Cervantes writes:

Don Quixote so buried himself in his books that he read all night from sundown to dawn, and all day from sunup to dusk, until with virtually no sleep and so much reading he dried out his brain and lost his sanity. . . . Indeed, his mind was so tattered and torn that, finally, it produced the strangest notion any madman ever conceived . . . he decided to turn himself into a knight errant, traveling all over the world with his horse and his weapons.

Calling himself Don Quixote, the gentleman-turned-knight recruits a neighboring peasant, Sancho Panza, to be his “squire,” and they set off. To Don Quixote, rambling over the countryside in search of fame and glory, every inn he encounters is a castle and every person he meets becomes part of his self-imagined romance. In the course of his hero’s adventures, Cervantes exposes, with crushing irony, how unfit an idealistic and half-mad dreamer is in the “real” world. Many of his exploits—such as chopping up a puppet play because he thinks the puppets are powered by a sorcerer, or the famous moment where he jousts with windmills, thinking them giants, and is ignobly thrown from his horse—make Don Quixote look ridiculous, foolish, even dangerous. Yet Cervantes tells his tale in a mild, confidential voice that endears his hero to the reader and somehow laments the passing of the chivalric ideal.

This narrative style, whereby the author overtly involves the reader in the story and calls upon the audience to make moral judgments about the characters and their decisions, is part of the novel’s innovation. The author is self-consciously aware that he is crafting a story, and characters in the story read the works of a certain Miguel de Cervantes, including *Don Quixote*. Adding to the fun, the hero becomes angry to hear that his exploits are misrepresented in the falsely authored Part II of his book. In addition, songs, SONNETS, and letters stretch the limits of genre and form, and embedded tales elaborate the action, digress from the main story, and often provide sparkling narratives that could stand alone.

Some of the stories narrated in *Don Quixote* are obviously drawn from Cervantes’s own life. In a substantial episode known as the “Captive’s Tale,” where a former captive of an Algerian bagnio recounts his imprisonment, he refers to a man named Saavedra whom he knew there, and who was a favorite of the Algerian ruler. Yet the categories of parody or loose autobiography barely begin to describe this lengthy and complex work.

Part of the book’s success is due to its obvious sympathies for the lives of everyday people and its wickedly cutting observations on the false and limiting practice of certain Spanish attitudes and customs. Cervantes questions the very nature of art and reality and examines the ways in which humans relate to one another in their projects of shaping identities and following dreams, falling in love and enduring failures, always mistaking, correcting, learning, and teaching one another.

Ultimately, *Don Quixote* is a book about books. The hero’s bibliomania has led to his unique madness, and large swaths of the narrative are devoted to discussions of and literary criticism about other works of fiction. Throughout the work, the narrator assumes the humble stance of a poorly educated, confused author overwhelmed by his material. In his Prologue he pokes sly fun at the pompous literature of his day, scattered with footnotes and obscure allusions. He invents a “friend” who gives him the prosaic advice to make up his own references:

And as for those missing marginal references, the names of all the books and writers where you went hunting for the wit and wisdom quoted in your history, all you have to do is scribble in any bits and pieces of Latin you happen to remember. . . . And with a pinch of Latin here, and a pinch of Latin there, they might even think you’re a scholar, which isn’t a bad reputation, these days.

The impact of *Don Quixote* on Western literature can scarcely be underrated. Not only is it felt by many to be the first and greatest of novels, but

also the consciousness of its hero has entered the language; “quixotic” is used to describe someone romantic and idealistic to an impractical degree. Novelist Mark Twain used *Don Quixote* as his model when he wrote the American picaresque *Adventures of Huckleberry Finn*, and William Faulkner read Cervantes more often than he read the Bible. The 400 years of the novel in Western literature owe themselves to the moment when Miguel de Cervantes, idle and in jail, began his own epic quest to cast down the ideology of chivalric fiction and find a new way of looking at life—essentially, in the words of novelist Milan Kundera, “to comprehend the world as a question.”

Chaucer, Geoffrey (ca. 1342–1400) poet

Though more is known about the life of Geoffrey Chaucer than many other English poets of his time, including William Langland and the author of the poems *Pearl* and *SIR GAWAIN AND THE GREEN KNIGHT*, the precise year of his birth remains a

mystery. His parents, John and Agnes, were part of a well-to-do merchant family who lived in Ipswich, near London. Though “Chaucer” in the French of the time meant “shoe-maker,” the family trade was wine making. In 1359 Chaucer traveled to France with the army of King Edward III and was captured but quickly ransomed. In 1366 he married Philippa, daughter of Sir Gilles of Hainault, and in 1367 he joined the king’s household as an esquire or general servant, and possibly studied law at the Inns of the Court.

In his lifetime Chaucer made several trips to France on business for various kings, and between the years 1370 and 1372 he traveled to Italy. The French chronicler FROISSART reports that Chaucer returned to France in 1377. After the Peasant’s Revolt of 1381, Chaucer gradually removed from London to Kent, where he served on the peace commission and later took a post as warden of the king’s forest. When Richard was deposed in 1399, Chaucer passed smoothly from the service of one king to the other, but did not live long enough to enjoy the favor of Henry IV. Chaucer died one year later and was buried in Westminster Abbey. The monument of his death suggests what his life’s work achieved: He was the first to occupy what became the Poet’s Corner, which now serves as the final resting place for such luminaries as SHAKESPEARE and John DONNE, symbolizing Chaucer’s place as the fountainhead of modern English poetry.

As his work suggests, young Geoffrey received a thorough education in the classics of Latin literature, including Virgil, Claudius, Lucan, Statius, and Ovid. He knew French and could read as well as compose French poetry, and the French poet Eustace Deschamps wrote a ballade praising Chaucer for his English translation of the medieval classic *Romance of the Rose*. Chaucer’s trip to Italy had a profound effect on him; he likely met PETRARCH and BOCCACCIO and discovered the works of Dante. His English contemporaries Thomas Usk and John GOWER spoke highly of him, and in his own time Chaucer as a poet was well respected, if not always well paid.

He wrote the first of his major works in 1368 as an elegy for Blanche, the wife of John of Gaunt.

The Book of the Duchess contains many of the elements of the courtly love poems made popular by the French poets Guillaume de Machaut and Jean de Meun; it includes a lovelorn narrator, a dream vision that takes place in May, and a dialogue with a mysterious Black Knight. Chaucer most likely wrote or began his other major poems, *The Parliament of Fowls*, *The House of Fame*, and *Troilus and Criseyde*, as well as his translation of *The Consolations of Philosophy* by Boethius, while he was serving as a controller in the customhouse between 1374 and 1386. The Trojan War as told in Homer was a popular subject for medieval tales, and the story of the fatal love of Troilus, a prince of Troy, for the modest widow Criseyde had been the subject of works by many skilled poets, from Boccaccio to Benoît de Saint-Maure. Chaucer's *The Legend of Good Women*, which he never finished, contains a list of the poet's works, some of which have descended to posterity and some of which are lost. In the centuries after his death many poems written by contemporaries or imitators were erroneously attributed to Chaucer, but peculiarities of language and style have helped scholars identify the spurious works. One of Chaucer's greatest achievements was that by writing in English, instead of the Latin or French then used in government and clerical documents, he helped make the native, vernacular language more accepted in higher circles.

Critical Analysis

Although Chaucer was famous in his own time, he is best known today for his unfinished masterpiece *The Canterbury Tales*. For this work, Chaucer drew upon all his careers as soldier, esquire in the king's household, diplomat, customs controller, justice of the peace, member of Parliament, clerk of the king's works, and forest official. He used his experiences and his encounters with people from all stations to create a work of unparalleled variety. He probably began writing the *Tales* piecemeal in 1387; evidence suggests he began some of the stories before deciding to use the narrative framework of a pilgrimage to Canterbury. The technique of

using a frame story to pull together very different narratives had been used before, by the composer of *The Thousand and One Nights* and by Gower in his *Confession of Amant*. Chaucer added a new twist by drawing his characters from all walks of life. The pilgrims include a knight and a squire, a landowner and a lawyer, a miller and a reeve, a clerk and a merchant, and several religious figures including nuns and priests, as well as a parson, pardoner, summoner, and friar—all of whom tell individual tales.

In the Prologue to *The Canterbury Tales*, the pilgrims assemble at an inn kept by Harry Bailly, the high-spirited host who decides to go with them. Their destination is the shrine where Thomas à Becket was murdered in 1170, a popular destination for those interested in religious sites. Bailly proposes a storytelling contest: Each of the pilgrims will tell two stories on the way to the shrine and two on the way back, and the pilgrim who tells the best story will win a dinner paid for by all the others. The descriptions of the pilgrims in the Prologue show Chaucer's eye for authentic detail and his ear for dialogue. His portraits are often deeply ironic, and behind the narrator's naïve voice the reader can see sharp critiques of the vices, social problems, and injustices of Chaucer's day.

One of the most popular pilgrims with modern readers is the Wife of Bath, who is described as gap-toothed and a bit deaf. Vain about her clothing and a famous scold, she is full of abundant energy; she has had five husbands, often goes on pilgrimages, and is an early feminist in her defense of women. The Wife's deafness is the consequence of a fistfight with her most recent husband over the issue of wifely obedience. He liked to read to her from a book about wicked wives, which made her so angry she finally tore up the book and threw it into the fire. The Wife's tale begins a debate about the basis of marriage, which other pilgrims take up and elaborate. She tells a story set in the time of King Arthur, when the queen gives an erring knight the task of discovering the one thing that women most want. The knight meets a hideous old woman who promises to tell him the answer to the

riddle if he marries her. Chastened and desperate, the knight agrees, and reports to the queen:

“My liege lady, generally,” said he,
 “Women desire to have sovereignty
 As well over their husbands as over their love,
 And to be in mastery of him above;
 This is your great desire, though you have
 me killed;
 Do as you wish, I am here at your will.”

The knight’s life is spared because he gives the correct answer, and his joy increases when, after their marriage, he discovers that the loathsome old woman was really a beautiful young maiden under a spell.

Aside from the tale-telling framework, the *Tales* are held together by interwoven themes of love, justice, religious devotion, and the relations between men and women. These connected meanings give the individual tales a sense of coherence, despite the fact that the manuscript exists in 10 fragments.

Scholars often wonder if Chaucer ever intended to finish all the stories, for he wrote a conclusion in the form of a Retraction, in which he apologizes for the works he had written. Given that this type of apology was a medieval convention and that Chaucer was known for his subtle yet effective humor, some doubt that he really regretted writing the work. In any case, *The Canterbury Tales* has become a landmark in the history of English and world literature. G. K. Chesterton calls Chaucer “not only the father of all our poets, but the grandfather of all our novelists.” Even now, translator Louis Untermeyer says that Chaucer “comes among us with unbounded vitality, gross, delicate, lavishly inclusive. . . . No poet has ever done more.”

Chikamatsu Monzaemon (1653–1725) dramatist

The great Japanese playwright Chikamatsu Monzaemon was born Sugimori Nobumori in Echizen, on Japan’s main island of Honshu. His father, a minor samurai, abandoned his feudal holdings around 1665 to become a *ronin*, or wandering samurai. He moved with his family to the imperial capital of Kyoto, where Chikamatsu found service with the court aristocracy as a teenager. Scholars do not know how he first became involved in the theater, but some have speculated that a nobleman he served was a patron of the BUNRAKU, the popular and prestigious puppet theater for which Chikamatsu was to compose most of his major works.

He wrote his first bunraku play, *The Soga Heir*, in 1683, which received some acclaim. In the following year, he wrote his first play for KABUKI, and in 1686 he achieved his first genuine renown with *Kagekiyo Victorious*, which was widely hailed for its originality and deviation from the stagnant formulas of the puppet play. For a 10-year period beginning in 1693, Chikamatsu wrote primarily for Kabuki, a form of traditional Japanese theater known for its exaggerated acting and brightly-colored sets and costumes. By 1703, however, he was again writing exclusively for the puppet theater, probably because Bunraku treated the playwright’s

original text with greater reverence than the more free-spirited Kabuki. In *Naniwa Miyage* by Hozumi Ikan, a friend of Chikamatsu relates the playwright's views of how puppet theater differs from live acting:

Jōruri differs from other forms of fiction in that, since it is primarily concerned with puppets, the words must all be living and full of action. Because *jōruri* is performed in theaters that operate in close competition with those of the *kabuki*, which is the art of living actors, the author must impart to lifeless wooden puppets a variety of emotions, and attempt in this way to capture the interest of the audience. . . . Even descriptive passages like the *michiyuki* [the journey], to say nothing of the narrative phrases and dialogue, must be charged with feeling or they will be greeted with scant applause.

In 1705 he moved to Osaka, the Bunraku capital of Japan, and until his death worked primarily for the famous bunraku chanter Takemoto Gidayu. Takemoto's lavish puppet theater Takemotōza staged the premieres of most of Chikamatsu's later works, which would eventually number around 150 plays.

Chikamatsu's works fall into two broad categories: historical romances and domestic tragedies. Although the former were tremendously popular in the 18th century, the latter are more highly esteemed for their accurate and vivid portraits of Japanese society. Peopled by samurai, farmers, merchants, housewives, thieves, and prostitutes, they feature believable characters that speak colloquial dialogue in realistic (and often rather sordid) settings such as streets, shops, brothels, and tea-houses. They are also noteworthy for a remarkably modern, naturalistic conception of drama in which the protagonists gain tragic stature when the pressures of society drive them to extreme acts. The stories' realism was centuries ahead of its time. Most of the domestic tragedies are based on actual incidents, and Chikamatsu rarely spent more than a few weeks on any given work so it would be as

topical as possible when presented; for instance, he finished *The Love-Suicides at Sonezaki* (1703) within two weeks of the celebrated double suicide by an assistant in the Osaka firm of Hirano and a prostitute named Ohatsu, upon which it was based. The assistant and Ohatsu committed suicide in the Sonezaki Shrine, from which the play takes its name. This play and the similarly themed *Double Suicide at Amijima* (1720) proved so popular that they touched off a widespread vogue for lovers' suicides both on stage and in real life.

Few of Chikamatsu's historical ROMANCES survive, one of which is the spectacular *Battles of Coxinga*, a lavish swashbuckling melodrama based loosely on the life of a 17th-century Chinese pirate who unsuccessfully attempted to restore the Ming dynasty to his country's throne. Written in 1715, it was the playwright's most popular work during his lifetime and for many years after his death.

Critical Analysis

The Love-Suicides at Sonezaki is perhaps Chikamatsu's most famous and characteristic play. Written in 1703, its plot bears a marked similarity to that of Alexandre Dumas's *Lady of the Camellias*, written some 150 years later. It is the story of Tokubei, a bankrupt merchant who rejects a lucrative arranged marriage for the love of the indentured prostitute Ohatsu. The lovers are unable to escape the respective fates that threaten to separate them forever and commit suicide together. As they prepare to die, Tokubei says to Ohatsu: "You make me feel so confident in our love that I am not worried even by the thought of death. . . . Let us become an unparalleled example of a beautiful way of dying."

The final act the lovers perform together is prefaced by "one of the loveliest passages in Japanese literature," according to Donald Keene. It is spoken by Ohatsu, in the final lines of a 100-line lyric, one of the only stretches of verse in a predominantly prose drama:

*It's strange, this is your unlucky year
Of twenty-five, and mine of nineteen.*

*It's surely proof how deep are our ties
That we who love each other are cursed alike.
All the prayers I have made for this world
To the gods and to the Buddha, I here and now
Direct to the future: in the world to come
May we be reborn on the same lotus!*

Ohatsu's final line is a reference to an ancient Buddhist belief that after a double-suicide, the lovers would spend eternity on the same lotus leaf.

For the quality of his prose, Chikamatsu is often called "the Japanese Shakespeare." In the words of translator Donald Keene, "we can only marvel that he could produce such astonishing textures of language," especially given the truncated schedule under which he generally worked. Scholars also view him as just as quintessential a playwright of the Japanese Tokugawa period as Shakespeare was of the English Elizabethan. Unfortunately, the modern Japanese theater rarely performs Chikamatsu's plays, due to a sharp decline in Bunraku's popularity since the late 18th century. Most contemporary Japanese audiences know him primarily through Kabuki and film adaptations of his works, many of which diverge significantly from the source material.

Chilam Balam, The Books of (n.d.–1700s)

Like *THE BOOK OF CHILAM BALAM OF CHUMAYEL*, *The Book of the Chilam Balam of Tizimin* and *The Book of the Chilam Balam of Mani* are parts of *The Books of Chilam Balam*, a record of Mayan history and culture based on stories firmly rooted in Mayan oral literature. The *Tizimin* book, while it contains prophecy, is more historical in nature and tone than the *Mani* book, which is more prophetic. In terms of dating the manuscripts, it is important to remember that Maya literature contains no linear, or chronological, history. As authors Leon-Portilla and Earl Shorris point out, "The Maya priests who wrote the books of the Chilam Balams were expected to predict the future based on the past, then to record what happened during the predicted period."

The Book of Chilam Balam of Tizimin covers, roughly, Maya history from the seventh to the 19th centuries and focuses on the Itza and Xiu peoples and their interaction with the ultimate conquering by the Spanish. It includes, among other stories and predictions, "The Last Flight of the Quetzal Prince," a story about Tecum; "The Death of Cuauhtemoc," a description of the Mexican prince's death; and "Crónica de Chac-Xulub-Chen," a story of the tragic enslavement of the Maya people.

The Book of the Chilam Balam of Mani roughly covers the same time period as the *Tizimin* book, but it is written in the future tense, giving it a prophetic tone and nature. Its focus is on the Spanish conquest of the Maya, and its stories include "The Prophecy and Advice of the Priest Xupan Nauat," "The Prophetic Words of the Great Prophets, The Principal Goods of the Underworld, and the Great Priests," and "The Prophecy of Oxlahun-Ti-Ku-for Katun 13 Ahau: Recital of the Priest of Chilam Balam," among others.

The Books of Chilam Balam represent not only a desperate attempt to cement dying wisdom, but also a mourning of the fate of the people it represents. "Should we not lament," the book asks defiantly, "in our suffering, grieving for the loss of our maize and the destruction of our teachings concerning the universe of the earth and the universe

of the heavens?” As one of the Great Priests states in “The Prophetic Words of the Great Prophets,”

I wrote this not to speak of our poverty but to make known the events that happened in the life of our ancestors.

In this, the contributors to *The Books of Chilam Balam* succeeded, and their efforts represent today a rare historical, cultural, and literary record of the Maya people.

Choon Hyang Jun (1700s) novel

Choon Hyang Jun is a novel that was published anonymously in Korea during the 18th century. It tells of the love between Choon Hyang, the beloved only daughter of a *kisaeng*—a professional entertainer, or courtesan—and Yi Toryong (or, in some versions, Yi Mongyong), the aristocratic son of a provincial governor in Namwon, southwestern Korea. Because of the social disparity between them, and because Yi Toryong is still dependent on his parents, they keep their attachment secret. The lovers are separated when Yi Toryong’s father is transferred to a position in the capital. Choon Hyang is defenseless when the new governor begins to pursue her, but she will not consider being

unfaithful to Yi Toryong. Furious at the impudence of her refusal, the governor has her publicly whipped and then imprisoned. She is near death from grief and humiliation when Yi Toryong, who has passed the examination for public office and has become a high-ranking official, returns to rescue her and to have the lecherous governor fired for abusing his office.

Although it has a fairy tale-like happy ending, the story contains elements of realism and biting social commentary in its depiction of the corrupt official and the underlings who are too timid to resist his injustices. There are also poignant passages about the unfair situation of the *kisaeng* entertainers who are scorned for taking up a profession that was the only one available in Korea at the time for women who had to earn their own living.

Choon Hyang is one of the most beloved characters in Korean literature. Her story is the basis for the most popular of the *pansori* Korean operas and for several Korean films, including the very first sound movie made in Korea, the classic *Chun Hyang* of 1935. A 1992 Japanese anime film, *The Legend of Chun Hyang*, transforms the heroine into a warrior princess.

classicism (1450–1600)

Classicism broadly refers to a number of movements in art, literature, architecture, and music that took place at various times. To call something “classic” typically means the object is the best representative of its kind. Classicism as a literary movement generally refers to a renewed interest in

and imitation of the art of ancient Greece and Rome, since the period in which these civilizations flourished is frequently referred to as the Classical Age in the history of Western Europe. This interest is usually marked by aesthetic standards reflecting the classical ideals of balance, clarity, concise expression, and concern for form.

More precisely, classicism refers to a movement during the RENAISSANCE when a rediscovery of the works of Greek and Roman rhetoricians and philosophers, such as Plato and Cicero, contributed to a new set of literary ideals. Part of the broader HUMANISM movement, these new standards of harmony, restraint, and idealism can be seen in the works of Italian writers PETRARCH, Dante, and BOCCACCIO. Likewise, artists in the circle of Cosimo de Medici, including MICHELANGELO Buonarroti, and other European authors followed the Italian precedents, as can be seen in the writings of Englishmen Francis BACON and Ben JONSON. Later on, French classicism, also known as NEO-CLASSICISM, particularly valued reason, intellect, simplicity, and symmetry, as shown in the works of PASCAL, DESCARTES, LA ROUCHEFOUCAULD, RACINE, and CORNEILLE.

In the 18th century, archaeological discoveries of the ruins of Herculaneum and Pompeii further revived interest in classical art. The classical period of German literature, 1750–1820, resulted in the dramas of SCHILLER and GOETHE and the music of Haydn, Mozart, and Beethoven. A Victorian classicism in England in the 19th century made “classical” synonymous with conservatism and the valuing of traditional forms over individual expression. Likewise, the 20th century witnessed its own revival of the models of classical Greece and Rome, reflecting the belief that the works of these periods reached a standard of beauty never rivaled in Western art.

Cloud of Unknowing, The (1300s?)

The Cloud of Unknowing was written by an anonymous 14th-century mystic for individuals dedicated to serving Christ and to knowing God through practicing a contemplative, mystical life. Over the past several hundred years, however, the work’s readership has grown to a much larger audience. The 17 surviving manuscripts of the work attest to its popularity during the Middle Ages, and *The Cloud* is now often studied alongside Eastern religious works, such as the Upanishads, in addition to other works by religious writers of the age, including JULIAN OF NORWICH’s *Revelations of Divine Love*.

The author of *The Cloud of Unknowing* also is believed to have written the following letters, treatises, and short tracts: *The Epistle of Prayer*, *The Epistle of Discretion in the Stirrings of the Soul*, *The Epistle of Privy Counsel*, and *The Treatise of Discerning of Spirits*. All of these works show a remarkable similarity in the obvious influence of Dionysius and Richard of St. Victor, but *The Cloud of Unknowing* is superior to the other works in its clarity of thought, contemplation of the divine, and lively prose style.

The author, who was probably a monk, challenges readers to practice rigorous discipline while contemplating God by abandoning all attachment to forms and objects. In this sense, then, the mystic asks his readers to engage in metaphysical meditation, that which is “beyond the physical.” Some scholars interpret the cloud of the work’s title as a

metaphorical cloud that becomes present when one abandons reasoned analysis and enters an intangible place of unknowing. Other scholars interpret the cloud as a metaphor for the “darkness” that blinds humans to God’s love. *The Cloud of Unknowing’s* message, however, seems to be that by abandoning typical modes of understanding the world and faith and by embracing love, one will experience “a loving impulse and a dark gazing into the simple being of God himself.”

Columbus, Christopher (Cristóbal Colón, Cristoforo Colombo) (1451–1506) *explorer*

One of the most famous figures in Western history, Columbus fundamentally changed the course of history with his discovery of the Americas in the late 1400s. By focusing European attention on the unexplored continents of North and South America, Columbus set the stage for the eventual Western domination of the world, which would last for centuries. His discovery also marked the beginning of the destruction of Native American civilization, for which he and the Spanish have been severely criticized.

Columbus was Italian, born in the city of Genoa. At that time, Genoa was a powerful city-state, and Italy was experiencing the political and cultural transformation of the RENAISSANCE. Relatively little is known about Columbus’s early life.

His father was a weaver of wool and could not afford an extensive education for his children.

Columbus apparently became a sailor in his teens, although the exact date is unknown. He served on merchant vessels, traveling throughout the Mediterranean. He also ventured into those parts of the Atlantic that were well known to Europeans, voyaging to England and even as far north as Iceland.

He eventually made his permanent home in Portugal, which was then in the midst of an era of extensive sea exploration, begun earlier in the century by Prince Henry the Navigator. The goal of the Portuguese was to send vessels all the way around Africa to find a trade route to the East Indies, where access to expensive spices would make Portugal a fabulously wealthy nation.

Columbus intensely studied the question of how to reach the Indies. He eventually decided that, rather than sail east around Africa, it was better to sail west across the Atlantic Ocean. Contrary to popular belief, educated people in the 15th century knew the world was a sphere, but the idea of a voyage across the unexplored Atlantic was still regarded as foolhardy.

Finding no support in Portugal for his navigational plan, Columbus journeyed to Spain, where he won the support of Queen Isabella and King Ferdinand. Their support proved to be one of the most important decisions in history.

In the summer of 1492, Columbus set sail in three vessels. As was customary for sea captains, Columbus kept a daily journal throughout the voyage. It would eventually be called the *Book of the First Navigation and Discovery of the Indies*, often referred to as the *Journal of the First Voyage*. Although the voyage was comparatively quiet, the weeks that passed without sight of land began to wear on the crewmen’s morale. Finally, on October 12, the tiny fleet sighted land. Historians have disputed where Columbus actually landed in the New World, although most evidence suggests that it was the island of San Salvador in the Bahamas.

Columbus explored the surrounding territory for several weeks, believing that he had discovered islands off the coast of China. He was unaware that the land he had found was, in fact, part of an entirely new and unknown continent. His lack of understanding continued until his death.

After returning from his voyage, Columbus secured additional funding and, over the course of the next few years, made three additional voyages of discovery to the New World. Each would chart new territories and promote further exploration. Columbus also worked at establishing Spanish colonies in the new lands, which resulted in the annihilation and enslavement of native populations.

Toward the end of his life, Columbus fell out of favor with Spain's rulers. He died on May 20, but his discoveries radically changed the course of history. Until the late 15th century, Europe had been focused on the Mediterranean and the struggles against the Muslim powers to the East. After Columbus, however, Europe increasingly turned its attention to the Americas. The empires created by various nations there would bring wealth and power to Western civilization and would result in the creation of new nations, including the United States of America.

In addition to being an able sea captain, Columbus was a skilled writer. The *Book of the First Navigation and Discovery of the Indies* was far more than a stilted, dull logbook. His account of the voyage contains exact descriptions of the people and places encountered during the voyage, as well as musings on the future of Spanish policy. It also contains a lively sense of adventure, which inspired numerous explorers who came after Columbus.

comedy of manners (1600s–1700s)

The comedy of manners is a genre of drama that was most popular in 17th- and 18th-century Europe and focused on human society and behavior. Comedies of manners concentrate on how characters conduct themselves in social situations. The plays are usually satirical, because they show a society or social group's foibles and vices in order to demonstrate how foolish the behavior is. The hallmarks of a comedy of manners are stock social stereotypes, such as the imperious matron; the witty, high-spirited heroine; and the self-important fool. The plots usually revolve around mistaken identities, thwarted young lovers in conflict with status-conscious parents or guardians, and convoluted plans to get money and/or position. Finally, while a comedy of manners can have enough physical humor in it to border on FARCE, it primarily relies on witty repartee for most of its humor.

While one can argue that the plots and basic characters were laid out in the early Roman comedies of Menander and Plautus, the genre is usually associated with 17th-century France and England. MOLIÈRE's comedies poked fun at such social phenomena as pretentious women in *Les Précieuses Ridicules* (*The Affected Young Ladies*, 1659) and possessive husbands in *L'École des Femmes* (*The School for Wives*, 1662).

Molière's plays were translated into English by William Wycherley in the 1670s and, combined with the English tradition of social comedy of BEN JONSON, created the stylish, artificial Restoration

sex comedies of the second half of the 17th century. Plays such as Sir George Etherege's *The Man of Mode* (1676), Wycherley's own *The Country Wife* (1675), and William Congreve's *The Way of the World* (1700) were high points in an age that valued cynical observations served in high style. A century later, English playwrights such as Oliver Goldsmith, with *She Stoops to Conquer* (1773), and Richard Brinsley Sheridan, with *The School for Scandal* (1777), would revive the style with gentler satire and more pointed morals. Comedies of manners survived into the 19th century with the witty comedies of Oscar Wilde, and many of their conventions can be seen in Hollywood screwball comedies of the 1930s and 1940s, as well as in contemporary situation comedies.

Comenius, Johann Amos (Jan Ámos Komenský) (1592–1670) theologian, educator

Johann Amos Comenius was born in Nivnice, Moravia, in what is now the Czech Republic. His parents died when he was 12 years old. Four years later, he was sent to the Brethren's school at Prerov, Moravia, and encouraged to pursue a career in the Protestant ministry. In 1613 he attended the University of Heidelberg, where he was influenced by the works of Francis BACON and the Protestant millennialists, who worked to achieve salvation on Earth through science and good works.

The beginning of the Thirty Years' War forced Comenius, who was by this time a Protestant minister, to go into hiding. While in hiding, his wife

and two children died of the plague. This tragedy, along with the religious intolerance of the Austrian rulers, led him to write the classic religious ALLEGORY, *The Labyrinth of the World and the Paradise of the Heart* (1618), in which he voices his worldly despair and spiritual consolation.

Six years later, Comenius moved to Leszno, Poland, where he published his two famous educational texts, *The Gates of Languages Unlocked* (1631) and *The Great Didactic* (1637). The first is a Latin instructional text written in both Czech and Latin. The idea of learning Latin through a comparison with the vernacular became very popular, and Comenius's book was translated into most European and Asian languages. The *Great Didactic* is a text on educational theory in which Comenius advocates full-time schooling for all children and the teaching of native and European cultures.

In 1641 Comenius was invited to England to establish a school of social reform, but his plans were interrupted by the outbreak of the English Civil War. He then moved to Sweden, where he developed a series of textbooks modeled on his educational theory. When the Thirty Years' War ended in 1648, Comenius returned to Poland and was named a bishop of the Brethren's Unity Church in Leszno.

In 1652 he moved to Amsterdam, where he spent the rest of his life writing and refining his educational treatises. He is recognized for his internationalism and educational reforms that shaped much of the modern system of education in Germany.

commedia dell'arte

Commedia dell'arte, the improvisational comic theater featuring beloved characters like Harlequin and Columbine, originated in Italy in the 1500s. It takes its name from the Italian for “skilled comedy,” because it was performed by professional troupes, in contrast to the learned and scripted *commedia erudita*, performed by amateurs in learned academies.

Commedia dell'arte performances were based on a *scenario*, or outline, of the plot, which was placed backstage for the actors to consult. Few scenarios remain, however, because they were only blueprints for the performance, though Flaminio Scala, an actor with the Duke of Mantua's troupe, published a collection in 1611.

The characters, each of whom had a distinctive mask or costume, included the foolish father Pantalone; the pedantic Dottore (Doctor) Graziano; the thwarted young lovers Isabella and Lelio; the bragging but cowardly soldier Captain Spavento; the comical servants, both crafty (Brighella) and dimwitted (Arlecchino or Harlequin); and the saucy servant girl Columbine. The actors filled out the scenario with their own improvised lines and *lazzi*, or physical gags, which often developed into long comic routines, and they had to be quick-witted to adapt to what their fellow actors were doing.

The origins of commedia dell'arte may lie in the plays of Plautus and Terence, ancient Roman FARCES, and the comedy of medieval minstrels and jesters. The first troupes to perform commedia dell'arte formed around 1550 and found patronage at the courts of Venice and Mantua. They soon began performing at royal courts in Germany, England, and France.

Commedia dell'arte greatly influenced French playwrights. MOLIÈRE and MARIVAUX, for example,

based many of the characters and plots in their comedies on Italian originals, and SHAKESPEARE refers to the popularity of the Italian theater in England in *As You Like It*.

Although commedia dell'arte declined after the middle of the 18th century, its spirit lives on in many classics of world literature and even in modern comedic performances, such as those by Charlie Chaplin and the Marx Brothers.

Cook, Ebenezer (ca. 1672–1732) *poet, satirist*

Ebenezer Cook is best known for his 1708 political satire, *The Sot-weed Factor: or a Voyage to Maryland*. A sot-weed factor is a tobacco agent, or trader. The 26-page poem is a satirical treatment of English views on colonial America through the eyes of a downtrodden tobacco agent who has come to America to make his fortune. The poem depicts the early colonies as an unrelenting place, where frauds and unsavory characters prey upon the naïve. At the end of the poem, the tobacco agent leaves America wishing never to see “this Cruel, this inhospitable Shoar” again. The form and style of the poem are modeled on Samuel Butler's *Hudibras*, a celebrated 17th-century satire. The work has received renewed attention in con-

temporary times, serving as the inspiration for the protagonist in John Barth's comic picaresque novel, *The Sot-Weed Factor* (1960), in which Cook plays the main character.

Cook is believed to have authored works published under the names E. Cooke and E. C. Gent. Several elegies are attributed to him, including an elegy to Thomas Bradley (1727), an elegy on the death of Nicholas Lowe (1728), and two elegies honoring Governor Benedict Leonard Calvert and Justice William Lock (1732).

Other significant works include the 1730 publication of *Sotweed Redivivus; or, The Planters Looking Glass* by E. C. Gent. *The Maryland Muse*, his longest work, was published in 1731 and is a satire of Nathaniel Bacon's rebellion.

Cook's works serve as a window into the life of early America and the difficulties of new settlers hoping to make their fortunes in commerce. Though his work is satirical and certainly a caricature at times, Cook's insights remain of historical significance to this day.

Copernicus, Nicolaus (1473–1543) scientist

After the collapse of the classical civilizations of Greece and Rome, virtually no scientific work was done in Europe for nearly 1,000 years. It wasn't until the 16th century, with the beginning of the

Scientific Revolution, that science once again became a major force in Europe. One of the earliest and most important figures of this period was Nicolaus Copernicus, the Latinized form of his name (Mikotaj Kopernik).

Copernicus was born on February 19, in the Polish town of Torun. He was the youngest of four children. His father, Mikolaj Koppernigk, was a wealthy merchant whose peasant ancestors had come from the Silesian village of Koperniki. His mother, Barbara Watzenrode, came from a prominent family. Her brother Lucas Watzenrode adopted the Copernicus children after their father's death, which occurred when Nicolaus was 10 years old.

Copernicus enrolled at the University of Krakow in 1491. Following the ideas of HUMANISM, the university offered a variety of courses in the arts and sciences. Copernicus's studies included law, Latin, philosophy, and geography. The young scholar bought a copy of Euclid's work on geometry. He also began to use the name Copernicus, a Latinized version of Koppernigk. In 1496 he traveled to Italy to continue his studies. The next few years saw him studying law and medicine at universities in Bologna, Padua, and Ferrara. He read the works of Avicenna, Hippocrates, Galen, and Aristotle. He also spent a year teaching mathematics in Rome.

Copernicus was a true RENAISSANCE man, displaying a wide range of interests and abilities not only in his studies but also in his later occupations. After 1506, when he returned from abroad, he spent six years as a medical attendant and adviser to Lucas Watzenrode. He took part in diplomatic missions, practiced medicine, wrote treatises on monetary reform, and performed the duties of a church canon. He also translated into Latin the *Moral, Pastoral, and Amorous Letters* of Theophylactus Simocatta, a seventh-century Byzantine writer. The translation, dedicated to Copernicus's uncle, appeared in print in 1509.

During all this time, Copernicus also developed an intense interest in mathematics and astronomy. By the beginning of the 16th century, astronomy

had not advanced beyond what was known to the ancient Greeks, and Copernicus read the astronomical works of such ancient thinkers as Aristotle and Ptolemy. Their view of the universe held that the Earth was the center and that everything, including the Sun, planets, and stars, rotated around the Earth. This view was adopted as religious dogma by the Roman Catholic Church.

During many years of personal study, combining direct astronomical observation with intense mathematical calculation, it gradually dawned on Copernicus that the ancient view of the universe was incorrect. As early as 1507, and in his handwritten *Little Commentary* of 1514, he hypothesized that the Earth rotated around the Sun, rather than the other way around. This cosmological idea had first been proposed by a Greek scientist, Aristarchus of Samos, but had been rejected by his fellow Greeks. Copernicus was the first modern thinker to come to this conclusion, which became known as the Copernican Theory.

In 1515 Copernicus began to write his greatest work, *De Revolutionibus Orbium Coelestium* (*On the Revolutions of the Heavenly Spheres*), in support of his heliocentric theory. Being a very modest and serene man, however, he was not particularly eager to publish his findings. He was encouraged to do so by his friend Georg Joachim Rheticus, who shared his interests in mathematics and astronomy. *On the Revolutions* was finally published in 1543, a year that also saw the publication of VESALIUS'S seminal work on anatomy. Copernicus, old and ill, suffered a stroke that year. According to legend, he died a few hours after seeing an advance copy of his book. *On the Revolutions* summarizes Copernicus's entire life work. It begins with general arguments in favor of the idea that the Earth moves around the Sun. It then explains how the heliocentric solar system looks and uses this model to explain why the year has four seasons. Subsequent sections discuss in more detail the motions of the known planets—Earth, Mercury, Venus, Mars, Jupiter, and Saturn. Copernicus's hypotheses involved fewer complicated rules and celestial motions than previous astro-

nomical systems. More important, he based his ideas not on abstract reasoning but on observations of the physical world around him.

Copernicus clearly knew that his theories would be controversial. To make them seem less radical and more authoritative, he supported them not only with data drawn from his own observations, but also with quotations from classical authors such as Cicero and Plutarch. Copernicus notes passages in which these authors raised the possibility that the Earth moved. "Taking occasion thence," he writes:

I too began to reflect upon the earth's capacity for motion. And though the idea appeared absurd, yet I knew that others before me had been allowed freedom to imagine what circles they pleased in order to represent the phenomena of the heavenly bodies. I therefore deemed that it would be readily granted to me also.

In addition, Copernicus mentions that he has received encouragement from two churchmen, and he dedicates his work to Pope Paul III.

Large portions of European society did in fact resist heliocentrism. Catholics as well as Protestants like Martin LUTHER claimed that Copernicus's theories contradicted the Bible. The Catholic Church persecuted a number of scholars, including Giordano BRUNO and Galileo GALILEI, for writing that the Earth moved around the Sun. *On the Revolutions* remained on the Catholic Church's Index of Prohibited Books from 1616 until 1820.

In his book *Copernicus: The Founder of Modern Astronomy*, Angus Armitage notes that Copernicus's

great contribution to astronomy lay not in his originality but in his development of those ideas into a systematic planetary theory . . . which was to make possible the triumphs of Kepler and Newton in the following century.

Johann Wolfgang von GOETHE emphasizes the astronomer's significance more forcefully: "Of all the

discoveries and opinions proclaimed,” he writes, “nothing surely has made such a deep impression on the human mind as the science of Copernicus.”

Corneille, Pierre (1608–1684) dramatist

Pierre Corneille was born in Rouen, France, and educated at the excellent Jesuit school there. Although he won prizes for poetry during his school years, he followed his father into the law, and maintained his legal practice in Rouen for most of his life. At the same time, he wrote the plays that established his reputation as one of the three great dramatists (with RACINE and MOLIÈRE) of France’s classical century.

In 1629 a traveling theatrical troupe led by the actor Montdory passed through Rouen. Corneille showed Montdory a play he had written, the comedy *Mélite*. Montdory took it on, and when the company performed it in Paris, it was a great

success. Corneille produced a succession of comedies and tragicomedies (plays that deal with serious themes but usually end happily) in the next few years, most of them with Montdory and his company in mind.

Corneille’s talent came to the attention of Cardinal Richelieu (1585–1642), the powerful prime minister to France’s King Louis XIII (1601–43; r. 1610–43). Richelieu invited Corneille to join a group that became known as the “Five Authors,” through whose efforts Richelieu hoped to establish a great dramatic tradition in France, based on the classical aesthetics of Aristotle. Richelieu would propose outlines of plays, and the Five Authors would collaborate to realize them. Corneille was involved in several joint projects with the Five Authors during the years from 1635 to 1638, but he withdrew from the group, perhaps because he chafed at the lack of artistic freedom it offered.

A project of his own, the tragicomedy *Le Cid* (1637), was Corneille’s most spectacular success up to that time. It is based on legends about an 11th-century Spanish hero, Rodrigo Díaz de Vivar (ca. 1040–1099). In battles against the Arabs, who held much of Spain at the time, Rodrigo earned the Arab epithet of “Cid,” or lord. In the play, Rodrigue and Chimène, two young nobles at the Spanish court in Seville, are in love, but their hopes to marry are dashed by a quarrel between their fathers in which Chimène’s father, the count of Gormas, slaps Rodrigue’s father. Honor demands that Rodrigue challenge the count to a duel, and when Rodrigue kills the older man, honor demands that Chimène seek the death penalty for Rodrigue. Rodrigue responds by offering Chimène his sword so that she can take her revenge on him herself, but love restrains her. An attack by a Moorish army provides an opportunity for Rodrigue to show himself an indispensable hero. The king pardons Rodrigue for the count’s death, and after a few more twists in the plot Chimène is at last able to give in to her love.

Audiences in Paris flocked to see *Le Cid*. Some of Corneille’s rival playwrights were jealous of his

success and eager to find fault. A battle of pamphlets, known as “the quarrel of *Le Cid*,” ensued. The pamphlets issued on both sides became so vicious that Richelieu ordered a halt, but he did allow the *ACADÉMIE FRANÇAISE* to have the last word with a document that tore the play apart on both ethical and aesthetic grounds. The quarrel was the first full discussion of the rules on which French classical theater was based. Although audiences continued to vindicate Corneille’s choices in *The Cid*, in subsequent plays Corneille, like other playwrights of the period, observed Aristotle’s *unities* of dramatic action more closely and made clearer genre distinctions. He wrote no more tragicomedies.

Corneille continued to place his protagonists in positions of emotional conflict in the three great tragedies (see *TRAGEDY*) that followed. Two of them, *Horace* (1640) and *Cinna* (1641), are set in ancient Rome and involve conflicts between love, family duty, and patriotism. In *Polyeucte* (1642) the hero, an Armenian prince in the days of the Roman Empire, is torn between his love of his wife and the new Christian faith he has embraced. These plays are the center of Corneille’s reputation today.

One of his most successful works is not a play but a verse translation (1651–56) of *The Imitation of Christ* by THOMAS À KEMPIS. By the 1670s, Molière and Racine, and even younger brother Thomas Corneille (1625–1709), whose career as a dramatist Corneille had helped substantially, had eclipsed the older writer in the attention of the public and of the royal patrons who allowed the drama to flourish. As the scholar Vincent Cheng remarks, “the age that idealized and understood the larger-than-life Cornelian hero with noble passions and pride of self was no more.”

Cortés, Hernán (1485–1547) chronicler, explorer, conquistador

Hernán Cortés was the Spanish explorer and conquistador who conquered Montezuma’s Aztec Empire and was responsible, in large part, for the Spanish conquest of Mexico. He was born in Medellín, Spain, and studied law at the University of Salamanca. Eager for adventure, he abandoned his law studies for trips abroad, and in 1504 undertook the first of several voyages to the New World. In 1519 he became captain-general of his own armada and set sail for the Yucatán.

Between 1519 and 1526, Cortés wrote his *Cartas de relación* (*Letters of Report*), five long reports addressed to Charles V in which he describes Spanish operations in Mexico. The first letter, now lost, has been replaced in editions of *Cartas de relación* by report addressed to Holy Roman Emperor Charles V (King Charles I of Spain) in July of 1519 by the regent of Villa Rica de la Vera Cruz, relating Cortés’s arrival in Mexico. The second letter, dated October 30, 1520, describes the entry of Cortés and his men into the Mexican hinterland. *Carta III* dates to May 15, 1522, and covers experiences in Tlaxcalan territory. *La quarta relación* (October 15, 1524) deals with Cortés’s Spanish rival, Diego Velázquez, while the fifth letter, dispatched on September 3, 1526, relates the Honduras expedition.

Cortés’s reports are considered models of their kind, demonstrating a lucid, elegant prose and a clear, concise, direct writing style. Though they glorify his ruthless conquest, the letters exhibit Cortés’s grasp of the complex issues surrounding the Spanish invasion, as well as an appreciation for detail in describing the splendor of Mexican civi-

lization. While Cortés expresses admiration for the culture of the Mexican Indians, it is evident in his writings that he understood their future only in terms of political and cultural assimilation to the European way of life. Nevertheless, Spanish chronicles like the letters of Cortés and the history of Bernal DÍAZ DEL CASTILLO remain valuable sources of information about the way of life of the peoples of Mexico before the Conquest.

Crèvecoeur, J. Hector St. John de (Michel-Guillaume-Jean de Crèvecoeur) (1735–1813) *essayist*

J. Hector St. John de Crèvecoeur was raised by his parents, Marie-Anne-Therese and Guillaume Jean de Crèvecoeur, in Normandy, France. The rigorous Jesuit school he attended required pupils to learn Latin, French, mathematics, catechism, and ethics. After graduating, he traveled to England, Canada, and New York, supporting himself by working as a surveyor and cartographer.

In 1769 he settled on a farm in New York with his wife, Mehetable, and began to compose essays about America and his experience as a farmer. His desire to remain neutral in the debates about Great Britain's control of the colonies made life difficult for him. He was imprisoned on suspicion of serving as an American spy. Upon release, he went to England, sold his essays, which he titled

Letters from an American Farmer (1782), and then journeyed back to France. In 1783 he returned to America and learned that his wife was dead and his farm destroyed. Seven years later, he moved back to France, where he continued living until his death.

Letters from an American Farmer secured for Crèvecoeur a place in literary history. The 12 letters are composed by James, a fictional narrator, and are directed to a European friend. In the third and most frequently cited letter, Crèvecoeur's narrator asks, "What . . . is the American, this new man?" The American, he answers, is a man who reaps the "rewards" of his own industry and is "at liberty . . . to follow the dictates" of his conscience without governmental interference. Other letters, especially those addressing issues relating to slavery and the American Revolution, are not so optimistic. Norman S. Grabo observes that *Letters* "brilliantly bespoke a new and arresting voice in American letters," and they "depicted both the American dream and its brutal subversive nightmare."

Cruz, Sor Juana Inés de la (Juana Ramírez de Asbaje) (1648–1695) *poet, playwright*

Sor Juana Inés de la Cruz was born in the town of San Miguel de Nepantla to a Creole mother and a

Spanish father. An extraordinarily gifted child, she was able to read by age three, was composing verse by age seven, and moved to Mexico City to be educated in the court of Mancera at age eight.

Less for religious inclinations than for a desire for peace, reflection, and the opportunity to write, Sor Juana opted for a religious life, entering first a Carmelite convent (1667) and later that of the order of Saint Jerome. It was at this time that she assumed the name Juana Inés de la Cruz.

She published her first book of poems in Madrid in 1689. With this and other publications, Sor Juana became famous throughout the Spanish-speaking world, and prominent writers and public personalities praised her work. Nevertheless, her prodigious talents as well as her outspoken opinions regarding the rights and roles of women also won her the animosity of many peers and superiors. After a long and difficult illness, she died alone in her convent, a victim of the plague.

Besides occasional verse and *villancicos*, a traditional folk verse form, Sor Juana wrote philosophical reflections and satires. In addition, her love poems are to this day among the best in the Spanish language. Her single greatest work may be “Primer sueño” (ca. 1680), a long poem with elements of ALLEGORY and rich symbolism that owes part of its inspiration to the Spanish writer Francisco de QUEVEDO’s poem of the same name.

Though Sor Juana’s plays and prose are also of a very high quality, it is primarily for her poetry that she is remembered. Her work shows not only a remarkable mastery of verse forms, but also incredible variety and energy. After being neglected during the 19th and early 20th centuries, Sor Juana is now seen as one of the great poets of Mexico and the Spanish language.

cycle, miracle, mystery, and morality plays (1400s–1600s)

Four types of drama that emerged from the 14th century to the 17th century were the cycle, miracle, mystery, and morality plays. While these plays were all founded on religious and secular thought, they vary slightly in purpose, subject matter, theme, and form of presentation.

Cycle plays, dramatized biblical stories of the Old and New Testaments, were one of the most important and popular forms of drama during the late Middle Ages and into the RENAISSANCE. The most well-known cycles are the Chester, York, Wakefield (Townley), and N-Town plays. The plays were performed sequentially, beginning with the *Fall of Lucifer* or the *Creation of Adam and Eve*, and closing with *The Last Judgment*. Written by clerics and performed by trade guilds, such as the tanners, tailors, and cooks and innkeepers guilds, the plays involved participation by both church clergy and laypersons. Such collaboration promoted the spread of biblical stories to a wide, mostly secular audience. Performances occurred out-of-doors on pageant-wagons, and audiences traveled from wagon to wagon to see a particular living story, or wagons moved to meet the crowd.

The plays were linked thematically and typologically. Recurring themes unite the individual stories, such as the theme of obedience in *Fall of Lucifer* and *Abraham and Isaac*, and Old Testament stories anticipated New Testament stories. The play of *Abraham and Isaac*, for example, with its emphasis on sacrifice, anticipates the later story of Christ’s sacrifice for humankind.

Many of the cycle plays were written by well-educated people, as can be seen in the plays attributed to the “Wakefield Master,” and they are valued for their representation of early popular (as opposed to court) drama.

Historically, cycle plays were an outgrowth of the annual holy day of Corpus Christi (Body of Christ), wherein the Eucharist was paraded through the church and then shown to onlookers congregating outside. Through close association with the Corpus Christi processional, cycle plays are also called Corpus Christi plays. These dramas are sometimes also referred to as miracle plays, but the cycle plays are less religious in tone and dogma.

Miracle plays differ from cycle plays in that they focus on the lives of, and miracles performed by, saints. For this reason, they are also known as “saints’ plays” and “conversion plays.” Miracle plays may also present miraculous stories of objects becoming sacred, such as the transformation of bread into the holy Eucharist. Although many scholars consider the term “miracle play” to include the genre of mystery play, others distinguish miracle plays from mystery plays by way of their source material. Whereas mystery plays are based upon scripture, miracle plays are not. However, the fact that no extant miracle play exists in the English language that has not been revised to modern tastes makes this definition of “miracle” difficult. The drama *Mary Magdalene* relies upon scriptural accounts as does *The Conversion of St. Paul*, for example. Moreover, as scholar Alfred W. Pollard suggests, what also confuses the distinction between the miracle and the mystery play is that the word *miracle* was used to describe both miracle and morality plays as far back as the 12th century.

Examples of plays recognized as miracle plays—since they resemble miracles more than any other dramatic form—are *The Conversion of St. Paul*, *Mary Magdalene*, and *The Play of the Sacrament*.

Another similar genre was the morality play, which was a staple of medieval drama that evolved side-by-side with mystery and miracle plays. Mystery plays mainly dramatized events in biblical history to highlight themes of salvation. The morality play, evolving from the medieval sermon, conveyed a moral truth or lesson using allegorical terms. In these plays, qualities or concepts were represented

as people, and the characters’ names indicated in obvious ways the quality they personified. The early plays dealt with fundamental issues such as the conflict between good and evil, the fall of man, and redemption. The purpose of the morality play was didactic; its object was to instruct the audience on the application of Christian doctrine to everyday life and the cultivation of character. Some of the most well-known morality plays in English are *The Castle of Perseverance* (ca. 1405), *Mankind*, and *EVERYMAN* (early 1500s).

The morality plays were not grim tragedies; rather, many contained comic scenes, which at times descended into venial or boisterous humor. Modern scholars frequently dismiss the morality plays as dull reading, primarily because of their allegorical nature and attention to abstract constructs. For medieval audiences, however, the plays had real ethical and moral significance and thus were popular even into the Renaissance. Near the end of the 15th century, the morality play evolved into the moral interlude, which still focused on an ethical teaching but was likely to be shorter, with a limited number of characters. After 1500, the increasing tendency to personify devils, include mischief makers, and improvise ribald jokes to amuse the audience became indications of secularization of which the Catholic Church did not approve. Later, the appearance of Reformation thought caused a complete separation between the morality play and the church. With their focus on the struggle between good and evil within the individual, some of the later morality plays show a complex sophistication of theme, layers of meaning, and a depth of characterization that point the way to the evolution of Elizabethan drama.

D

Defoe, Daniel (1660–1731) *novelist, poet, journalist, nonfiction writer*

Daniel Defoe was born in London to James Foe, a merchant, and his wife, Alice. He was raised with a strongly Puritanical leaning and sent to Dissenting schools. In 1684 he married Mary Tuffley and established himself as a merchant in London. Defoe retained his early religious principles and in 1685 joined the duke of Monmouth's unsuccessful rebellion against the Catholic king, James II. In 1692 he declared bankruptcy after having been previously imprisoned for debt.

Sometime in the 1680s, Defoe began writing political pamphlets, which critics continue to attempt to identify, as he published hundreds of works anonymously. One of the earlier works is *An Essay on Projects* (1697), about social improvement. Defoe achieved a major success with the poem *The True-Born Englishman* (1701), a satire of narrow-minded national pride.

Defoe increasingly became interested in creating narrative personae. *The Shortest Way with Dissenters* (1702) demonstrated the dangers of irony. The pamphlet ironically presents the voice of a religious zealot advocating extreme treatment of dissenters: "Now, let us *Crucifie the Thieves*. Let her Foundations be establish'd upon the Destruction

of her Enemies: The Doors of Mercy being always open to the returning Part of the deluded People: let the Obstinate be rul'd with the Rod of Iron." His plan backfired, however; the pamphlet was declared libelous, and Defoe was jailed once again.

While in prison, Defoe struck a bargain with an important member of Parliament, Robert Harley, agreeing to write political propaganda for his freedom. He received £200 a year to work as a government agent, producing a journal, *The Review*, from 1704 to 1713. He changed his name from "Foe" to "Defoe" in 1703, and in 1713 was jailed yet again for a satirical pamphlet.

The turning point in Defoe's career came in 1719, when he published *Robinson Crusoe*. With this work, Defoe transformed himself from a prolific hack writer into one of the earliest and most important English novelists. Over the next five years, he wrote a rapid succession of novels modeled on this successful formula: first-person, realistic, episodic narratives of remarkable individuals. *Robinson Crusoe* tells the story of a man stranded on an island, *Moll Flanders* (1722) was a thief, and *Roxana* (1724) a prostitute. Other works purported to be first-person accounts of major historical events, such as *Memoirs of a Cavalier* (1720), set during the English Civil War, and *Journal of the*

Plague Year (1722), a remarkable reconstruction of life in London during an outbreak of the plague.

One of Defoe's last important works was *Tour thro' the Whole Island of Great Britain* (1724–27), an economic survey of England and Scotland. Although he wrote in a wide range of genres, Defoe is best remembered as a novelist.

Critics have argued whether Defoe was the first English novelist, but they tend to agree that his works were important in developing the standard of realism in the novel. In *The Rise of the Novel*, Ian Watt praises *Moll Flanders* for its “formal realism” while noting its literary defects: “Defoe’s prose is not in the ordinary sense well-written, but it is remarkably effective in keeping us close to the consciousness of Moll Flanders as she struggles to make her recollection clear. . . .”

Critics also have noted the exploration of themes of identity and subjectivity in many of Defoe’s works. *Colonel Jack* (1722), for example, tells a story of the rise of a street urchin from thief to gentleman. J. R. Hammond calls it “remarkable for its insight into the mind of a child.” Critic Hans Turley praises *Captain Singleton* (1720) as “the most important of [Defoe’s] pirate works and particularly significant in a history of the novel that emphasizes psychological realism and domestic subjectivity.”

Recently, critics have begun to value *Roxana*, Defoe’s last novel, as perhaps his masterpiece. The book was intended to be a “woman’s novel,” imitative of the popular courtship novels of Eliza Haywood and Penelope Aubin.

Defoe’s first reputation, however, rests on *Robinson Crusoe*, in which critics have found fertile ground for exploring issues of race and colonialism in the early 18th century.

De-Ka-Nah-Wi-Da and Hiawatha

(late 1300s)

Current knowledge of this traditional story of the Iroquois is based on writings made in the 19th century. In *De-Ka-Nah-Wi-Da and Hiawatha*, as told by Glen Welker, a young mother learns in a dream that she will give birth to a son who will bring peace. This child, De-Ka-Nah-Wi-Da, grows to manhood and helps Chief Hiawatha bring peace to warring tribes.

In some stories, Hiawatha was originally known as Ta-ren-ya-wa-gon, the Great Upholder of the Heavens, a spirit or god who chose to become a mortal. In other stories, he was the chief of his people, a man who De-Ka-Nah-Wi-Da met as he was attempting to spread peace among all the peoples of the land. According to legend, De-Ka-Nah-Wi-Da gave this chief the name Hiawatha, as well as the task of teaching peace and balance.

For many years, the Iroquois and other tribes prospered under Hiawatha’s influence. This prosperity was threatened, however, when new, fierce, uncivilized tribes invaded the lands. When the Onondaga, Mohawk, Oneida, Cayuga, and Seneca turned to Hiawatha for counsel, Hiawatha told them:

You five tribes must be like the five fingers of a warrior’s hand joined in gripping the war club. Unite as one, and then your enemies will recoil

before you back into the northern wastes from whence they came.

When the tribes united, Hiawatha gave them a common name—Ako-no-shu-ne, the Iroquois. Based on Iroquois oral tradition, the story of De-Ka-Nah-Wi-Da and Hiawatha has been told and retold and continues to the present day, garnering widespread interest in the history, customs, and stories of the Iroquois people.

Della Casa, Giovanni (1503–1556) poet, scholar, cleric

Giovanni Della Casa took his name from his birthplace, La Casa, in the Italian region of Tuscany. He grew up in Mugello and, while studying at various universities, composed a number of light lyric poems, some rather licentious. He became a priest in 1537 and was named archbishop of Benevento in 1544. Though he hoped to become a cardinal like his mentor Pietro BEMBO, Della Casa was instead sent to Venice as the papal nuncio.

Between 1547 and 1549 Della Casa wrote a series of weighty orations or *Political Discourses*, in which he lamented the dangers facing Italy. Despite the triumphs of art and learning that characterized Italy during the High RENAISSANCE, Della Casa and his peers felt threatened by the ideals of the Protestant Reformation. As part of the Counter-Reformation to preserve the Catholic Church, Della Casa introduced Venice to the Inquisition, a board of clerics committed to suppressing what they viewed as heretical ideals. Though an author himself, Della Casa helped found the papal index of forbidden books.

When his patron, Pope Paul III, died in 1549, Della Casa removed to the Venetian countryside and began composing *Galateo*, a treatise on man-

ners. Written in the style of Baldessare CASTIGLIONE'S *Courtier*, but borrowing the witty flair of BOCCACCIO, *Galateo* prescribed proper behavior for all levels of society. The work was enormously popular and widely read from the moment it appeared in print in 1558, along with Della Casa's *Poems*.

The *Poems*, written in Latin, showed Della Casa's reworking of the classic style established by PETRARCH. He followed the style of Horace, Catullus, Virgil, and Propertius to tell his stories of exile and redemption. Though important in their own right, the authoritative majesty of Della Casa's *Poems* and the passionate playfulness of his lyrical songs or *canzoniere* were far overshadowed in popularity by *Galateo*, for whose witty advice and clever insights Della Casa is best remembered.

Derzhavin, Gavriil Romanovich

(1743–1816) poet

Gavriil Romanovich Derzhavin was born into a poor noble family and spent his early years in Kazan. He learned to read and write Russian and German and in 1762 he began military duty in St. Petersburg, witnessing the palace coup that brought CATHERINE THE GREAT to the throne. The

influence of Russian poets Mikhail LOMONOSOV and Alexander SUMAROKOV showed in Derzhavin's early works, but gradually his poems developed a more lyrical and distinct style.

Derzhavin participated in the military suppression of the Pugachev revolt (1773–75) and wrote “Ode on the Death of Bibikov” (1774) in memory of one of his commanders. In 1776 he published *Odes Translated and Composed Near Chitalagai Mountain*, largely dealing with natural imagery.

In 1777 Derzhavin transferred to the civil service and during these years wrote his most highly-regarded poems. “The Bride” (1778) celebrates his marriage to Ekaterina Bastidion. “Ode to Felitsa” praises Catherine II's virtues and humorously contrasts them with the vices of her advisers and of the poet himself. “God,” combines an exaltation of the divine with a celebration of humanity and the individual. In “The Waterfall,” commemorating the death of statesman Grigorii Potemkin, Derzhavin uses the image of a waterfall to review Potemkin's life and achievements.

After his retirement in 1803, Derzhavin published *Anacreontic Songs* (1804), a collection of 109 lyric poems, assembled a four-volume edition of his writings in 1808, composed his memoirs (1811–12), and helped found the Society of Lovers of the Russian Word, a group that opposed the literary innovations of Nikolai Karamzin. In his final years, the patriotic Derzhavin wrote poems mourning Russia's losses during the Napoleonic Wars and rejoicing over France's defeat.

As a poet, Derzhavin drew inspiration from current events and writers, as well as from ancient authors Horace and Anacreon. His odes, satires, and lyric poems display his gift for visual imagery. They also reflect Derzhavin's love of nature, appreciation for the pleasures of life, and concern with the inevitability of death. Many scholars consider Derzhavin the most important Russian poet of his time.

Descartes, René (1596–1650) *nonfiction writer, philosopher, scholar*

René Descartes was born in La Haye, France, to Joachim Descartes, a counselor in the French parliament. In 1606 he entered the Jesuit school of La Flèche in Anjou, where he studied classics, logic, philosophy, and mathematics. He received a law degree and a *bacalaureat* (B.A.) in 1616 from the University of Poitiers. He enlisted at a military school in Breda, Holland, where he studied mathematics with the Dutch scientist Isaac Beeckman (1588–1637). After serving briefly in the Bavarian army (1619), he embarked on eight years of travel, spending time in Bohemia, Hungary, Italy, Holland, and France. He ultimately settled in Holland, where he lived from 1628 to 1648, maintaining correspondence across Europe with many of the most important mathematicians and philosophers of his day.

In 1648 Descartes was persuaded by Queen Christina of Sweden to accept a position at her court. The queen was so eager to study mathematics with Descartes that she demanded his presence at five o'clock every morning. Breaking his lifelong habit of getting up at 11 A.M., and suffering in the northern climate, Descartes caught pneumonia, which ultimately killed him.

Critical Analysis

When Descartes moved to Holland, he began work on a scientific work, *The World, or Treatise on*

Light. He had nearly finished it when he learned that the Italian scientist Galileo GALILEI was being tried for defying church teaching by publishing his findings about the Earth's movement around the Sun. In the circumstances, Descartes decided not to publish his work on light or anything about the world as it actually is; instead he confined his publishing to speculative works about how the world could be.

Descartes' first two published works, and the ones for which he is best known, are *Discourse on Method* (1637) and *Meditations on First Philosophy* (1641). At the beginning of *Meditations* he writes, "I should withhold from assent no less carefully from opinions that are not completely certain and indubitable than I would from those that are patently false."

With this statement Descartes sets out his underlying purpose: to establish a methodology that is based on skepticism, eventually labeled "Cartesian doubt." His experiments with light had brought the phenomenon of optical illusions to his attention. Since one's senses can deceive one, Descartes supposes "that everything I see is false. . . . I have no senses whatever." From this piece of reasoning he concludes that the only thing of which he can be certain is that he thinks. As he explains in *Discourse on Method*:

I resolved to assume that everything whatever entered into my mind was no more true than the illusions of my dreams. But immediately afterwards I noticed that whilst I thus wished to think all things false, it was absolutely essential that the "I" who thought this should be somewhat, and remarking that this truth "*I think, therefore I am*" was so certain and so assured that all the most extravagant suppositions brought forward by the skeptics were incapable of shaking it, I came to the conclusion that I could receive it without scruple as the first principle of the Philosophy for which I was seeking.

There is a split in Cartesian thought between the evidence of the senses, which must remain

uncertain, and pure thought. The philosopher, according to Descartes, is required to progress from a simple idea, one that can be known without any prior knowledge, to ideas that can be known only because of one's knowledge of the chain of ideas that proceeds from the first one. Hence, as the scholar Emily Grosholz points out, "the argument of the *Meditations* [the basis of all Descartes thought] critically limits the extent of human knowledge to ideas proportional to the 'I think' with which it begins." This limitation requires the Cartesian philosopher to ignore other possibilities, excluding, for example, considerations of the body.

Descartes' thought has remained extremely important and influential. Cartesian philosophy took hold in France almost immediately. In England, however, his influence was less immediate. The Cartesian distrust of the evidence of the senses ran directly contrary to British empiricism, a philosophy built upon direct sensory evidence and typified by the work of Francis BACON and John Locke. Later skeptical philosophers such as David Hume renewed interest in Descartes in the 18th century. "Over the centuries and with currently renewed intensity," as Grosholz observes, Descartes' *Meditations* "has never failed to inspire serious discussion among philosophers."

Díaz del Castillo, Bernal (1496–1584)

explorer, nonfiction writer

Bernal Díaz del Castillo was born in Medina del Campo. He began a career of expeditions to the New World when he was 18 and served as a soldier in several expeditions, but he is best known for his service under Hernán CORTÉS in the Yucatán. The Cortés expedition inspired Díaz del Castillo's chronicle, *Historia verdadera de la conquista de la Nueva España* (*The True History of the Conquest of New Spain*, 1632). He was in his 60s when he began writing and died in Santiago de los Caballeros in Guatemala at age 88.

The True History of the Conquest of New Spain is a soldier's eyewitness account, told from Díaz del Castillo's perspective, of the campaigns of Cortés. By his own account, Díaz del Castillo was eager to leave a record of his dramatic experiences in the New World for his children and grandchildren. Unlike other famous conquistadors, Díaz del Castillo does not distinguish himself through military deeds; his fame rests solely on his comprehensive historical chronicle.

The True History of the Conquest of New Spain is largely autobiographical and has the value of authenticity. The narration encompasses the years from 1517 to 1524, the period of Cortés's disastrous expedition to Las Hibueras (Honduras). Later additions and corrections provide information up

to the year 1568. Throughout, Díaz del Castillo demonstrates a remarkable memory for details, including names of persons, places, and horses. In a straightforward and conversational style, he describes the men's hopes, fears, and personalities. He also analyzes Cortés's psychology, vividly portrays the Spanish conqueror in action, and provides a wealth of information on the Aztec empire and civilization, including a memorable description of Tenochtitlán.

Modern critics consider Díaz del Castillo's work a valuable source for the study of Mexico's history and one of the greatest Spanish-American historical narratives. The chronicle is noted for its drama, detail, and recording of the extremes of human experience.

Dickinson, John (1732–1808) *politician*

The American Revolution was far more than simply a military conflict. It also was an era when ideas of political philosophy were fundamentally reconsidered. Questions were debated and discussed regarding the nature of government, the relations between citizens and the state, and how to create societies that have a proper balance of freedom and order. The American revolutionaries were forced to ask themselves whether they should break their ties with Great Britain, and if so, what kind of in-

dependent nation they would create. Among the brilliant men involved in these critical debates was John Dickinson.

Dickinson was born in Maryland to an ordinary Quaker family. They moved to Delaware when Dickinson was still very young, and throughout his adult life he was involved with the affairs of both Delaware and Pennsylvania. He began studying law in Philadelphia and spent three years in London completing his studies. Upon his return to America, he established a successful legal practice.

By the mid-1760s, relations between Great Britain and the American colonies were breaking down, beginning with the issue of the Stamp Act in 1765, when Britain attempted to tax the colonists without their consent. Elected to the legislative assembly of Pennsylvania, Dickinson began speaking out against British policies, which he felt were oppressive. He also began writing political tracts upholding his views. Soon his reputation spread throughout America and he became one of the most popular men in the colonies.

In late 1767 Dickinson began writing a series of articles titled *Farmer's Letters*, in which he assumed the guise of an educated common man, a commonly used method for writing political tracts at the time. In these articles, he attacked the British legal and political positions with both logic and passion, laying out the arguments of the Americans in a clear and profound style. The *Farmer's Letters* had an immense impact in both America and Britain, where they were reprinted with the help of Benjamin FRANKLIN. By 1774 Dickinson was one of the most popular men in America.

With the outbreak of military hostilities in 1775, Dickinson became a member of the Continental Congress, which struggled to fight a war while also endeavoring to solve the overall issues. Dickinson strongly opposed the movement to issue a declaration of independence, believing that some sort of compromise with Great Britain was still possible and that America could never survive on its own. He wrote an eloquent petition to King George III, which was rejected. His opposition to

independence caused him to lose his popularity, and his final defeat was confirmed by the Declaration of Independence in July 1776.

Dickinson remained a patriot, serving in the American army during the war. Though he had opposed breaking away from Britain, once America was committed to independence, Dickinson fought hard for it. After his army service, he served in a variety of political offices in both Delaware and Pennsylvania.

After the war, Dickinson wrote in support of the U.S. Constitution but effectively retired from public life. He died in his home in Delaware on February 14.

Dickinson is remembered as an honest statesman who defended his beliefs even when they were not popular with the people. At the same time, he defended his nation with energy and determination, even when he believed it was moving in the wrong direction. His clear and sharp political writings stand as a model for not only the ideas they contained but also the manner in which they were written.

Diderot, Denis (1713–1784) philosopher, encyclopedist

Denis Diderot ranks with MONTESQUIEU, VOLTAIRE, and ROUSSEAU as a leader in the French ENLIGHTEN-

MENT. Within this intellectual circle he was known by the nickname “Pantophile” because his thought encompassed all subjects.

Like Rousseau, who was first a friend and later a bitter critic, Diderot came from an artisan family—his father was a master cutler—and gave voice to the discontents and aspirations of middle-class groups. But the content of his thought extended far beyond any narrow bounds that might have been imposed by his socioeconomic origins. Diderot was an intellectual rebel, thoroughly committed to atheism and to a revolution in aesthetics and political theory.

As a youth in Langres, Diderot received a secondary education from the Jesuits and took preliminary steps toward entering that order by receiving his tonsure. At age 16 he moved to Paris, where he matriculated at the University of Paris, receiving a master of arts degree in 1732. He abandoned his plan to enter the clergy and also declined to take degrees in law or medicine, actions that angered his family. During the years from 1728 until 1740, Diderot may have worked briefly as a law clerk, and he most certainly continued his independent studies in a wide range of fields. He supported himself by tutoring and translating books from English into French. But not much more is known of his life until 1740, when his literary career began to blossom.

In the eyes of his family, Diderot was behaving irresponsibly. His father cut off all financial support and also refused to assent to his son’s request in 1743 for permission to marry Anne-Toinette Champion. In an effort to show his displeasure and to enforce his will on his son, the elder Diderot resorted to a standard practice of the time: He had his son incarcerated for a short period in a monastery near Troyes. Upon his release, young Diderot returned to Paris, where he and Mademoiselle Champion were secretly married.

During the early 1740s, Diderot was circulating in various cafés and coffeehouses, making contacts with philosophes such as Rousseau and Condillac. His English translations began to appear in 1742, but the year 1745 marked the solid establishment

of his career. In that year, he published a translation of the *Essay on Merit and Virtue* by Anthony Ashley Cooper, third earl of Shaftesbury.

The Shaftesbury translation helped to secure Diderot a position with the publisher André Le Breton as a translator of the Chambers *Cyclopaedia*. Although never completed, the Chambers project gave birth to the great ENCYCLOPEDIA, one of the major publications of the Enlightenment.

Critical Analysis

The process of creating the *Encyclopedia* took nearly three decades, and it would eventually contain 17 volumes of text and 11 additional volumes of engravings and illustrations. It was one of the most astonishing literary achievements of all time.

Many of the most famous and important thinkers and writers of the Enlightenment contributed to the *Encyclopedia*, including Voltaire, Rousseau, Montesquieu, and numerous other prominent men of letters. Diderot became its general editor in 1747, with assistance from Jean Le Rond d’ALEMBERT in the realms of mathematics and science, and he also contributed a large number of articles.

The *Encyclopedia* was originally intended as simply an amassing of human knowledge, but it gradually developed into an extensive social commentary as well. It criticized organized religion in general and the Catholic Church in particular. It also seemed to disparage monarchical forms of government.

During his years of working on the *Encyclopedia*, Diderot also wrote and published many other works. In 1749 he published *Lettre sur les aveugles*, or *Letter on the Blind*, which questioned the existence of God. He followed this with *Lettre sur les sourds et muets*, or *Letter on the Deaf and Dumb*, which was a wide-ranging work dealing with various linguistic subjects and demonstrating Diderot’s broad intellect.

Diderot also wrote a number of novels and plays, perhaps the most famous being his play *Père de famille*, or *Father of a Family*. It was produced in 1758, and became a standard of dramatic pieces

based on middle-class characters, rather than aristocratic ones. His novels include *La Religieuse* (*The Nun*), in which he subtly criticizes the entire notion of nunneries; *Le Neveu de Rameau* (*Rameau's Nephew*), a continuing dialogue with the composer Rameau's nephew, which Diderot wrote and rewrote for 20 years; and *Jacques le fataliste et son maître* (*Jacques the Fatalist and His Master*), in which Diderot includes elements of his philosophy.

Diderot's unorthodox views on religion and government got him into serious trouble with the authorities. The *Encyclopedia* was placed on the Catholic Church's list of forbidden books and was publicly burned. In 1749 Diderot was imprisoned for his anti-Christian beliefs.

In 1773 he traveled to Russia, having been invited there by CATHERINE THE GREAT. The empress had corresponded with Diderot and was very fond of him. She continued to support him financially until his death.

Although Diderot is not as well remembered as other figures of the Enlightenment, particularly Voltaire and Rousseau, he was one of the most important writers and thinkers of the time. His quest to continue publishing his ideas, despite the authorities' persecution and threats, represented a courageous resistance to censorship. By collecting the ideas of Enlightenment thinkers and publishing them in the *Encyclopedia*, as well as by making crucial contributions of his own, Diderot greatly influenced Western intellectual thought.

Dmitriev, Ivan Ivanovich (1760–1837)

fable writer, poet

Ivan Ivanovich Dmitriev was born on his family's estate. His father was a wealthy Russian nobleman, and Dmitriev received a good education and, as was customary for Russian nobles at the time, joined the military in 1775. Dmitriev had a brilliant career: he became a senator, a member of the state council, and the minister of justice (1810). Throughout his career, he remained devoted to literature and used his satirical talents to highlight weaknesses in official measures.

Dmitriev's early literary taste was influenced by French, Greek, and Roman classics. The decisive influence in Dmitriev's life, however, was Karamzin, in whose house Dmitriev met all the important figures of the Russian literary world.

In 1791 a collection of Dmitriev's works appeared in the *Moscow Journal*, published by Karamzin. The critics received his debut warmly, praising his fairy tale *Fashionable Wife* and his song "Little Dove." The latter was immediately set to music and became highly popular. Dmitriev later published other works in the literary journals *Aglaia* and *Aonid*. In 1795 he released his first collection of poems under the title *And My Little Things*, followed by a popular songbook, *Pocket Songbook, or a Collection of Best Secular and Folk Songs*. His *Fables*, *Fairy Tales*, and *Apologues* went through numerous editions during and after his life, and both his poetry and prose brought a romantic spirit to Russian literature.

Dmitriev's fairy tales and fables are favored for their light and elegant language and the musical flow of verse. While Dmitriev borrowed most of his themes from French literature, his use of satire makes his works unique. He aimed his well-known satire, *Alien Talk*, at the current fashion of

writing pseudo-classical odes, which were often stiff in language and devoid of meaning. Because *Alien Talk* helped exterminate outdated literary forms and introduced a new approach to poetry, Dmitriev is counted among the great reformists of Russian literature.

Donne, John (1572–1631) poet, preacher

John Donne was born in London into a family with strong Catholic roots. His mother was related to Thomas MORE, famously beheaded by Henry VIII. Donne's uncle was executed in 1594 for performing Masses, and his brother died while in prison for harboring a priest. Donne studied at both Cambridge and Oxford, and later acquired a promising post as secretary to Lord Keeper Sir Thomas Edgerton. Then, in 1601, he abruptly ruined his career by eloping with Edgerton's niece, Anne More. He spent much of his life away from London, helping raise his 12 children. During this period he read voluminously; wrote but did not publish a treatise on suicide, *Biathanatos*; and published two anti-Catholic tracts, *Pseudo-martyr* (1610) and *Ignatius His Conclave* (1611). In 1611 and 1612 he commemorated the death of Anne Drury, his patron's 14-year-old daughter, with *Anniversaries*, two lengthy and enigmatic poems about the decay of the world and the progress of the soul.

Pseudo-martyr earned the admiration of King James, who urged Donne to enter the ministry. Donne took orders in 1615 and began a very successful ecclesiastical career. In the last decade of his life, as dean of St. Paul's in London, he was the most famous preacher of his age.

In 1624 he published *Devotions*, a series of 24 prayerful meditations upon his near-fatal illness. Death was a frequent subject in his later meditations. He was said to have preached his own funeral sermon in *Death's Duel* (1630), and near the very end he posed for his monument in his funeral sheets. Soon after his death, the poems on which much of his later fame rests were published as a book, accompanied by elegies penned by such poets as Ben JONSON and Thomas Carew. Donne's elegies are rhymed erotic poems that address a lover, describe an amorous situation, or develop a philosophy of love. In "To His Mistress Going to Bed," the speaker of the poem urges his beloved to undress, describes the process in ingenious images, and compares caressing her to the excitement of global exploration. Contemplating exploration in conjunction with caressing a woman's body provokes thoughts of conquest and rule, sexual dominance, ideas of New World treasure, and finally expectations of honor.

Donne's art is one of radical compression. In one of his great religious SONNETS, he summarizes all the possible modes of death in two lines:

*All whom war, dearth, age, agues, tyrannies,
Despair, law, chance, hath slain. . . .*

His logic, reaching out to extremely diverse areas of experience, asks the reader to pay attention, hold possibilities in suspension, and finally draw conclusions without explicit statement.

If Donne's concise, compressed lyric poems are like miniature dramas so self-involved as to suggest someone acting in front of a mirror, then the sermons are lengthy performances that offer instruction and spiritual solace. For instance, trying to conceive of the angelic wisdom that the saved shall experience on Judgment Day, Donne argues. "There our curiosity shall have this noble satis-

faction.” He then reviews at some length the human ways of knowing (school, books, experience) and uses a metaphor in which the world is a library. Despite the greatness of this library, however, it is nothing compared to the knowledge of God’s glory.

Despite a revival of interest in Donne’s work, spearheaded by the critic T. S. Eliot in the early part of the 20th century, Donne’s popularity has waned in the last few decades. One reason is the loss of interest in the lyric form of poetry in the current age. Another is Donne’s mode of masculine self-assertion, which some may equate with misogyny. Nevertheless, Donne remains a striking artist who left a work charged with intellectual energy. Through self-dramatization, he fashioned a persona, earthly and spiritual, that came alive through his works.

Dwight, Timothy (1752–1817) *clergyman, poet, teacher*

Timothy Dwight, grandson of the famous theologian Jonathan EDWARDS, displayed an early

inclination for learning. He entered Yale College at age 13 and graduated with highest honors at age 17. Dwight worked as principal of a grammar school before returning to Yale to teach as a tutor and to complete a master’s degree. In 1777 he entered military service as chaplain of the Connecticut Continental Brigade, during which time he wrote patriotic songs, the most memorable of which is “Columbia, Columbia, to Glory Arise.” After leaving the army, he became active in politics, farming, education, and church life in Massachusetts.

In 1783 he was ordained as a pastor in the parish of Greenfield Hill, Connecticut. His experiences inspired one of his most important works, *Greenfield Hill*. Two years later he published *The Conquest of Canaan*, considered the first EPIC poem produced in America.

In 1795 Dwight was elected president of Yale College, a position he held for more than 21 years. As a moralist and professor of theology, he greatly influenced the students, who wrote about him in their notebooks.

While Dwight was accepted during his time as one of the principal men of letters, modern interpretations view his poetry as dated and characterized by an artificial elevation of style, common to other poetry of the time. Nevertheless, his works are important for their insight into 18th-century America and for the place they hold in that country’s literary tradition.

E

Edwards, Jonathan (1703–1758) *theologian, philosopher*

Jonathan Edwards was born in East Windsor, Connecticut, to Reverend Timothy Edwards and Esther Stoddard, the daughter of Reverend Solomon Stoddard, who was one of the most influential ministers in 18th-century New England.

From an early age, Edwards possessed a remarkable curiosity about the relationship between the natural world and God. His keen attention to the details of nature can be discerned in his legendary “Of Insects” (1715); an essay that contains firsthand descriptions of the way spiders move and spin their webs and that concludes with observations about how these “flying insects” provided him with the perfect occasion to “behold and admire the wisdom” of God.

Edwards’s interest in nature continued throughout his life. From 1727 until a few years before his death, the theologian-philosopher kept a notebook in which he recorded how “natural things” like the “waves and billows of the sea in a storm” and the “blue sky, the green fields and trees, and pleasant flowers” were “ordered for types of spiritual things.” The private notebook, eventually entitled *Images of Divine Things* (1948), was not published until almost 200 years after Edwards’s death.

At age 18, Edwards entered Yale College, where he studied Latin and Greek grammar, Hebrew, logic, ethics, religion, arithmetic, and natural philosophy. After receiving his B.A., he spent two years immersed in theological studies at Yale. In 1726 he became the colleague of his esteemed grandfather in Northampton, Massachusetts, and when, in 1729, Stoddard died, he assumed full spiritual leadership of the congregation. Edwards led a highly disciplined life in Northampton, rising in the early hours of the dawn and spending, on average, 13 hours each day in his study. Nevertheless, he lived more than the life of the mind. In 1727 he married Sarah Pierrepont; their union was affectionate and resulted in the birth of 11 children.

In order to appreciate the masterly artistry of his many sermons, it is essential to understand that the relationship between the intellect and emotions preoccupied Edwards. In “A Divine and Supernatural Light” (1734), he introduced his congregation to his notion of the “sense of the heart.” Those who experience this “sense” simultaneously have “light in the understanding as well as an affected heart.” Edwards insisted that the true “sense of the heart” was imparted to humans by God and could not be attained through mere human effort. A minister could, however, do his

best to foster within unconverted individuals a longing for God's grace, and this is precisely what Edwards did in his most well known sermon, "Sinners in the Hands of an Angry God" (1741).

Edwards delivered this sermon during the height of the Great Awakening (a time when preachers were making a concerted effort to revive interest in religion), and it focuses on the inevitable damnation of sinners despite their present complacency. There is, Edwards announces, nothing that "keeps wicked men at any one moment out of hell, but the mere pleasure of God." Edwards, who was greatly influenced by John Locke's thesis that knowledge is acquired through experience, created a rhetorical environment that forced his listeners to experience—both mentally and emotionally—the precariousness of their spiritual condition. His sermon was incredibly effective. One person in attendance described how people were "crowding up to the pulpit, crying for mercy." He gave his listeners a sensible understanding of the argument he was presenting, and therein lies his artistic genius. He was, as Perry Miller points out in *Jonathan Edwards*, an "artist who happened to work with ideas instead of poems or novels."

Despite Edwards's many successes, his congregation dismissed him in 1750, due to his desire to impose stricter qualifications for church membership. In 1751 he settled in Stockbridge, Massachusetts, as local pastor and missionary to a group of Native Americans. Then, in 1758, he was elected president of the College of New Jersey (now Princeton) and died of smallpox shortly thereafter.

Eliot, John (1604–1690) *teacher, missionary, linguist*

John Eliot was born in Hertfordshire, England, and studied for the ministry at Jesus College, Cambridge University. He received a bachelor of arts degree in 1622 and taught in a grammar school in Essex, where he became associated with the Puritan Separatist Thomas Hooker. When Hooker escaped to the Netherlands, Eliot decided to immigrate to New England.

Eliot arrived in Boston in 1631 and served as a pastor for a short time in Boston before he was assigned as a teacher at Roxbury Church in Massachusetts. Eliot served as a teacher until 1641 and helped found the Roxbury Latin School. He then assumed a position as sole pastor of the church in Roxbury and held the position for the remainder of his life.

Eliot developed a strong interest in converting the Native Americans to Christianity. Realizing that language differences created a barrier to the delivery of Christian sermons and teachings, Eliot began a study of the local Algonquian language in 1643. He took a Native American boy who knew English into his home and learned the Algonquian language through the boy's pronunciations. In 1647 Eliot delivered his first sermon to the natives in their own language. To further advance Christian teachings, Eliot began translating the Bible into the Algonquian language in 1653. The New Testament was published in 1661 followed by the Old Testament in 1663. The completed work has the

distinction of being the first complete Bible to be printed on the American continent.

In addition, Eliot helped Native Americans set up independent schools, seminaries, and communities. By 1674 there were 14 established communities for the “Praying Indian”; the best known of these was located at Natick. The outbreak of King Philip’s War (1675–76) destroyed all of the communities, and the natives who survived were exiled to Deer Island. Eliot’s final publication, *Dying Speeches & Counsels of such Indians as dyed in the Lord*, contains the dying speeches of eight Indians. It reveals Eliot’s loss of spirit from both the events and results of the war and the undoing of his life’s work. After Eliot’s death, four of the communities were rebuilt but gradually faded away.

Not only was Eliot a pastor and missionary to the native populations but he was also a prolific writer. In addition to his translation of the Bible, he wrote a number of books in Native American languages as well as in English. In 1640 a collaborative work, *The Whole Booke of Psalmes Faithfully Translated into English Metre*, was published as a literal translation of Psalms designed to fit metrically with tunes familiar to Puritan congregations. It was an attempt to improve upon the Sternhold-Hopkins psalter that was popular among the Puritans while they were in England. Commonly known as *The Bay Psalm Book*, the coauthors of this work included John Cutter, Richard Mather, Thomas Welde, and John Wilson.

Eliot founded the first genuine Native American missions in the American colonies. His work with the Algonquians and his use of native language set the standard that missionaries followed for the next two centuries.

Encyclopædia (Encyclopédie ou dictionnaire raisonné des sciences, des arts et des métiers) (1751–1772)

During the 18th century, Europe went through an intellectual transformation, with new ideas on the rise and old ideas on the decline. This period was known as the ENLIGHTENMENT. The general theme of the Enlightenment was the need to subject all ideas to rigorous criticism and examination. Concepts of religion, politics, art, literature, and social organization were now being methodically analyzed on a wide scale. Although the Enlightenment took place all over Europe, it had its greatest impact in France, where it was heavily opposed by the church and by social and political conservatives.

Many brilliant and towering intellectual figures won their fame during the Enlightenment, perhaps the most famous being VOLTAIRE and Jean-Jacques ROUSSEAU. There were literally dozens of great scholars during this era, and they left their mark on the intellectual history of the Western world.

Aside from the works of Voltaire and Rousseau, the greatest literary achievement of the Enlightenment was the *Encyclopædia*, which came into being when many leading thinkers embarked on the ambitious project of collecting the sum total of human knowledge. Their purpose was to make the information accessible to the educated public.

The men who compiled the *Encyclopædia* included Denis DIDEROT, Jean Le Rond d’ALEMBERT, Voltaire, and Rousseau. Diderot, however, dominated the writing, editing, and publication of the work, with d’Alembert as the next greatest contributor. Voltaire wrote several articles for the project and was always willing to help with advice on various matters. Rousseau wrote a few pieces on

music theory but eventually became disgusted with the undertaking and withdrew. Other intellectuals who participated in creating the *Encyclopedia* included political philosopher Charles MONTESQUIEU, economist Anne-Robert-Jacques Turgot, and mathematician Antoine-Nicolas de Condorcet.

The first volume was published in 1751, and publication continued for more than 20 years. The *Encyclopedia* would eventually amount to 28 volumes, the final one being printed in 1772. Addendums would continue to be published until 1780.

While the amount of information and material contained within the *Encyclopedia* was immense, it was far from impartial, for the creators of the work held very strong opinions on the subjects about which they wrote. In terms of metaphysics, Diderot and his allies were strongly committed to the beliefs of the English philosopher John LOCKE, dismissing the ideas of those who disagreed with him. Similarly, the scientific articles held to the theories of Isaac Newton, rejecting the notions of opposing scientists. Many articles in the *Encyclopedia* were biased toward democratic and constitutional forms of government, and clearly hostile to religion, but the work as a whole revealed a philosophical tolerance unusual in its day.

From the beginning, the *Encyclopedia* encountered fierce opposition from religious and political authorities, who attempted to suppress the entire work. Most European states had well-funded government departments whose job it was to prevent works considered harmful or dangerous from reaching the public. This was particularly true in France, where the *Encyclopedia* was published.

Religious authorities despised the creators of the *Encyclopedia* because of their critical evaluation of religious ideas, unflinching defense of the scientific method, and questioning of the church's role in social and political spheres. Political authorities opposed the *Encyclopedia* because it questioned the validity of absolute monarchy and called for a less cruel and severe legal system. In short, the authorities disliked and distrusted the

Encyclopedia because it challenged the status quo and tried to tell the people that the way things were was not the way they had to be.

The first official reaction came in 1752, after the publication of the first two volumes. The censors decreed that the volumes be banned; nevertheless, publication continued. In 1759 the French authorities decreed that the *Encyclopedia* as a whole was banned, and all sale and publication of it were forbidden. Despite this, Diderot and his allies bravely carried on with the work in secret. They continued to write the articles and print the volumes, working clandestinely and trying to hide their activities from the censors. The efforts of the French government to repress the work only added to its popularity.

The *Encyclopedia* was one of the great achievements of the 18th century. Diderot and his collaborators had created a masterly work, immense in its scope and radical in its implications. They did so in the face of difficult and dangerous obstacles, giving the people of Europe a great gift of knowledge. In summary, the work of the encyclopedists was a monument to the Enlightenment itself.

English ballad

The ballad is a narrative song composed and recited by individuals and sung to a melodic accompaniment that follows the pattern of the verses. In England, the first ballads were folk ballads, meaning that they were products of an oral tradition. Folk ballads were sung before such narratives, or stories, were written down.

English folk ballads share several characteristics with ballads from other countries, and many are based upon songs from other nations. They usually tell stories of common folk rather than the aristocracy, and they focus upon a central event, situation, or character; feature a strong, dramatic element; and display what scholar Gordon Hall Gerould calls an "impersonal quality." Although the events described in the ballad may be terrible or horrendous (such as the loss of a child or a murder), the action receives little commentary. Other aspects of ballads include an element of the supernatural, displays of physical courage, an emphasis on domestic life, and a motif of love.

Although English folk ballads follow multiple forms, a traditional form prevails. The standard ballad stanza is composed of four-line stanzas that rhyme *abcb*. The first and third lines of the stanzas contain four accented syllables, and lines two and three carry three accented syllables. The amount of unstressed syllables varies, and the rhyme is not always perfect. Most ballads contain a refrain, and many folk ballads use assonance (similar vowel sounds with differing consonant sounds) rather than rhyme.

The ballad "The Three Ravens" tells of a dead knight who is carried away by a deer before three ravens successfully consume his decaying body.

"Lord Rendal" is a song about a lover who has been betrayed by his beloved and lies sick and dying. Not all ballads, however, focus upon death. Other popular ballads celebrate successes, such as those recounting stories of Robin Hood and his adventures. In "Robin Hood and Allen-a-Dale," Robin Hood helps Allen, a soon-to-be loyal servant, by saving Allen's beloved from marriage to an old knight.

Ballads were a major form of literature and entertainment in the Middle Ages. While they remained popular with the advent of printing and the spread of new forms of literature, by the 18th century they came to be taken seriously as historical artifacts. During this time, English ballads were collected by scholars such as Thomas Percy and Sir Walter Scott. These collections played a significant role in the genesis of English Romantic poetry and inspired writers such as William Wordsworth, Samuel Taylor Coleridge, and John Keats.

Enlightenment, Age of (1700s)

During the 18th century, a dramatic intellectual movement swept over Europe, particularly the nation of France. The movement set off an explosion of scholarly and literary achievement equal to any period of Western history. Generally, the Enlightenment is thought to have lasted from the early years of the 18th century to sometime before the outbreak of the French Revolution in 1789. During the Enlightenment, dozens of brilliant thinkers and writers questioned some of the most basic assumptions of Western society. Political, religious, and

social ideas that had been accepted for centuries were critically examined, and the consequences had a tremendous impact on Western society.

At the heart of the Enlightenment was a belief in the power of RATIONALISM, the ability to arrive at answers to difficult and complicated questions through the power of human reason and experience. Enlightenment thinkers believed that all questions must be answered rationally, without recourse to authority or intuition. Furthermore, Enlightenment thinkers believed that every element of human society should be open to rigorous questioning, no matter how sacred others considered it. These beliefs stemmed from some of the scientific discoveries occurring at the time, such as those by Sir Isaac Newton. As a result, some of the most controversial elements of the Age of Enlightenment involved religion.

The thinkers and writers of the Enlightenment were known as philosophes. They were not philosophers in the traditional sense, but rather individuals who sought to spread the ideas of philosophy to the general public. The philosophes achieved this through the use of nearly every genre of literature; Enlightenment ideas were expressed in poetry, novels, dramas, pamphlets, and various reference works.

By far the most famous and influential of the philosophes was VOLTAIRE. From the 1720s until his death in 1778, Voltaire produced a constant stream of literature in various genres, including plays, short stories, novels, essays, and pamphlets. Through his writing, he attacked censorship of the press, religious intolerance, backward legal systems, and outdated political ideas. His hugely popular writings helped spread Enlightenment ideas throughout the literate populations of Europe and the United States. His most successful work, *Candide*, is one of the two great literary works of the Enlightenment period.

Voltaire was not alone; the Enlightenment produced a very large number of influential literary figures. Denis DIDEROT wrote a series of works, both fiction and nonfiction, expressing Enlightenment ideas. Jean Le Rond d'ALEMBERT did fundamental

new work in mathematics while pursuing philosophical studies, and Baron de MONTESQUIEU wrote the highly influential *Spirit of Laws*, which greatly affected 18th-century political thought.

However, not all thinkers and writers of the Age of Enlightenment were devoted to rationalism. Many people, including members of the clergy, distrusted the philosophes, because their ideas seemed to threaten the status of religion in Western society. Jean-Jacques ROUSSEAU, for instance, taught that the key to human understanding of the world was not the power of human reason, but rather involved emotion and intuition. This point of view resulted in an intense dispute between Rousseau and Voltaire, which lasted throughout their lives.

Perhaps the greatest literary production of the Age of Enlightenment was the *ENCYCLOPEDIA*. Jointly edited by Diderot and d'Alembert, and featuring contributions from Voltaire and other philosophes, the *Encyclopedia* sought to systematize human knowledge after examining it with a thoroughly rational point of view. Government authorities sought to censor the work and prevent its publication, as well as harassing and imprisoning those who worked on it.

Despite such resistance, Enlightenment ideals spread far and wide. The intellectual flowering that took place in Scotland during the latter half of the 18th century owed a great deal to the scholarship and literature of the Enlightenment. During the American Revolution, the political ideas that motivated the American radicals were largely borrowed from the French philosophes. Finally, when the French Revolution began in 1789, the revolutionaries looked to the ideas of the Enlightenment for inspiration as they sought to topple the French monarchy and create a republic in its place.

In a larger sense, the Age of Enlightenment fundamentally altered the intellectual environment of the Western world. The modern, rational insistence on solid evidence when answering difficult questions, which is at the heart of both the modern scientific method and the Western legal system, is a legacy of Enlightenment thought. So, too, are the

Western traditions of freedom of thought and expression, which are enshrined in the political systems of nearly all Western nations.

epic (n.d.–present)

The term *epic* generally refers to long, episodic narrative poems featuring larger-than-life characters who engage in actions requiring great courage and strength. Epic heroes hold national or international importance and are celebrated as symbols of national values and embodiments of the heroic ideal. Such greatness is underscored by the epic's elevated, formal style, an objective point of view, and a vast, expansive setting.

Historically, epics were recited to audiences as songs by bards. As writing increased in popularity, however, these long story-songs were written down and circulated in book form.

Epics typically begin with an invocation (a prayer) to a muse, whom the narrator asks for inspiration to tell a valuable and memorable story. The epic then begins in the middle of a central action or key event, a technique known as *in medias res* (Latin for “in the middle of things”). Thus, the epic's narrative opens in the middle of a serious and significant moment, such as a battle. In Homer's *Iliad*, for instance, the drama opens after the war between the Greek forces and the inhabitants of Troy has been raging for 10 years.

After opening *in medias res*, the epic's story unfolds, and the history of the dramatic action is revealed intermittently. The narrator frequently digresses from the action's central plot to tell the history of a particular character or some other story, a digression that adds meaning to the main action and to the epic's main themes. In Virgil's *Aeneid*, for instance, the narrator departs from the main story to discuss a highly valuable and symbolic shield that was forged by Vulcan and given to Aeneas by his mother.

Another common characteristic shared by epics is an element of supernaturalism. Gods, spirits, and angels interject themselves in human affairs and act as supernatural forces influencing the epic's characters and actions. In some epics, in fact, the hero is part divine, as in the *Aeneid*, where Venus, the goddess of love, is Aeneas's mother.

Other key characteristics of epics include extensive cataloging of things and characters (resembling lists in the Old Testament), elaborate comparisons known as epic similes, and long formal speeches.

Epics generally fall into two categories, the folk epic and the art epic. Folk epics are works of unknown authorship and are composed by several individuals. Art epics, on the other hand, are those thought to be written by a single author. The art epic is generally more moral in its purpose and more critical about the events and characters portrayed. Additionally, the events of these epics typically take place further in the past.

Important folk epics include Homer's *Iliad* and *Odyssey*, the Old English *Beowulf*, the German *Nibelungenlied*, and the East Indian *Mahabharata*.

The *Aeneid*, by P. Vergilius Maro (Virgil), the *Divine Comedy* by Dante Alighieri, and *Paradise Lost* by John MILTON are examples of the art epic.

Equiano, Olaudah (Gustavus Vassa) (1745–1797) *autobiographer*

Olaudah Equiano was born in the Benin region of what is now Nigeria. His name means “one favoured, and having a loud voice and well spoken.” His father was a distinguished man in in Essaka, a village along the Niger River. When Equiano was 11, he was kidnapped and sold into slavery. Eventually, he was sent to Virginia, where he was bought and put to work on a plantation. He was then sold to Michael Henry Pascal, a lieutenant in the Royal Navy. After years of sailing around the world with Pascal, Equiano was able to buy his freedom in 1766.

Equiano settled in London, where he became an active member of the movement to abolish slavery in Britain. At age 44, he published the work that was to make him famous, his autobiography *The Interesting Narrative of the Life of Olaudah Equiano, Or Gustavus Vassa* (1789). This immensely popular work influenced many African-American writers who followed him, including Frederick Douglass, Ralph Ellison, Toni Morrison, and Malcolm X.

The Interesting Narrative tells the story of Equiano’s life, but its real purpose is to demonstrate the essential humanity of people of color and, to some extent, to question the perception of whites as “civilized” and Africans as “uncivilized.” In the first chapter, Equiano describes the life and customs of his native village in terms that suggest that the simplicity of Benin life was quite superior to life in the great cities to which he had traveled. From this simple life, Equiano is plunged into hell. In the hold of the slave ship that transports him to Barbados, the stench is “absolutely pestilential” and “the shrieks of the women, and the groans of

the dying, [render] the whole scene of horror almost inconceivable.”

The structure and style of *The Interesting Narrative* show the influence of 18th-century writers such as DEFOE, ROWLANDSON, and FRANKLIN. Equiano traces his progress from slavery to escape to freedom, and while he uses a conventional form, the details of his story are unique to his own experiences.

One important theme of the narrative is the question of identity, symbolized in the various names Equiano is given and must accept. In Virginia he is given two names, Michael and Jacob, while on board ship, he is called Gustavus Vassa. Equiano’s struggle with his identity prefigures the struggles of generations of enslaved peoples and their descendants. Critic Robert J. Allison writes that “Equiano’s book . . . reminds us of the lives of millions who did not live to tell their stories.”

Erasmus, Desiderius (ca. 1469–1536) *theologian, philosopher*

During the late 15th and early 16th centuries, the artistic and literary influences of the RENAISSANCE, which were first felt in Italy, spread across Europe. The rediscovery of the knowledge and literature of ancient Greece and Rome allowed scholars to promote learning. HUMANISM, a new, secular way of viewing the world, gradually began to replace the static, religiously obsessed thought that had dominated the intellectual climate of the Middle Ages. Humanism was largely devoted to the study of human beings as they exist in the world, rather than the study of religion and theology. One of the

foremost writers and thinkers of this time period, who became known as the “Prince of Humanists,” was Desiderius Erasmus.

Erasmus was born in the Dutch city of Rotterdam. Because of his birthplace, he is often known simply as “Erasmus of Rotterdam.” Little is known of his family or his early life, although it is known that he was the son of a priest. He received a solid education in monastic schools and, briefly, at the University of Paris. He took priestly orders in 1492, but never adopted the profession, preferring to devote his life to academic studies.

Over the course of his life, Erasmus wandered from one part of Europe to another, never settling down in one place for very long. At various times, he lived in France, Switzerland, Italy, and England. He told his friends that he considered his library, which he took with him in his travels, to be his home. He lived a celibate and meticulous life, never paying much attention to money or possessions. He intensely disliked personal disputes and tried to stay on good terms with everyone. Although he held very strong views about the shortcomings of the Roman Catholic Church, he always expressed them with a strong sense of irony, almost as if to disguise what he really believed.

Because of his assuaging personality, he was held in extremely high regard throughout Europe and was on friendly terms with some of the most famous rulers, statesmen, and intellectual figures of the day. Although he remained loyal to the Catholic Church throughout his life, Erasmus also corresponded with Martin LUTHER, the chief figure of the Protestant Reformation. He made a strong effort to stay neutral in the great religious and intellectual debates that erupted throughout Europe during the 16th century. However, in the intensely belligerent atmosphere of the Protestant Reformation, even Erasmus would be unable to stay entirely removed from the conflict.

In 1499 Erasmus visited England, where he met and befriended the great humanist scholar, Sir Thomas MORE, with whom he shared a devoted and intellectually-vibrant friendship for the rest of

his life. One year later, he published *Adages*, which is essentially a collection of sayings and proverbs from ancient Greek and Roman literature. It reflects the author’s knowledge of classical texts, as well as his preoccupation with the purity of the Greek and Latin languages.

A few years after the publication of *Adages*, Erasmus published his second major work, *The Enchiridion*. This book, which would later have a huge impact on the English and American Puritan communities, describes the author’s belief that piety should be a simple matter of the heart and rely less on the formal ritual of the church. He viewed religious life as pure and simple, something that could be created from the heart, but he never rejected the church’s authority, as Luther would later do.

Critical Analysis

In 1509, while living in England at the invitation of King Henry VIII, Erasmus wrote his most celebrated work, *In Praise of Folly*. With brilliant use of irony and symbolism, he cleverly describes much of what he dislikes about contemporary European culture, particularly in terms of the religious establishment. *In Praise of Folly* was printed in 1511 and became very popular, going through several editions within the author’s lifetime. The church, however, disapproved of the work and began to look upon Erasmus with suspicion.

The book was written in polished Latin and was dedicated to Thomas More. Erasmus intended the audience of the book to be a small number of fellow humanists. He was taken by surprise when the book became very popular with many people from different levels of society and differing educational backgrounds.

Erasmus uses the character of Folly, whom he describes as a foolish woman, to speak his mind regarding various aspects of European society. He ironically declares that folly and stupidity allow people to live the kinds of lives they live; if it weren’t for folly, people simply would not put up with things as they are. He ridicules various conventions concerning romance and marriage. In

addition, in his discussions of intellectuals and authors, he declares them also to be victims of folly.

The most important aspects of *In Praise of Folly* are the criticisms Erasmus leveled against the religious institutions of the Catholic Church. He ridicules theologians whose debates he considers to be nonsensical wastes of time. He also attacks monks as illiterate hypocrites. In general, Erasmus criticizes all those elements of contemporary religion that he considered to detract from pure, heartfelt religious devotion.

In Praise of Folly was very popular but was also widely criticized. Because of his skillful use of irony and wit, Erasmus was shielded from official censure by the church. Although he always remained loyal to the Catholic Church, *In Praise of Folly* contributed to the Protestant Reformation by creating an image of the church as vulnerable to censure and by exposing many of the church's flaws.

In 1516 Erasmus published a Greek translation of the New Testament, which he had prepared and edited. It was an enormous feat of intellectual skill, and it increased readership of the Bible. However, like *In Praise of Folly*, it was regarded with distrust by many Catholic leaders and scholars.

A few years after the publication of his Greek version of the New Testament, the Protestant Reformation began. Very quickly, European theologians and intellectuals were being pressured to choose sides, supporting either Martin Luther and the Protestants or the Roman Catholic Church. Erasmus tried desperately to remain neutral. He wrote Luther, calling on him to restrain his anti-Catholic fervor, and he asked all sides of the dispute to resolve their arguments through logical compromise. In this effort to keep the peace, Erasmus was doomed to fail. He was trying to be a reasonable man in an unreasonable age. By trying to please both sides, he pleased neither; Luther denounced Erasmus for not joining the Reformation, while the Catholic Church later declared him a heretic for refusing to condemn Luther.

The Protestant Reformation dominated the remainder of Erasmus's life. In the mid-1520s, at

More's urging and in response to Luther's bitter attack on his character, Erasmus wrote *Hyperaspistes*, also known as *A Weighty Consideration*. In this work, he criticizes Luther for his hatred of all who disagree with him and, in effect, asks Luther for an apology. While the work reflects Erasmus's compromising attitude, it had little impact on the bitter and violent disputes raging throughout Europe.

Elderly and in failing health, Erasmus moved from place to place, accused by Catholics of being a secret Protestant and charged by Protestants of being a Catholic reactionary. He finally found refuge among fellow humanists in Basel, Switzerland, where he later died in the home of a friend.

Erasmus's fame is based on his enormous influence on the literary culture of his age, which raised the study of classical languages to a respected and even revered profession. By doing so, he powerfully advanced intellectual activities of all kinds.

Everyman (ca. 1500) *medieval drama*

Though the author of the English play *Everyman* is unknown, he was probably an Englishman who translated it from a copy of a Dutch play of the same name at the beginning of the 16th century. *Everyman* is an example of a morality play, a type of medieval drama that addressed the questions of how to live a good Christian life and how best to prepare for death.

Everyman conveys the message that preparation for death requires giving up worldly possessions, repenting of sins, asking God for mercy, and submitting oneself to be judged on the merit of works, or good deeds. Everyman (who, as his name suggests, represents the average person) is summoned by Death and finds he is not ready to be called to God for his “reckoning,” for he has spent his life pursuing wealth. One by one, the friends Everyman calls upon for help desert him, and in his increasing isolation and despair he learns finally that only knowledge and good deeds will benefit him in the final judgment. The play teaches that knowledge includes both self-knowledge, arrived at by using the five wits or senses, and knowledge of God, made possible only through humility.

The story-type of the false friends first appears in an oriental collection of fables called *Barlaam*

and *Josaphat*, which was a popular sourcebook for medieval sermons. *Everyman* is often praised for its natural language, which is not elevated or obscure. The play makes the moral points that death is the end of all things, and wrongdoing, while it may be enjoyable at the moment, always carries penalties in the end. Scholar A. C. Cawley calls *Everyman* “one of the finest, if not one of the most typical, of medieval Catholic moral plays.”

F

fabliaux (1300s)

The fabliaux are short medieval bawdy tales, usually told in verse, that originated in France during the 12th century. The fabliaux usually take place in the present in middle- and lower-class settings. The plots are humorous, usually scatological or sexual. Marie de France included two fabliaux about amorous women in her *lais*, and many fabliaux originated from court writers and even clergymen. The fabliaux subvert conventional morality, celebrating trickery and sexual pleasure over honesty and chastity.

By 1300, the fabliaux had peaked as a fashionable literary genre in France, but Geoffrey CHAUCER would create some of the best examples of the form for his *Canterbury Tales*, including “The Miller’s Tale,” “The Reeve’s Tale,” and “The Summoner’s Tale.” Each centers on middle- and lower-class characters, possessive impotent husbands, and lusty young wives and their enterprising lovers. Each features some painful or embarrassing physical punishment. Finally, each punishes the self-righteous and socially conscious characters and rewards the cunning and carnal.

One variant of the fabliaux is the bestiary, or beast fable, which Chaucer used in “The Nun’s Priest’s Tale.” This tale features Chanticleer the

rooster and how he is almost fooled into becoming dinner for a fox. The beast fable’s most popular cycle was that of Reynard the Fox, which featured animals taking on the social positions and attitudes of feudal society. The king was a lion, a wolf was Reynard’s prosecutor, and Reynard was a trickster-courtier, intent on fooling others for his own ends. Like Aesop’s fables, these fabliaux featured animals portraying human character types, but unlike those fables, these were longer narratives that did not teach a specific moral. Their satire targeted different social classes and the worst traits associated with them. Fabliaux were a welcome diversion from the idealistic allegorical romances and lofty courtly love literature of the Middle Ages.

farce (1400s–present)

A farce is a theatrical genre that uses exaggerated comic situations and stereotypical characters. The genre developed in 15th-century France and has maintained its popularity to the present day. However, it is often considered to be a lower form of comedy because of its reliance on crude physical humor and improbable plots.

While elements of farce can be found in ancient Greek and Roman plays, especially the works of Aristophanes and Plautus, the term itself comes from the Old French word meaning “stuffing.” The first French farces were brief pieces of clowning and gymnastics inserted into religious plays by the actors. Later, French playwrights wrote entirely farcical works, one famous example being *Maistre Pierre Pathelin* (ca. 1470).

Farces continued to be a popular theatrical genre throughout the 18th and 19th centuries. They also found a new form in films during the 20th century, especially in the work of Charlie Chaplin and the Marx Brothers.

Fénelon, François de Salignac de la Mothe (1651–1715) theologian, novelist

François de Salignac de la Mothe Fénelon was born in Périgord, France, the second son of Pons de Salignac and his wife, Louise. He studied the humanities and philosophy at the University of Cahors, was ordained as a priest, and became a doctor of theology in 1677. In 1681 he became director of the Congregation of New Catholics, where he was in charge of instructing Protestant women who had converted. He fell under suspicion for his association with Madame Guyon and Quietism, her slightly unorthodox blend of mystical piety and “pure love,” and was eventually exiled to his archbishopric, where his gentleness, humanity, and eloquence earned him the nickname “the Swan of Cambrai.”

The letters Fénelon wrote throughout his life continue to impart wisdom to followers of the Christian faith. He also authored several treatises on points of religion and education. In 1689 he was made the tutor of the grandson of Louis XIV, for whom he wrote the *Fables* and *Dialogues of the Dead* (both in 1690) for reading practice and instruction. In 1695 he began *Telemachus* (completed in 1699), which is remembered as his masterpiece. He described it as “a fabulous narrative in the form of a heroic poem . . . into which I incorporated the major lessons suitable for a prince.” A sequel to Homer’s *Odyssey*, it tells the adventures of Ulysses’s son Telemachus within the frame of a moral lesson on simplicity and strength in adversity. Since the narrative shows that the king is but a man and therefore fallible, the work was seen as a harsh criticism of the regime of Louis XIV. It was enormously popular for its literary quality, but it also ensured its author’s disgrace. Despite this, future generations remembered Fénelon, and his biographer J. Lewis may say he is “the exemplar of all that is noblest and most gracious in the genius of France.”

Fernández de Lizardi, José Joaquín (1776–1827) novelist, journalist

José Joaquín Fernández de Lizardi was born in Mexico City, and as a youth studied theology before becoming a clerk for an Acapulco magistrate. In 1810 Mexico launched its war for independence against Spain, and Fernández de Lizardi joined the revolutionaries two years later. For this he was briefly imprisoned, and upon his release founded a pro-revolutionary newspaper called *The Mexican Thinker*. In his newspaper and many pamphlets, Lizardi called for an end to Spanish rule, racial and social equality, and curbs in the church's power. For his continuing anti-clerical sentiments, the Roman Catholic Church excommunicated him.

In 1816 Fernández de Lizardi wrote his best-known work, the picaresque novel *The Itching Parrot* (*El periquillo sarniento*). A colorful satire of all aspects of Mexican society. *The Itching Parrot* takes its title from the nickname of its protagonist, who occupies numerous professions throughout the novel, including monk, gambler, and doctor. The work also shows the influence of many philosophers of the French ENLIGHTENMENT, particularly in its respect for science and logic and its disdain for superstition. In this passage, for example, an African character questions the morality of slavery:

How can I obey properly the precepts of that religion which obliges me to love my neighbor as myself . . . [yet approves my] buying for a pittance a poor black, making him a slave to serve . . . and treating him at times perhaps little better than a beast?

Fernández de Lizardi also wrote three other novels, *Miss Quixote and Her Cousin* (1819), *Sad Nights and Happy Days* (1823), and *Don Catrin de Fachenda* (1826). He died in Mexico City of tuberculosis. For his unyielding advocacy of his country's freedom, Mexicans regard Fernández de Lizardi as a national hero. Most scholars consider *The Itching Parrot* the first true Latin American novel, and it is highly prized for its detailed and vivid portrayal of early 19th-century Mexican society, and for its strikingly contemporary views on politics and morality.

Ferreira, António (ca. 1528–1569) poet, playwright

António Ferreira was born in Lisbon, Portugal, to a noble family with ties to the monarchy. As a child, Ferreira developed a deep love for his native city, and after spending 13 years at Coimbra University studying Latin, classical literature, poetry,

plays, and law, he returned home as a judge of the appeals court.

Though Ferreira was a judge, he spent a great deal of time with a group of intellectual poets and cultivated his poetic talents. He disdained the masses, which he felt were ignorant, and fought for intellectual freedom from church domination. Ferreira was also very patriotic. He encouraged the use of Portuguese, instead of Spanish, in the writing of poetry. Ferreira wrote many different kinds of poems in the classical mode, from epigrams and eclogues to odes and Petrarchan SONNETS. He achieved some fame posthumously for his sonnets in honor of his wives, Maria Leite, and later, Maria Pimentel. His son published Ferreira's first edition of poetry, *Poemas Lusitanos*, 30 years after Ferreira's death.

Ferreira also wrote several pieces for the theater. His first two plays, *Bristo*, about friends who become romantic rivals, and *Cioso*, about a jealous husband, were comedies that did not arouse much interest either in Portugal or the world abroad. However, his third play, *Inês de Castro*, was the first original RENAISSANCE TRAGEDY written in Portuguese. The play develops a famous episode in the history of the Portuguese monarchy, the murder of Prince Peter's mistress by his father for political reasons. The play served as a model for many later playwrights, including CAMÕES, one of Portugal's greatest writers. Ferreira was one of the major voices in the establishment of a Portuguese literature.

Franklin, Benjamin (1706–1790) *nonfiction writer, journalist, publisher, scientist, political figure*

More than 200 years after his death, Benjamin Franklin remains one of the most famous and influential figures in American history. He is counted among the first of the great writers produced by the emerging American nation.

Franklin was born in Boston, the 10th son of Josiah Franklin, a candle-maker who had immigrated to Massachusetts from England. Although he received only a few years of schooling, Franklin was clearly a highly intelligent youth. When he was 12, he was apprenticed to his older brother, James, who had set up a print shop and begun publishing a newspaper titled *The New England Courant*. He also met and was influenced by the Puritan leader, Cotton MATHER.

While working for his brother, Franklin wrote a series of anonymous essays under the pseudonym "Silence Dogood." These essays presented brilliant and biting commentary on the social conditions of New England and caused something of a stir in Boston. The essays were Franklin's earliest important writings, and they were remarkably lucid and penetrating, considering that their author was only a teenager.

After being mistreated by his brother, Franklin ran away to Philadelphia, where he found work at a local print shop. He spent some time in London before settling permanently in Philadelphia. He soon established himself as an independent businessman, launching his own printing shop. His sound business sense and his willingness to work hard soon paid off, and his business became very profitable.

Franklin became an important part of the civic life of Philadelphia. With a number of friends, he established the Junto Club, a social group that discussed politics, science, and philosophy, and that worked to improve life in the city. Working with his friends, Franklin established the city's first lending library, a fire department, a police force, an academy, which later evolved into the University of

Pennsylvania, a hospital, and a public forum where clergy of any religion were allowed to preach. These institutions helped make Philadelphia America's premier city of the time.

In 1729 Franklin began printing his own newspaper, *The Pennsylvania Gazette*. It quickly became the leading newspaper of the colony. In addition to publishing and editing the paper, Franklin wrote much of the material himself, including articles on ordinary news and advertisements, as well as important political issues, science, and literature. Franklin saw his newspaper as both a source of personal profit and a means of improving everyday life in his community.

In 1732 he embarked on his most successful printing and writing project, *Poor Richard's Almanac*. In the 18th century, almanacs were extremely popular and useful as sources of information for farmers and tradesmen. They dealt with such subjects as when to plant and harvest crops, the dates on which specific holidays would fall, and weather conditions of different seasons. Franklin's almanac rapidly became a best-seller, not only in Pennsylvania, but also throughout the American colonies.

Poor Richard was much more than simply a way to dispense routine information. Like his newspaper, he used it as an educational tool to promote common sense, healthy skepticism, strong work ethics, and sound financial principles. Later in his life, Franklin would collect many of the sayings from *Poor Richard's Almanac* and publish them as a separate work, entitled *The Way to Wealth*.

The success of *The Pennsylvania Gazette* and *Poor Richard's Almanac*, made possible by his brilliant writing and his shrewd business practices, allowed Franklin to make a great deal of money. He invested his earnings in Philadelphia real estate and satellite printing operations in other colonies. By the time he had reached middle age, he was a wealthy man.

Franklin expanded his interests to include scientific work, and his research into the nature of electricity is one of his chief claims to fame. In

1752 he conducted a test using a brass key tied onto a kite, to determine whether lightning is a form of electricity. This may be the most famous scientific experiment in history. In addition to electricity, Franklin also conducted scientific research into meteorology, hydrodynamics, and numerous other scientific subjects. His writings on these subjects were published in many different languages, were widely read, and had substantial influence on later scientific developments.

From the mid-1750s to the end of his life, Franklin turned his attention to the political events of the American Revolution, and he made his most important mark on the world as a statesman and diplomat. In 1757 he traveled to Great Britain to serve as the representative of the colony of Pennsylvania. He became friends with some of the leading English and Scottish writers and thinkers of the day and received an honorary degree from Oxford University.

When the crisis between Great Britain and its colonies began, starting with the Stamp Act crisis in 1765, Franklin devoted himself to ending the quarrel and restoring good faith and harmony between the British and the Americans. For many years, he saw himself as a loyal citizen of the British Empire and was willing to do anything to save it from destruction. He wrote several articles calling for peace and reconciliation, which were published in both British and American newspapers.

In 1771, during a lull in the crisis, Franklin began writing *The Autobiography of Benjamin Franklin*, which would become his literary masterpiece. His work on the project was still incomplete when the American Revolution began.

Unsuccessful in his efforts to preserve peace, and having been humiliated and insulted by the British government, Franklin eventually sided with the colonists and was elected to the Continental Congress. He assisted Thomas JEFFERSON in writing the Declaration of Independence. Franklin was then selected by Congress as its representative to France, with the objective of gaining French support in the war against Britain.

Franklin arrived in France in late 1776 and immediately became the most popular person in the country. French citizens were enthralled by his charm and humor, and he became a favorite at aristocratic parties in Paris. He wrote numerous propaganda pieces to raise support for the American cause, which were printed in French newspapers. Franklin's influence helped persuade France to sign an alliance with the United States, which helped the colonies gain their independence. In 1784, while still in France, Franklin resumed writing the *Autobiography*.

With the war over, Franklin returned to his beloved Philadelphia. In 1787 he served as a delegate to the Constitutional Convention, although his age and ill health were beginning to take their toll. He continued to work on the *Autobiography*, but it was still incomplete when he died on April 17.

Franklin stands today as the personification of the American dream. Coming from very humble origins, he rose through hard work and determination to become one of the greatest men of his age. He achieved greatness in an incredible variety of fields, from journalism and literature to science and diplomacy. Through his witty yet thought-provoking writings, he left behind a testament to the potential of America.

Critical Analysis

Franklin's greatest literary achievement was unquestionably his *Autobiography*. It was the first true classic of American literature. In it, Franklin tells the story of his life, using it as a means to communicate to his readers his personal work ethic and sense of morality.

Franklin begins his life story by relating his family's history and his own upbringing in the city of Boston. He then tells, with a humorous and self-effacing sense of drama, the tale of his running away from Boston and arriving in Philadelphia. The image of a young Franklin, walking up the street from the city's docks, penniless and with a large loaf of bread stuffed under each arm, has

become an American icon. Franklin continues the story of his life in Philadelphia and his involvement in scientific and public affairs, up to his departure for London in 1757.

In the *Autobiography*, Franklin provides a list of 13 virtues he tried to live up to throughout his life. These virtues were temperance, silence, order, resolution, frugality, industry, sincerity, justice, moderation, cleanliness, tranquility, chastity, and humility. He modestly points out, however, that he was not always successful in keeping these virtues.

Franklin's *Autobiography* was designed to inspire Americans to aspire to become better in all that they do. In writing his masterpiece, Franklin was telling his countrymen that they, too, could achieve greatness, if only they were virtuous, hard-working, and determined.

Freneau, Philip Morin (1752–1832) *poet, editor, journalist*

Philip Freneau was the oldest of five children born to Agnes Watson and Pierre Fresneau (old spelling), a wine merchant. He enjoyed a privileged upbringing in New York and New Jersey, though his father often struggled financially. At a boarding school in New York and a Latin school in New

Jersey, Philip received an education in Latin, geography, composition, and arithmetic. He also read Horace, Cicero, Lucian, and Xenophon. In the fall of 1768, Philip entered the College of New Jersey (now Princeton), where he discovered his ambition to become a writer.

The titles of a few of his many poems—"The Rising Glory of America" (1771), "America Independent" (1778), and "To the Memory of Brave Americans" (1781)—point to why Freneau became known as the poet of the American Revolution. He composed, with some input from a classmate, the first and most important of these poems during his senior year of college. Emory B. Elliott Jr. observes that "The Rising Glory of America" is a "patriotic poem of epic design," which speaks "of a time when a united nation should rule the vast continent from the Atlantic to the Pacific." For a time, Freneau served as editor of *The Freeman's Journal* (1781–84) and the *National Gazette* (1791–93), writing fervently in support of the Revolution. Although he was intensely committed to addressing the political matters of his day, he also, according to Elliott, experienced a longing to "escape social turmoil and war." He expressed his more romantic side in "The Wild Honeysuckle" (1786), a beautiful poem that, as Jacob Axelard points out, uses the "fragrant flowers that bloom for a little while and then wilt away" to symbolize the "sad immutable destinies" of humankind.

Froissart, Jean (1337?–1404?) chronicler, poet

Jean Froissart was born in Valenciennes, France, around the start of the Hundred Years War. He received clerical instruction in Latin and later joined the church. For several years he lived in England as the secretary to Queen Phillipa; after her death, he found patrons in Wenscelas, Duke of Brabant, and Guy of Blois. He traveled extensively, including to Scotland and Italy, and composed and compiled his major work, the *Chronicles*, from his time in England until his death. The four books of the *Chronicles* cover events all over western Europe and in later centuries were as widely read in England as they were in France.

Froissart also wrote poetry and the last French Arthurian ROMANCE, *Meliador* (composed in the 1380s). In 1395 he presented a volume of his poetry to Richard II of England, and four years later recorded that monarch's deposition as the closing event in the *Chronicles*.

In his love poetry Froissart was influenced by Guillaume de Machaut and Guillaume de Lorris, and his contributions to the genre in turn influenced his English contemporary, Geoffrey CHAUCER. It is possible that in his travels, which enlarged his worldview and are reflected in his historical writings, he met the poet PETRARCH while in Italy.

Froissart's contributions turned historiography in a new direction: instead of simply recording events as a parade of remarkable figures, he made the story of how he came to learn of these events part of the larger narrative, adding an original touch.

Though Froissart has been thought shallow by some historians for his sympathy for the aristocracy and his attachment to the knightly ideal, his *Chronicles* are a monument to French literature and his poetry demonstrates considerable range,

leading critics like Donald Maddox to consider him “one of the great synthesizing minds of the fourteenth century and one of the most engaging writers of his age.”

G

Galilei, Galileo (1564–1642) *scientist, writer*
Galileo Galilei is often considered to be the father of modern science. He is most famous for perfecting the telescope and using it to make numerous astronomical discoveries, including the moons of Jupiter and the rings of Saturn. He also did groundbreaking work in physics and set the foundations for the modern scientific method.

Galileo is also well known for the persecution he suffered at the hands of the Catholic Church. He believed, correctly, in the Copernican Theory, the idea put forward by Nicolaus COPERNICUS that the Earth moves around the Sun. The official position of the church was that the Copernican Theory was false and that the Sun moved around the Earth. After using his writing abilities to try to persuade the public of the correctness of his views, the Church ordered Galileo not to speak of the subject again and, threatening torture, made him recant his ideas before the Inquisition.

In addition to his skill as a scientist, Galileo had considerable talent as a writer. He combined these two gifts in his efforts to popularize science, helping ordinary people to understand the scientific discoveries he was making, particularly in astronomy.

The first of his great literary works was titled *The Starry Messenger*. Galileo published this book in 1610, only months after he had discovered the

moons of Jupiter with his new telescope. In this book, he discusses the moons of Jupiter, the surface features of Earth's Moon, and the fact that the Milky Way is made up of innumerable stars. One interesting aspect of *The Starry Messenger* is that it was written in Italian, rather than in Latin, as was customary for academic books at that time. Galileo wanted ordinary people to be able to read his book and understand its contents, so he wrote it in the everyday language of the country.

Galileo's next book, *Dialogue Concerning the Two Chief Systems of the World*, would become his most famous and the one that caused him the most trouble with authorities. The work represented his efforts to convince the public that the Copernican Theory was correct. When it was published in 1632, the Catholic Church tried to prevent its distribution.

The *Dialogue* was written in the style of Plato, taking the form of a long conversation among three different people. Salviati is an intelligent man who represents Galileo's own views in support of the Copernican Theory; Simplicio is a rather slow-witted character who represents those who oppose Galileo's views; and Sagredo is an open-minded man who hosts the discussion and tries to make up his mind as to which of his guests is correct.

It is clear that Galileo did not intend for an objective presentation of every viewpoint of the debate; he clearly presents Salviati's ideas as those that any intelligent person would believe, and he ridiculed Simplicio's ideas. One primary reason the *Dialogue* created such a problem for Galileo was that many viewed Simplicio's character as a caricature of Pope Urban VIII.

Galileo wrote his final great work, *Discourse on Two New Sciences* (1638), toward the end of his life, after he had been sentenced to lifelong house arrest by the church. Rather than a work of popular literature, this piece is a far more academic work of scientific writing in which Galileo put together a lifetime of thinking and experimentation on the physics of motion. This work would later have a strong influence on the great English scientist Isaac Newton, helping him develop his theory of gravitation.

Galileo was clearly one of the great scientists of history, and his gifts as a writer and his determination allowed him to spread his scientific ideas across Europe. Many of his discoveries and theories shaped the course of future science, astronomy, and math.

Gama, José Basílio da (1740–1795) poet, author

José Basílio da Gama was an important Brazilian poet of the Colonial Period (1500–1822). He completed his Jesuit novitiate in 1759, the same year the order was expelled from Brazil. Leaving Brazil for Rome, he pursued education in Italy and Portugal, where he was influenced by Italian NEOCLASSICISM. When he returned to Brazil in 1767, he was sent by the Inquisition to Portugal to face possible deportation to Angola. He received a pardon by composing a wedding poem for the daughter of a local minister, the marquês de Pombal.

He is best known for his masterpiece epic poem, *O Uruguai*, an account of the Portuguese-Spanish war against the Jesuit-controlled reservation Indians of the Uruguay River basin. Through this narrative poem composed in blank verse, Gama expresses sentiment against the conquerors, a sentiment he also expressed earlier in a SONNET dedicated to the Peruvian Tupac Amaru. In *O Uruguai*, Gama also shows appreciation for the natural Brazilian environment and presents an idealistic view of Indian life and customs. The poem is a forerunner of the romantic nationalism that later developed in 19th-century Brazilian literature.

José Basílio da Gama belonged to a group of Brazilian writers known as the Arcadians. These writers also included Cláudio Manuel da Costa (1729–89) and Tomás Antônio Gonzaga (1744–1810), among others. The Arcadians are remembered for their lyric and epic poems and were highly involved in the “Minas Conspiracy” (“Conjuração Mineira”), a liberation movement to free Brazil from Portuguese rule.

Gama, along with several other Brazilian poets (including Gonzaga, who wrote the pastoral love poem *Marília de Dirceu*, and Friar José de Santa Ritta Durão, who wrote the EPIC *Caramuru*, or *Sea*

Dragon, celebrating the discovery of Bahia), also joined a writers' academy in the mining town of Minas Gerais in Brazil. This academy and its poets were responsible for introducing to Brazil many new ideas that had arisen in France, some of them revolutionary, and for influencing the work of future writers such as José Gonçalves de Magalhães (1811–82) and Antônio Gonçalves Dias (1823–64).

Garcilaso de la Vega (El Inca) (1539–1616) *historian*

El Inca Garcilaso de la Vega was a gifted writer and Peruvian historian. His father was the conquistador Sebastián Garcilaso de la Vega and his mother was the Inca princess Isabel Chimpu Ocllo. Garcilaso, fusing his diverse racial and cultural backgrounds, came to represent the traumatic process of conquest and cultural blending initiated by Spain in the New World.

El Inca Garcilaso's first literary achievement was a Castilian translation of the Italian Leo Hebreo's *Philosophy of Love* or *Dialog: d'amore* (1590). His project in translating this major work of Neoplatonism anticipated his lifelong work of balancing and cultivating two very different cultures.

Garcilaso's second publication was *Florida del Inca*, or *The Florida of the Incas* (1605). Based on secondhand accounts of the Hernando de Soto expedition, this work provides most of the information that exists on the conquistador. Although well received in Garcilaso's time, due to its imaginative tone, *The Florida* is today considered more of a historical novel than a historical document.

Garcilaso's knowledge of Inca civilization through his mother uniquely positioned him to be the ideal chronicler of the Inca people. His most important work was *The General History of Peru*, a two-volume work. The first part appeared in 1606

as *Real Commentaries* and describes the history of the Inca until the arrival of the Spaniards. In describing the myths, poetry, traditions, and rituals of the Inca, Garcilaso gives them the character of a utopia in the manner of RENAISSANCE ideals. The second part of the *Commentaries* appeared as *The General History of Peru* in 1617. The early influence of Neoplatonist thought shows in Garcilaso's descriptions of the coming of the Spaniards and the events thereafter, vindicating both the earlier way of life and the fusion of the new culture with the old. This landmark work established Garcilaso de la Vega as an authority on Peruvian history.

Goethe, Johann Wolfgang von (1749–1832) *poet, novelist, playwright*

During the late 18th and early 19th centuries, Europe experienced an intellectual and literary movement known as Romanticism, which rejected pure reason in favor of human emotional experience. This was in reaction to the scientific RATIONALISM of the earlier ENLIGHTENMENT period. Romanticism found its most intense expression in Germany. Of all the outstanding writers and thinkers who emerged in Germany during this time, none had greater influence or more lasting fame than the brilliant and controversial Johann Wolfgang von Goethe. Indeed, many historians consider him the single greatest German writer who has ever lived.

Goethe was born into a moderately prominent family and, as a young man, received an excellent education. He became fluent in several languages and was fascinated with literature and art from a very early age. As a student at the University of Leipzig, Goethe rejected the neoclassical tradition of the Enlightenment in favor of the natural and emotional beliefs of the emerging Romantic movement.

While studying in the city of Strasbourg, Goethe came under the influence of Johann HERDER, one of the founders of the Sturm und Drang movement. Herder contributed to Goethe's drift away from NEOCLASSICISM and introduced him to the writings of William SHAKESPEARE, which would greatly influence him. During this time, Goethe wrote an essay about the Gothic cathedral in Strasbourg titled *Von deutscher Baukunst*, which means "On German Architecture," which Herder included in a collection of similar works he was editing.

Goethe settled down in the German city of Weimar in the mid-1700s, and he spent most of the rest of his life there and at the nearby University of Jena. His presence in Weimar helped make the city one of the great centers of European culture. At first, he intended to pursue a legal career and held a number of official positions in the local government. The powerful Duke Karl August, who ruled Weimar, proved to be an excellent patron, and it seemed as if Goethe would enjoy a prosperous legal and political career. However, after experiencing a personal awakening during a two-year visit to Italy in the late 1780s, Goethe returned to Weimar determined to pursue a career in literature rather than law.

Goethe had already written a great deal of poetry and dramatic pieces while pursuing his legal career. His earliest major work was *Die Leiden des jungen Werther* (*The Sorrows of Young Werther*). It is considered one of the most important works of the Sturm und Drang movement.

During his first years after returning from Italy, Goethe produced a great deal of poetry and other work. After accompanying Duke Karl August during the Prussian invasion of France in 1792 (during which he witnessed the famous French victory at the Battle of Valmy), Goethe wrote an account of

events titled *Campagne in Frankreich—1792* (*The Campaign in France in 1792*). His writing was heavily influenced by his study of the literature of ancient Greece and Rome. He also pursued a number of scientific studies, publishing essays on optics and the nature of color.

During these years, Goethe began an extremely productive collaboration with Friedrich von SCHILLER. Although they often disagreed with each other, the thought-provoking critiques they exchanged had tremendous influence on the literary output of both. Furthermore, they shared the common goal of creating a unique literary and artistic culture within Germany, equal to the culture of ancient Greece.

Throughout the 1790s, Goethe labored on his masterpiece, *Faust*, which has become his most famous work and ranks as one of the most influential and important works produced in all of literature. He had, in fact, been working on pieces of it for many years, but the first part of *Faust* wasn't published until 1808. That same year, Goethe was summoned to meet no less a personage than Napoleon Bonaparte, who then ruled nearly all of Europe. Napoleon's desire to meet Goethe reflected the fame he had achieved as a writer.

Although universally respected as a writer, Goethe became increasingly unpopular with the German public. This was partly due to his admiration for Napoleon (hated by most Germans), his unorthodox religious views, and his seeming lack of interest in German political unification. Throughout the last few decades of his life, Goethe continued to produce enormous numbers of novels and plays and continued his studies of science, art, and history.

In the late 1820s, Goethe wrote the second half of *Faust*, which was published just before his death. Although the second half is somewhat different in style from the first, there is a clear continuity between the two, as they contain the same themes and ideas.

Perhaps more than any other writer, Goethe can be seen as the central figure of Romanticism, in the same way that VOLTAIRE can be seen as the central figure of the Enlightenment. Goethe's writings

reflect the influence of Herder, Immanuel KANT, Shakespeare, and a number of classical Greek and Roman writers. But Goethe was a strikingly original writer who did perhaps more than anyone else to create a uniquely German literature. He oversaw the transformation of a European culture based on French rationalism to one based on German Romanticism, which would dominate European culture for generations to come.

Critical Analysis

Goethe's first major work, *The Sorrows of Young Werther*, delineates Werther's hopeless love for Lotte Buff, the wife of his close friend. Driven to self-alienation and psychological breakdown, no longer able to live without his beloved, Werther commits suicide. Werther expresses his misery in terms that resonated widely, especially with young readers: "My creative powers have been reduced to a senseless indolence. I cannot be idle, yet I cannot seem to do anything either. When we are robbed of ourselves, we are robbed of everything." Goethe explained his motivation for writing the novel in terms of his heightened spiritual and emotional awareness: "I tried to release myself from all alien emotions, to look kindly upon what was going on around me and let all living things, beginning with man himself, affect me as deeply as possible, each in its own way." The emotions and local color are placed in the foreground of his work.

In Goethe's second major novel, *Wilhelm Meister's Apprenticeship* (1795–96), Goethe continues to explore themes of love and alienation. However, the novel presents a more optimistic outlook on life. Like Werther, Wilhelm suffers a tragic blow after an unsuccessful courtship. Unlike Werther, however, Wilhelm begins to actively seek out other values in life. He dedicates himself to work and becomes a playwright and an actor. In the end, Wilhelm is spiritually satisfied with his newfound outlet for passion. The novel remains thematically consistent with the Romantic school; however, critics have noted the emergence of the conservative side of Goethe's thinking. Unlike many of his contemporaries, Goethe was not impressed by the

uprising and violence of the French Revolution. He supported liberty and progress but also maintained that the aristocracy had an important role in society. Many younger readers began to criticize Goethe for what they saw as subservience to the upper classes.

The first part of Goethe's dramatic masterpiece, *Faust*, appeared in 1808. This drama became his passion, and he worked on it for more than 30 years. Based on the play by the English Renaissance dramatist Christopher MARLOWE, it tells a chilling story of a man who sells his soul for knowledge. Faust makes a contract with Mephistopheles to die as soon as his thirst for knowledge is satisfied. Faust is driven to despair when Margaret, an innocent woman, is condemned to death for giving birth to Faust's illegitimate child. He finally realizes that his lust for knowledge has led to tragic mistakes.

In the second part of *Faust*, which appeared in 1838, Faust marries the beautiful Helen of Troy and creates a happy community of scholars. The bliss of his good deeds brings satisfaction at old age, and Mephistopheles is about to demand satisfaction. But Faust's changed attitudes and good heart are rewarded, as angels descend from the sky in the final scene of the play and take Faust to heaven. The play brought Goethe international success and had a profound influence on modern drama.

During his illustrious career, Goethe produced in addition a number of important poetical works. He also provided literary guidance to his close friend Schiller and produced several of his plays. When Goethe died, he was buried next to Schiller in Weimar.

Although it is difficult to measure the influence of Johann Wolfgang von Goethe, he ranks among the giants of world literature. He is a dominant figure of German Romanticism, and his novels, poems, and plays are still widely read and studied.

Goldoni, Carlo (1707–1793) dramatist

Carlo Goldoni was born in Venice to Giulio Goldoni and his wife, Margherita. He studied grammar and rhetoric in Perugia and Rimini, but his interest in the theater continually drew him away from his studies and later practice in law. He traveled often and served in various political positions, earning frequent rejections and sometimes hostile displeasure for his satires and musical dramas. Despite his prodigious output and his fame—VOLTAIRE called him “Italy’s MOLIÈRE”—Goldoni struggled throughout his life with hostile critics, poverty, and frequent removals in search of supportive patrons or escape from creditors. He reportedly died poor and blind, buried in an unknown grave.

In all, Goldoni wrote five tragedies (see TRAGEDY), 16 tragicomedies, and 137 comedies, in addition to 57 scenarios for actors of the *COMEDIA DELL’ARTE*. The historical tragedy *Belisario* (1734) was his first success, followed by *A Man of the World* (1738), *A Lady of Charm* (1743), and *The Servant of Two*

Masters (1744–45). *The Cunning Widow* (1748), *A Girl of Honor* (1749), and *The Good Wife* (1749) showed Goldoni’s emerging talent and accomplished style, but his fearlessness continued to provoke audiences. In 1750 *The Gentleman and the Lady*, the first Italian comedy without masks, infuriated nobles who felt that Goldoni had exposed their secrets. He continued to write, producing dozens of plays a year and learning again and again that in drama of the 18th century, serious tragedy belonged to the French stage, while Italians were expected to write buffoonish comedies. Goldoni dwelled on this paradox in his memoirs, subtitled *For a Better Understanding of the History of His Life and Theater* (1787).

Goldoni also contributed to musical productions, writing, among many others pieces, libretti put to music by Piccinni, Haydn, Mozart, Vivaldi, and others. Goldoni’s works infused new life into a stagnant art form and became an important voice for the concerns of the middle-class, ultimately reforming Italian and European drama.

Golenishchev-Kutuzov, Pavel

Ivanovich (1767–1829) poet, translator

Pavel Golenishchev-Kutuzov was born in St. Petersburg, in the family of the head of Marine

College, Admiral Ivan Golenishchev-Kutuzov. The family was related to the celebrated Russian prince and army commander, Mikhail Kutuzov. Pavel entered military service at age nine and later participated in the war with Sweden. At age 29, he left the military and began his brilliant political career. He became the czar's counselor, a senator, and one of the curators of the Moscow University.

Golenishchev-Kutuzov won a stable place in history as an avid enemy of KARAMZIN. The enmity was not exclusively literary, for Golenishchev-Kutuzov considered Karamzin a dangerous revolutionary. The battle took place not only on journal pages; Golenishchev-Kutuzov also wrote scathing denunciations of Karamzin and send them to the czar.

Golenishchev-Kutuzov's literary career began in 1791 with the publication of a series of his poems in a literary journal, *Russian Literature Lover's Interlocutor*. He wrote a number of solemn odes devoted to Catherine II and Pavel I. These odes became the subject of severe satire written by DIMITRIEV, who considered them outdated, stiff, and inappropriate for contemporary literature.

One of Golenishchev-Kutuzov's main projects was his literary journal *Companion to Education* (1802–06), in which he published a great number of poems and translations, including translations of such famous authors as Gray, Sappho, Pindar, and Geziod. In 1803–04, he also published three separate volumes of his poetry.

Although Golenishchev-Kutuzov's poetry was far from the ideal of perfection, he entered history as an important political figure, a prolific translator, and a poet.

Góngora y Argote, Luis de (1561–1627) poet

Luis de Góngora was born to the judge Francisco de Argote and his wife, Leonor de Góngora, in the city of Cordova in southern Spain. At an early age his family determined that he would become a priest, and though the poet himself seemed to have no particular inclination for the religious life, he was ordained a clergyman at age 14. He went on to attend the University of Salamanca but, due to his dissipated lifestyle and interests in poetry, never received a degree.

By age 19, Góngora's poetry had already begun circulating in manuscript form and it received the praise of such well known writers as Miguel de CERVANTES, who paid tribute to the young writer in his *Canto a Caliope* (1585). Over the next three decades Góngora lived extravagantly, sinking himself in debt but establishing himself as a gifted poet and well-known figure in his native city. In 1617 he relocated to Madrid, where he was named the king's chaplain and where he spent the next 10 years fulfilling his religious duties and continuing to write poetry. He sold his house in 1625 and returned to Cordova, where he died two years later.

Góngora is considered almost exclusively as a lyric poet, and his work can be separated into two periods. While his early work tends to be straightforward and affirmative, his later poems are characterized by the density of their language and darkness. His first poems appeared in 1580, when he contributed to a collection of poetry dedicated to the duke of Olivares, the prime minister of Philip IV. Much of Góngora's early poetry shows him experimenting with simple styles and forms, such as the octosyllabic *romance* and the festive *letrilla*, a short verse form with a refrain that was frequently written for either amorous or satiric purposes. As early as 1585, however, in his SONNET "A Córdoba" ("To Córdoba"), Góngora shows the first traces of the ornate baroque style that would come to be his trademark.

In Spain, Góngora's talent for satire and his elegant style attracted attention. He directed several cutting poems at corrupt life in Valladolid, then the Spanish capital, and made a lifelong enemy of

his fellow poet QUEVEDO. In 1603 Góngora was the largest contributor to *Flores de poetas ilustres* (*Flowers of Illustrious Poets*) and gained the patronage of the marqués de Ayamonte, to whom he dedicated several sonnets.

Subsequent travels around Galicia moved Góngora to more poetry, including *La oda a la toma de Larache* (*Ode on the Taking of Larache*, 1610), a work of extravagant allusion concerning the occupation by Spanish troops of the north African city of Larache. Thereafter Góngora expanded the scope of his projects, working on the *Fábula de Polifemo y Galatea* (*Fable of Polyphemus and Galatea*, 1612) at the same time as *Las soledades* (*Solitudes*, 1613). His *Polifemo* shows an innovative reworking of Ovid's myth, a theme also treated by his contemporary LOPE DE VEGA. *Las soledades* recounts the adventures of a shipwrecked youth among a group of shepherds. Góngora, however, never completed the long poem, and it was his dissatisfaction with it that led him to turn to the darker tone and more complicated style of his later works.

The *Fábula de Piramo y Tisbe* (*Fable of Pyramus and Thisbe*, 1618) is perhaps the finest example of Góngora's use of ancient myth, though blended with an ironic amount of skepticism. Góngora's later poems, such as *Panegyric to the Duke of Lerma* (1617), the prime minister at the time, reflect his need for patrons. Personal trials including debt, rivalry, disgrace, and the death of his patrons led to a self-imposed exile from Spain and the end of Góngora's poetic output.

Góngora was recognized by later generations of Spanish writers and critics, and in the 20th century in particular he began to be recognized as a major figure in the development of Spanish poetry. He is seen today as an enigmatic but crucial poet who helped initiate the modern period of Spanish verse and whose message and language remain relevant and moving.

Gower, John (ca. 1325–1408) poet

Revered by Geoffrey CHAUCER as "Moral Gower," John Gower is one of the most important English poets of the 14th century. He is best recognized for three works: *Speculum Meditantis* (*Mirror of Man*), written in French; *Vox Clamantis* (*Voice of One Crying*) written in Latin; and *Confessio Amantis* (*Lover's Confession*), written in English.

Little is known about Gower's life, but evidence indicates he was a lawyer and a "purchasour," one who bought and sold lands. We also know that Chaucer and he were friends. That Chaucer granted Gower power of attorney while on leave to Italy, as well as dedicated his *Troilus and Criseyde* to Gower, attests to their camaraderie.

Gower's *Confessio Amantis* is his greatest work. A lively verse narrative of approximately 30,000 lines, *Confessio* presents a series of stories illustrating various aspects of the seven deadly sins. At times, the framework appears to clash with the nature of the tales, but *Confessio* seeks to both delight and instruct, and its strong moral purpose is clear.

The work features the character of a lover who begs Venus, the goddess of love, for relief from Cupid's fiery dart. His plea for her "pity and mercy" requires the lover to confess to Genius, a "worthy priest." In so doing, a dialogue between Genius and the lover begins, and stories including those of Nauplius and the Greeks (Benoit de Sainte-Maure's *Roman de Troie*) and Jason and Medea (from Ovid's *Metamorphoses*) are told. Following the lover's lengthy confession, Venus presents him with a rosary, declares him "a lover never more," and commends him to "go where moral virtues dwell." Released from her hold and forgiven for his sins, the lover returns home to devote himself to prayer.

In these well-told stories within *Confessio*, readers find examples of how and how not to live, and as Terence Tiller observes, details "of medieval life as it really was." For these and other merits found in Gower's *Confessio* and his other writings, Gower continues to be praised and recognized as one of the period's finest writers.

Graffigny, Madame Françoise de (Françoise d'Issembourg d'Happoncourt Graffigny)

(1695–1758) *novelist, playwright*

Françoise de Graffigny, who spent much of her early years in Lunéville and was a great-niece of the engraver Jacques Callot, entered the literary scene at age 43, when she moved to Paris. Before that, she spent nine weeks at VOLTAIRE's Chateau de Cirey in 1738 and 1739, apparently escaping ill treatment from her husband. While there, she wrote several

letters each day to various friends, letters apparently filled with gossip and innuendo about the life of the famous writer and his wife. These letters gained her some notoriety and were later published in her *Vie privée de Voltaire et de Mme du Châtelet* in 1820.

In Paris Graffigny was a frequent guest in various literary circles. An early short story she wrote met with harsh criticism, so she decided to "learn her craft" before publishing again (Niklaus, 356). The result was her greatest and best-known work, *Lettres d'une péruvienne* (1747). The epistolary NOVEL is the sentimental tale of an Inca princess, Zilia, kidnapped and brought to France. In France she is protected by a nobleman named Déterville, who falls in love with her. The novel is composed of the letter she writes to her brother, Aza, who was also to have become her husband. It was one of the first French works to portray a foreigner's view of French society. The novel blended "romance, feminist protest, and social satire" (France, 354) and was a phenomenal and lasting success, going through at least 10 reprints in Graffigny's lifetime.

Graffigny also wrote a comedy, *Cénie* (1750), which was successful on the stage and admired by DIDEROT. Another play, *La Fille d'Aristide*, was not so well received. Still, her literary legacy rests mainly on the merits of her novel, which remains in print.

Guicciardini, Francesco (1483–1540)
historian, writer

Francesco Guicciardini was a member of an influential Florentine family, close to the Medicis. He studied law, developed a political career, and wrote numerous works of great historical value. His first political appointment was in Spain, as the ambassador of the Florentine Republic (1512–13). He later held numerous political posts, many of them fraught with danger, upheaval, and the struggle for power in Florence. When Guicciardini retired, he began working on his historical writings, which he had been composing throughout his political career.

In his *Considerations on the Discourses of Machiavelli* (ca. 1530), Guicciardini reveals his concept of history, which was centered on the idea that self-interest inspires action, which must be governed by law. This concept conflicts with the ideas set forth by MACHIAVELLI, who claimed that the conflict was what made ancient Rome great.

Guicciardini's earlier works include, among others, the *Florentine Histories* (1508–09), which covers the years 1378 to 1509; *Discourse on Ordering the Popular Government* (1512), in which he argues for gradual, rather than radical, change; and *Ricordi* (1528), his reflections on politics.

His main work, *The History of Italy*, analyzes Italy's history between 1494 and 1534. In *The History* (published between 1561 and 1564), Guicciardini attempts to explain the decline of Italy and the general failure of Italian statesmanship. It is an important work because it sets Italy within the

larger framework of European history and because Guicciardini innovatively presents his characters, showing "how events were moulded by the chance interplay of different personalities" (Brand and Pertile, 196). *The History of Italy* found a large reading audience across Europe and was translated into numerous languages, including French, Latin, German, and English.

H

Hāfiz (Hāfez, Shams ud-Dīn Mohammad)
(1326–1390) *poet*

Shams ud-Dīn Mohammad grew up in the town of Shiraz, in Persia, the son of Bahā'ud-Dīn, a merchant. Shiraz was a thriving center of Islamic culture renowned for its wines and gardens, and it is where the poet later known as Hāfiz (also Hāfez) spent his life. Hāfiz acquired a thorough education in both the Persian and Arabic languages and traditions and earned the title Khajeh Hāfiz, an honor assigned to those who had memorized the Koran (Qur'an) and were thus qualified to teach it. Hāfiz worked for a time as a baker's apprentice and copyist but became known for his lectures and commentaries on religious texts.

During Hāfiz's life the politics of the region were quite unstable and violent. In an age when poets were dependent on patrons, Hāfiz relied on his wit to keep favor throughout the changes in leadership. One story explains how he gained favor with Timur Lang, who consolidated power in Central Asia and began his conquest of the old Il-Khānid empire around 1380. When Timur entered Shiraz, he scolded Hāfiz for the following verses: "If that Turk of Shiraz would take my heart in his hand, I would give for his Hindu [i.e., black] mole both Bukhārá and Samarqand." Timur was angry because he had worked hard to build both these

places and could not believe that anyone would trade them for the affections of a slave. Hāfiz is said to have replied, "Sir, it is because of such prodigality that I have fallen into poverty and hard times." Timur was charmed, and Hāfiz was rewarded instead of imprisoned.

Hāfiz is considered the finest and most popular lyric poet of the Persian language, variously referred to as Sun of the Faith, Tongue of the Hidden, and Interpreter of Secrets. His poetry has both deeply spiritual and sensual aspects. His *Diwan* (which simply means a collection of poems) was gathered after his death and has been widely translated and enormously influential. Aside from being admired for their technical ability and depth of expression, the poems of the *Diwan* have even been used to foretell the future.

The 500 poems of the *Diwan* are in the form of a *ghazal*, a series of between five and 12 couplets often unified by a single image or theme. *Ghazals* were often set to music. The complexity and rigidity of the *ghazal* defeated lesser poets, but the form helped Hāfiz create intensely beautiful poetry.

One of Hāfiz's trademarks is his use of descriptions of earthly love to explore the mystical meaning of divine love. Like his predecessor Rūmī, Hāfiz was a practitioner of Sufi, which has its roots in Indian mysticism and Islam. The highest goal of Sufi

practice is union with the divine, which Hāfiz imagines as a sort of spiritual intoxication. Sufi wisdom teaches that the essence of God and indeed all things is love, and many of Hāfiz's verses address the beauty and freedom of true devotion. These lines translated by Elizabeth Gray, for example, use layered imagery to portray both the teaching of God and the love of God as nourishing water:

*O beggar at the cloister door, come to the
monastery of the Magi,
for the water they give makes hearts rich.*

Since the *ghazal* is not a narrative form, meaning it does not tell a story, Hāfiz's poems are instead deep contemplations on faith, love, and longing. A famously complex poet, Hāfiz uses contradicting metaphors that puzzle and fascinate readers, such as these lines from Gray's translation: "Since the kohl of our insight is the dust of your doorway, / Please tell us, where do we go from this threshold?"

As these lines suggest, Hāfiz also uses questions within his poems to engage the reader in his thoughts. His deeply personal meditations, his sensual descriptions of love and unity, and the optimism of his faith make reading his poetry a universally beautiful experience, which perhaps explains why Hāfiz has been one of the most famous and best-loved Persian poets, and still has devoted followers to this day.

haiku

Haiku is a form of Japanese poetry that is structured in three lines of five, seven, and five syllables, respectively. Haiku is often used to express the poet's emotional or spiritual response to a natural object, such as a frog or a blossom. It became popular in Japan around the 17th century and is similar to the much older *tanka* form, though shorter in length.

Originally, haiku was meant to be part of longer verse, called linked poems, to which additional lines of poetry were added. Eventually, poets began to write the haiku as stand-alone poems.

The structure of haiku relies on imagery and requires concise expression. The focus is often on an impression of an instant, a moment captured in time, as in these two haiku:

*My hut, in spring:
true, there is nothing in it—
there is Everything!*
(by Yamaguchi Sodō, 1642–1716)

Eaten by the cat!
*perhaps the cricket's widow
is bewailing that.*
(by Enomoto Kikaku, 1661–1704)

Haiku is notoriously difficult to translate into English because its structure is built around syllables rather than rhyme schemes. Translators are challenged to keep the original structure and remain true to the original meaning of the poem.

One of the first practitioners of haiku was BASHŌ, who wrote the following poem:

*Octopus in a trap
Its dreams are fleeting under
The Summer moon.*

The simplicity of Bashō's haiku made the form attractive to later Zen poets, who used it to express their meditations.

Another haiku master was KOBAYASHI ISSA, whose prolific writing produced some of the finest Japanese poetry of all time, including these lines:

*In its eye
the far-off hills are mirrored—
dragonfly!*

Haiku is still written today by many poets, including children. One of the beauties of the form is its versatility of subject matter, which can range from the seasons to rice, or from stones in a stream to tears on a child's cheek. Few verse forms provide such classic imagery, inherent with meaning and mood, as haiku.

Hammon, Jupiter (1711–ca. 1806) poet, religious writer

Jupiter Hammon was born a slave on October 17, on the estate of Henry Lloyd, near Oyster Bay, on Long Island, New York. His father was a slave whom the Lloyds called Opium, while his mother, possibly named Rose, was sold when Jupiter was quite young.

The Lloyds were relatively kind masters, and Hammon was educated alongside some of the Lloyd sons, who had private tutors. In 1733 he was swept up in the “Great Awakening” religious revival and bought his first Bible from Henry Lloyd (Johnson, 210). The poems and prose tracts that he wrote and later published are all heavily religious in nature and filled with biblical imagery.

On Christmas Day, 1760, Hammon published his first poem, *An Evening Thought, Salvation by Christ, with Penitential Cries*. The 22-stanza poem is written in the style of a Negro spiritual and focuses on salvation after death. Some of Hammon's other works include *A Winter Piece*, a sermon that compares black slaves with the Samaritans in Palestine, and an essay titled *An Address to the Negroes in the State of New-York* (1787), his most widely circulated work.

Although he was never directly outspoken in his opposition to slavery, Hammon found his own unique way of arguing for equality for all people. He wrote in *An Address*: “I should be glad if others, especially the young Negroes, were to be free.” Many critics debate the artistic merit of Hammon's works, and some criticize him for using Christianity to justify his lot in life. But O'Neale argues that Hammon “couched his antislavery protests in biblical symbols because the Bible was the cultural reference of his times and because slave supporters contorted a few of its verses to justify the enslavement of blacks.” Hammon's is an important voice—not only in the past and the slave society

in which he lived, but also today in American and world literature.

Harriot, Thomas (Thomas Harriot)

(1560–1621) *nonfiction writer*

Thomas Harriot was born in Oxford, where he later studied at St. Mary's Hall. Primarily known as a scientist and mathematician, he became the mathematics and science tutor in Sir Walter Raleigh's household. Not only did he build a telescope at the same time that Galileo GALILEI built his, he also discovered the law of refraction, sunspots, and Jovian satellites. In addition, he included inventions in his *Artis analyticae praxis ad aequationes algebraicas resolvendas* (1631) that established the modern form of algebra.

Harriot also wrote *A Briefe and True Report of the New Found Land of Virginia* (1588). This report was written during his expedition to America with Richard Grenville in 1585–86. Harriot helped Grenville with navigation, astronomy, study of the native people and lands, and the supervision of mapping. The report first appeared in 1588 and was reissued two years later in another edition with illustrations by John White. In addition, the report appeared with other chronicles of exploration in Richard Hakluyt's *Principal Navigations* (1589).

In *A Briefe and True Report*, Harriot pays careful attention to the land's economic possibilities. He lists resources as commodities with brief descriptions of

them, mentioning how they are currently used and how they might be exploited further or exported for use by the English. For example, he discusses the healthful properties of tobacco, which became a profitable export for the British colonies:

[T]hey use to take the fume or smoke thereof by sucking it through pipes made of claie into their stomacke and heade; from when it purgeth superfluous fleame and other grosse humors, openeth all the pores and passages of the body . . . wherby their bodies are notably preserved in health, and know not many greevous diseases wherewithall wee in England are oftentimes afflicted.

The report reads as factual and scientific but also borders, as this passage does, on promotion. Primarily, Raleigh and his associates, including Harriot, were interested in assuring their ventures in America would succeed. While none of Harriot's scientific work was published during his lifetime, his report is important for the unique glimpse it provides into merchant mentality and the exploration of early America.

Henryson, Robert (1424?–1506?) *poet*

Nothing beyond his poetry is known of Robert Henryson, who wrote in Middle Scots. One of Henryson's major works is *The Morall Fabillis of*

Esope the Phrygian (1568), a collection of 13 animal fables based on those of Aesop. One of the finest is Henryson's telling of the story of the country mouse and the city mouse. This tale, like all the others, ends with a moral:

*Great abundance and blind prosperity
Often make an evil conclusion.
The sweetest life, therefore, in this country
Is security with few possessions.*

Henryson wrote a third long poem, *Orpheus and Euridice*, based on the classical myth about two lovers, Orpheus, a musician, and his wife Euridice. When Euridice dies, Orpheus plays the lyre so beautifully the gods are moved to allow him to bring her back, but they stipulate that he must not look at her until they reach the upper world. Orpheus forgets the condition and looks at Euridice, thereby losing her again to death.

Henryson is best known for his poem *The Testament of Cresseid*, a 616-line sequel to Geoffrey CHAUCER's *Troilus and Criseyde* (ca. 1385). Set during the Trojan War of classical antiquity, *Troilus and Criseyde* tells of the love of the Trojan prince Troilus for Criseyde, who swears to be true, only to betray him after she has been captured by the Greek warrior Diomedes. In his sequel Henryson follows Cresseid's fate after Diomedes abandons her: She becomes a prostitute and eventually a victim of leprosy. Though the disease is presented as a fitting punishment for Cresseid's sins, Henryson is sympathetic as well as stern. Here is Cresseid's father's reaction to her disease:

*He looked on her ugly leprous face,
Which before was as white as a lily; . . .
he knew well that was no cure
For her sickness, and that doubled his pain.
Thus was their care enough between the
two of them.*

Henryson's poem is a great work in its own right, as the poet parallels the physical degeneration of Cresseid with her spiritual redemption. The

20th-century poet and critic Tom Scott wrote that Henryson is Scotland's "supreme poet": "No other Scottish poet, before or since, has given us so comprehensive a view of life."

Herder, Johann Gottfried (1744–1803)

philosopher

Among the great thinkers and writers who emerged from Germany during the late 18th and early 19th centuries was Johann Herder. He played an important role in the development of the German intellectual movement known as Romanticism, which emphasized human emotion (over pure reason) and nature. In addition, Herder contributed greatly to the rise of nationalism, the feeling of intense loyalty to one's nation or ethnic group, which would have a tremendous impact on the political events of later centuries.

Herder was born in the town of Mohrungen, in a part of Germany known as East Prussia. He spent most of his life as a preacher in the German city of Weimar, but it seems clear that his intellectual activities, rather than preaching, absorbed him throughout his life. He would develop an intense pride in being culturally German, and his reflections on national culture would be the basis of his most important ideas.

Herder is considered one of the founders of the movement known as Sturm und Drang (1771–78), which roughly translates as "storm and stress" and was derived from F. M. Klingner's play by the same name (1777). This movement stressed the power of German literary and artistic culture and gradually evolved into Romanticism. One of Herder's works from this period is his manifesto *Von*

deutscher Art und Kunst (*On German Character and Art*, 1773), which celebrates the uniqueness of German literature, art, and architecture, and was influenced by ROUSSEAU.

In his *Materials for the Philosophy of the History of Mankind* (1784) Herder advocates the political ideal known as *Volk*, roughly translated as “people” or “nation.” Herder used the term in reference to people united by shared linguistic and cultural ties. In *Materials*, he expresses his ideas about *Volk* in relation to his ideas of progress, presenting a cyclical view, rather than a linear view, of how civilizations are born, grow, and die.

Herder had enormous influence on German culture and literature. He influenced numerous writers, including GOETHE; contributed to the Sturm und Drang movement; and developed the concept of *Volk*, which contributed to the nationalism that dominated European politics for centuries.

Huh Joon (Ho Chun) (1546–1615) *medical scholar*

Born into the Moogwan, or military class, in the middle of the Chosun dynasty, Huh Joon was destined to compile *Tongui pogam* (*Exemplar of Korean Medicine*). For its time, this encyclopedia was the most comprehensive medical work of its kind in all Asia. Today it is still highly regarded as a standard text of traditional medicine, although English translations are not in print.

Despite the later success of *Tongui pogam*, Huh Joon’s early scholastic aspirations were thwarted because of his status as an illegitimate child; this

automatically excluded him from sitting for the civil service exam generally reserved for the scholarly class. Instead, he was forced to study medicine, as doctors in Korea were then considered inferior to literati.

Huh Joon’s reputation gradually spread, and in 1575 he became a physician in the royal court. Not long after, his extraordinary medical skills got him a promotion as personal physician to King Sun Jo himself.

It was also in this period that the king commissioned the compilation of a new medical text to bring up to date two previous encyclopedias that had been instigated by KING SE-JONG. This work had not long commenced when it was halted by a Japanese invasion in 1592. During this crisis, however, Huh Joon continued to see after the king’s health. In 1597 the work of compiling the medical text was assigned to him, and he was duly given access to the royal archives. On the death of the chief court physician, Huh Joon replaced him.

In 1608 the work of compilation still incomplete, the king, Huh Joon’s staunchest supporter, died. Thereafter jealous court officials had him wrongfully imprisoned. Fortunately, a prince whom Huh Joon had previously treated interceded on his behalf and obtained his release. He was then able to complete his medical research, which resulted in a 25-volume work of 3,137 pages.

Tongui pogam had taken 16 years to compile and was published in 1610. It is especially notable for stressing the medicinal value and dangers of alcohol. In addition to this work, Huh Joon also translated five important medical texts from Chinese into Korean.

In 1615 Huh Joon retired with the rank of Sun-grokdaebu, second only to the highest. Given the rigid class structure of Chosun society, this was indeed singular recognition of his medical genius.

humanism (1300–1600)

Humanism describes a trend of thought taking place during the European RENAISSANCE that originated as a literary movement and developed into a

philosophy. Humanism was closely related to CLASSICISM, as much effort was directed toward recovering the works of writers of ancient Greece and Rome. Characterized by an interest in classical forms and subjects of poetry, spawning revolutionary ideas about education and scholarship, and aided by the diffusion of printing, humanism spread quickly from its origins in Italy to France, Spain, Portugal, Great Britain, Germany, and the Low Countries.

The writer most responsible for introducing humanistic ideals in Italy was PETRARCH, who self-consciously offered Greek and Roman works as models for poetry. In his treatise *On His Own Ignorance and That of Others* (1368), Petrarch summed up the works of his authorities, Aristotle, Cicero, and Seneca, while emulating their style. His recovery of the classical tradition, his appreciation of the individual, his quest for earthly fame and achievement, and his sense of a dawning new age became hallmarks of the new modes of thought that spread throughout Italy. In Florence, politician Coluccio Salutati recovered Quintilian and revolutionized the teaching of rhetoric; Vergerio wrote the first modern educational tract, *On Noble Customs and Liberal Studies of Adolescents* (1402–03); and Leonardo Bruni's translations made Plato, Plutarch, and Xenophon available to a broader reading public.

While Petrarch and others like him advocated a solitary life of contemplation as the scholarly ideal, second-generation humanists felt it their duty to actively contribute to civic life, resurrecting the classical age's republican ideals along with its literary sensibilities. At the same time, artists showed a new interest in realistic representations of the human body, as seen in the works of MICHELANGELO. Humanistic values spread rapidly among the elite, including women scholars like Alessandra Scala and Isotta Nogarola. Works like the histories of BOCCACCIO show the humanists' perceptions that their age was witnessing a revival of learning, rather than participating in the continual decline that had marked the philosophy of the Middle Ages.

Thinkers in Spain, inheriting from both the Italian innovations and the works of the Dutch philosopher ERASMUS, used and elaborated on the gifts of humanism, including the new poetics and a revised system for historical inquiry. Humanistic scholarship reached Germany and the Low Countries through the marriage of Maximilian and Mary of Burgundy in 1473, which brought Germany into the Hapsburg Empire. Though drawing on Italian sources, humanism in these countries took on a distinctly Christian character, revitalizing interest in the landmarks of Christian antiquity, like the works of Augustine. The educational philosophies developed in these circles showed a strong belief in the human potential for self-improvement, a belief shared by English educators John Cheke and Roger Ascham. Sir Thomas MORE is probably the best representative of British humanism, though his belief in freedom of thought and expression led to his beheading by Henry VIII. Also in England, Latin translations of Galen influenced medical thought as well as literary conceptions of personality.

In France, humanist thought reached its peak in the works of Jacques Lefevre d'Étaples on religion and philosophy, ideas reflected in the literature of MAROT and RABELAIS. Other humanist figures in France include Budé, who is credited with the rise of legal humanism, bringing lawyers, magistrates, and public administrators under the influence of humanist thought; and MONTAIGNE, whose works perhaps mark the outer limit of the extension of humanism. In his *Essays* he admits to an appreciation for the classical past but encourages forward vision and new ideas rather than a return to old ideals.

Though in the Renaissance humanism was essentially a program of study rather than a formulated philosophy, it came to encompass not only teachings in grammar, rhetoric, and history, but also ideas about moral philosophy. In the present-day sense, humanism refers to any viewpoint that is human-centered. In its own time, the humanist interest in and regard for the individual set the stage for the early modern period in Europe.

Hus, Jan (John Huss) (1370–1415) *theologian*

Jan Hus was born in the village of Husinec in Bohemia (now in the Czech Republic), from which he took his name. Although the son of poor peasants, he graduated from the University of Prague in 1394. He became dean of philosophy there in 1401, one year after becoming a priest, and became renowned for giving his sermons in the Czech vernacular, rather than in Latin, for the benefit of the common people.

The writings of the English religious reformer John WYCLIFFE on the abuses of the Roman Catholic clergy greatly influenced Hus, who allied himself with a pro-reform and strongly-Czech nationalist faction at the university. The Bohemian Church was very wealthy and powerful, and the ideas of Hus and his allies met with much opposition. In 1409 he became rector of the university,

following a mass exodus of the conservative German faculty. In 1412, however, the church excommunicated Hus for his criticism of its sale of papal indulgences, a corrupt practice that the reformers despised. He fled Prague and lived in the castles of several aristocratic supporters, writing many treatises in Latin and Czech, as well as a collection of sermons and many letters. Many of these documents were widely distributed in Prague. Two years later, Hus was treacherously taken prisoner at the Council of Constance in Switzerland and tried for heresy. He heroically refused to renounce his beliefs and was burned at the stake.

In his writings, most written during his two-year exile, Hus espoused the doctrines of predestination over indulgence and biblical over clerical supremacy, holding Christ to be the true head of the church rather than the pope. In these beliefs, he followed Wycliffe. His most famous work is the massive *De Ecclesia (The Church)*, which comprehensively outlines his religious beliefs. His treatises in Czech are considered masterpieces of that nation's literature and language, the most famous being *Exposition of the Faith, of the Ten Commandments and of the Lord's Prayer*. Today, Czechs remember Hus as one of their greatest national heroes. The world remembers him as a landmark religious thinker whose writings foreshadowed the Protestant Reformation.

Ibn al-Khatīb (Abu ‘Abdallah Muhammad, Lisan al-Din, Abenaljatib, Ben al-Hatib, al-Jatib) (1313–1375)
historian, poet

Abu ‘Abdallah Muhammad Ibn al-Khatīb was born at Loja, some 30 miles outside Granada, Spain. During his lifetime, Ibn al-Khatīb was the preeminent literary figure in Spain. He wrote more than 60 volumes of history, poetry, and medical and religious texts. Among these is his *Círculo*, a collection of biographical works about the men who were associated with Granada’s history, religion, and politics. Ibn al-Khatīb also compiled a volume of Andalusian Arabic poetry, as well as a history of Granada and works on Sufism and philosophy.

Ibn al-Khatīb served at the royal court in Granada for many years and became a highly influential figure. However, political intrigues and his feud with another scholar and minister in Granada, Ibn Zamraq (1333–92), who had once been his pupil, forced al-Khatīb to flee Spain for North Africa in the late 1360s. Ibn al-Khatīb was eventually imprisoned in Fez, where he was put to death. Afterward, he was given the name Lisan al-Din, which means “Tongue of the Religion” and was bestowed in honor of his poetry.

Ibn Khaldūn (Abu Zayd ‘Abd al-Rahman ibn Muhammad) (1332–1406) *historian, philosopher*

Ibn Khaldūn was born in Tunis to an aristocratic Spanish Arab from Andalusia. After an intensive religious and literary education, he began a career of government service. He eventually filled top posts in many of the major Arab capitals of North Africa, Egypt, and Spain, but a tendency to make enemies kept him on the run.

In 1375 he took his family to seclusion in a castle in Algeria, where for the next four years he wrote his famous *Muqaddimah*. *Muqaddimah* is translated as *The Prolegomena*, which literally means “initial discussions” or “introductory es-

says.” Ibn Khaldūn thus wrote this work as an introduction to history. He also used it as an introduction to a later work, titled *Kitab al-'Ibar*, a historical chronicle. In *Muqaddimah*, he takes a historical and philosophical approach to the progress of events in the past. He examines the methods needed to separate fact from fiction and develops what he calls a “science of culture,” a theory that would explain the social transformations that take place across time.

Exploring the principles for understanding politics, economics, urban life, and education, he developed a concept of *'asabbiyah*, or social cohesion, the force that binds together tribes and clans. According to Ibn Khaldūn, this force, combined with a sense of religious mission, can impel new groups to seize power in a society. Various political and psychological factors then begin to eat away at the new power group. Thus, he explains the cyclical nature of history: One group conquers, becomes civilized and complacent, gains wealth and stature, and then becomes vulnerable to attack from a new group.

In other parts of *Muqaddimah*, Ibn Khaldūn discusses the arts and sciences. The information he provides specifically on the art of writing has been particularly useful to historians in tracking the development of Andalusian and North African literary developments. In *Night & Horses & The Desert*, Robert Irwin states that Ibn Khaldūn “hated the fancy flourishes which had become fashionable among the chancery officials of his day.” Irwin supports this claim with a quote from Franz Rosenthal’s translation from *Muqaddimah* in which Ibn Khaldūn states:

Recent authors employ the methods and ways of poetry in writing prose. [Their writing] contains a great deal of rhymed prose and obligatory rhymes as well as the use of the *nasih* before the authors say what they want to say. When one examines such prose, [one gets the impression that] it has actually become a kind of poetry. It differs from poetry only through

the absence of metre. In recent times, secretaries took this up and employed it in government correspondence. They restricted all prose writing to this type, which they liked. They mixed up [all the different] methods in it. They avoided straight prose and affected to forget it, especially the people of the East.

Regarding poets themselves, Ibn Khaldūn praises IBN AL-KHATIB as one of the greatest Arabic poets in the history of Spain, stating in the *Muqaddimah* that “[Ibn al-Khatib] possessed an unequalled linguistic habit. His pupils followed in his footsteps” (Irwin).

In addition, Ibn Khaldūn comments on different forms of poetry, such as the *muwashshah*, a form of poetry that included five rhymed stanzas and appeared in classical Arabic literature during the ninth or 10th century. These poems were intended to be sung and were often accompanied by performance. Ibn Khaldūn tells us:

The *muwashshah* consists of branches and strings in great number and different metres. A certain number [of branches and strings] is called a single verse [stanza]. There must be the same number of rhymes in the branches [of each stanza] and the same metre [for the branches of the whole poem] throughout the whole poem. The largest number of stanzas employed is seven. Each stanza contains as many branches as is consistent with purpose and method. Like the *qasida*, the *muwashshah* is used for erotic and laudatory poetry (Irwin).

According to Irwin, Ibn Khaldūn also commented on such poems being “popular both with the court and with the populace at large because they were easy to understand.”

For the rest of his life, Ibn Khaldūn worked on his massive universal history, the *Kitab al-'Ibar* (*The Book of Examples*), in which he discusses the Persians, Israelites, Arabs, and Romans, among others. In a clear, concise, and thoughtful narrative

style, he provides invaluable information on the history of North Africa and Spain, which he intended to be instructional. It was his belief that those in the present and the future could learn from events and people in the past.

From age 50, he spent most of his life in Cairo, lecturing under the patronage of the Mamluk sultan, serving as a notoriously incorruptible judge, and continuing his writing. His fame was such that, when he was trapped in Damascus under a Mongol siege in 1400, the fierce chieftain Tamurlane (Timur) had him brought from the city. For seven weeks, Ibn Khaldūn enjoyed the conqueror's hospitality, lecturing and writing surveys on request. Such was his relationship with Timur that the two often engaged in friendly debates concerning political and social issues. Ibn Khaldūn used these debates as the basis of his work *Ta'rif*, a brief autobiography.

Ibn Khaldūn died in Cairo. His teachings and historical works stimulated a resurgence of historical writing in Egypt and Turkey during the 15th and 16th centuries. Since then, translations of his works into Spanish, English, French, and other languages have given him a worldwide reputation as one of the most original philosophers of Arabic history.

Ignatius of Loyola (1491–1556) *saint, religious writer*

Ignatius of Loyola's *Spiritual Exercises* is one of the most influential and widely used texts in Christian spiritual discipline. Born Inigo de Loyola in the Basque province of Guipuzcoa in northern Spain, the young Ignatius was bred for a life in RENAISSANCE Spain's aristocratic circles. He entered the military and in 1521 was seriously wounded during the siege of Pamplona. Loyola was taken prisoner by the French, but they were so impressed by his bravery that they treated him more as a wounded guest than a prisoner. Loyola's leg was so severely damaged by a cannonball that it had to be broken and reset twice; it never healed successfully, and he limped the rest of his life.

During his convalescence, Loyola underwent a spiritual transformation and embraced Christ as his model and savior. He recovered and went on a pilgrimage in 1522. After his return, he decided to study for the priesthood and attended the Universities of Alcalá, Salamanca, and Paris. During this period, he formulated what became the *Spiritual Exercises* and taught them to fellow students.

In 1538 Loyola and some of his companions went to Rome and offered their services to the pope, who set them to teaching scripture and preaching. In 1540 Pope Paul III formally approved Ignatius's group, the Society of Jesus, which dedicated itself to serving wherever the pope sent its members. Loyola was elected the first superior general of the order; within 20 years, new members and new missions of the society, also known as the Jesuits, appeared as far away as India. The Jesuits would become one of the most influential and controversial religious orders of the Roman Catholic

Church. Loyola died in 1556 and was granted sainthood in 1622.

The *Spiritual Exercises* is a four-week program that leads its disciples to contemplation of their sinfulness, God's greatness and love, and greater perfection in their soul in order to discern God's will for them. Loyola recommends visualization and emotional identification with Jesus' joy and suffering so that participants can truly understand God's love. The *Spiritual Exercises* has been translated in several major languages, and its systematic, emotionally engaging approach to prayer has influenced the spiritual lives of millions.

Izmailov, Aleksandr (1779–1831) fable writer, poet, novelist, journalist

Aleksandr Izmailov was born in Vladimir, Russia, to a bankrupt nobleman. He was educated at a military school and worked almost his entire life in the Ministry of Finance in St. Petersburg. Toward the end of his life, he was appointed the vice-governor of Tver, near Moscow. However, he lost this prestigious position because of his bitter criticism of the customs and social system of the province.

Izmailov edited and published a number of literary journals and anthologies, and was a member of the Letters, Science, and Arts Lovers Free Society, established to advance the cause of Russian literature. Izmailov's admiration for the prose style of KARAMZIN shows in his novel *Eugene, or Fatal Consequences of a Poor Upbringing* (1799–1801). In effect, this novel created the genre of the *conte moral* or moral fable in Russian literature. Written in the same vein of moral education, handmade copies of Izmailov's poem "Instructions for My Wife, the Vice-Governor's First Lady" circulated throughout the Russian empire. Izmailov's gift for satire, however, is best seen in his numerous fables.

Based on daily scenes from the life of petty bureaucrats and merchants, Izmailov's fables are full of both good-natured humor and biting sarcasm. His tendency for unabridged realism and rough language account for Izmailov's fame as a "writer not for ladies." Some of his most famous fables are "Goldfinch-Astronomer," "Drunkard," and "Passion for Poem-Making." Critic Belinsky notes that Izmailov's fables "insult esthetic taste by their triviality, but some of them stand out due to their genuine giftedness and peasant-like originality."

Jefferson, Thomas (1743–1826) *political writer*

Thomas Jefferson was born in Albermarle County, Virginia, to Jane and Peter Jefferson, a Virginia official, surveyor, and owner of vast tracts of land. The education of the country's future third president proceeded in a series of stages: At age five, he was sent to a local school to learn reading and writing; At nine, he boarded with a clergyman who guided him in a study of Latin, Greek, and French; and at 14, he received tutoring by a classical scholar to prepare for college. When he entered the College of William and Mary, he came into contact with intellectuals who introduced him to philosophy, law, and legal philosophy. During his lifetime, Jefferson also studied architecture, the arts, math, natural and applied sciences, politics, and religion. His personal library contained nearly 10,000 books and pamphlets and was purchased by Congress when it was establishing its own library. Later, in 1797, he was elected president of the American Philosophical Society, a position he held for 18 years.

As a writer, he composed eight works, as well as 60 volumes of other works that comprise his many treatises, letters, state papers, an autobiography (published posthumously), presidential addresses, and journal entries. In his works, which reflect his personal, philosophical, political, and social views,

he was influenced, among others, by Benjamin FRANKLIN, Harrington, MILTON, Locke, MONTESQUIEU, Helvetius, and VOLTAIRE.

Yet Jefferson was not simply an intellectual. With his childhood friends, he roamed the countryside, rode horses, and passed many hours hunting and fishing. When his father died, he inherited, at age 14, thousands of acres of land, which he strove to cultivate with the assistance of some 150 slaves. He corresponded with horticulturists and often asked for new seeds and plantings for his estates. For a number of decades, he kept diaries in which he recorded observations about the natural world and the type of work being done on his plantations. He also devoted a large portion of his time to putting to use his ever-increasing knowledge of architecture. When he was 26, he began building Monticello, an estate that he was constantly expanding and remodeling.

Not long after starting work on Monticello, Jefferson fell in love with Martha Wayles Skelton. They wed in 1772 and had six children, only two of whom survived to adulthood. Martha died after only 10 years of marriage, and Jefferson never remarried.

The year 1768 was a turning point for Jefferson; it was the year he was elected to the House of Burgesses, and it marks his formal entrance into

the political sphere. Drawing on his knowledge of John Locke's theories regarding man's natural right to liberty, he composed *A Summary View of the Rights of British America* (1774), a series of resolutions that challenged Great Britain's authority over the colonies. A year later, he began serving as a delegate to the Continental Congress and drafted the Declaration of Independence in 1776.

In 1779 he was elected governor of Virginia. In 1785 he assumed a post as minister to France. That same year *Notes on the State of Virginia*, his only book, was published. He wrote it in response to questions that had been posed by the marquis de Barbé-Marbois, secretary of the French legation at Philadelphia. The work has been divided into 23 sections, each covering a different topic. The topics range from slavery to civil rights, education, religious freedom, natural resources, geography, and more. Jefferson's comments on slavery reveal that he is aware of the wrongness of slavery, and they are prophetic of the war that would later ensue:

I tremble for my country when I reflect that God is just; that His justice cannot sleep forever; that . . . a revolution of the wheel of fortune, an exchange of situation, is among possible events; that it may become probable. . . . The spirit of the master [slaveholder] is abating, that of the slave rising from the dust, his condition mollifying, the way, I hope, preparing, under the auspices of heaven, for a total emancipation.

In 1789 Jefferson was named the first secretary of state. In 1797 he became vice president. In 1800 Jefferson was elected president of the United States.

In his first inaugural address, he states, "though the will of the majority is in all cases to prevail, that will, to be rightful, must be reasonable; that the minority possess their equal rights, which equal laws must protect, and to violate would be oppression."

Jefferson was reelected president in 1804, and after his second term retired to his beloved Monticello. He died on July 4, 1826—the 50th anniversary of the Declaration of Independence.

Critical Analysis

Without a doubt, the most important document that Jefferson composed was the Declaration of Independence. In 1776, shortly after Richard Henry Lee proposed that the colonies should be free and independent, Congress elected Jefferson and four others to draft a more formal and detailed declaration that would legitimate—both morally and legally—the colonists' desire to become autonomous. Although all the members of the committee offered ideas, Jefferson was the document's principal author. John Adams explained that when Jefferson entered Congress, he "brought with him" a "happy talent for composition"; his writings were "remarkable" for their "felicity of expression." Jefferson channeled his talents into creating a document that would, in Thomas Gustafson's words, "ring the alarm bell for the fight for independence in all thirteen colonies at the same time" and "unify in sentiment colonists who shared markedly different . . . ideas."

To achieve these ends, Jefferson infused the language of the Declaration with ENLIGHTENMENT principles. Two passages from the opening paragraphs are especially important to examine in this regard. The Declaration begins with the following statement: "When, in the Course of human Events, it becomes necessary for one People to dissolve the Political Bands which have connected them with another, and to assume among the Powers of the Earth, the separate and equal Station to which the Laws of Nature and of Nature's God entitle them, a decent Respect to the Opinions of Mankind requires that they should declare the causes which impel them to the Separation." Jefferson followed this finely phrased announcement with one that has come to embody the fundamental tenets of the American nation: "We hold these Truths to be self evident, that all Men are created equal, that they are endowed by their Creator with certain unalienable Rights, that among these are Life, Liberty, and the Pursuit of Happiness." These words reveal Jefferson's reliance on the ideas that John Locke expressed in *Treatises of Civil Government*, especially those related to natural rights to "life, liberty, and property." Jefferson, influenced by Francis Hutch-

eson, a Scottish philosopher, opted to substitute people's right to property with his right to pursue happiness. The natural rights philosophy espoused by Locke and Hutcheson was vague enough to appeal to the colonists, despite their many underlying differences, and it set up a framework for understanding the magnitude of crimes the British committed against the inhabitants of the colonies.

After establishing this framework of rights, Jefferson devotes the main portion of the Declaration to cataloging the "long Train of Abuses and Usurpations" perpetuated against the colonists by George III, the king of Great Britain. Some of the charges against the king include his having "refused his Assent to Laws, the most wholesome and necessary for the public Good," "refused to pass other Laws for the Accommodation of large Districts of People, unless those People would relinquish the Right of Representation in the Legislature," "called together Legislative Bodies at Places unusual, uncomfortable, and distant," "has dissolved Representative Houses . . . for opposing with manly Firmness his Invasions on the Rights of the People," and "endeavored to bring on the Inhabitants of our Frontiers, the merciless Indian Savages." In effect, Jefferson was demonstrating that the colonists were not absolving their "Allegiance to the British Crown" for "light" or "transient Causes," but were, instead, exercising their right to "alter or . . . abolish" a tyrannical government that consistently ignored or deliberately violated their basic rights.

Absent from the final draft of the Declaration are Jefferson's statements regarding slavery. In his draft, he described slavery as a "cruel war against human nature itself," one that desecrated the "sacred rights of life and liberty." Even though Jefferson argued that it was the British king who was "determined to keep open a market where MEN should be bought and sold," slaveholding delegates in the northern and southern colonies took offense at these remarks. To ensure that they would sign the Declaration, the passages on slavery were removed.

It should be noted that Jefferson's stance on race-related issues was a complicated one. Earlier, in *Notes on the State of Virginia*, he argued that

blacks were "inferior to the whites in body and mind." In addition, it was not until he was on his deathbed that Jefferson freed a handful of his most loyal slaves. Jefferson's attitudes on African Americans and the institution of slavery were, like many of his contemporaries, equivocal and prone to change. It was not until 1863, nearly 40 years after Jefferson's death, that the country, under the guidance of President Abraham Lincoln, made the official decision to put an end to slavery.

The Declaration of Independence did not achieve its goals through its originality. As Jefferson himself remarked in 1825, he had not aimed to "find out new principles, or new arguments never before thought of." Rather, he desired to "place before mankind the common sense of the subject, in terms so plain and firm as to command their assent," and he used his powerful mastery of language to craft a document that would be regarded as an "expression of the American mind."

Jesuit Relations (1632–1791)

The *Jesuit Relations* are a series of reports sent from French Jesuit missionaries in North America to

their superiors in Europe, which give a fascinating account of the missionaries' lives with the natives. Written largely in French and Latin, and intended to garner support for the missions at home in Europe, *Jesuit Relations* appeared annually in France between 1632 and 1673. The first English edition, by Reuben Gold Thwaites, originally published between 1896 and 1901, also included reports written by Jesuits after 1673 and up to 1791. One such report was written by Father Jacques Marquette and tells of his 1674 journey to the mouth of the Mississippi River.

In 1625 the first Jesuit missionaries went to the areas of Quebec, Montreal, and Three Rivers, which were occupied by French settlers and traders. The missionaries lived with the Huron and Algonquin, who were often threatened by the Iroquois. One of the most famous sections of *Jesuit Relations* tells how Isaac Jogues, Jean de Brebeuf, and other missionaries were captured and killed by the Iroquois and became known as martyrs for the faith.

The Jesuits, founded by IGNATIUS OF LOYOLA in 1634, were known for their learning. The Jesuits' reports combined scientific observations of Native American life with religious reflections and descriptions of native cultures and religious beliefs. In addition, Jean de Brébeuf wrote a detailed description of the Huron language.

The Jesuits were accurate observers, though their reports reflected an outsiders' view of native cultures. For instance, in *Jesuit Relations* they describe the gods and spirits of the natives as "demons" and their shamans or religious healers as "sorcerers." At the same time, they celebrate the natives' natural virtues, including patient endurance and lack of greed. Father Paul LeJeune wrote: "Those little fops that are seen elsewhere are only painted images of men, compared with our Indians." Later accounts of the natives by Europeans elevated this into the notion of the "noble savage."

Today, the reports known as *Jesuit Relations* are an important source for historians of French colonization in North America, as well as for ethnogra-

phers and anthropologists studying Native Americans of the 17th century.

Jiménez de Quesada, Gonzalo

(ca. 1495–1579) *conquistador*

Gonzalo Jiménez de Quesada led a successful military campaign in South America that resulted in the conquest of the region now known as Colombia. His account of his adventures, known as *The Conquest of New Granada*, survives only in excerpts copied by others from the original.

Trained as a lawyer in his native Granada, Jiménez de Quesada was assigned as magistrate to the South American colony of Santa Marta in 1535. In the following year, he was commissioned to search for El Dorado. After eight months in the tropical forests where he and his party endured incredible hardships, Jiménez de Quesada reached the central plain of Colombia inhabited by the Chibcha tribe. In the wake of his arrival, Zipa the Chibcha ruler fled. Jiménez de Quesada then established Santa Fé de Bogotá as the capital of New Granada. He found wealth there, and a dispute

with two rivals over the conquest soon followed. He returned to Spain to obtain official recognition of his claim but succeeded in gaining only an honorary title.

After a period in which he was ignored by the Spanish Crown and imprisoned by the governor of New Granada, he was released and appointed marshal of Granada (1550) and councilor of Bogotá for life. But Jiménez de Quesada's craving for riches eventually returned. In 1569 he resumed his pursuit of El Dorado, leading an expedition of 500 men up the Orinoco River. It proved a disaster, and he returned after three years with only 25 of the original company.

As an administrator, Jiménez de Quesada is credited with protecting the rights of the ordinary colonists against powerful landholders and officials. However, his treatment of the natives was inconsistent, varying from humane to brutal as it suited his purpose. This led to a native insurrection late in his career, which he quickly quelled.

Afflicted by leprosy, Jiménez de Quesada retired to his country house to write an account of his various campaigns and died without fulfilling his ambition of discovering El Dorado. His relentless thirst for riches and his failed quest for El Dorado, the mythical city of gold, excited the imaginations of other Spanish writers, including, critics have speculated, Miguel de CERVANTES.

***Jin Ping Mei* (Chin P'ing Mei) (late 1500s)** novel

Jin Ping Mei (Chin P'ing Mei; known in English as *The Plum in the Golden Vase* and *Golden Lotus*) is one of the first and most sophisticated Chinese novels of the modern age. It is one of the four greatest Chinese novels, along with *San Guo Zhi*

Tong Su Yan Yi (*San-kuo chih t'ung-su yen-I; Romance of the Three Kingdoms*, 1321–23; pub. 1522), by Luo Guanzhong (Lo Kuan-chung); *Shui Hu Zhuan* (*Shui-hu chuan; Outlaws of the Marsh*, ca. 1368) by SHI NAIAN (Shih Nai-an) and Luo Guanzhong (Lo Kuan-chung); and *Xiyouji* (*Hsi Yu Chi; The Journey to the West*, 1592) by WU CHENG-EN (Wu Cheng-en). However, though *Jin Ping Mei* is often grouped with and compared to these other works, it is considered by many to surpass them in terms of symbolic and structural complexity.

The novel comprises 100 chapters totaling 2,923 pages in the original wood-block printing of 1618. The plot details the rise and fall of a middle-class provincial household led by Ximen Qing (Hsi-men Ch'ing) between 1112 and 1127 during the Song (Sung) dynasty. While the story takes place in the provincial town of Qingho (Ch'ingho) and concerns a middle-class family, the setting is meant to reflect the anonymous author's critique of Peking and the later Ming dynasty. Critics have read the novel as a neo-Confucian critique of the immorality of the Ming ruling class and its inability to establish and maintain order according to Confucian precepts.

The novel achieved fame not only for its scathing critique of Ming rulers, but also for its graphic depiction of sex. *Jin Ping Mei* describes in detail the immorality of Ximen Qing and his wives and servants, who catered to his basest desires. Ximen Qing's gruesome death is brought about directly by his libido as he dies after taking too much of an aphrodisiac brought to him by a mysterious Indian monk.

Jin Ping Mei's important place in world literary history is well deserved. It was the first Chinese novel with a unitary plot structure. Critics have argued that only *The Tale of Genji* and *Don Quixote* equaled the novel's complexity at the time of its publication.

Jippensha Ikku (1765–1831) *novelist*

Tradition has it that Jippensha Ikku was born into a family of minor samurai, or warrior class. As a boy he served in a samurai household but left to spend his youth in Osaka's *chonin* society. At age 30, he traveled to Edo (in 1868 renamed Tokyo), the old capital of Japan, and lived by his writing while lodging at a bookshop.

In 1802 Jippensha began writing the work for which he is best known today—*Tokai dochu hizakurige* (*Shank's Pony along the Tokaido*; also known as *Shank's Mare*)—an extremely popular comic novel about Japan's *chonin*, or townfolk. It is a picaresque novel, consisting of loose episodes that do not contribute to an overall plot. The only unifying device is the presence of the main characters in each episode. This serialized structure perfectly reflects the Japanese world view with its emphasis on the present and its appreciation of individual details. Ikku continued writing episodes for *Shank's Pony* until 1822.

Set along the main highways of Japan, *Shank's Pony* is a sharply realistic depiction of the behavior and speech of the Edo *chonin*. The episodes typically take place in brothels, inns, or teahouses, where the heroes Yajiro and Kitahachi encounter a colorful array of townspeople and travelers.

Noticeably absent from the novel, however, are upper-class samurai and peasants. True to *chonin* life in the smallest detail, Jippensha describes only the kinds of people with whom lower-class *chonin* would interact in daily life. Consequently, the novel conveys *chonin* disinterest in the lives of peasants.

The novel is also notable for its resemblance to KYOGEN, a form of Japanese comic theater, and for its inclusion of *kyōka*, short satirical verses, which Jippensha uses to deflate Japanese superstitions.

For example, the heroes meet a ghost that turns out to be an undershirt hung out to dry, while a monster is revealed to be smoke from a distant fire.

It is not known how Jippensha died, but his characteristic wit is memorialized by one popular tale. It tells how Jippensha requested fireworks to be placed in his coffin so that when he was cremated the spectacular display would both startle and amuse the funeral party.

John of the Cross, St. (Juan de Yepes) (1542–1591) *poet, mystic*

Juan de Yepes was born to Gonzalo de Yepes and Catalina Álvarez in the village of Fontiberos. He studied at the University of Salamanca, took vows as a Carmelite brother, and became known as John of the Cross.

In 1567 John joined TERESA OF AVILA in her cause of church reform, helping to found monasteries of the Barefoot Carmelites. In 1577 John's reform activities landed him in prison in Toledo, and there he began composing the short verses called the "Stanzas of the Soul." These light, mystical verses outline his views on the soul's progress toward what he considered the highest state of being, the union with God, which could be achieved only through rigid self-denial, the surrender of will, and a series of spiritual tests he called "nights." He describes the soul's final union with the divine in the rapturous terms of a lover encountering a beloved.

After his escape from prison, John developed and recorded his teachings in two treatises, *Ascent of Mount Carmel* and *Dark Night of the Soul*. The *Spiritual Canticle*, written down in 1584, evolved from the visionary "Stanzas," and describes in detail the upward flight of the soul and the 10 rungs on the "ladder of love" that reach to God. In 1586 he wrote

“The Living Flame of Love,” a four-stanza poem accompanied by commentary in which he compares the knowledge of God to a consuming fire.

John’s writings were not collected until his death and not officially published by the Carmelite Order until 1630. He was made a saint in 1726. He is remembered as one of the best Christian mystics and poets, as beloved as St. Francis of Assisi. The *Spiritual Canticle* remains the best example of the challenging ideals and beautiful language of this highly disciplined and inspiring man.

Jonson, Ben (1572–1637) dramatist, poet, nonfiction writer

Ben Jonson was born in London. His father, a clergyman, died before Jonson’s birth. Although his mother then married a poor tradesman, Jonson received a high-quality education at the Westminster Grammar School. After stints as a bricklayer’s apprentice and a military serviceman, he became an actor. He had his first success as a playwright with *Every Man in His Humor* (performed 1598, printed 1601), in which William SHAKESPEARE acted. Jonson’s intent in this play and the ones that followed was to mock, or satirize, the folly of his audiences so they would be shamed into improving their behavior.

Shortly after *Every Man in His Humor* hit the stage, Jonson was imprisoned for killing a man in a

duel. He admitted his guilt, but was released after forfeiting his goods and being branded on the thumb. The following year *Every Man Out of His Humor*, which illustrates the shortcomings of jealous, overambitious people, was performed. The play’s memorable characters include the miser Macilente, the sarcastic clown Carlo Buffone, and Puntarvolo, an arrogant knight, all of whom came from the Italian tradition of the *COMMEDIA DELL’ARTE*. The onlookers Mitis and Cordatus comment on the ridiculousness of these characters. They are Jonson’s moral compass, the holders of a perspective with whom we would like to identify, even if we see ourselves in the fools.

In 1605 Jonson again found himself in jail, briefly, for collaborating on *Eastward Ho!* (1605), a comedy with references to the Scots that offended the Scottish-born king James I. In spite of this disagreement with King James, Jonson’s career flourished during James’s reign and with the king’s support.

By 1616 Jonson had written his greatest plays, including *Volpone, or the Fox* (1605), a satire about greed and the respect accorded to the wealthy rather than the morally superior. Next came *Epi-coene, or the Silent Woman* (1609), a critique of the period’s contradictory view of women, which represented the ideal woman as a silent one.

The Alchemist (1610), a satire about superstitions and how tricksters make use of them, was written in supple blank verse and is arguably Jonson’s greatest achievement. The central character, Subtle, a fraudulent alchemist (someone who is supposedly able to turn ordinary metals into gold), embodies the vice of greed. The play follows Subtle’s hilariously successful swindles until he is caught and punished through a marriage to the obnoxious Dame Pliant. Jonson’s genius with plot is evident in his ability to catch up his villain-heroes in their own schemes.

Jonson also composed masques, dramatic entertainments with dances and music that were performed at court, often by the royal family and their friends. Jonson’s best masques include *The Masque of Blackness* (1606), *The Masque of Beauty* (1608),

and *The Masque of Queens* (1609). In addition to the masque proper, which celebrates the order produced by royal authority, these works include what Jonson called anti-masques, comic dramatizations of the forces of misrule.

Jonson's nondramatic poetry was held in such high regard that in 1616 King James began giving him a yearly salary for it. Jonson wrote in a wide range of poetic forms, including epigrams, lyrics, and tributes. His "Song: to Celia" is based on letters by the Greek writer Philostratus. The poem's opening lines are among the most famous in English literature:

*Drink to me only with thine eyes,
And I will pledge with mine;
Or leave a kiss but in the cup,
And I'll not look for wine.*

Jonson was also an important literary critic. His critical stance was that of a neoclassicist. In his own plays he observed classical ideals such as the dramatic UNITIES, derived from Aristotle's *Poetics*, which require that a play contain one action that takes place in a single day and in a single location. In the neoclassicist view, a play that does not observe the unities puts too much strain on the audience's belief. Thus, Jonson's famous observation about Shakespeare, that he "wanted art," means not that Shakespeare is a bad writer, but that his plays do not maintain the unities.

At the end of his life, Jonson was regarded by many as England's greatest living writer, and a number of young poets, styling themselves as the "Sons of Ben," gathered around him to enjoy his wit and learn their craft. After suffering a stroke in 1628, Jonson spent the remainder of his life bedridden. Upon his death, he was buried in Westminster Abbey, where he remains to this day beneath a tombstone reading "O rare Ben Jonson."

Julian of Norwich (1342–ca. 1416)

religious writer

When Julian of Norwich was 30 years old, she experienced intense, spiritual visions that led her to live as a religious recluse in a room attached to St. Julian's Church in Norwich, England. The practice of living in seclusion was not uncommon during the period, and those who chose to live such a life were known as "anchorites." Little is known about Julian; even the name "Julian" refers not to her Christian name but to the church she occupied. We do know, however, the date of her life-changing visions—May 13, 1373—and we have four manuscripts of the narrative of her mystical encounters.

Julian's *Revelations of Divine Love* (also known as *A Book of Showings*) consists of a highly vivid account of the visions she encountered while severely ill. These revelations are examined through a theologically informed and spiritually sophisticated lens. What likely strikes present-day readers most is not Julian's facility with both Latin and English but the intense, graphic quality of her descriptions. She describes the blood that drips from Christ's crown of thorns as running down like heavy drops of rain falling from the eaves of a house in a rainstorm. The roundness of the drops, she adds, resembles the scales of herrings. Perhaps even more startling, however, is Julian's comparison of Jesus to a mother figure. "The mother," she writes, "can lay her child tenderly to her breast. But our tender Mother Jesus can lead us . . . into his blessed breast . . . and shew

us . . . the joys of heaven . . . [and] endless bliss.” The feminization of Christ, while rather unusual today, was not uncommon during the period.

Revelations of Divine Love in some ways resembles works by other religious mystics, such as Margery KEMPE and the author of *THE CLOUD OF UNKNOWING*. Julian of Norwich’s emphasis, however, is on Christ’s love for humankind, and the excitement and inspiration she derived from her vision sets her work apart.

Jung Mong Joo (Chǒng Mong-ju, P’oun) (1337–1392) *scholar, poet, diplomat*
Born in the final years of the Koryo dynasty, Jung Mong Joo is often referred to as the father of Neo-Confucianism in Korea. While in his 20s, he became a member of the faculty of Songgyungwan University. With other noted Korean scholars, he established the Chinese classics as the core curriculum with emphasis on the interpretations of Zhu Xi (Chu Hsi).

Jung Mong Joo distinguished himself as a capable diplomat. In 1377 he was sent to Japan to establish ties with the Ashikaga military regime and to negotiate the return of Koreans captured by Japanese pirates. In 1386 he was ambassador to China at the court of the newly founded Ming dynasty at Nanjing (Wanking).

During this period, the Koryo dynasty was under threat from within and without. In 1388 when the Ming dynasty tried to annex northern Koryo territories, the Koryo king dispatched an army under General Yi Song-gye to deal with the crisis. Yi instead turned against Koryo and attempted to seize the government, while his son tried to persuade Jung Mong Joo to change sides. Jung Mong Joo, however, remained staunchly loyal to Koryo and responded to the taunts of Yi’s son with the following poem, which he wrote in the traditional Korean form of *sijo*:

*Though this frame should die and die
though I die a hundred times
My bleached bones all turn to dust
my very soul exist or not
What can change the undivided heart
that glows with faith toward my lord?*

The poem has become famous as a classic expression of Korean fidelity. Not long after he wrote the poem, Jung Mong Joo was murdered by members of the Yi faction on the Sojukkyo Bridge at Kaesong for his refusal to switch sides. Thus, in death, he became a symbol of Confucian loyalty. In 1517 during the Chosun dynasty, Jung Mong Joo was posthumously inducted into the national academy to take his place alongside the other great Korean philosophers.

Jung Yak Yong (Jeong Yak-jong, Chong Yag-yong, Dasan, Tasan) (1762–1836)
philosopher, poet, reformer

The founder of the Shirhak, or “Practical Learning” philosophy, Jung Yak Yong was one of Korea’s leading philosophers. As a proponent of Shirhak, he

went outside the conservative limits of philosophy, writing about a wide range of subjects, including history, education, law, mathematics, science, agriculture, and engineering. Born at Kwangju, he was brother-in-law of Yi Sunghun, the first Korean convert to Catholicism, and the uncle of Chong Hasang, the Catholic martyr. He himself converted to Catholicism in 1784. He was educated in the standard Korean and Chinese classics and acquired a taste for the religion and learning of the West.

Upon passing the civil service examination in 1780, Jung Yak Yong went on to hold several government positions. He was a lecturer at Songgyungwan University, assistant minister of defense, and personal secretary and close adviser to King Chongjo. In 1794 as secret royal inspector of Kyonggi, he submitted a report in verse on rural poverty. Soon after, he performed duties as magistrate in the Hwanghae province.

The king's death in 1801 coincided with the infamous Catholic persecutions of the time. Jung yak Yong was fortunate to be saved because of his royal connections, but his penchant for social reform resulted in his exile in 1802.

He spent the next 18 years at Kangjin in Cholla Province, where he developed the doctrine of

Shirhak in opposition to the old Confucian values of the Yi dynasty. Shirhak advocated new utilitarian solutions to national problems. In his famous work *Kyongse yp'yo* (Design for good government), he articulated a new concept of government. In *Mongmin simso* (Handbook for tending the people), he proposed agrarian and economic reforms; and in *Humhum sinso* (New work on sentencing), a treatise on capital punishment, he demanded justice for the poor.

In 1818 he returned from exile to his native Kwangju. Refusing to reenter government service, Jung Yak Yong continued his philosophical project. His numerous prose and poetic writings not only analyze in depth the social problems and injustices of his era, but also propose solutions within the innovative framework of Shirhak. His writings are thus considered the theoretical basis of Korea's economic and political modernization.

K

Kabuki (1600s–present)

Kabuki, the Japanese popular theater, originated in the early 1600s. A female dancer and former temple attendant named Okuni assembled a troupe of female dancers and actors who gained wide popularity for their parodies of Buddhist ceremonies. Okuni's Kabuki (literally meaning “song-dance-skill”) was the first theatrical entertainment in Japanese history for the common people, in contrast to the classical, aristocratic NOH and its predecessors. Okuni's erotic and arguably blasphemous performances (and pervasive rumors that her troupe doubled as a brothel) caused the government to ban women from performing on stage in 1629. Young boys took on female roles for some years, but this practice ended in 1652, when the state again intervened. At this point, mature men began playing all women's roles, a practice that continues to the present day. By the early 1700s, Kabuki had abandoned satire and salaciousness to present serious and moving contemporary dramas, often about commoners rather than samurai. In contrast to the ritualistic, solemn, and aristocratic Noh, however, kabuki delighted audiences of all classes with its spectacular stage effects, beautiful scenery, sympathetic characters, and exuberant performances. Its rise in popularity mirrored the ascent in social status of Japan's long-despised

merchant class, and protagonists of Kabuki dramas often sprang from their ranks. Many Kabuki plays were based on actual events; *Chushingura* (*The 47 Ronin*) was inspired by the legendary ritual suicide of a group of samurai in 1703. Similarly, many of the Kabuki written by the great dramatist Chikamatsu MONZAEMON were inspired by actual lovers' suicides, as were his more numerous works for the BUNRAKU (puppet theater).

As the 18th century wore on, two distinct schools of Kabuki developed. “Soft” Kabuki, centered in the thriving commercial city of Osaka, produced plays that were realistic in style and often domestic in theme. “Hard” Kabuki, by contrast, originated in the samurai-dominated city of Edo (now Tokyo), capital of Japan's shogun, or military commander in chief. It was highly stylized and violent, and influenced by Noh to a greater extent than its Osaka counterpart.

Many common themes in Kabuki derive from Buddhist and Confucian thought and include vengeance, the transience of life, and, above all, the insoluble conflicts between society and the individual, between passion and morality, between conscience and duty. Notwithstanding these ambitious themes, most Kabuki plays are better performance vehicles than literary works, though some are unqualified masterpieces. One of these is *Sukeroku, Flower of Edo*, about a young samurai

who plots revenge with his lover after an evil warlord murders his father. Written by Tsuchi Jihei in 1713, its ornate procession and crowd scenes, spectacular swordplay, and uproarious comedy have long made it a favorite of Japanese theater. Another, less-uplifting classic Kabuki drama is *Chronicle of the Battle of Ichinotani*. Loosely based on historical events, it revolves around a noble general's tragic attempts to reconcile conflicting duties to his emperor and his lord. Arguably the best Kabuki texts, from a literary point of view, are those of Chikamatsu's puppet plays that were adapted for Kabuki after his death; indeed, these works make up nearly half of the current Kabuki stage repertoire.

Kabuki today remains a highly popular art form, and is regularly performed at two large theaters in Tokyo: the commercially focused, star-driven Kabuki Theater, and the more historically oriented, textually faithful National Theater. Many younger actors and directors at these and other companies are attempting to update their discipline using Western stage techniques and special effects. Classic Kabuki plays have inspired numerous films, and after 400 years it remains Japan's most popular genre of traditional theater. Kabuki has also influenced Western dramatists ranging from Bertolt Brecht to Steven Sondheim, and since the mid-1980s has become increasingly popular in the United States.

Kant, Immanuel (1724–1804) philosopher

Considered to be one of the most influential thinkers of modern times, Immanuel Kant repre-

sents a link between the ENLIGHTENMENT philosophy of the 18th century and the Romanticist thinking of later times. His writings on metaphysics and the nature of understanding had enormous influence throughout the Western world. His greatest work, *A Critique of Pure Reason*, is one of the most important works of philosophy ever written.

Kant was born in the German city of Königsberg, which is today the city of Kaliningrad. Throughout his life, he never traveled outside the vicinity of the city of his birth. After graduating from the University of Königsberg, he worked for a time as a private tutor before he became a professor at the university. He would continue to teach at the university until his death, simultaneously producing an impressive amount of intellectual writings. Kant never married or had a family, and it was said that his daily routine never changed throughout the whole of his life. He was very well liked and respected by the people of the city of Königsberg.

Although Kant's life was relatively uneventful, his philosophical influence was enormous. In fact, he was one of the most important philosophers of all time. His influence was most deeply felt in the field of epistemology. Epistemology concerns the nature of knowledge and asks questions about how human beings know what they know (or what they think they know). During Kant's time, fierce debate was raging in the field of epistemology. On one side were thinkers who believed that all knowledge came from direct experience or observation, an idea known as *empiricism*. On the other hand there were philosophers who maintained that some human knowledge was innate, or built into the human mind itself, and that people did not need to acquire it through experience or observation. This debate had serious implications for philosophy, religion, and the nature of knowledge itself.

Kant's works formed a bridge between these two points of view. In 1781 he published his masterpiece *A Critique of Pure Reason*, which went a long way toward resolving the philosophical dispute. In this work, Kant describes his own view of epistemology and explains how he believed human beings acquired knowledge.

Although Kant is best known for his epistemology, he also produced works on a wide variety of other subjects. He wrote about political philosophy in *A Critique of Practical Reason* (1788), in which he states his belief in the freedom of the individual and the right of every person to self-government. He quietly sympathized with both the American Revolution and the French Revolution.

In addition to epistemology and political philosophy, Kant had a substantial influence on ethics, which is the study of how people decide what is morally right and what is morally wrong. He laid out his ethical philosophy in *Metaphysics of Ethics*, which was published in 1797. For a long time, European thinkers had believed that human beings possessed an innate sense of morality, given to them by God. Kant, on the other hand, believed that human beings discover what is right and wrong simply through the use of reason.

Kant also believed that religious ideas should be based on human reason, rather than on biblical revelation. This unorthodox attitude toward religion caused the king of Prussia, Frederick William II, to forbid Kant to write or teach about religion.

In addition to philosophy, Kant also wrote about scientific subjects. In 1755 he published *General Natural History and Theory of the Heavens*, which was influenced by Isaac Newton. In this book, he theorizes that astronomical systems such as galaxies and solar systems might develop from a spinning, gaseous nebula. This idea, astonishing at the time, is now the accepted scientific theory for how such formations come to be. Kant also wrote about geography and mathematics.

The philosophical work of Kant drew much of its inspiration from earlier thinkers. Kant himself stated that he was greatly impressed with the writings of the Scottish philosopher David Hume, although he challenged many of Hume's ideas. Jean-Jacques ROUSSEAU also influenced Kant, although more in a political than philosophical sense.

Although Kant's political, ethical, religious, and scientific thought is important, he is best known for his work on epistemology, and it would be in this field that he had his greatest impact. Both during

his own time and after his death, his ideas influenced a wide variety of thinkers and philosophers, such as Johann Wolfgang von GOETHE, other German writers of the Romantic period, and Georg Wilhelm Friedrich Hegel (who, in turn, had a tremendous impact on Karl Marx). Kant's political views were greatly influenced by Rousseau, who favored a government that was not dependent on a monarchy, which both Rousseau and Kant viewed as a "violation of human dignity." And, like Thomas JEFFERSON, he believed that humans deserved to act according to the will of the majority and to what was best for all, rather than being subjected to rules created by a wealthy and "noble" ruling class. Much of 19th- and 20th-century European philosophy is based on Kant's work.

Critical Analysis

Of all the many works that Kant produced over the course of his life, by far the most famous and influential is *A Critique of Pure Reason*, a detailed and exact description of his system of epistemology in which Kant explains how he believes human beings acquire their knowledge.

European intellectuals had been debating the nature of human knowledge for centuries before Kant. One point of view held that the basis of human knowledge was empiricism, the idea that all human knowledge comes from direct experience and observation. According to this idea, the human mind is a "blank slate" before it experiences or observes anything. No human can have any knowledge of something unless he or she directly experiences or observes it. One of the key thinkers of empiricism was the English philosopher John Locke.

The other point of view held that certain types of knowledge could be known to the human mind independently of experience or observation, because human beings possessed reason enough to figure things out. A clear example of this is human knowledge of mathematics. Humans can solve mathematical problems through the use of their reason alone, without observing or experiencing the problem beforehand. According to this school of thought, knowledge of mathematical logic was

innate, which means that human beings possess it simply because they are gifted with human reason.

However, Kant perceived that some things exist beyond human knowledge and are generated by a phenomenon outside the scope of human understanding. This *Ding-an-sich* (thing-in-itself) can only be perceived through creative and intellectual faculties but not fully understood.

In *A Critique of Pure Reason*, Kant combines the two points of view to form a new system of epistemology. He declares that both types of knowledge exist and are equally important. Some knowledge is empirical and comes from direct experience and observation, while other knowledge is innate and simply is the gift of human reason.

An example of an empirical statement might be, "The horse is brown." This cannot be known through innate knowledge, because people must see the horse to know that it is brown. However, if people directly observe the horse and see that it is, indeed, a brown horse, they can be said to have empirical knowledge of the horse's color.

An example of an innate statement might be, "All brown horses are brown." This can be known innately, without having to bother with observing brown horses to make sure they are brown. The truth of the statement is contained within the statement itself and therefore cannot logically be false. Similarly, one could say, "All brown horses are horses" and know, independent of empirical evidence, that the statement is true.

Kant's genius was simply to point out that different types of human knowledge will apply in different circumstances. In some cases, empirical knowledge is called for, such as when a person is trying to determine the physical characteristics of a particular thing. In other cases, innate knowledge is called for, such as when a person is trying to solve a mathematical problem.

On morality, Kant granted that moral action is guided by duty. Duty, he perceived as the core of freedom; thus, according to Kant's philosophy, "freedom rests upon the submission of the will to the sublime moral law." He believed in God, who instilled in humans a moral consciousness, and it is

this consciousness that spurs action, and the human soul that guides morality and ethical behavior.

The unification of the two types of knowledge allowed Kant to develop an entirely new way of viewing human knowledge. It bridged the gap between those who believed in empirical knowledge and those who believed in innate knowledge, and in almost all of his works, he saw a deep and abiding connection between knowledge and faith in God. His philosophy also advanced, if not made possible, much of the philosophical and scientific work that has taken place since Kant's time.

Kempe, Margery (1373–1438) *memoirist*
 Margery Kempe was born in the English seaport of Bishop's Lynn to the prominent official John Brunham. Around age 20 she married John Kempe, with whom she had 14 children. Following difficulties in childbirth, failed business endeavors, and an increasing number of visions, in which she was visited by and held conversations with Christ and the Virgin Mary, Margery, at age 40, struck a bargain with her husband to end her duties as a wife so she might take up her calling as a pilgrim of faith. She occupied herself with visiting holy places and people all over England and as far away as Germany and Jerusalem. One of Margery's most affecting visits was to JULIAN OF NORWICH, the anchorite famous for recording her own visions. With the help of two separate scribes, Margery dictated an account of her turbulent life in what is now called *The Book of Margery Kempe*, the first autobiography in English.

To the excitement of literary historians, Kempe's manuscript was "discovered" in 1934. It is valued for its descriptions of the experiences of a middle-class laywoman of the 15th century. For some modern readers, the *Book* can be inaccessible due to Kempe's highly emotional form of expression and her devout religious fervor. The strength of personality that endowed Kempe with the motivation to record her life also sparked many conflicts with her contemporaries. Some found her excessive and noisy weeping bothersome, and others accused her of preaching, which women were not allowed to do. Furthermore, Kempe was suspected of practicing heresy, or not conforming with the beliefs of the Christian Church. Though tried on successive occasions, Kempe defended herself and was always acquitted. For Kempe, the difficulties she encountered and the trials she endured served only to prove the rightness of the path she had undertaken. The following passage from the *Book* is typical of its tone and theme:

And then this creature, seeing all these adversities coming on every side, thought they were the scourges of our Lord that would chastise her for her sin. Then she asked God for mercy, and forsook her pride, her covetousness, and the desire

that she had for worldly dignity, and did great bodily penance, and began to enter the way of everlasting life as shall be told hereafter.

Kempe's faith was the most important thing in her life, and her concern with her own errors and atonement for them is constant. Throughout the work, her interactions with her visions and her active fantasies about participating in scenes of Christ's birth and death are described much more frequently, and in more vivid detail, than interactions with her fellow humans. The above passage demonstrates her belief that all her challenges are merely tests of faith meant to guide her back to God. Most curiously, she refers to herself throughout her autobiography in the third person, often using the term "this creature." This allowed her to distance herself from the narrative, which may have been a tactic to avoid further charges of heresy. Regardless, she proves her humility by portraying herself as no more than one of God's many creatures.

Kempe's determination to record her life is surprising and daring, especially since she, like most women of her class, was unable to read or write. Once considered, in the words of Lynn Staley, the account of a "possibly hysterical, certainly emotional, woman," Kempe's *Book* is valuable as a record of everyday life in England and as a depiction of one woman's struggles toward faith, identity, and self-preservation in a world largely controlled by men. Kempe believed she could personally and directly experience God's love and mercy, and she maintained that belief despite opposition. Modern readers must keep in mind that the Kempe we see is filtered through others, the scribes who wrote what Kempe dictated; it is, therefore, impossible to guess the extent to which these scribes modified the narrative as she told it. Still, the *Book* is a clear and honest account of human faith. B. A. Windeatt observes that "in the *Book* we hear recorded, however tidied, [we discover] much of the accent of an authentic voice, the voice of a medieval Englishwoman of unforgettable character, undeniable courage and unparalleled experience."

Kim Jung Hee (Kim Chung-hui, Ch'usa, Yedang, Wandang) (1786–1856) artist, calligrapher, scholar

Representative of the flowering of the late Choson period, Kim Jung Hee is regarded as one of Korea's greatest calligraphers. He was born into an aristocratic family, and his talents manifested themselves at an early age. By six he was already a competent calligrapher; and at age 16 he was accepted as a pupil by the revered statesman Pak Che-ga.

Kim Jung Hee's teen years, however, were marred by personal tragedy. His mother died, followed in quick succession by several close relatives, including his wife. In spite of such adversity, Ch'usa nonetheless passed the civil service examination at age 23.

In 1809 he accompanied his father to China as part of a delegation to the Qing dynasty. While there, he was a student of the Chinese scholar Wang Fanggang, who introduced him to the intellectual and artistic circles of Beijing. Ch'usa thus returned to Korea with a significant advantage over his scholarly peers.

As leader of the Northern Group, he pioneered historical research on epigraphy in Korea, producing the first text on Korean inscriptions. His main achievement, however, was the creation of a unique style of calligraphy known as *ch'usach'e*. In this style the strong strokes of early Chinese epigraphy (*Ye*) complement the vibrancy of grass script (*ch'o*).

In paintings, Kim Jung Hee's work synthesizes the individual self-expression of the Wu school and

the minimalist Son tradition with its sparing but disciplined brushwork. He also excelled at orchid paintings in which the simplicity of a single bloom harmonizes with inscriptions surrounding it.

Exiled to Cheju Island as a result of factional fighting, Kim Jung Hee made productive use of his time by perfecting the individuality of his style. He was recalled in 1848 by King Hongjong, only to be exiled again to Pukch'ong in 1851 as a result of another intrigue.

As a highly original artist and connoisseur of taste, Kim Jung Hee made a great impact on the visual arts of the 19th century. Because he shared his knowledge, he raised the level of art and made it accessible to many.

Kim Shi-sup (Kim Sisup) (1435–1493) fiction writer

As a child, Kim Shi-sup was very precocious. He lived in the early years of the Yi dynasty and as a young man held an administrative position at the Korean court during the reign of Tanjong. After Tanjong was overthrown by Se Jo, Kim Shi-sup shaved his head and became an itinerant Buddhist monk rather than serve the usurper.

At age 30, he settled at Kumo-san, near Kyongju, where he developed a reputation for eccentric behavior. His collection of stories *Kumo Sinhwa* (*New Stories from Golden Turtle Mountain*) is named after this location. Kim Shi-sup wrote the five stories in the collection in classical Chinese and used as his sources supernatural tales called *chuanqi* (*ch'uan-ch'i*), or "tales of wonder." These folk tales typically dealt with love affairs between mortals and otherworldly beings, as well as dream voyages to the dark underworld or exotic places, such as the Dragon Palace. Kim Shi-sup's story "Yisaeng kyujang chŏn" (Student Yi peers over the wall) contains many elements characteristic of the *ch'uan-ch'i*, such as a ghost wife, an exchange of poems, and a moral lesson at the end of the tale.

Kim Shi-sup's writing is, moreover, marked by allusions, or veiled references, to Chinese literature, especially a work by Qu You (Ch'ü Yu;

1341–1427) called *Jiandeng xinhua* (*Chien-teng hsin-hua*; New tales written while cutting the wick), from which he drew much inspiration.

Kim Shi-sup returned to Seoul after Se Jo died but did not take up a government position again. Like other educated men of this period, he also wrote verse, but it is for his stories that he is most remembered.

An English Version of a Work by Kim Shi-sup “Student Yi Peers Over the Wall.” In *Anthology of Korean Literature from Early Times to the Nineteenth Century*. Compiled and edited by Peter H. Lee. Honolulu: University of Hawaii Press, 1981.

Kleist, Heinrich von (1777–1811)

dramatist, novelist

Heinrich von Kleist, born in Frankfurt into a family of the minor Prussian nobility, led a life as troubled as the political fortunes his native country would experience under Napoleon. After entering the Prussian army in 1792, following his family’s tradition of military service, Kleist found that his temperament did not suit a life of rigid discipline and unquestioning obedience. He resigned in 1799 to devote himself to study, but overtaxed himself at the University of Frankfurt and left in 1800 to seek a cure for his health. He settled in Switzerland, intending to take up the rustic life, but his fiancée, Wilhelmine von Zenge, declined to join him, and their engagement ended.

In the following years, he turned to writing plays and reading the works of the great philosophers; he identified with ROUSSEAU and LEIBNIZ, but reading KANT’s theories about the absence of absolute truth shattered Kleist, who believed the search for truth was his chief goal in life. Lack of funds forced him to take a position as a civil servant in 1805, which he resigned the next year to take up the series of travels, failed enterprises, bursts of writing, and bouts of desperation that marked the remaining years of his life. In this time he spent six months in prison after being mistaken for a spy. Disillusioned by the cool reception given

his plays, disappointed by the failure of his literary enterprises, destitute, and feeling he had failed his family, Kleist ended his own life in an act of double suicide with his friend Henriette Vogel, who was dying of uterine cancer.
